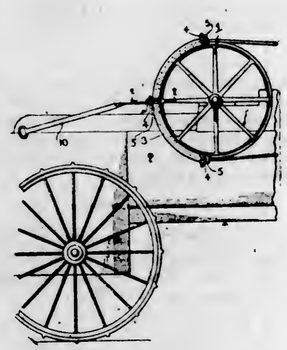
1. A device of the character described including an elongated bar having a head at one end; said head including a slot; and a finger having a hook adapted to be inserted within said slot and pivot on a portion of the head immediately adjacent said slot and remote from said bar; substantially as described.

1,381,662. TRACTOR-PLOW. ARTHUR W. REYNOLDS, Newtown, Conn., assignor of one-half to Edward Benedict, Newtown, Conn. Filed Oct. 14, 1920. Serial No. 416,834. 15 Claims. (Cl. 97—30.)

1. In combination, a tractor having tractor beams and a draw bar, and a plow having a rectangular frame and a plow beam, said rectangular frame secured to said tractor beams and located therebeneath and said plow beam extending through said rectangular frame and having connection with said draw bar.

1,381,663. VISE-STAND. LAWRENCE F. ROEDER, Philadelphia, Pa. Filed May 3, 1918. Serial No. 232,191. 2 Claims. (Cl. 81—41.)



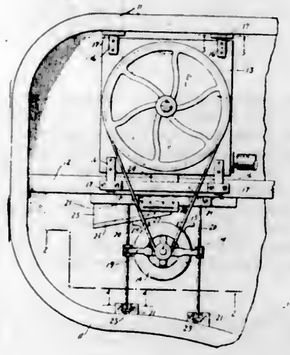
1. In a vise stand the combination with two pipes, adjustable relative to each other, one of said pipes having

a polygonal opening at one end, of a feed nut having a polygonal portion for registration with said opening

whereby said feed nut may be detachably mounted in the end of the pipe and a screw having threaded engagement with the feed nut as shown and described.

1,381,664. BELT-GUIDE. VIRGIL ROGERS, Gibbon, Nebr. Filed Jun. 30, 1919. Serial No. 274,029. 1 Claim. (Cl. 74—51.)

A belt guide of the character described comprising a pair of segmental members arranged upon opposite sides of the wheel, brace bars connecting said members together, angle irons having slots formed therein and being secured to the segmental members and brace bars, means for securing said members together, a center brace bar having one end extended and pivotally mounted upon the frame of the engine, said segmental guide members being adjustably secured to the brace bars so that said members may be moved toward and from each other according to the width of the wheel and a pull-out lever being attached to said center brace bar.

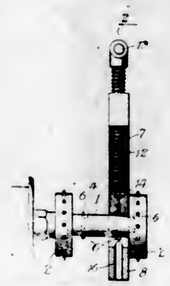


1,381,665. EGG-BEATER. JOHN M. ROSTOCKI, Pittsburgh, Pa. Filed Jan. 6, 1921. Serial No. 435,372. 2 Claims. (Cl. 259—144.)

1. A device for the purpose set forth comprising a shank provided with a series of lengthwise extending rows of apertures, the apertures of each row arranged out of alinement with respect to each other and one in advance of the other, sets of overlapping whipping elements, each

of said elements formed from a resilient member of the same length having its ends anchored in apertures of opposed rows of apertures.

1,381,666. POWER-UNIT MOUNTING FOR MUSICAL INSTRUMENTS. GUY MANLY RUSSELL, Syracuse, N. Y., assignor to American Piano Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 26, 1917. Serial No. 208,759. 3 Claims. (Cl. 248—30.)

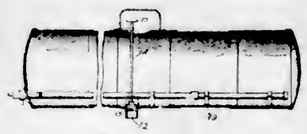


1. Supporting means for an electric motor comprising, in combination, a yoke affixed to the motor casing, said yoke being provided with bosses bored at right angles to the armature shaft of the motor; a pair of rods passing through said bosses; vibration absorbing bushings for said bosses; supports for the ends of said rods; and vibration absorbing bushings between said rods and said supports.

2. Supporting means for an electric motor comprising, in combination, a yoke affixed to the motor casing, said yoke being provided with bosses bored at right angles to the armature shaft of the motor; a pair of rods passing through said bosses; supports for the ends of said rods; and vibration absorbing bushings between said rods and said supports.

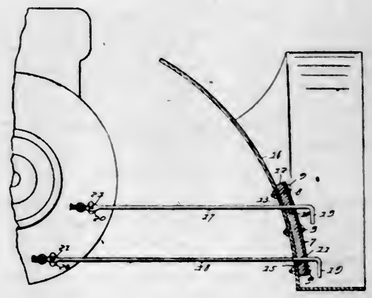
3. In a power unit for an automatic instrument, a pump associated with the frame of the instrument; supporting extensions from said pump adapted to be slidably received by said frame; vibration absorbing material interposed between said extensions and said frame; an electric motor; means for slidably supporting said motor upon said frame; vibration absorbing material interposed between the motor supports and the frame; and means including vibration absorbing means for spacing said pump and motor upon opposite sides of a central frame member.

1,381,667. SPROCKET-PIN DRIVER FOR MOTION-PICTURE MACHINES. CHARLES W. RYDER, Chicago, Ill., assignor of one-half to William Dietz, Chicago, Ill. Filed Oct. 2, 1919. Serial No. 327,988. 2 Claims. (Cl. 29—86.1.)



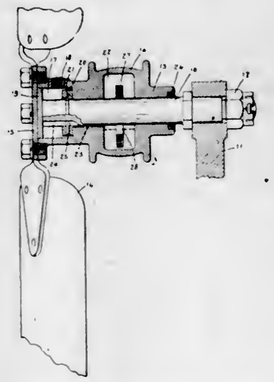
1. A tool of the class described, comprising a yoke having an extended part having on its upper face a transverse V-shaped seat, and a screw-threaded member supported on said yoke and axially adjustable toward and away from said seat, said extended part having an aperture therethrough in alinement with the longitudinal axis of said screw-threaded member, said member being adapted to effect the insertion or extraction of a pin into and from a shaft supported in said V-shaped seat.

1,381,668. PISTON-RING. ALEXANDER K. SCHAAF, New York, N. Y. Filed Apr. 3, 1920. Serial No. 371,016. 1 Claim. (Cl. 74—109.)



A single piece piston ring having an overlapping joint and provided with two edges one overhanging the other and longer than the other, at each side of the ring, the said edges being so arranged and disposed that one part runs across the other part, and these edges have a quadrilateral in common and adjacent edges on opposite ends approach each other more closely at the exterior periphery of the ring than at the interior periphery.

1,381,669. TANK-CAR-HEATING APPARATUS. EDWARD A. SCHREIBER, Chicago, Ill., assignor to Egbert H. Gold, Chicago, Ill. Filed Apr. 30, 1917. Serial No. 165,530. 15 Claims. (Cl. 257—198.)

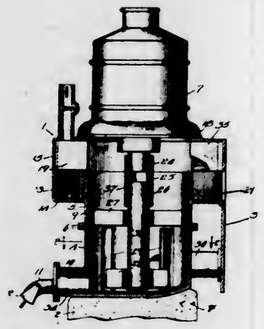


4. In a tank car, the combination with a tank, the end wall of which is formed with an aperture, of a hollow header secured to the outside of the end wall so as to cover said aperture, an inflow pipe secured to the outer wall of said header, a return pipe secured to the inner wall thereof and surrounding and substantially concentric with said inflow pipe, means for supporting said pipes intermediate their ends which permit their expansion and contraction and supply and discharge pipes on the outside of the tank connected with said header so as to communicate with said inflow and return pipes, respectively.

1,381,670. CONTROLLING DEVICE FOR PETCOCKS OF AUTOMOBILES. HENRY SCHUMACHER, Alma, Mo. Filed July 29, 1920. Serial No. 399,756. 1 Claim. (Cl. 137—139.)

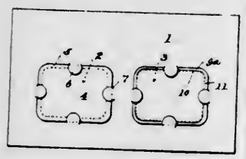
In a controlling device for pet-cocks of automobiles, rods connected to said pet-cocks, said rods having position indicators thereon, a flexible member anchored to an automobile, said flexible member having apertures through which the rods extend, said openings being normally smaller than the rods, a plate superimposed on the flexible member and secured therewith, the said plate having apertures coinciding with the apertures of the flexible member to receive the rods, the said apertures of the plates being larger than the apertures of the said flexible member.

1,381,671. LUBRICATING MEANS FOR FANS. LOUIS SCHWITZER, Indianapolis, Ind., assignor to Automotive Parts Company, Indianapolis, Ind. Filed Jan. 2, 1920. Serial No. 348,839. 4 Claims. (Cl. 64—31.)



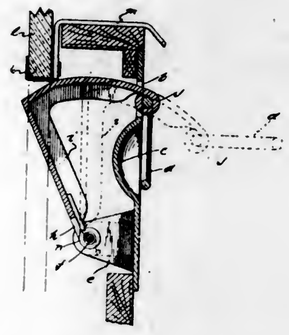
1. A lubricating system for hubs and the like including a stationary spindle upon which the hub is rotatably mounted, said hub having an annular chamber therein, means for supplying said chamber with lubricating material, and an annular absorbent ring surrounding said spindle and bearing thereon and within said chamber in position to engage the lubricating material contained therein and be rotatable with said lubricating material to cause it to be carried to said spindle for lubricating the bearing surface thereof.

1,381,672. DENTAL-NAPKIN HOLDER. WALLACE F. SHAW, Westfield, Mass. Filed Dec. 17, 1920. Serial No. 431,328. 9 Claims. (Cl. 32—20.)



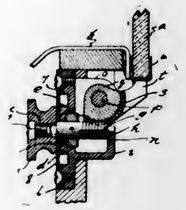
1. As an improved article of manufacture, a dental napkin holder comprising a clamp attachable to a tooth, and an arm of ductile material extending from said clamp, said arm having the general curvature of the roof of the mouth transversely, and adapted to be bent into closer conformity to the transverse curvature of the roof of the mouth, whereby a napkin may be held by said arm securely against the roof of the mouth.

1,381,673. AGITATING-MACHINE. CHARLES F. SHERWOOD, Salt Lake City, Utah, assignor, by direct and mesne assignments, of ninety per cent. to George T. Hansen, Salt Lake City, Utah, and five per cent. to Thomas A. Ryan, and five per cent. to B. O. Jones, Denver, Colo. Filed Apr. 28, 1919. Serial No. 293,286. 16 Claims. (Cl. 259—96.)



1. In a device of the class described an agitating member adapted to have violent agitating impact with a fluid mass only, said members having an impressionable resilient impact surface for engaging with the particles of said fluid mass.

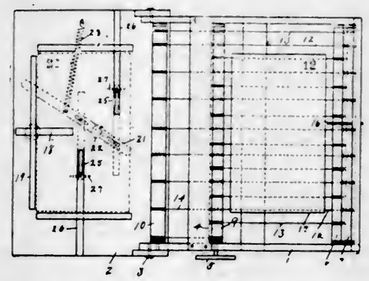
1,381,674. FILM-MOUNTING. CLARENCE O. SIMPSON, St. Louis, Mo. Filed July 12, 1920. Serial No. 395,661. 4 Claims. (Cl. 40—158.)



1. A mount consisting of a sheet of opaque material having an unobstructed opening therein, in combination with a translucent film of greater width and greater length than the opening and superposed over the same, with the edges of the film lying farther out than the edges of the opening, and tongues carried by the opaque sheet and projecting across the edge of the opening, the side edges of the tongues extending outwardly past the side edges of the opening to engage and retain the side edges of the film.

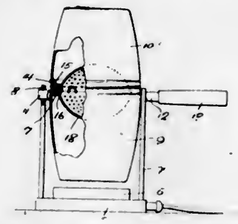
1,381,675. WINDOW-SUPPORTING LATCH. EMORY GLENN SIMPSON, Detroit, Mich., assignor to Fisher Body Corporation, Detroit, Mich., a Corporation of New York. Filed Oct. 16, 1920. Serial No. 417,433. 3 Claims. (Cl. 292—202.)

1. In a window construction, the combination of a frame provided with a window pocket, a window slidable vertically therein, and a latch comprising an escutcheon plate securable to the window frame and provided with an opening therein, an elbow-like latch member pivoted at its lower end and having its upper free end adapted to protrude through said opening, a spring for ordinarily forcing the latch into the window well, and the joint portion of the elbow into the path of travel of the window and means secured to the free end of the upper arm of the elbow for drawing the latch member out of the window well to allow the descent of the window.



1,381,676. WINDOW-SUPPORTING DEVICE. EMORY GLENN SIMPSON, Detroit, Mich., assignor to Fisher Body Corporation, Detroit, Mich., a Corporation of New York. Filed Oct. 16, 1920. Serial No. 417,434. 12 Claims. (Cl. 292—199.)

1. In a window construction, the combination of a window frame provided with a window pocket, a window slidable therein, and a supporting device comprising a worm wheel segment, and a worm engaging the teeth of the segment to raise the same under the window when elevated.

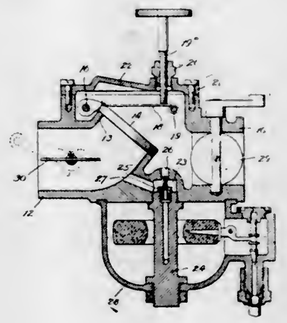


1,381,677. DEVICE FOR REVERSING PRINTED FORMS. EDGAR J. STENNER, Baltimore, Md., assignor of one-third to Herbert F. Czarnowsky and one-third to Lewis A. Engel, Baltimore, Md. Filed Jan. 30, 1919. Serial No. 273,948. 1 Claim. (Cl. 271—76.)

A device for reversing printing forms, comprising a frame 1, a driven roller 4 revolubly mounted in and having one end projecting through said frame, a wheel 5 on the end of said roller 4, rollers 6, 7, 8, 9, 10, and 11 also revolubly mounted in said frame, belts 12 connecting the rollers 4, 6 and 7 and impinging against the rollers 8 and adapted to carry the printing forms, belts 13 passing around the rollers 8 and 9, belts 14 passing around the

rollers 9 and 10, belts 15 passing around the rollers 10 and 11, and a table adapted to receive the printing forms as they fall from said rollers.

1,381,678. COFFEE-POT. GABRIELLA TUMARELLO, Benld, Ill. Filed Aug. 11, 1920. Serial No. 402,771. 2 Claims. (Cl. 53—3.)



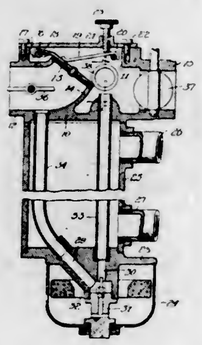
1. In a device of the character described, a support having openings, a pot-section provided with trunnions pivotally supported within said openings, said pot-section being provided at its open end with screw threads, and having an inwardly projecting annular flange arranged interiorly thereof near said screw-threads, a coacting pot-section having its open end provided with screw-threads to engage the screw-threaded end of the first named pot-section and provided near such screw-threads with an inwardly extending annular flange, a strainer element embodying a pair of strainer-sections having annular flanges adapted to be assembled in close superposed relation between the first named flanges and to be clamped therebetween, means to heat either pot-section, and a handle carried by one trunnion.

1,381,679. BINDING DEVICE FOR SKEINING-MACHINES. HARRY E. VERRAN and MAX O. CLAUSS, New York, N. Y., assignors to H. E. Verran Company, a Corporation of New York. Original application filed Mar. 27, 1911, Serial No. 617,039. Renewed Dec. 15, 1917. Serial No. 207,357. Divided and this application filed June 14, 1918. Serial No. 239,971. 5 Claims. (Cl. 140—93.)

4. In a skeining machine, means for feeding a binding wire, a guide for receiving the end of said wire and acting to bind the same, and means for severing the bound portion of the wire.

1,381,680. CARBURETER. HARRY C. WAITE, Elgin, Ill., assignor to Thermo Carburetor Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 26, 1917. Serial No. 164,718. 2 Claims. (Cl. 261—63.)

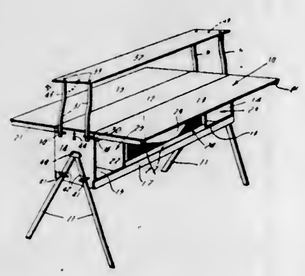
1. In a carbureter, a mixing chamber, a fuel nozzle, an inlet air passage of elbow-form, a valve between said passage and chamber, an air shunt passage through the wall of the inlet air passage, the inner end of which terminates in an enlarged chamber surrounding the fuel nozzle, a comparatively restricted passage leading from said enlarged chamber to the mixing chamber, said shunt passage and its connections constituting a primary air passage and discharging posterior to the valve between the air inlet and mixing chamber and in the path of the air issuing from beneath the valve, whereby an aspirating effect is produced, as set forth.



2. In a carbureter, a mixing chamber, a fuel nozzle, an upwardly extending air inlet passage terminating at its innner end in said chamber, a valve between said passage and chamber, the air inlet passsage being provided with an open bore in the lower wall thereof, said bore connecting at its inner end with an enlarged chamber surrounding the fuel nozzle and terminating in a comparatively restricted passage leading into the mixing chamber; the discharge end of said last-referred to passage being posterior to the valve between the air inlet and mixing chamber and in the path of the air issuing from beneath the valve, whereby an aspirating effect is produced, as set forth.

1,381,681. CARBURETER. HARRY C. WAITE, Elgin, Ill., assignor to Thermo Carburetor Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 10, 1917. Serial No. 190,462. 2 Claims. (Cl. 261—12.)

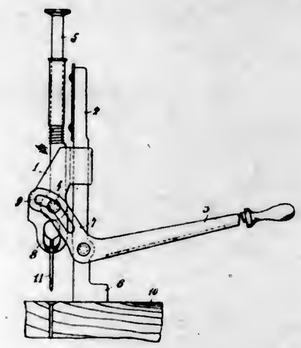
1. In a carbureter, a heater adapted to receive the exhaust gases of an internal-combustion engine, a casing connected with said heater and having a mixing chamber therein, a main air passage leading to said chamber, a valve between the main air passage and mixing chamber, a fuel inlet, a shunt air passage anterior to the valve and leading from said main air passage and terminating in an enlarged chamber surrounding the fuel inlet, and a passage leading from said last-referred to chamber through the heating chamber and terminating in the mixing chamber posterior to the valve separating same from the main air inlet, whereby the fuel is heated in the presence of a small proportion of air and then mixed with a larger proportion of air at atmospheric temperature.



2. In a carbureter, a heater adapted to receive the exhaust gases of an internal combustion engine, a casing connected with said heater and having a mixing chamber therein, a main air passage leading to said chamber, a valve between the main air passage and mixing chamber, a fuel inlet, a shunt air passage of relative restricted area

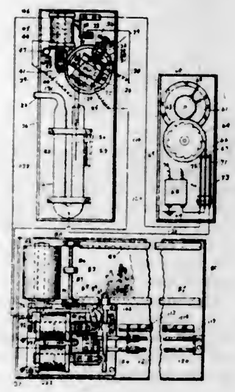
to the main air passage and opening from the lower wall thereof anterior to the valve and leading from said main air passage and terminating in an enlarged chamber surrounding the fuel inlet, and a passage leading from said last-referred to chamber through the heating chamber and

terminating in the mixing chamber posterior to the valve separating same from the main air inlet, whereby the fuel is heated in the presence of a small proportion of air and then mixed with a larger proportion of air at atmospheric temperature.



1,381,682. FOLDING BOX-TABLE. WILLARD M. WEBSTER and GEORGE D. WERNLI, Los Angeles, Calif. Filed July 21, 1919. Serial No. 312,355. 5 Claims. (Cl. 190—12.)

2. A table of the character described, comprising a box embodying a removable top, a bottom, ends, side rails, and having unclosed sides, side leaves hinged to said box and adapted to be swung upwardly to form a table with said top and to be swung against said side rails to form sides for the box, said top being removable independently of said side leaves whereby access may be obtained to the box through the top when the side leaves are swung downwardly, and means operative when said leaves are moved to said side-forming position to lock the leaves in this position.

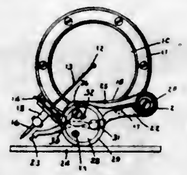


1,381,683. NAIL-EXTRACTOR. GREGOR WEINBEER, Nuremberg, Germany. Filed Mar. 19, 1921. Serial No. 453,850. 2 Claims. (Cl. 254—22.)

1. An improved nail extractor comprising in combination a vertical support, pincers composed of a long arm, of a short arm and of the jaws, a pivot pin for said jaws, means for guiding said short arm upon said support, an angle lever pivotally fixed to the lower part of said sup-

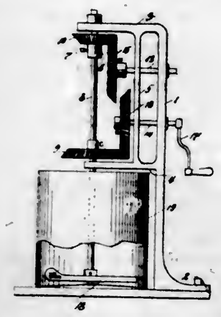
port and composed of a long arm and of a fork-shaped short arm, said short arms having guide slots for the pivot pin of the jaws of the pincers.

1,381,684. ELECTRIC RECORDER. HORACE H. WELCH, Chicago, Ill. Filed Aug. 8, 1918. Serial No. 248,840. 20 Claims. (Cl. 234—20.)



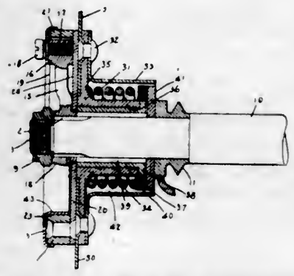
1. A recording system of the character described comprising in combination an electric-circuit, an electro-magnetic operating means and an electro-magnetic recorder in said circuit, and means including said electro-magnetic operating means to send a regularly pulsating electric current through said circuit for a period corresponding to the present status of a variable condition, whereby the recorder registers such status, substantially as described.

1,381,685. AUTOMATIC GRAVITY-STOP FOR PHONOGRAPHS. WALTER R. WHETSEL, Richmond, Ind. Filed Aug. 28, 1920. Serial No. 406,631. 7 Claims. (Cl. 192—116.)



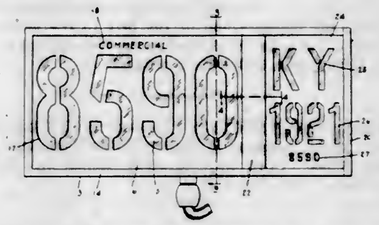
1. A device for arresting the playing of a phonograph record, including a sound reproducing medium, adapted to engage said record, a brake member eccentrically pivoted on said medium, an arm pivoted at one end and provided with a finger on the other end adapted to engage and be guided by said grooves, and means for normally holding said brake in elevated position, so arranged that upon the arresting of the movement of said medium by the last

groove and the continued inward movement of said finger caused by said grooves, said arm will be moved out of normal position for permitting said holding means to release said brake and permit it to frictionally engage the



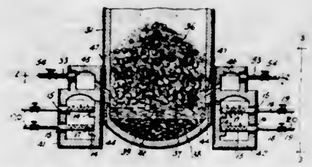
surface of said record and prevent the further movement thereof, said brake being so pivoted that the inertia of said record will cause said brake to elevate the needle and finger from the surface thereof.

1,384,686. DEVICE FOR MIXING MATERIALS. GEORGE WHIGELT, Dongon Hills, N. Y. Filed July 7, 1920. Serial No. 394,475. 4 Claims. (Cl. 74—7.)



1. In a device of the class described, a stand, a rod supported thereby in a movable relation, relatively large and small gears mounted on the rod, a shaft carrying a small gear to mesh with the said large gear, a shaft carrying a large gear to mesh with the first named small one, and means to operate either shaft at will.

1,381,687. FAN CONSTRUCTION. D'ORSAY MCCALL WHITE, Indianapolis, Ind., assignor to La Fayette Motors Company, Indianapolis, Ind., a Corporation of Delaware. Filed July 12, 1920. Serial No. 395,706. 3 Claims. (Cl. 64—96.)



3. A fan construction comprising in combination a driving shaft, a friction driven plate, a friction driving plate, yielding means normally maintaining said plates in frictional driving engagement, fan means associated with the driven friction plate, a plurality of driven lugs upon said driving plate, a spider including a plurality of driving arms, said arms being in spaced relation with said driven lugs, cushioning means between said driving arms and said driven lugs, a driving shaft rigid with said spider for rotating said fan means, rim means associated with said friction driving plate, and cover means associated with said friction driving plate and said rim means to form a cushioning chamber for the cushioning means between the driving arms and the driven lugs.

1,381,688. LICENSE-PLATE. JULIUS YOUNG, Louisville, Ky. Filed Jan. 10, 1921. Serial No. 436,154. 1 Claim. (Cl. 40—133.)

A rectangular housing having an open face with flange means integral with the edges of said open face rectangular housing and upon three sides of said open face, said flange means being suitably shaped to form a groove, a relatively permanent license indicating means slidably supported in said groove means, and a securing member also supported in said groove means for retaining said relatively permanent license indicating means in said groove, and a relatively renewable license indicating means also slidably seatable in said groove and having one edge bearable upon said securing means, and detachable flange forming means adapted to be rigidly secured to the housing to secure the securing means and both license indicating means in the groove to close said housing.

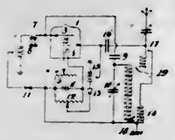
1,381,689. PROCESS FOR THE REDUCTION OF IRON AND LEAD ORES. ROBERT J. ANDERSON, El Paso, Tex., assignor to International Fuel Conservation Co., Phoenix, Ariz., a Corporation of Arizona. Original application filed Mar. 6, 1919, Serial No. 281,037. Divided and this application filed Nov. 5, 1919. Serial No. 335,937. 2 Claims. (Cl. 75—17.)

1. A process for the reduction of ores consisting in the maintenance of independent primary and secondary combustion processes, the primary combustion process comprising the development of substantially complete combustion and the delivery of the gases derived therefrom to the ore, the secondary combustion process comprising the development of partially complete combustion, with production of an excess of carbon and the delivery of the products of such secondary combustion to the ore independently of the delivery of the gases derived from the primary combustion process for the utilization of the excess carbon in the reduction of the ore.

1,381,690. BUCKLE. LAWRENCE E. BAER, Attleboro, Msss., assignor to Baer & Wilde Company, Attleboro, Mass. Filed Mar. 19, 1921. Serial No. 453,567. 6 Claims. (Cl. 24—77.)

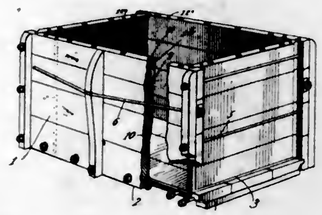
1. In a belt buckle, a female member composed of two telescoped parts of U-shape in cross section to form front

and back plates, the free longitudinal edges of the front plate being rolled inwardly over the back plate to hold the latter in position and to form a female member, adjustable belt engaging means borne by the back plate, a male member having curled longitudinal edges received by the



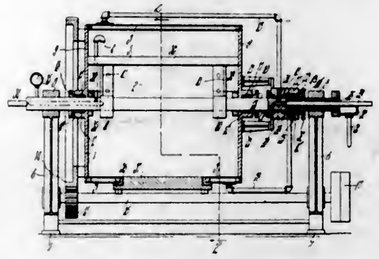
female member and having its said edges engaged with and between the curled edges of the female member, means to secure the opposite end of the belt to the male member, and a snap fastener having its respective parts secured to the male and female members.

1,381,691. BELT-BUCKLE. LAWRENCE E. BAER, Attleboro, Mass., assignor to Baer & Wilde Company, Attleboro, Mass. Filed Apr. 1, 1921. Serial No. 457,609. 2 Claims. (Cl. 24—77.)



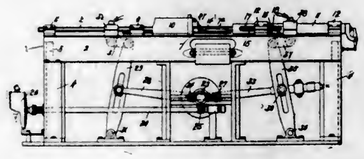
1. A belt buckle composed of a front member having top and bottom flanges, spaced shanks secured to the front member on its rear and having heads, the shanks being formed to extend through holes in one end of the belt with the latter arranged between the flanges, and a rear member formed to have the opposite end of the belt permanently attached thereto and to engage the first named end of the belt by seating thereon, said rear member being formed to be received between the flanges of the front member and having female parts receiving the heads and the shanks and with the latter forming snap fastening means for detachingly connecting the two members and for holding the belt engaged with the front member throughout the length of the latter.

1,381,692. DEVICE FOR RECEIVING RADIOTELEGRAPHIC AND RADIOTELEPHONIC SIGNALS. CESARE BARDELONI, Rome, Italy. Filed Apr. 12, 1919. Serial No. 289,758. 3 Claims. (Cl. 250—20.)



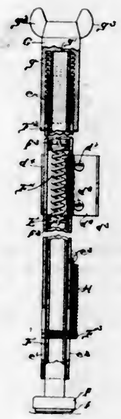
1. A device for detecting high frequency oscillations of the kind used for radiotelegraphic and radiotelephonic transmissions, comprising an oscillating circuit responsive to the action of the arriving waves, an ionized gas receiver with an incandescent filament, a grid and a third electrode, two conductors which, starting from the said oscillating circuit, lead respectively to the incandescent filament and to the grid, a rectifying device and a potentiometer inserted in series in a conductor bridging the said two conductors which end at the filament and the grid, the potentiometer being fed by the same source of electrical energy which feeds the incandescent filament, and a circuit comprising a telephonic or the like receiver connected to the third electrode.

1,381,693. TANK. JOHN BAUERLE, Cincinnati, Ohio, assignor to The Hauser-Stander Tank Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 2, 1920. Serial No. 427,745. 6 Claims. (Cl. 217—4.)



1. A tank having wooden wall forming boards set edge to edge, said boards having channels cut in the edges thereof, so as to match each other when the boards are laid edge to edge, said channels provided with apertures whereby a sealing compound may be poured into said channels after the wall is set up.

1,381,694. PROCESS FOR THE MATURING OF CHOCOLATE AND THE LIKE. GEORGE A. BAUSMAN, Springfield, Mass., assignor to National Equipment Company, Springfield, Mass., a Corporation of Massachusetts. Filed Jan. 20, 1919. Serial No. 272,096. 6 Claims. (Cl. 99—11.)



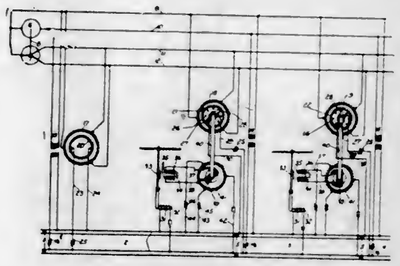
1. The method of maturing chocolate and confectionery liquors, which consists in systematically causing the particles of the mass to repeatedly rub upon one another free from pressure except that of its own mass, to improve the smoothness of the liquor.

1,381,695. PORCELAIN-TUBE-HEADING MACHINE. THOMAS W. BEATTY, Carey, Ohio. Filed Dec. 20, 1920. Serial No. 432,060. 12 Claims. (Cl. 25—3.)

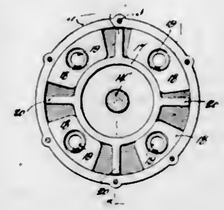
1. In a porcelain tube heading machine, a pair of coacting plungers movable toward and away from article operating position and adapted to coöperate to offset a work piece end, one plunger being operable to advance a work piece into operative relation partially within the other plunger, and means for simultaneously imparting opposed reciprocatory movements to the plungers.

1,381,696. DEVICE FOR HOLDING DOORS AND THE LIKE. LOUIS BERNHARD, Boston, Mass. Filed Aug. 30, 1920. Serial No. 406,766. 3 Claims. (Cl. 292—176.)

1. A device of the character described comprising a threaded support adapted for fixed connection to a door or the like; means mounted to move longitudinally on said support, the latter and said means having coöperating portions which prevent rotation of said means, said means including a spring; a threaded actuating member engaging the threading of the support, rotatable on said support and engaging said means to move said means into engagement with a fixed element and to hold said means in such engagement; and a spring tending to move said means out of engagement with said fixed element.



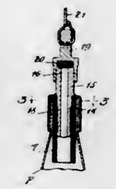
1,381,697. HANDPIECE FOR DENTAL ENGINES. CHARLES B. BISHOP, New York, N. Y., assignor to Consolidated Dental Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Apr. 4, 1916. Serial No. 88,838. 4 Claims. (Cl. 32—11.)



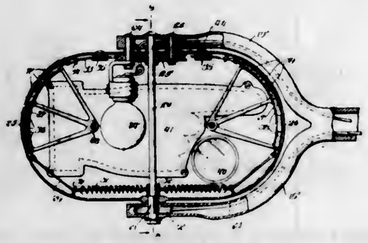
1. In combination with the head piece of a dental engine having a projecting sleeve and an exteriorly screw threaded portion, a hand piece comprising a case mounted on said sleeve and provided at one end with an annular flange arranged to abut said threaded portion, and a hollow nut adapted to engage said flange and threaded portion for locking the case to the head piece and sleeve.

1,381,698. SYSTEM OF TRAIN CONTROL. ELI J. BLAKE, Buffalo, N. Y., assignor to Hall Switch & Signal Co., a Corporation of Maine. Filed Mar. 11, 1919. Serial No. 282,014. 10 Claims. (Cl. 246—34.)

2. In a system of train control, a trackway and a vehicle for travel thereon, a circuit on said vehicle, means for impressing alternating currents of commensurate frequencies upon the trackway, means whereby corresponding frequencies are caused to flow in the circuit on the vehicle and controlling apparatus on the vehicle adapted to be selectively operated in accordance with the phase relation of the frequencies in said circuit.

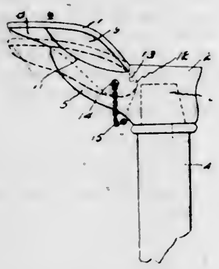


1,381,699. SHOCK-ABSORBER. WILLIAM M. BOENNING, Manitowoc, Wis. Filed Sept. 2, 1919. Serial No. 321,131. 6 Claims. (Cl. 188—130.)



1. A shock absorbing device comprising the combination with a pair of relatively movable members of a series of resistance units each mounted for relative movement with respect to said members to set up frictional resistance upon such relative movement of the units and a member fixedly secured to one of said relatively movable members and having portions adapted for successive engagements with said resistance units upon continuous relative movement between said first named members.

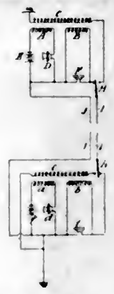
1,381,700. INFLATING-VALVE. REGINA N. BRESSLER, New York, N. Y. Filed Mar. 5, 1919. Serial No. 280,779. 6 Claims. (Cl. 9—17.)



1. A valve for inflatable bags, comprising a tubular body, a sleeve of compressible material surrounding a part of the length of the body and adapted to fit within the neck of the air bag, clamping means adapted to extend about the neck of the bag upon said sleeve to force the neck against the sleeve and the sleeve against the body and secure the body, sleeve and neck together, and means for opening and closing the valve.

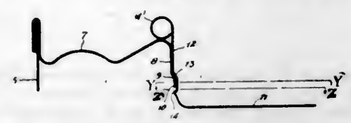
1,381,701. AUTOMOBILE SIGNAL-LAMP. GEORGE W. BRINGMAN, Cleveland, Ohio. Filed Sept. 30, 1919, Serial No. 327,587. Renewed Apr. 8, 1921. Serial No. 459,715. 14 Claims. (Cl. 116—48.)

1. In a device of the class described, the combination of a lamp casing, means for mounting the same for rotary movement about a vertical axis, said casing provided with two oppositely disposed light apertures, one constituting a forward light aperture and the other constituting a rear light aperture, an indicator carried by the casing visible from the side of the casing and invisible as an indicator from the rear of the casing, a source of light within the casing for directing light rays through said apertures, means for rotating the casing over an angle of approximately 90°, whereby said forward and rear apertures become side apertures and the indicator becomes visible from the rear of the casing, and means acting on the casing to restore the same to its normal position.



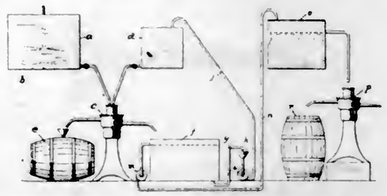
1,381,702. INTERCHANGEABLE LAST. GEORGE G. CAMPINI, San Francisco, Calif. Filed Feb. 8, 1919. Serial No. 275,857. 1 Claim. (Cl. 12—123.)

A last comprising a heel block with a pair of laterally extending, parallel arms having recessed top faces, and a sole plate with a longitudinal, medial rib insertible between the arms and having side bosses on the rib for support on said arms in said recesses to position the plate at a predetermined angle with respect to the top plane of the heel block.



1,381,703. TELEPHONE SYSTEM. BERTRAM SYDNEY COHEN, Twickenham, England, assignor to The Relay Automatic Telephone Company Limited, Strand, England. Filed Dec. 31, 1919. Serial No. 348,631. 5 Claims. (Cl. 179—1.)

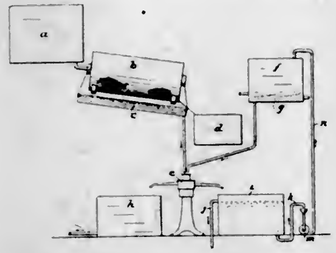
1. In a telephone installation, the combination of a transmitter, a receiver, a capacity, a transformer having three windings, one in series with the transmitter, the second in series with the receiver and the third connected at one end to the capacity, a pair of conductors, one being connected to the transmitter and receiver, and



means for connecting the other conductor either to the transmitter and receiver or to the other end of the third winding of the transformer.

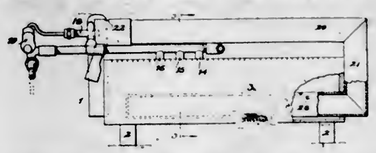
1,381,704. REMOVABLE CLOSURE FOR METALLIC CONTAINERS. CHARLES T. DRAPER, Cleveland, Ohio, assignor to The Draper Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 15, 1920. Serial No. 365,723. 3 Claims. (Cl. 220—42.)

1. A closure for containers, comprising an annular head provided with an opening, a depending rim integral with said head and beneath said opening, said rim being provided at its lower end with a shoulder and a cylindrical lip, and a closure plug inserted within the above mentioned opening, said plug being provided with a coacting peripheral shoulder, and a series of projections, positioned to engage the edge of the lip in locking relation.



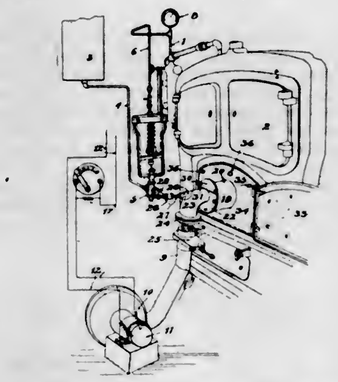
1,381,705. SEPARATION OF OLEO AND STEARIN FROM FATS. CYRUS HOWARD HAPGOOD, Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed May 20, 1920. Serial No. 382,699. 11 Claims. (Cl. 87—12.)

1. The process of treating fats to separate the oleo thereof from the stearin thereof which comprises subjecting the fats and a liquid that is heavier than the oleo to centrifugal force and separately discharging the oleo and said heavier liquid and stearin, and subjecting said heavier liquid and stearin to centrifugal force to separate out the stearin.



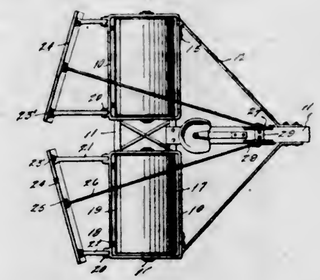
1,381,706. PROCESS OF SEPARATING OILS FROM FOOTS. CYRUS HOWARD HAPGOOD, Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed May 24, 1920. Serial No. 383,665. 4 Claims. (Cl. 87—12.)

1. The process of separating foots from oil which comprises filtering out the coarser solid particles, heating a liquid of greater specific gravity than the oil, subjecting the partially purified oil and said heated liquid concurrently to the action of centrifugal force, separately discharging the oil from said liquid, whereby the latter will



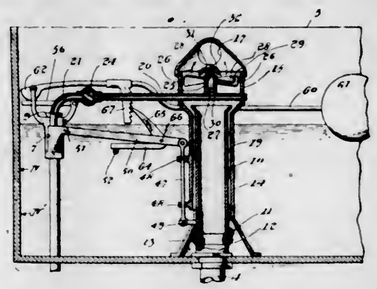
carry off the solid particles that have not been removed in the filtering step, separating said particles, with some of the heated liquid, from the remainder of the heated liquid, and re-using the purified liquid in the centrifugal oil separating and purifying operation.

1,381,707. KEROSENE-BURNER. ARTHUR E. HAUCK, New York, N. Y.; Adolph H. Stein executor of said Arthur E. Hauck, deceased. Filed Aug. 17, 1920. Serial No. 404,096. 2 Claims. (Cl. 158—65.)



1. A hydrocarbon burner containing means for preheating the fuel and vaporizing the same, a perforated tube for receiving the vaporized fuel and mixing the same with air and a chamber with slotted upper walls into which the perforated tube projects so that when the burner is in use, the flames extending through the slots will heat the preheating means and the perforated tube.

1,381,708. AUTOMATIC OIL-BURNER FOR FURNACES. ARTHUR E. HAUCK, New York, N. Y.; Adolph H. Stein executor of said Arthur E. Hauck, deceased. Filed Aug. 17, 1920. Serial No. 404,097. 2 Claims. (Cl. 158—28.)

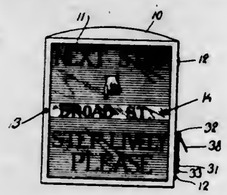


1. A furnace provided with an oil burner composed of a burner T tube with flame perforations in its upper surface, means for supporting said tube, an inwardly extending bar adapted to rest in the path of a flame, means for supplying fuel oil for the burner tube and means for supplying air.

1,381,709. ROAD GRADER AND DRAG. JESIE M. HERRING, Groesbeck, Tex. Filed Feb. 17, 1920. Serial No. 359,432. 2 Claims. (Cl. 37—5.)

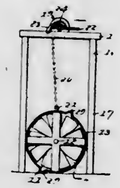
1. In a road surface grader, a pair of scraping units each comprising a frame, a roller journaled in each frame, a mud scraper carried by each frame and engaging the roller thereof, a scraper blade disposed in the rear of each frame, jointed arms connecting the scraper blade with the rear end of the frame, a shank projecting upwardly from each scraper, and a lever adjusting device having connection with the shank of the scraper of each frame.

1,381,710. WATER-OPERATED VENTILATOR FOR TOILETS. CARL A. KRANTZ and GUSTAVUS E. KRANTZ, Chicago, Ill. Filed July 7, 1919. Serial No. 309,123. 11 Claims. (Cl. 4—21.)



1. In a toilet of the kind described and in combination, a bowl, a flushing tank therefor provided with an inlet and with an outlet into said bowl, a valve for controlling the admission of water through said inlet and a valve for controlling the discharge of water through said outlet, and a single coöperating mechanism for controlling both of said valves, whereby a measured amount of the water will remain in said tank after discharge, and means for ventilating said bowl including a fan, a water motor for driving said fan and receiving its operating liquid from said inlet, said motor arranged to discharge the spent water into the said tank.

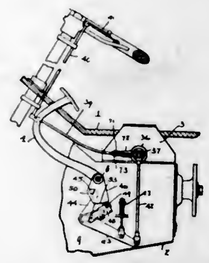
1,381,711. STATION-INDICATOR. LEO J. KREIPEL, New York, N. Y. Filed Jan. 20, 1919. Serial No. 272,066. 1 Claim. (Cl. 40—86.)



In a device of the character described, a casing having an open front closed by a door provided with a sight opening, a partition in the casing next to one of its sides,

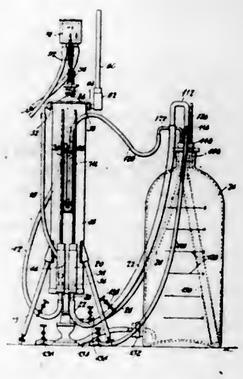
boxes having spring influenced pins projecting therethrough arranged in opposed pairs that are fixed to the inner wall of the partition and the side of the casing opposite said wall, rollers having ratchet wheels fixed on the ends thereof, the wheels on one of the rollers having their teeth pitched in a reverse direction to the teeth of the wheels on the other roller, each of said wheels having a central socket to receive the referred to opposed pairs of pins therein, a curtain attached to one of the rollers and adapted to be wound on the other roller, said curtain having a successive series of reversely arranged characters which are designed to be successively displayed through the sight opening in the casing, a lever having one end journaled on one side of the casing near the bottom thereof, an angle arm on the lever, said casing having its side and partition provided with an arcuate

slot disposed above the lower roller and receiving therethrough said arm, a dog pivoted to the arm and engaging the teeth of the ratchet wheel directly therebelow, a flat spring in the partition having an arched outer end which is connected to the arm for swinging the lever and dog to one position to bring said arm in contacting engagement with the rear end walls provided by the slots, and the said arm also designed to contact with the opposite end walls of the slots when a pull is exerted on the lever, and thus limit the swinging of the lever and dog in such direction, and arched springs secured to the back of the casing and contacting with the portions of the curtain wound on the rollers, and the springs contacting with the curtain on the lower roller holding said curtain and roller against movement when the dog ratchets over the ratchet wheel on the said lower roller when the lever is spring influenced to initial position.



1,381,712. WATER-MOTOR. ELI KUNKEL, North Platte, Nebr. Filed Oct. 21, 1919. Serial No. 332,233. 2 Claims. (Cl. 170—130.)

1. A water motor having rotary units arranged in a battery or series with a common axis arranged in parallelism with the direction of progress of the water and provided with blades deflected respectively from planes perpendicular to said axis, a housing for the units, and means consisting of channels disposed longitudinally of the housing and in substantial parallelism with said axis for directing the water in its passage through the housing.

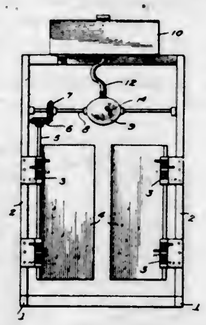


1,381,713. TRANSMISSION-CONTROL MECHANISM. CYRUS B. KURTZ, Lakewood, Ohio. Filed Mar. 11, 1919. Serial No. 282,008. 15 Claims. (Cl. 74—58.)

1. The combination with a selective sliding gear transmission having a plurality of shiftable sliding gears; of a series of gear-shifting levers; operating connections therefor connected in pairs and each connection being adapted upon a one-direction actuation to cause opposite movement of said levers, and a pivotally mounted select-

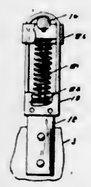
ing and operating member adapted to engage and actuate in the same direction either of the connections of each of said pair of connections, thereby effecting different movements of said shifting levers.

1,381,714. CALORIMETER. WILBUR G. LAIRD, New York, N. Y., assignor to Henry L. Doherty, New York, N. Y. Filed June 24, 1919. Serial No. 306,392. 11 Claims. (Cl. 73—184.)



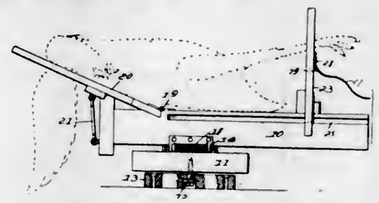
1. A gas calorimeter comprising a gas tank, a straight annular container having cylindrical walls spaced a short distance apart, said container being open at the bottom for the direct admission of air thereto, an outlet mounted on the top of said container forming a direct passage of combustion gas from said container to atmosphere, a burner inclosed by the inner wall of the container, means for connecting said burner with said gas tank, a water inlet for said annular container, a conduit for leading water from said container to said tank and means for measuring the rise in temperature of the water passing through said container.

1,381,715. HOG-OILING APPARATUS. PAUL P. LARKIN, South Charleston, Ohio. Filed July 10, 1920. Serial No. 395,194. 5 Claims. (Cl. 119—159.)



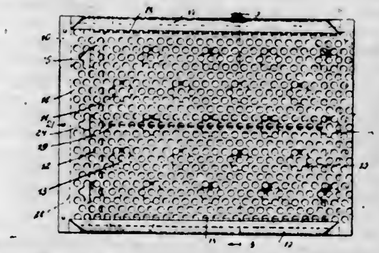
1. The combination in a hog oiling apparatus, of a frame, a tiltable oil container having at the opposite sides thereof exterior oil spouts and also having interior pipes each of which extends from one spout to a point adjacent to the opposite side of the container and is disposed at an

intermediate point in the height of the container, and means operable by the passage of a hog in either direction



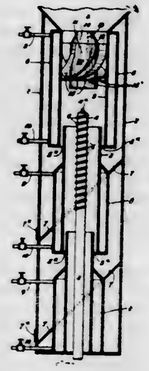
under the container to tilt the container and thereby discharge oil therefrom co-incident with the passage of the hog.

1,381,716. WASHING-MACHINE. MINNIE M. LATHAM, Fort Worth, Tex., assignor of one-third to Ada Wood, Lynnville, Iowa. Filed June 10, 1919. Serial No. 303,173. 1 Claim. (Cl. 68—23.)



A washing machine including a tub having a cover and a rubber, an operating shaft journaled on the cover, means for oscillating the shaft, upwardly extending arms secured to the rubber, inverted substantially U-shaped hanger straps suspended from the shaft and secured to the arms, guide members slidable on the hanger straps and having grooves to receive the shaft and secured to the latter, collars secured to said arms, and expansion springs between the guides and collars for normally urging the rubber downwardly and adapted to permit upward movement of the rubber when undue pressure is placed thereon.

1,381,717. CAPONIZING-RACK. MARTIN E. LINDEMUTH, Elizabethtown, Pa. Filed Sept. 14, 1920. Serial No. 410,109. 4 Claims. (Cl. 119—97.)



1. A caponizing rack having a base bar, an inclined head rest, and an upright foot rest mounted upon said base bar, both of said rests being provided with terminally open slots for the reception respectively of the wings and feet of a fowl.

1,381,718. GRAIN-SIEVE. ALONZO LOCKARD, Massillon, Ohio. Filed Apr. 7, 1920. Serial No. 372,031. 1 Claim. (Cl. 130—19.)

A screen consisting of a pair of screen plates each having therein a plurality of small circular apertures and a plurality of larger circular apertures, the edges of the larger apertures being defined by a plurality of substantially semi-circular notches corresponding in curvature to said smaller apertures, so that the notches of said larger apertures in said plates may be made to coincide when said screen plates are in one relative position, and said small apertures made to coincide with said notches when said screen plates are in another relative position.

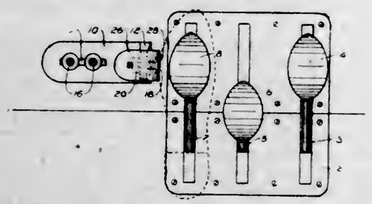
1,381,719. CENTRIFUGAL GAS-CLEANING APPARATUS. FRANK R. MCGEE, Steubenville, Ohio, and ARTHUR F. NESBIT, Wilkinsburg, Pa. Filed Dec. 10, 1920. Serial No. 429,667. 6 Claims. (Cl. 183—7.)

1. In an apparatus for separating foreign particles from gaseous streams, the combination with a receiving chamber for the gases to be cleaned, and a tubular conduit leading therefrom, of a centrifugal head member mounted in said tubular conduit, said head comprising a body portion having a centrally arranged aperture therethrough, and a plurality of helical passages around its periphery, the major portion of the gases entering said chamber being adapted to pass through said helical passages and a minor portion being adapted to pass through said centrally arranged aperture.

2. In an apparatus for electrically precipitating particles from gaseous streams, a head member adapted to cause a mechanical centrifugal movement to the major portion of the gases, said head comprising a body portion having a relatively small centrally arranged aperture therethrough, and a plurality of helical vanes formed on the outer periphery of said body portion forming helical passages, the major portion of the gases being adapted to pass through said helical passages and a minor portion being adapted to pass through said small centrally arranged aperture forming a lead stream.

3. In an apparatus for electrically precipitating particles from gaseous streams, the combination with a tubular

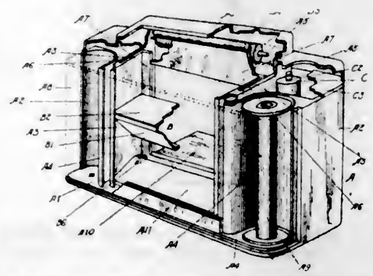
collecting electrode and a discharge electrode centrally arranged within said collecting electrode, of a centrifugal head member adapted to impart a mechanical centrifugal movement to the major portion of the gases, said head being arranged within said collecting electrode and above said discharge electrode, and comprising a cylindrical body portion having a relatively small centrally arranged unrestricted aperture therein adapted to admit a small lead flow of uncleaned gases through the head, to impinge directly upon the upper end of the discharge electrode, and a plurality of helical vanes formed on the outer periphery of said body portion adapted to abut the inner periphery of said collecting electrode, thereby forming helical passages through which the major portion of said gases are adapted to pass.



4. An apparatus for separating particles from gaseous and fluid streams by electrical precipitation, comprising the combination with a casing, of a tubular collecting electrode arranged within said casing and having a plurality of traps spaced along its length, a discharge electrode centrally arranged within said collecting electrode, and a centrifugal head member adapted to impart a mechanical centrifugal movement to the major portion of the gases, said head being arranged within said collecting electrode and above said discharge electrode, and comprising a cylindrical body portion having a relatively small centrally arranged unrestricted aperture therein adapted to admit a small lead flow of uncleaned gases through the head to impinge directly upon the upper end of the discharge electrode, and a plurality of helical vanes formed on the outer periphery of said body portion adapted to abut the inner periphery of said collecting electrode, thereby forming helical passages through which the major portion of said gases are adapted to pass.

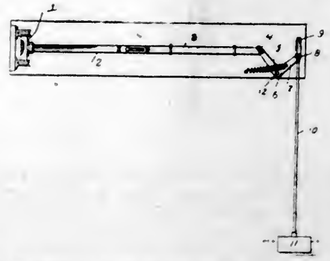
5. The method of precipitating particles from gaseous fluids, comprising first, in passing the gases into a chamber, dividing said gases into two flow bodies, imparting a mechanical centrifugal whirl to one of said bodies and passing it between a discharge electrode and a collecting electrode, and passing said other body directly against the discharge electrode, causing an initial ionization thereof, and precipitating the particles therefrom toward said collecting electrode and into the path of said first body.

1,381,720. METHOD OF SEPARATING NICKEL. ALEXANDER MCKECHNIE, Birmingham, England. Filed May 3, 1920. Serial No. 378,537. 4 Claims. (Cl. 75—17.)



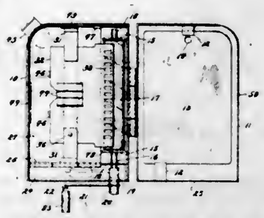
1. A method of separating nickel from cupro-nickel alloy, or scrap or other material containing copper and nickel in the metallic state, in which the molten material is subjected to heat and oxidizing treatment in a basic reverbatory furnace; the treatment being continued until the whole or part of the nickel content is volatilized out or carried over from the furnace in the form of nickel oxid, which can be intercepted or collected and reduced to metallic nickel by any known method.

1,381,721. STOP DEVICE FOR USE WITH CHANGE-SPEED PEDALS OF AUTOMOBILES. KENNETH K. MCLEOD, St. Paul, Minn., assignor of one-half to Walter Corey, Minneapolis, Minn. Filed Aug. 2, 1919. Serial No. 314,924. 5 Claims. (Cl. 74—81.)



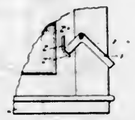
1. A stop device for use with change-speed pedals of automobiles consisting of a support, means for securing said support to the foot-board, and a stop member mounted upon said support, said stop member being adapted to be so positioned as to be engaged by the foot of the driver when the change-speed pedal is depressed from high-speed position into neutral position.

1,381,722. CAMERA. HART H. MCNAUGHTON, Maryville, Tenn. Filed June 17, 1919. Serial No. 304,824. Renewed Dec. 30, 1920. Serial No. 434,112. 12 Claims. (Cl. 95—42.)



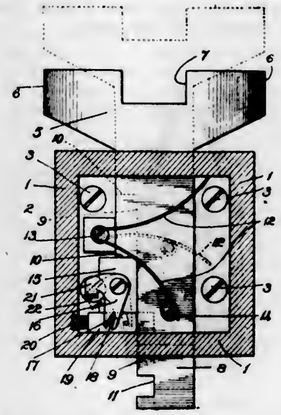
1. In a camera, the combination of upright walls forming a well, the forward of said walls having a light opening, and a reflecting unit movable up and down in said well and having a height less than the height of said light opening, substantially as described.

1,381,723. SWITCH-OPERATING MECHANISM. CHARLES MAKOBEN, Stockton, Iowa. Filed Aug. 2, 1919. Serial No. 314,998. 1 Claim. (Cl. 200—84.)



Means for throwing a switch including a movable blade, comprising a link connected with the blade, a hinged leaf at one end of said link formed with a slot, a second link carrying a pin passing through said slot, a bell crank lever having a slot and pin connection with said second named link, a spring for holding said named lever past center at either limit of its movement, and a rod carrying a float and having a lost motion connection with said lever.

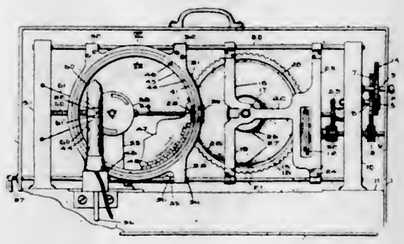
1,381,724. SAFETY-RAZOR AND STROP. JAMES A. MALONEY, Scranton, Pa. Filed May 18, 1920. Serial No. 382,234. 9 Claims. (Cl. 132—80.)



1. A safety razor including a receptacle, a cover hinged to said receptacle, a blade carrier hinged in said receptacle, sharpening means operably mounted in said receptacle, a mirror carried by the hinged cover, and a blade holder adapted to sent on the blade carrier and to be removably attached to the receptacle when the operation of shaving is to be effected.

1,381,725. SASH-HOLDER. FREDERICK WILLIAM MARHEINE, Spokane, Wash., assignor of one-half to Emil Hansen, Spokane, Wash. Filed May 20, 1918. Serial No. 235,520. 1 Claim. (Cl. 292—238.)

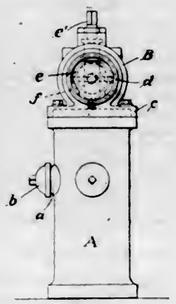
In combination with a window frame and its sash, of locking means for the sash consisting of an L-shaped member pivoted on one part at the junction of its arms and a stationary member on the other part, said L-shaped member having a short arm and a long arm and the stationary member having a straight vertical part and an inclined part, said inclined part receiving the end of the short arm with the corner of said arm resting against the vertical part.



1,381,726. STEERING-WHEEL LOCK. STUART DUNCAN MARR and ROBERT DUCKETT MARR, Balham, London, England. Filed Dec. 10, 1919. Serial No. 343,883. 3 Claims. (Cl. 70—129.)

1. An appliance for locking the steering wheels of motor vehicles comprising a casing associated with the steering column of the vehicle, a locking member movably mounted within the casing and adapted to engage the steering wheel, means for locking the movable member when it is in engagement with the steering wheel, a door pivoted to said casing and adapted when in closed position to conceal said locking member and locking means, said door having means acting when it is being opened to release the locking member from engagement with the steering wheel, and means for locking the door in closed position.

1,381,727. MOTION-PICTURE APPARATUS. ALBERT M. MAYLE, Toledo, Ohio. Filed May 14, 1919. Serial No. 296,987. 21 Claims. (Cl. 88—18.8.)

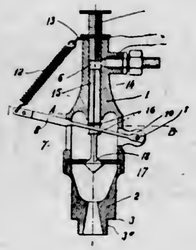


1. In a motion picture apparatus including a projecting lens, a light, a condenser between the light and lens, a disk record holder for positioning a record to receive light rays from the condenser, and a shutter to intercept rays from the light, a transmission mechanism peripherally engaging the record holder, embodying an actuator for progressively varying the angular velocity of the holder, and a driver for peripherally engaging the actuator.

1,381,728. ABRASIVE COMPOSITION. JOSEPH A. MENARD, Seattle, Wash. Filed Apr. 29, 1920. Serial No. 377,558. 4 Claims. (Cl. 51—280.)

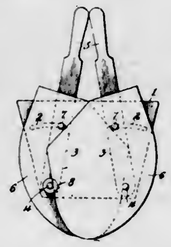
1. A composition of matter comprising in substantially the proportions stated, potassium, lead, sodium, an abrasive, and a suitable vehicle, such composition possessing initially, cutting or abrading properties, but convertible through a rubbing action between opposed parts movable relatively one to the other, into a lubricating mixture.

1,381,729. FIRE-PLUG. THOMAS H. MEUSHAW and CONRAD J. DIEZ, Baltimore, Md. Filed Aug. 13, 1920. Serial No. 403,425. 2 Claims. (Cl. 137—13.)



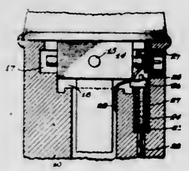
1. A cap attachment for hydrants having an open bottom and adapted to be secured to a hydrant, a valve controlling the flow of water to the cap and a valved outlet from the cap, substantially as described.

1,381,730. ATOMIZING DEVICE FOR INTERNAL-COMBUSTION ENGINES. JULES MAURICE MEYER, Paris, France. Filed Jan. 12, 1920. Serial No. 351,067. 2 Claims. (Cl. 261—51.)



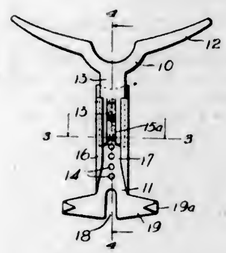
1. A device of the class described comprising a casing adapted to be connected to the suction pipe of an internal combustion engine, said casing having a water inlet, a bore communicating therewith, and a valve cage having air openings formed therein, a feeding device in said casing having a stem located in said bore, said stem being provided with tapered grooves and a valve head connected to said stem for controlling communication between said valve cage and the suction pipe, and means for moving

said valve head and stem to permit the suction of the engine to draw air through said openings and to expose



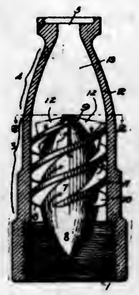
the tapered parts of said grooves to the action of said air whereby the water contained therein may be atomized and mixed with the fuel mixture in the suction pipe.

1,381,731. IRRIGATING DEVICE. CHARLES A. MORRIS, Augusta, Colo. Filed Aug. 28, 1920. Serial No. 406,646. 2 Claims. (Cl. 61—29.)



1. In a device for the purpose set forth, the combination of a body portion, blades secured to and movable with respect to the body member; said blades overlapping each other, slots formed in the body member near the upper end thereof, handles secured to the body member, bolts passing through the handles near their lower ends and also passing through the body member and blades, and bolts secured to the handles and wings and adapted to move in the slots of the body member, whereby the blades may be moved with respect to each other.

1,381,732. SWITCH-LOCK. JOHN M. MORRISON, Plattsburg, N. Y. Filed Nov. 2, 1920. Serial No. 421,216. 6 Claims. (Cl. 246—413.)

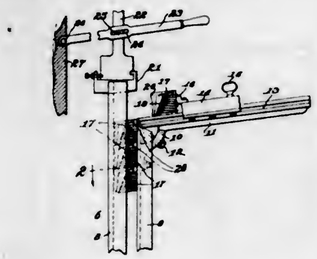


1. A switch stand, including a base formed with a recess, a shaft extending into said recess, a multi-faced block being secured to said shaft and being adapted to engage the side walls of said faces, trunnions secured to and extending outwardly from said block, and means adapted to engage said trunnions for normally preventing a lifting of said block, and consequently a subsequent turning of the same.

1,381,733. SOFT-COLLAR HOLDER. JOHN O'CONNOR, New York, N. Y. Filed Apr. 2, 1921. Serial No. 457,906. 4 Claims. (Cl. 24—87.)

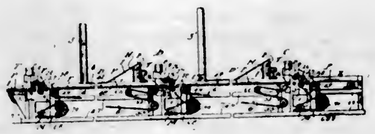
1. A holder for soft collars including an upper section adapted to have supporting engagement with the collar within the latter, a lower section having means at its lower end to engage a collar button, means to adjustably connect said upper and lower connections to vary the total height of the holder, and lateral arms extending in opposite directions on said lower section, said arms having their ends returned laterally inward at the front and formed to penetrate the flaps of the collar.

1,381,734. SPRAY-NOZZLE AND METHOD OF DISTRIBUTING LIQUID. LEE H. PARKER, Boston, and CHARLES H. LANDON, Wollaston, Mass., assignors to Spray Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed June 3, 1920. Serial No. 386,245. 22 Claims. (Cl. 299—120.)



12. A spray nozzle comprising a shell or casing having an inlet and an outlet, a core within said casing having a spiral to which all the liquid of the stream is subjected, means to permit a portion of the liquid to flow inwardly away from the spiral, an obstruction interposed in the path of flow of said inwardly flowing part of the liquid, and a mixing chamber wherein all the parts of the stream are intimately mixed.

1,381,735. HEEL-BLANK SEPARATOR, AND METHOD OF AND APPARATUS FOR USING SAME. DENNIS PARKS, St. Louis, Mo. Filed Dec. 12, 1919. Serial No. 344,288. 6 Claims. (Cl. 12—50.)



1. A unitary separating member for decked heel blanks insertible in a log holder for containing a column of such blanks comprising a plate adapted to have its under side, relative to the position of the separating member in the

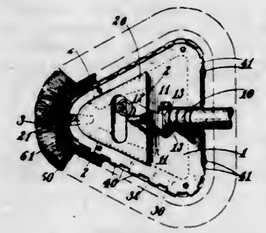
holder, rest upon the top of the heel-blank and its upper side support the bottom of another heel-blank, and mem-

bers depending from the plate at opposite sides of one end thereof and having inner faces for engaging the rounded portion of the heel-blank.

1,381,736. PROCESS FOR ENAMELING PLATES AND THE LIKE. ROBERT H. PRICHARD, Los Angeles, Calif. Filed Jan. 9, 1920. Serial No. 352,228. 4 Claims. (Cl. 91—70.)

2. The herein described process for enameling plates and the like, which consists in alternately applying enamel and passing the sheets flatwise through drying zones in which the sheets are exposed to a forced draft of heated air, and finally discharging them for further treatment.

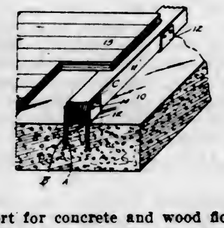
1,381,737. PROCESS FOR PRODUCING LINOLEUM AND PRODUCT THEREOF. GEORGE W. PRIEST, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Original application filed Aug. 8, 1917, Serial No. 185,016. Divided and this application filed Sept. 25, 1918. Serial No. 255,588. 10 Claims. (Cl. 106—7.)



1. The process which comprises mixing together an oxidized oil and a polymerized product of the coumarone or indene group of compounds at a temperature not above 100° C.

1,381,738. LINOLEUM COMPOSITION AND PROCESS OF MAKING SAME. GEORGE W. PRIEST, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Original application filed Aug. 8, 1917, Serial No. 185,015. Divided and this application filed Sept 25, 1918. Serial No. 255,613. 10 Claims. (Cl. 106—7.)

1. The process which comprises mixing together an oil and a polymerized product of the coumarone or indene group of compounds at a temperature not above 100° C.



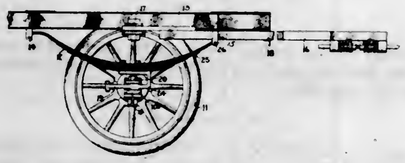
1,381,739. MOP. ARTHUR EDWARD PRENTIS, Kent, England. Filed Nov. 13, 1919. Serial No. 337,668. 15 Claims. (Cl. 15—51.)

1. A mop of the type described, comprising in combination a mop-headplate, a detachable closed fluid container separable from and carried by the headplate, a perforated fluid-distributing conduit also carried by the headplate, means to convey fluid from the container to the conduit, and a mop-fabric engaging said conduit to receive dressing fluid directly therefrom, the container being so disposed

relatively to the conduit as to enable the fluid to flow to the latter by gravity when the mop is in use, substantially as described.

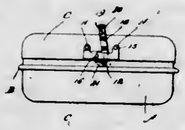
1,381,740. CONCRETE AND WOOD FLOOR CONSTRUCTION DEVICE. CLYDE W. PRICKETT, Winterset, Iowa. Filed Nov. 1, 1920. Serial No. 421,020. 3 Claims. (Cl. 72—101.)

1. A support for concrete and wood floor construction, comprising a single piece of material bent to form a central member, downwardly extending parts at the ends thereof, the ends of the downwardly extending parts being re-bent upwardly and projecting upwardly above said central members, and adapted to receive a sleeper between them.



1,381,741. WIRE CONNECTION. GIOVANNI QUAGLIA and ARRIGO CAPELLO, Turin, Italy, assignors to Ch. Henri E. Wetzels, Paris, France. Filed Sept. 8, 1917. Serial No. 190,402. 4 Claims. (Cl. 24—126.)

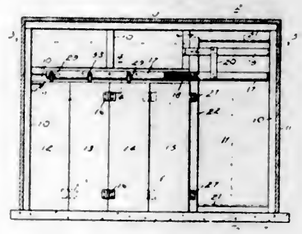
3. In combination, a wire-like rod having its end portion bent upon itself and having the portion between the bend and the end lying for a substantial distance upon the unbent portion adjacent the bend, said portion between the end and the bend being reduced in thickness to form a wedge-like inclination inclining toward the end of the



rod; and a housing to receive the rod and provided with an aperture through which the rod extends, said aperture tapering to conform to the inclination of the wedge-like portion of the rod between the end and the bend whereby the bent portion of the rod fits snugly within the aperture and in close contact with the internal surface of the aperture, a portion of the wall of the aperture being disposed parallel with the axis of the unbent portion of the wire.

1,381,742. TRAILER-STEERING DEVICE. HENRY J. RALSTON, San Francisco, Calif. Filed Apr. 14, 1920. Serial No. 373,887. 2 Claims. (Cl. 280—33.5.)

1. In a vehicle, an axle, a frame carried by the axle, semi-elliptical springs on the axle supporting the frame, steering wheels on the axle, a draw-bar having a fixed pivotal connection with the frame, a steering lever having a fixed pivotal connection with the axle, and a connection between the steering lever and draw-bar comprising a leaf spring having points of connection in line with those of the supporting springs and whose elongating movement under compression is coextensive with that of the supporting springs.

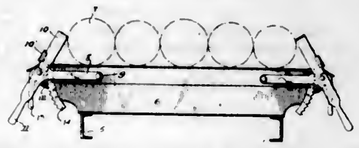


1,381,743. POLISH-BOX OPENER. ZARAGOZA GONSALEZ RAMON, Amarillo, Tex. Filed Nov. 1, 1920. Serial No. 421,017. 1 Claim. (Cl. 220—43.)

A device of the character described comprising in combination, a box body formed with a circumferential bead, a cover telescopically engaged upon the body, said cover being formed at one side with spaced tongues connected by a web and the web being separated from the body of the cover by a slot, said tongues and web being bent to lie alongside the flange of the cover, a third tongue formed on the web and bent into spaced relation thereto to define a bearing, and a lever pivoted between said last named tongue and the web and having a cam head operating through said slot and engageable with said bead, the extremities of said first named tongues being provided with holes and said ends being soldered onto the body of the cover, the holes permitting passage of the solder.

1,381,744. COLLAPSIBLE DOOR. LEO A. RIGGS, Audubon, Iowa. Filed July 29, 1920. Serial No. 399,679. 5 Claims. (Cl. 20—20.)

1. A collapsible door comprising a plurality of door sections hinged together, a support adjacent to one edge of said door sections, said support being designed to slide longitudinally, the door section adjacent to said support being hinged thereto, a track device for supporting the remainder of the door sections, the parts being so arranged that movement of the door sections will cause them and the support to slide longitudinally and then

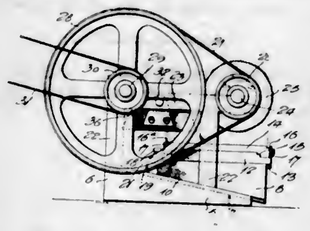


cause the door sections to collapse one against the other so that the entire doorway may be clear, and means for yieldingly holding said door sections in their collapsible position.

1,381,745. POWER-TRANSMITTING MECHANISM. WILLIAM ESSINGTON ROBB, Oil City, Pa. Filed June 8, 1920. Serial No. 387,355. 4 Claims. (Cl. 74—1.)

3. A power-transmitting device comprising an eccentric, having a rim and a web portion, a power-transmitting roller engaging a face of the rim below the web portion, an annular groove in the upper face of the rim, a plurality of passages from said groove to points in the web under which the roller passes, and a second series of passages connecting the first-named passages with the peripheral face of the rim.

1,381,746. STAKE. GEORGE BRYANT ROBERTSON, Keene, N. H. Filed Dec. 14, 1920. Serial No. 430,741. 3 Claims. (Cl. 280—144.)

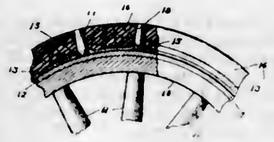


1. A stake including a pair of arms adapted to have their outer ends pivotally attached to a supporting element, a U shaped member secured to the outer ends of each of said arms and having one of its arms extending beyond the same to provide a handle, and means secured to said U shaped portion and coöperating with said supporting element to retain said arms in an angular position.

1,381,747. KEY-DUPLICATING MACHINE. SILAS O. ROREM, Sioux City, Iowa. Filed Apr. 9, 1920. Serial No. 372,727. 7 Claims. (Cl. 90—13.2.)

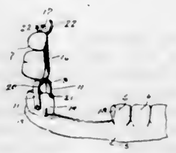
1. In a key duplicating machine, a base provided with inclined trackways, a carriage movable in the inclined trackways, a plate longitudinally movable upon the carriage, means for retaining a key and key blank in parallel spaced relation, said means being capable of adjustment transversely of the plate, a rotary cutter supported above

the plate, a gage blade arranged in advance of the cutter, the carriage being adapted to be moved up the inclined trackways until the gage blade engages the bottom wall of



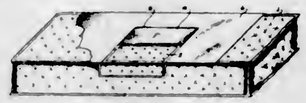
one of the notches in the pattern key, whereupon advancing the horizontal and longitudinally movable plate the blank will be cut to the same depth as the depth of the notches in the pattern key.

1,381,748. MANUFACTURE OF AGGLOMERATES OF VARIOUS MATERIALS AND THEIR UTILIZATION. THOMAS ROUSE, Stamford Hill, England. Filed Sept. 12, 1919. Serial No. 323,323. 10 Claims. (Cl. 204—49.)



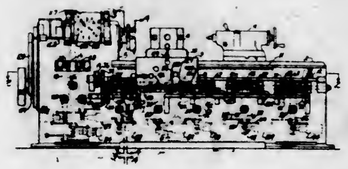
1. A method of agglomerating material, which comprises mixing it with ferro-boro-silicate, subjecting the mixture to the action of steam and subsequently subjecting the steam-treated mass to heat treatment.

1,381,749. ANTISKID-TIRE. CHARLES P. SALGEE, Philadelphia, Pa. Filed Dec. 18, 1920. Serial No. 431,621. 3 Claims. (Cl. 152—6.)



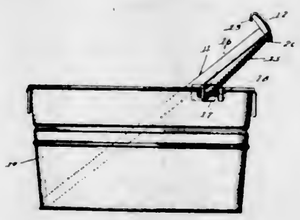
1. A tire for vehicle wheels comprising an annular ring adapted for attachment on a wheel felly and having outwardly flanged openings therein, a resilient tire for fitment on said annular ring and having radial passages therethrough in register with the aforesaid flanged openings, and plugs of a material having a higher coefficient of friction fitted into said registering openings and passages whereby the annular ring and resilient tire are firmly anchored together.

1,381,750. DENTAL DEVICE. ORIN C. SAMPHERE, West Allis, Wis. Filed May 13, 1920. Serial No. 381,060. 6 Claims. (Cl. 32—12.)



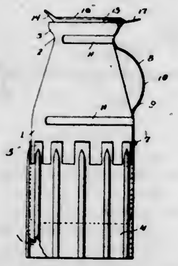
1. A dental device for attaching a movable tooth to a fixed tooth consisting of a means forming a pivotal and a swivel connection between the two teeth.

1,381,751. MATTRESS. ANNA SCANLAN, New York, N. Y. Filed May 12, 1920. Serial No. 380,755. 1 Claim. (Cl. 5—13.)



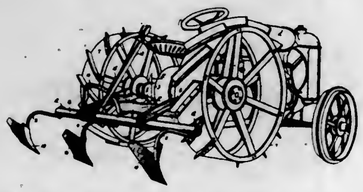
In combination with a mattress having a recess, said recess being at said mattress's transverse median and extending to substantially equal distances on each side thereof, and extending transversely from one side of said mattress to a point beyond the longitudinal median and said recess having a depth substantially one-half the depth of said mattress and having perpendicular walls, a plurality of closures for said recess, one of said closures being covered with an impervious medium and an impervious medium adapted to fit into said recess and to cover substantially the whole of said mattress.

1,381,752. AUTOMATIC LATHE. EMANUEL SCHEYER, New York, N. Y. Filed June 7, 1919. Serial No. 302,504. 26 Claims. (Cl. 29—42.)



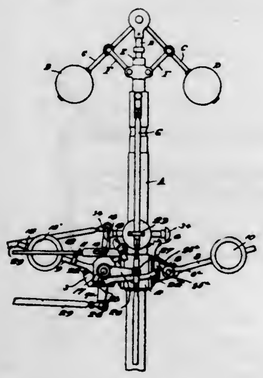
1. In a machine of the character described, the combination with a machine bed and a tool-carrier mounted thereon, of mechanism for causing the motion of the tool-carrier in reversible directions, a plurality of stops, a record provided with suitable means automatically to effect the desired control of said mechanism and the desired operation of said stops, said stops being suitably constructed to arrest the motion of the tool-carrier when called for and as selected by the record.

1,381,753. WASHBOARD-ANCHOR. FRANK JOSEPH SCHLAGER, Burlington, Iowa. Filed July 22, 1919. Serial No. 312,643. 1 Claim. (Cl. 68—29.)



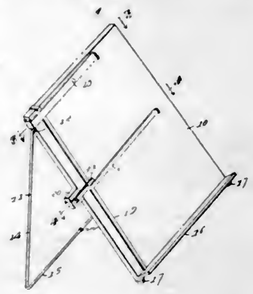
In combination, a transversely disposed bar, fastening means carried by the opposite ends of the bar for securing the latter to a fixed support, a pair of divergently disposed springs associated with the bar along one of its longitudinal edges, a plate carried by the opposite ends of said springs, and said plate being curved to define a hook at one of its longitudinal edges.

1,381,754. MILK-BOTTLE ATTACHMENT. ARTHUR R. SCHRADER, Chicago, Ill. Filed Dec. 27, 1919. Serial No. 347,653. 3 Claims. (Cl. 215—1.)



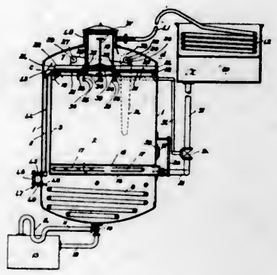
1. A milk bottle attachment comprising a heating receptacle encircling the bottom portion of the bottle, a clamp hinged to the receptacle, and a lid hinged to the clamp.

1,381,755. TRACTOR ATTACHMENT. JOHN FREDERICK SCHUALE, Cashmere, Wash. Filed June 29, 1920. Serial No. 392,697. 2 Claims. (Cl. 97—30.)



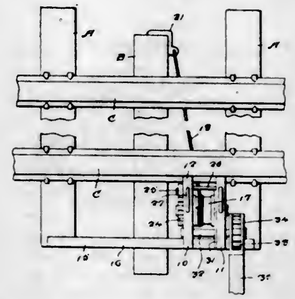
1. The combination with a wheeled supporting frame including a housing around the rear axle and a transverse frame bar located behind the rear axle, of a pair of longitudinal frame bars connected to the axle housing and supported on said transverse frame bar, depending semicircular hangers secured to the free ends of the longitudinal frame bars, a shaft mounted in the hangers, plow fixedly secured to the shaft, and means for rotating the shaft.

1,381,756. AUTOMATIC SAFETY-STOP FOR STEAM-ENGINES. GUSTAV J. SELK, Bend, Oreg. Filed Jan. 24, 1918. Serial No. 213,518. 5 Claims. (Cl. 121—47.)



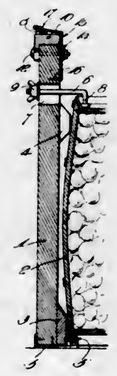
1. In combination with the speed governing means of an engine, weighted pivotal means supported on the engine, trip means engaged with the weighted means and operable upon movement of the speed governor's stem for actuating the same, cut-off valve operating means, and means connected to said cut-off valve operating means adapted to be actuated by the pivotal weighted members upon their release for moving the cut-off valve to closed position.

1,381,757. NOTEBOOK-HOLDER. JAMES SHEEAN, Camden, N. J. Filed Feb. 5, 1920. Serial No. 356,518. 3 Claims. (Cl. 120—28.)



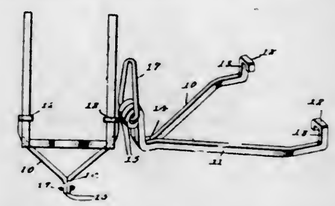
3. A copy holder having a base and means for supporting the same in a substantially upright position, front and rear guide ribs arranged parallel with one side edge of the base, a carrier block provided with yielding front and rear arms for bearing contact respectively with said ribs, the rear arm having a terminal hook for engagement with the rear rib to prevent accidental displacement of the block, and a yielding line indicating arm carried by the said block and extending transversely of the surface of the base.

1,381,758. APPARATUS FOR EXTRACTING OILS, FATS, GREASE, WAX, INDIA-RUBBER, SULFUR, AND OTHER SUBSTANCES SOLUBLE IN ORGANIC SOLVENTS FROM MATERIALS CONTAINING THE SAME. LOUIS JOHN SIMON and JOHN WILLIAM HINCHLEY, London, England, assignors of one-third to Standar Chemical Engineering Company, Limited, London, England. Filed Apr. 10, 1919. Serial No. 289,075. 5 Claims. (Cl. 87—6.)



1. An apparatus for extracting oil, fat, grease, wax, india rubber, sulfur and other substances soluble in organic solvents from material containing or yielding the same, comprising a vessel having an extractor and a distiller positioned therein, said extractor being spaced from the top of the vessel, a charging tube extending through said top space, mechanism for sealing said tube, a discharge door in the lower portion of said extractor, a strainer positioned around said tube, a condenser tube communicating with said top space, means affording communication between said distiller and top space so that the overflow from the extractor may pass to said distiller, a lid adapted to cover said strainer and seal the extractor from the distiller without closing said means of communication, whereby vapors from the distiller may pass to the top space and condenser tube even though the lid is in closed position.

1,381,759. RAILROAD-TIE RENEWER. JESSE R. SMITH, Benton, Ill. Filed July 12, 1920. Serial No. 395,660. 2 Claims. (Cl. 254—43.)

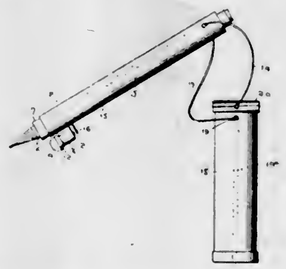


1. A tie renewer comprising spaced parallel side members, a supporting bar secured to the members and projecting from corresponding ends thereof, a winch journaled between the said parallel members, one of said members being recessed, a gear carried by the axis of said winch and arranged within said recess, a shaft journaled between the side members at the rear of said winch, a second gear carried by the said shaft and arranged within said recess and meshing with the gear of said winch, a removable plate associated with said side member and covering the said recess and said gears, means for rotating the said shaft whereby said winch is rotated, a cable having one end secured to the winch and adapted to be wound thereabout and unwound therefrom, a guide mounted on the frame for said cable, a hook like element carried by the free end of the cable, and means for preventing retrograde movement of the winch.

1,381,760. BARREL-HOOP-REPAIR DEVICE. GUY GARFIELD STAINES, Albion, N. Y. Filed Aug. 7, 1920. Serial No. 401,975. 4 Claims. (Cl. 144—288.)

1. A repair device for a barrel hoop comprising a standard, clamping means at the lower end of the standard for engaging the lower portion of a barrel, adjustable clamping means carried by the standard for engaging the upper portion of a barrel, a head for the standard having a longitudinally curved upper face and constituting an anvil, and means for engaging overlapping end portions of a hoop and holding the same upon the curved upper face of the anvil.

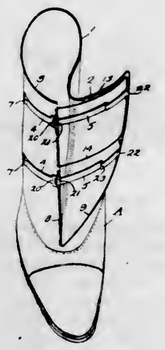
1,381,761. SUPPORT. GEORGE EDWARDS STANSBURY and RAYMOND HARPER, Catlin, Ill., assignors of one-half to H. C. Shockley, Danville, Ill. Filed Feb. 24, 1920. Serial No. 360,559. 2 Claims. (Cl. 294—82.)



1. Means for elevating the rear end of a motor vehicle comprising two independently movable members divergently disposed and having their adjacent terminals in contacting engagement, a link associated with said terminals, said members being arranged to engage the under side of the chassis of the car adjacent the corners thereof, and hook like portions formed by the other ends of said members and adapted to overlie the upper portion of the opposed side members of the chassis as described.

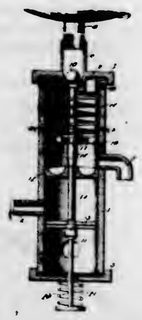
1,381,762. PICTURE-FRAME. ISIDORE STARR, New York, N. Y. Filed Nov. 27, 1920. Serial No. 426,699. 1 Claim. (Cl. 40—152.)

A rectangular frame, a pair of transparent plates mounted in the frame and adapted to support between them an opaque sheet having printed matter on both of its faces, alined eyes projecting laterally from the sides of the frame and a flexible device having its ends secured to the eyes, whereby when said flexible device is suspended from a support, said frame may be rotated upon said flexible device to expose either face without removing the flexible device from its support.



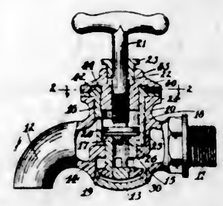
1,381,763. ILLUMINATED PENCIL. FERDINAND STRIDINGER and RUDOLPH MILLER, St. Michael, Pa. Filed Dec. 11, 1919. Serial No. 344,011. 4 Claims. (Cl. 240—2.)

2. A device of the character described comprising a holder for writing instruments, electric lamp supporting



means arranged laterally thereof and a resilient laterally projecting circuit closing member carried by the holder normally disposed in spaced relation to and movable directly against the center electrode of a lamp mounted in said supporting means and arranged adjacent and engageable with the center electrode of the lamp.

1,381,764. SHOE-FASTENER. TEDDY L. TETIRICK and PHILIP J. MUELLER, Joplin, Mo. Filed Oct. 4, 1920. Serial No. 414,623. 2 Claims. (Cl. 24—71.)



2. The combination with a shoe having a flap adapted to overlap the body portion when in closed position, of fastening means comprising a member secured to the body portion of the shoe, a pivoted member connected to said first member and connected to the edge of said flap, and a wire reinforcing member having one arm extending along the edge of said flap, and a second arm secured to the body portion of the shoe, said second arm forming the pivot for said pivoted member.

1,381,765. VALVE. GEORGE W. THOMPSON, Cheboygan, Mich. Filed Jan. 3, 1920. Serial No. 349,193. 1 Claim. (Cl. 137—139.)

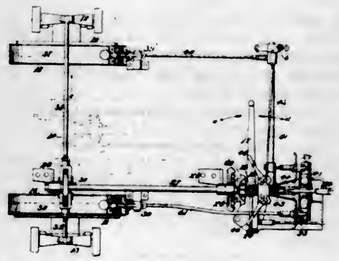
In combination, a valve casing adapted to be interposed in the fuel line and the oil line of any gas or oil burning motor and having a partition dividing the casing into a fuel compartment and an oil compartment, the fuel compartment having an inlet at the top and an outlet near the partition, and the oil compartment having inlet and outlet ports spaced apart vertically, a plunger movable in the oil compartment and having a stem extending through the partition into the inlet port of the fuel compartment, a ball seating upon and closing the fuel inlet adapted to be unseated by the engagement of the plunger stem therewith when the plunger is above the oil outlet and the inlet and the outlet of the oil compartment are in communication, and a spring normally pressing the plunger downwardly.

1,381,766. TAP FOR CONTROLLING THE SUPPLY OF FLUIDS. EDWIN CHARLES TONKIN, Stockwell, London, and HENRY THOMAS COLLINS, Hampstead, London, England. Filed Nov. 13, 1919. Serial No. 337,711. 19 Claims. (Cl. 277—35.)

7. In a tap for controlling the supply of fluids, the combination with a main and an auxiliary valve of the screw-down type, of a seating member movable along the path of travel of the main valve, an internal flange in the body of the tap on one side of which the seating member normally rests, the other side of said flange comprising a seating for the auxiliary valve, a seating in the seating member for the main valve, an extension from such main valve seating carrying the auxiliary valve which valve is normally held off its seat, a main valve securing and seating operating member and means to lock said securing and operating member and said seating member together to permit of operation of the auxiliary valve, said locking means comprising contacting faces on both of said last named members, which faces lie approximately parallel to the direction of which the seating member moves.

18. In a tap for controlling the supply of fluids, the combination with a main and an auxiliary valve, of a single securing and operating member which secures the main valve in place and which operates the auxiliary valve to bring it into and out of closing position, and means to lock together the securing and operating member and the auxiliary valve, said locking means comprising a locking pin operatively carried by one of said members to be locked together and a shoulder in a recess in the other of said members, into which recess the pin projects and with which shoulder the pin contacts to lock together the said parts and permit the auxiliary valve to be operated, the relative dimensions of the pin and recess being such as to permit lost motion between the securing and operating member and the auxiliary valve whereby the former can be adjusted within limits to secure the main valve in place without operating the auxiliary valve, substantially as described.

1,381,767. STEAM-SEPARATOR. HAYDEN H. TRACY, San Francisco, Calif. Filed Oct. 2, 1919. Serial No. 327,910. 2 Claims. (Cl. 183—75.)



1. A steam separator including a housing, a series of interspaced baffling plates interposed from end to end within the housing and disposed in two parallel groups

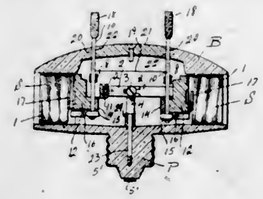
interspaced to form a central steam passage, a discharge passage for steam connecting with said central passage, angularly disposed bottom plates forming a concave collecting chamber for water and scum and a connecting pipe and trap, and guard plates on each side of the housing disposed on converging inclines secured to the top and bottom plates and provided with end plates to prevent the admission of foam except to the upper part of the baffle plates.

1,381,768. [WITHDRAWN.]

1,381,769. TRACTION-ENGINE CONTROL. WILLIAM TURNBULL, Peoria, Ill., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Aug. 12, 1918. Serial No. 249,482. 2 Claims. (Cl. 180—17.)

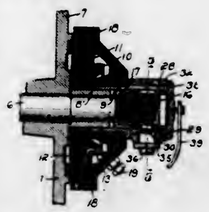
1. In a vehicle, the combination with a pair of steering clutches at each side thereof, an inwardly extending shift-rod for each clutch, of a steering post located forwardly of the clutches, and a longitudinally extending rock shaft operatively connected with the steering post and having one way connections with the shift-rods.

1,381,770. TERMINAL GROUND-CLAMP. WHEELER H. VIBBER, New London, Conn., assignor of one-half to The Gillette-Vibber Co., New London, Conn., a Corporation. Filed Aug. 9, 1920. Serial No. 402,262. 2 Claims. (Cl. 173—273.)



2. A terminal or ground clamp for electrical conductors consisting of a flexible metal strip formed at one end with a plurality of perforations and bent at its other end to form an upstanding loop the legs of which are perforated and the outer or free leg of which is bent outwardly near the bow of the loop, in combination with a screw passing through the said perforations in the legs of the loop and through one of the perforations in the other end of the strip, and a nut positioned upon the screw to engage with the outer face of said other end of the strip.

1,381,771. METHOD OF TREATING IRON AND STEEL. FELIX VISINTAINER, Glacier, Wash., assignor of one-fourth to William Lemm, Bellingham, Wash. Filed Sept. 18, 1920. Serial No. 411,162. 3 Claims. (Cl. 75—49.)



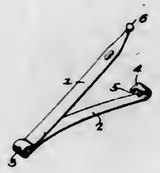
1. In the treatment of iron and steel, the process of coating the metal with a mineralized clay substantially comprising silica 61.12%, ferric oxid 7.92%, alumina 16.06%, calcium oxid 6.39%, magnesium 3.46%, sulfur 0.86%, alkali 0.53%, and moisture 3.66%, mixed with water to the consistency of paste, raising it to the required temperature for the purpose desired and shaping it into the desired form.

1,381,772. ELECTRICAL CONNECTOR. FLAKE M. WAKEFIELD, Anniston, Ala. Filed May 1, 1920. Serial No. 378,193. 3 Claims. (Cl. 173—337.)

1. An electrical connector comprising a tubular body having an outstanding plug substantially midway thereof, said plug being provided with a pair of contact members, sockets arranged within the opposite end portions of the bore of the tubular member, each of said sockets being provided with a pair of contact members, arms in electrical connection with the contact members of the plug and extending inwardly of the bore of the tubular member, an electrical connection between a contact member of each of the sockets and one of the arms, a rotatable member coacting with each of the sockets and in electrical connection with the second arm, each of said rotatable members being provided with a contact member for engagement with the second contact member of the adjacent socket.

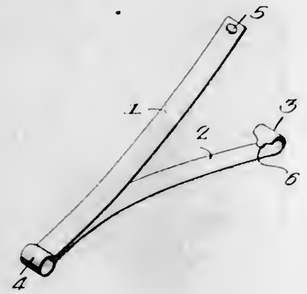
1,381,773. IGNITION APPARATUS. HAROLD D. WATERHOUSE, Quincy, Mass., assignor, by mesne assignments, to Walter S. Crane, Joshua Crane, and Frank V. Stone, trustees. Filed Jan. 14, 1918. Serial No. 211,737. 10 Claims. (Cl. 200—19.)

1. In an internal combustion engine having a valve shaft, a nut, distributing means including a sleeve secured to the end of the valve shaft and counterbored interiorly to receive said nut engaging the threads on the end of said valve shaft, a second sleeve surrounding said first-named sleeve and removable therefrom over said nut while the latter remains in threaded relation to the shaft.



1,381,774. SYRINGE. SAMUEL E. WEINER, Atlantic City, N. J. Filed July 3, 1920. Serial No. 393,894. 2 Claims. (Cl. 128—234.)

1. A syringe comprising a barrel having a tapered apertured end, a medicament containing sack disposed in said

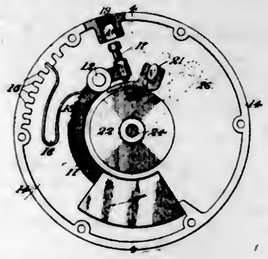


end of the barrel and a plunger in said barrel and movable therein to draw a fluid through the aperture of the barrel and through the sack and its contents to the interior of the barrel and subsequently eject the resulting fluid solution upon the reverse movement of the plunger in the barrel.

1,381,775. HAIR-CURLER. AUGUSTUS A. WEST, Philadelphia, Pa., assignor to David L. Short, Philadelphia, Pa. Filed May 25, 1920. Serial No. 384,030. 2 Claims. (Cl. 132—41.)

1. A hair curler comprising two resilient arms joined together at one end, the outer end of one of said arms being turned inwardly and backwardly to form a hook under which the outer end of the said other arm may be inserted, the end-edge of said hooked arm being notched for the reception of said other arm, and an enlargement at the outer end of said last named arm, substantially as and for the purpose set forth.

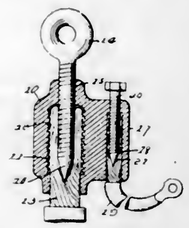
1,381,776. HAIR-CURLER. AUGUSTUS A. WEST, Philadelphia, Pa., assignor to David L. Short, Philadelphia, Pa. Filed May 27, 1920. Serial No. 384,613. 2 Claims. (Cl. 132—41.)



1. A hair curler comprising two resilient arms joined together at one end thereof, the outer end of one of said arms being turned inwardly and backwardly to form a hook under which the outer end of said other arm may be inserted, and the outer end of said last-mentioned arm having a hole therein for the reception of the turned-over end of said first-named arm, substantially as and for the purpose set forth.

1,381,777. BASE-EXCHANGE COMPOUND AND PROCESS OF MAKING THE SAME. HAROLD JOSEPH WHEATON, near Warrington, England, assignor to Joseph Crosfield and Sons, Limited, Warrington, England. Filed Nov. 6, 1919. Serial No. 336,060. 4 Claims. (Cl. 23—13.)

1. A process which comprises partially neutralizing with mineral acid a solution of silicate of soda, drying the resultant gelatinous mass and washing the dried mass to free it of any excess of soluble salts, and to render it suitable for use as a water purifier and softener.

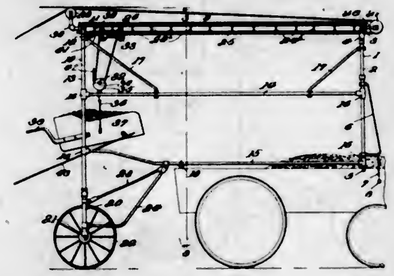


1,381,778. SPEED-GOVERNOR. ELMER E. WICKERSHAM, Sunnyvale, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Mar. 20, 1917. Serial No. 155,970. 5 Claims. (Cl. 264—13.)

1. A speed governor, comprising a rotatable casing, a centrifugal lever pivoted thereon, a friction shoe carried by the casing and controlled by said lever, and a disk journaled in said casing and engageable by the shoe to receive motion therefrom.

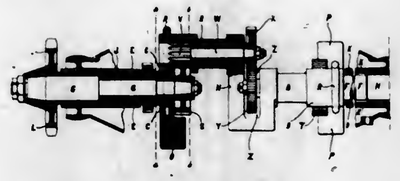
5. A speed governor, comprising a rotatable casing, a centrifugal lever carried in said casing, a shoe carried by said casing, a disk journaled centrally in said casing and adapted to be engaged by the shoe to receive motion therefrom, and a set-screw on the inwardly moving end of said lever to engage with the shoe, said casing being provided with an opening to permit the adjustment of the set-screw from without.

1,381,779. DEAD-END CLAMP FOR CABLES. THOMAS M. WILLIAMS, Gary, Ind. Filed Sept. 25, 1919. Serial No. 326,264. 1 Claim. (Cl. 24—123.)



A dead end clamp for cables consisting of a shell formed with a socket opening at one end and provided on the inner wall with serrations defining peripheral teeth whose free edges are rounded and whose upper faces lie in planes at right angles to the axis of the socket, the lower faces of the teeth being inclined to lie at acute angles with said axis, whereby a cable end inserted in the socket may have the strands thereof brought into contact with the edge of the teeth and caused to bulge over the flat top faces of the same, and a bolt threadingly engaged with the shell and axially alined with the socket which it enters from the closed end, the belt being formed with a pointed extremity for penetration between the strands of the cable to effect spreading of the latter for engagement with the said teeth.

1,381,780. LOADING APPARATUS. EDWARD B. ALLEN, Alexandria, La. Filed Oct. 7, 1918. Serial No. 257,246. 2 Claims. (Cl. 214—86.)



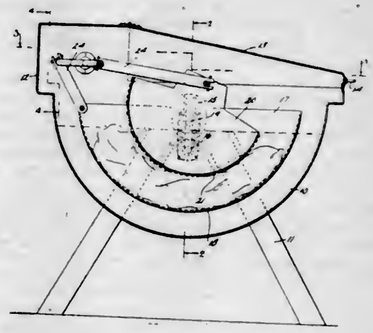
1. The combination with a vehicle body, of a loading apparatus including an inverted U-shaped rear frame having side bars provided at their lower ends with forks, wheels mounted in said forks and supporting the rear frame, an inverted U-shaped front frame having side bars provided at their lower ends with saddles adapted to rest

on the side bars of the vehicle body, substantially horizontal bars having their ends rigidly connected to said frames and spacing the same apart, means detachably securing the side bars of the front frame to the vehicle

body, a gathering device adapted to gather the material to be loaded into said body, and means supported by said frames and attached to said gathering device for moving said gathering device toward the vehicle body.

1,381,781. COMBINED CRANK-SHAFT AND DIFFERENTIAL GEAR. STEPHEN EVANS ALLEY and ARTHUR THOMSON, Shrewsbury, England. Filed Sept. 15, 1920. Serial No. 410,528. 2 Claims. (Cl. 74—99.)

1. A combined crank-shaft and differential gear having two crank pins at right angles and comprising hollow end-shaft members within which are differential shafts having on their inner ends, and within the crank webs, pinions meshing through gaps in the inner peripheries of the hollow crank pins with pinions formed on shafts lying within the pins and having at their inner ends intermeshing pinions accommodated in a gapped web member connecting the adjacent ends of the two crank pins.



1,381,782. PROCESS OF MAKING SUBSTANTIALLY ANHYDROUS ORGANIC ACIDS. ROLAND L. ANDREAU, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 31, 1919. Serial No. 334,847. 4 Claims. (Cl. 23—24.)

1. The process of making acetic acid which consists in suspending an acetate in a paraffin oil, adding sulfuric acid, and removing the acetic acid formed by the reaction of the acetate and the sulfuric acid.

1,381,783. PROCESS OF MAKING PHOSPHORUS OXYCHLORID. THOMAS LEES BARTLESON, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 21, 1920. Serial No. 418,575. 3 Claims. (Cl. 23—10.)

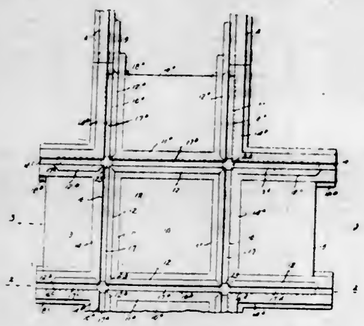
1. The process of producing phosphorus oxychlorid which comprises bringing phosgen into contact with molten metaphosphoric acid.

1,381,784. WASHING-MACHINE. CLINTON E. BEARDSLEY, Rice Lake, Wis. Filed Mar. 31, 1920. Serial No. 370,119. 1 Claim. (Cl. 68—20.)

A washing machine including a tub, strips forming guideways arranged at diametrically opposite points upon the inner face of said tub, a clothes receptacle, a rubber movably mounted within said receptacle, trunnions mounted on the end walls of said receptacle and rubber and resting in said guideway, and means for oscillating said receptacle and rubber.

1,381,785. SECONDARY WINDING FOR INDUCTION-MOTORS. HENRY BEWLAY, Mansfield, Ohio, assignor of one-half to The Ideal Electric & Mfg. Co. a Corporation of Ohio. Filed May 18, 1918. Serial No. 235,231. 1 Claim. (Cl. 172—120.)

A short circuited jointless coil for an induction motor secondary, comprising a one piece U-shaped sheet metal punching wherein the leg parts extend perpendicularly to the base part, and having a continuous slit extending from near the end of one leg part, along the base part, and to a point near the end of the other leg part, substantially as described.

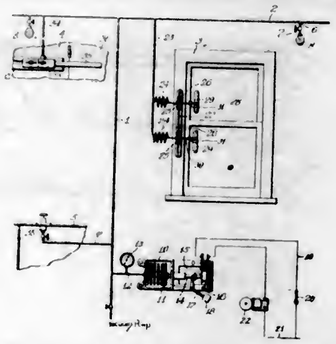


1,381,786. WRENCH. JOE E. BONNETT, Troy, W. Va. Filed Aug. 24, 1920. Serial No. 405,692. 1 Claim. (Cl. 81—170.)

In a wrench of the class described, a hollow shank comprising a body having a fixed jaw at one end and a reduced externally threaded neck at its other end, the bore of said shank body being polygonal in cross sections and that of the neck circular with a shoulder at the junction

of said bore, a stem mounted to slide in said shank the cross section thereof conforming to that of the bore of said shank, said stem being provided with a jaw at one end to coöperate with the jaw on said shank and having a threaded bore closed at its jaw carrying end and opening through its other end, a combined jaw adjusting screw and handle stem having a portion at one end threaded to adjustably engage the bore of said hollow stem and an unthreaded portion mounted to rotate in said neck and equipped with an annular flange positioned to abut the rear end of said neck, a collar encircling said handle stem at the rear of said flange, encompassing said flange and provided with a sleeve having threaded engagement with said neck, and a handle secured to the rear end of said handle stem and connected so that the rotation of the handle will turn the stem and thereby adjust the movable jaw, said adjusting screw and handle shaft being completely housed throughout its entire length as well as the parts coöperating therewith.

1,381,787. RAILWAY-CROSSING. RICHARD EAGER BOWEN, Los Angeles, Calif. Filed June 4, 1920. Serial No. 386,616. 3 Claims. (Cl. 246—457.)



1. A crossing presenting intersecting grooves for the wheel flanges, said crossing comprising a base presenting undercut recesses along one side of each groove, elements in the grooves at the bottom and extending into said recesses, and removable wedge-shaped locking elements for said first-mentioned elements at the opposite sides from said recesses, the grooves at their intersections being of a depth to cause the wheel flanges to travel on the bottom surfaces of the grooves, the adjacent surfaces at the outer sides of the grooves being at elevations to lie below the wheel treads.

1,381,788. MOISTURE-PREVENTING COMPOSITION. WILLIAM H. BRABANT, Sheboygan, Wis. Filed Sept. 25, 1920. Serial No. 412,734. 2 Claims. (Cl. 134—27.)

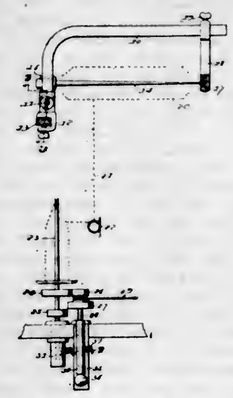
1. A composition of the character described comprising sugar and paraffin combined with tobacco water substantially as herein described.

1,381,789. BELLOWS-ACTUATED SWITCH. CLARENCE A. BRACONIER, Ypsilanti, Mich. Filed Sept. 14, 1918. Serial No. 254,150. 1 Claim. (Cl. 200—81.)

A bellows actuated switch comprising a frame, a switch at one end of said frame having normally open switch members, a bellows in the opposite end of said frame normally retracted by a partial vacuum therein, a plunger slidable in said frame and axially connected to said bellows and adapted to close said switch members when the partial vacuum is destroyed in said bellows, and a bell crank carried by the lower edge of said frame and having one end thereof engaging said plunger intermediate said bellows and said switch and the opposite end thereof provided with a weight below said frame, said weighted bell crank

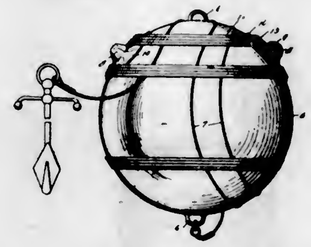
adding impetus to the movement of said plunger by said bellows to prevent vibrations of said bellows from opening said switch.

1,381,790. STOVE. FRANK HUGO BRAND, Elmwood Place, Ohio. Filed Apr. 8, 1918. Serial No. 227,264. 1 Claim. (Cl. 126—90.)



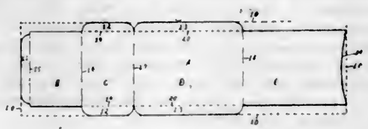
A stove comprising an outer drum, having an inturned flange at its upper end; a base, said base having a flange arranged to engage said drum; air passages in the flanges of said drum and base; an intermediate drum arranged to rest upon said base and to fit snugly in and to extend above the outer drum flange so as to leave a passage between said drums; a third drum fitting snugly inside said intermediate drum; grate bars for the support of fire clay in the bottom of said third drum; a ring for securing the inner ends of said bars; a pipe arranged to fit inside said ring and to extend through said third drum so as to leave a combustion chamber between said pipe and third drum; burners arranged at the bottom of said combustion chamber; a cover arranged to fit over said combustion chamber; a flue in said cover; a hot air pipe fitting snugly in said first pipe and arranged to extend through and above said cover, and an ornamental top, said top being provided with a central passage for said hot air pipe and with openings arranged to serve as outlets for air currents from the passage between the outer and intermediate drums.

1,381,791. AUXILIARY YARN SPOOLER OR WINDER. CLIFTON M. BYRD, Lagrange, Ga. Filed Aug. 22, 1919. Serial No. 319,202. 2 Claims. (Cl. 242—18.)



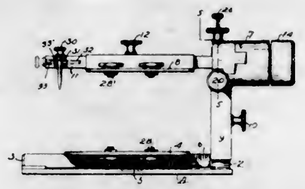
1. A yarn spooling mechanism having a rewinder spindle provided with a plurality of pulleys of different diameters, a driving spindle having pulleys for respective engagement with those of the rewinder spindle, a socket bearing for the driving spindle, a carrier mounted for movement

parallel with the rewinder spindle and having the said socket bearing pivotally mounted thereon, and means for



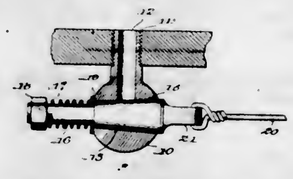
imparting longitudinal and transverse movement to said socket bearing, in combination with feeding means for supporting a tangled cop.

1,381,792. SUBMARINE MINE. THOMAS J. CAHILL, Philadelphia, Pa. Filed Apr. 17, 1920. Serial No. 374,650. 4 Claims. (Cl. 102—3.)



2. The combination with a submarine mine having a horn thereon, of a guard plate located over said horn, means for holding the guard plate in position, and means whereby submersion of the mine automatically releases the guard plate.

1,381,793. DUPLEX ENVELOP. JULIUS S. CAINE, Des Moines, Iowa. Filed Aug. 11, 1919. Serial No. 316,896. 2 Claims. (Cl. 229—72.)



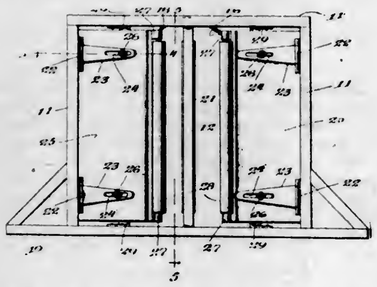
1. In a device of the class described, an envelop formed from a single blank by folding the ends of the blank upon the central portions to thereby form independent compartments, sealing flaps adapted to close the ends of said compartments and a flap formed at one end of said blank adapted to extend past the line upon which said compartments are folded, when one is swung over to position where it is superimposed upon the other.

1,381,794. ANATOMICAL ARTICULATOR. ROBERT EDGAR CAMPBELL, Berkeley, Calif. Filed Jan. 7, 1920. Serial No. 350,032. 7 Claims. (Cl. 32—1.)

1. An anatomical articulator comprising a base member, a post vertically disposed thereon, a head member vertically adjustable on the post, a socket member journaled in the head, an arm carried by said socket member, said arm being laterally and vertically movable about the socket member, screws and adjusting springs for limiting the downward movement of the arm, screws and opposing springs for varying the lateral movement of the arm, and an upper mounting plate carried by the arm.

1,381,795. VALVE. JOHN A. CARSON, Huntington, N. Y. Filed Nov. 15, 1919. Serial No. 338,247. 3 Claims. (Cl. 137—139.)

1. A valve structure as characterized comprising a body having a tapered bore therein and a screw threaded stem extending from said body and having a passage opening to said bore, a tapered plug arranged for reciprocatory movement in said bore and extending from end to end thereof, the plug being movable to permit the flow of a fluid through said passage and said bore, means at one side of the body for holding the plug in said bore and permitting the movement of the plug, and means at the opposite side of said body for moving the plug.

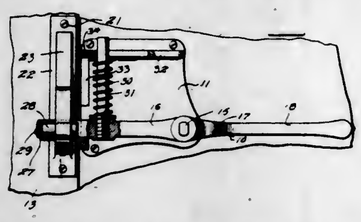


1,381,796. LAMP-SHADE HOLDER. LEONARD HENRY CASSWELL, Maidstone, England. Filed Oct. 24, 1919. Serial No. 333,021. 3 Claims. (Cl. 240—111.)

1. The combination, with a lamp shade, of vertically extended members secured to said shade, a carrier ring

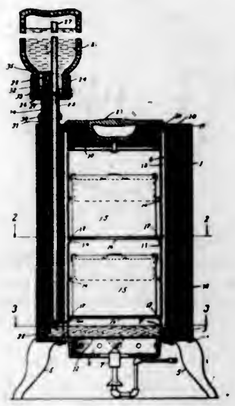
adapted to be secured to a jamp, spring clips adapted to hold said vertically extended members friction-tight, and means including pivotal joints connecting said clips and said carrier ring and adapted to hold said clips friction-tight in a position to which they are adjusted.

1,381,797. STOCK-SEPARATOR. HERMAN D. CASPERS, Sheffield, Iowa. Filed Apr. 1, 1921. Serial No. 457,573. 3 Claims. (Cl. 119—155.)



1. A stock separator comprising a frame, a main gate carried centrally by one side of the frame, movable doors mounted in the frame at opposite sides of the mounting of the main gate, and means for adjusting the doors toward and away from the said mounting of the main gate.

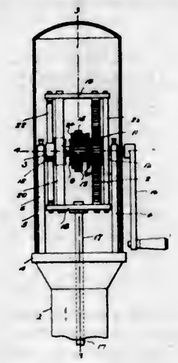
1,381,798. TYPEWRITER. MANUEL CHARLES, Mexico, Mexico. Filed Mar. 2, 1920. Serial No. 362,871. 3 Claims. (Cl. 197—57.)



1. A pocket typewriter comprising a channel shaped frame having a type opening therein and longitudinal guideways in its upper part, a guiding frame longitudinally movable in said guideways, a carrier member adjustable transversely on said guiding frame, rows of type carried by said member, a vertically movable type actuating member for depressing the type through the type opening, an inking ribbon supported by the carrier member and engaging a portion of the actuating member.

1,381,799. REFRIGERATOR-DOOR LATCH. CHARLES R. CHENERY, Buffalo, N. Y. Filed Apr. 1, 1919. Serial No. 286,644. 1 Claim. (Cl. 292—242.)

A refrigerator door latch and opener comprising the combination with a refrigerator door and door frame, of a shaft mounted for rotation in said door, a plate engaged upon each face of said door and forming a bearing for said shaft, a handle formed on the inner end of said shaft and having its main portion offset from the inner face of the door, a second handle mounted on the outer end of said shaft and rigidly connected therewith, said second handle having its main portion offset from the outer face of said door to form a hand grip, a latch carrying extension formed with the second mentioned handle and directed oppositely thereto, said latch carrying extension having a cut out portion adjacent its free end, a roller mounted in said cutout portion, said latch carrying extension having an increased apertured portion inwardly of said roller, a pin threaded in said enlarged apertured portion and extended upwardly, a rib carried by the plate positioned upon the outer face of said door, said pin being extended through an elongated slot of said rib, a spring positioned on said pin between said latch carrying extension and said rib to resiliently retain the latch carrying extension downwardly in a horizontal plane, and a keeper mounted on said door frame and provided with an outwardly extended vertical rib having a downwardly inclined slot formed therein with one wall of the slot separated from the main portion of the rib intermediate the ends of the slot and turned downwardly whereby the roller may ride in said slot to force the door into closed position in said door frame, said roller being adapted to force the door into closed position in said door frame, said roller being adapted to force the door outwardly when raised in the slot of the keeper, said plate and the outer face of the door being provided with a guide for the latch carrying extension.

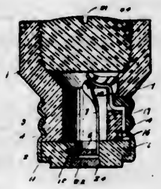


1,381,800. COOKER. CLAUD J. CLEFTON, Owatonna, Minn., assignor, by mesne assignments, of one-half to Guy J. Clefton, Owatonna, Minn. Filed Aug. 11, 1919. Serial No. 316,705. 4 Claims. (Cl. 126—20.)

1. A cooking unit having in combination, a cooking compartment, a heating element to heat water in the compartment, a container to hold a supply of water, a waterway connecting the container and compartment, a vent also connecting the container and compartment, said water-way and vent being so arranged as automatically to prevent the water in the compartment from falling below a predetermined level.

1,381,801. PUMP. CHARLES L. CODDING, Sr., Perth, N. Y. Filed Aug. 3, 1920. Serial No. 400,952. 3 Claims. (Cl. 103—62.)

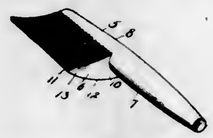
1. The combination in a pump, of supporting means, a reciprocatory piston rod, rotary actuating means mounted in the supporting means, and a driving connection between said rotary actuating means and the piston rod for reciprocating the latter by rotation of the former; the said driving connection comprising rack bars movable with the piston rod, rotary gears intermeshed with said rack bars and loose on the rotary actuating means and having inner ratchet faces, an endwise movable spur



gear keyed to the rotary actuating means and having ratchet disks at its ends and also having spaced plates, and a spur gear of a less thickness than the width of the space between said plates, intermeshed with the first-named spur gear and having cam shoes at its sides to engage said plates.

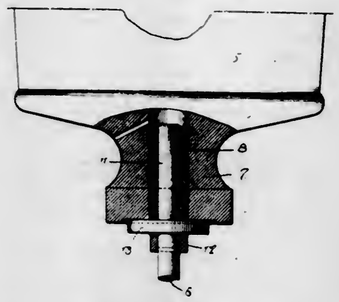
1,381,802. METHOD FOR RECOVERING VANADIUM. LEONARD S. COPELIN, Millers, Nev. Filed May 28, 1920. Serial No. 384,922. 7 Claims. (Cl. 23—13.)

1. The method of recovering vanadium from ores and compounds containing the same which consists in the treatment of the ore with sodium sulfid solution in the presence of heat.



1,381,803. FUSE-PLUG. THOMAS F. COTE, Winnipeg, Manitoba, Canada. Filed May 28, 1919. Serial No. 300,268. 2 Claims. (Cl. 200—130.)

1. A fuse plug comprising a body having each end open, a closure plug closing one end of the body, a disk engaging the other end of the body and having a centrally arranged opening and an annular shoulder, a ferrule secured to the body and engaging said shoulder, a gage disk in said opening and having a portion thereof spaced from the wall of said opening to provide a fuse receiving slot, a fuse extending through the slot and into the body, means connecting the fuse to the ferrule, and a plug secured in the opening and forcing one end of the fuse against the gage disk.

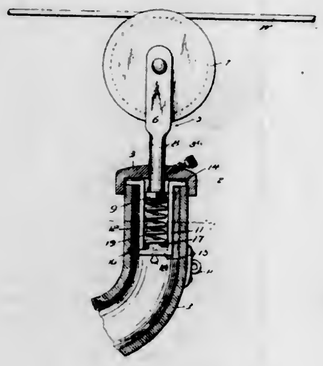


1,381,804. COMB. SAMUEL T. CRAWFORD, Washington, D. C. Filed Feb. 1, 1919. Serial No. 274,460. Renewed Apr. 13, 1921. Serial No. 461,151. 1 Claim. (Cl. 132—18.)

A comb of the class specified having a back extending from a handle, the back tapering from the handle portion to the front end of the comb and having a rear convex side and a front longitudinally straight flat side, a plurality of teeth all of equal length projecting from the front flat side of the back and having lower convex sides merging regularly into the said convex rear side of the back to provide a smooth rolling surface formed by the combined lower edges of the teeth and the rear side of the back, the teeth tapering toward their free ends and having upper uniform concave edges to provide a concave

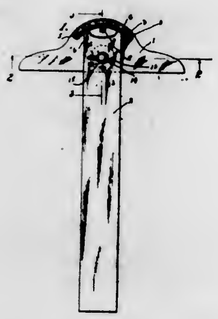
recess throughout the series of the teeth for application in said recess of cutting shears, the tapering back gradually reduced toward its free end effecting a balancing action of the comb when the latter is operated by gripping the handle and whereby the comb may also be tilted longitudinally and the thickest part of the back at the juncture with the handle serving alone as the fulcrum for operating the comb to permit varying length cuts to be made with the comb.

1,381,805. SPINNING-BOX MOUNTING. HENRY CREWDSON, Roanoke, Va., assignor of one-half to Courtaulds, Limited, London, England, and one-half to The Viscose Company, Roanoke, Va. Filed Dec. 9, 1919. Serial No. 343,640. 5 Claims. (Cl. 118—49.)



1. A spindle, a mushroom thereon, a spinning box freely resting on said mushroom, and a steep pitch screw connection between said mushroom and spinning box to prevent slippage on the drive of the spindle.

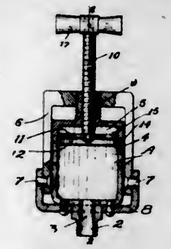
1,381,806. PRINTING-PRESS ATTACHMENT. JOHN HENRY CUNNINGHAM, San Francisco, Calif. Filed July 16, 1920. Serial No. 396,630. 7 Claims. (Cl. 34—18.)



3. An attachment for printing presses comprising a burner tube, a flexible pipe connecting the burner tube to a gas supply pipe, an air discharging tube located under the burner tube and connected to the air line of a printing press, and means for directing a continuous current of heated air downwardly from said air tube.

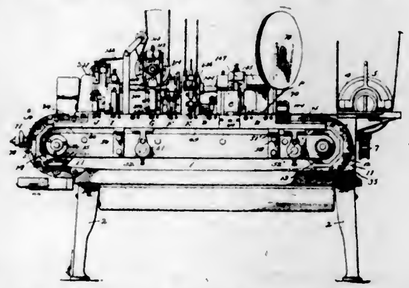
1,381,807. TROLLEY-HEAD. HENCEL DAFFRON and CLYDE C. PULLEM, Detroit, Mich. Filed Feb. 5, 1921. Serial No. 442,745. 4 Claims. (Cl. 191—59.)

1. The combination with a trolley pole having a casing at its upper end, of a trolley wheel supporting fork having its shank mounted for yieldable longitudinal movement in said casing, and coöperating means carried by said casing and shank to hold the latter against lateral movement.



1,381,808. T-SQUARE. MARTIN D. DAVIS, Daleville, Ind. Filed Dec. 4, 1920. Serial No. 428,273. 4 Claims. (Cl. 33—100.)

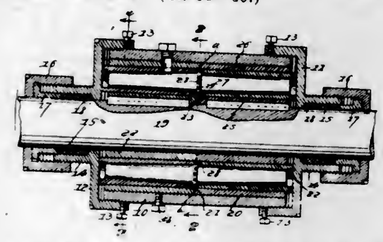
1. In a T-square, the combination of a head having a recess therein, a blade pivotally mounted upon the head concentric with said recess, and opposed friction disks housed within the recess of the head and secured respectively to the head and the blade.



1,381,809. GREASE-CUP. WILLIAM W. DAVIS and WILLIAM W. MACDONALD, San Francisco, Calif. Filed Aug. 13, 1919. Serial No. 317,187. 12 Claims. (Cl. 184—38.)

10. A grease cup comprising an open ended cup having a discharge opening formed at the opposite end thereof, a bail pivotally attached to the cup, a cover carried by the bail, and vertically adjustable therein, a screw rod carried by the cover and vertically adjustable with relation to the cover and cup, a disk secured on the lower end of the screw rod, and a thin metallic disk secured to the first named disk, said thin metallic disk being constructed of

spring metal and provided with an annular downwardly turned rim, said rim having a diameter slightly larger than that of the first named disk.

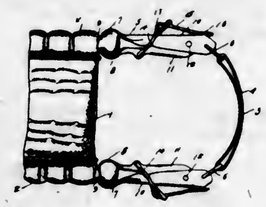


1,381,810. LATCH-NEEDLE-MAKING MACHINE. WILLIAM H. DAYTON, deceased, Torrington, Conn., by James M. Dayton, administrator, assignor to The Torrington Company, Torrington, Conn., a Corporation of Connecticut. Filed Nov. 19, 1918. Serial No. 263,208. 60 Claims. (Cl. 163—3.)

1. The combination of a needle holding chuck, means for forming a needle latch, means for inserting the latch in the slot of a latch needle, and means for securing the latch in said slot.

42. The process of riveting a latch to a needle consisting in subjecting a rivet to a series of light and substantially uniform blows to enlarge the rivet intermediate its ends and to head said ends.

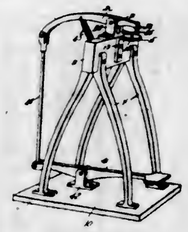
1,381,811. JOURNAL-BEARING. GEORGE W. DENTON, South Bend, Ind. Filed Sept. 7, 1920. Serial No. 408,584. 9 Claims. (Cl. 64—60.)



9. A journal, a journal box including a tubular member concentric to the journal, bearing rollers disposed between the journal and the tubular member, each of said rollers having a circumferential flange formed on its periphery with a series of teeth, a sleeve surrounding the journal, and a sleeve surrounding the bearing rollers, one of said sleeves being composed of tapering sections shiftable longitudinally to take up wear, one of said sleeves and the tubular member being formed with a circumferential groove to receive the circumferential flanges on the rollers, said groove being formed with teeth to mesh with the teeth on said flanges, and means carried by the journal box whereby said tapering sleeve sections may be shifted longitudinally to take up wear.

1,381,812. TRACE-CARRIER. HENRY D. EASTLY, Kennebec, S. D. Filed Apr. 1, 1920. Serial No. 370,468. 1 Claim. (Cl. 54—56.)

A trace carrier comprising a frame having opposite upstanding posts formed therewith and provided with flat side faces, an arch extending across said frame and formed as a part thereof, said arch being extended across the frame between said posts, and a flat spring member extended transversely beneath the center of said arch and pivotally connected thereto at the central portion of said spring member, said flat spring member being positioned with its narrow edges upwardly and downwardly and with the end portions of one of the flat sides thereof resiliently contacting with flat side faces of said upstanding posts adjacent the upper ends thereof, the end portions of said posts and said flat spring member being rounded to permit ready engagement of eye members on said posts and disengagement of said eye members from said posts, said frame being provided with perforated ears extended outwardly at points opposite said posts and at points opposite the ends of said arch for attachment of harness strap members with said frame, said frame being curved to conform to the body of a draft animal.

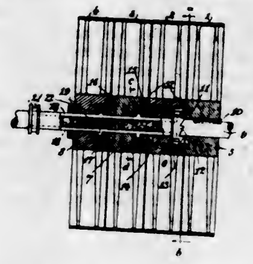


1,381,813. MATTRESS-TURNER. BESSIE K. ENGEVIK, Tacoma, Wash. Filed May 8, 1920. Serial No. 379,845. 4 Claims. (Cl. 294—86.)

1. A mattress turner comprising a strap, loops carried by said strap, and clasps hinged to said loops for detachably connecting the strap to a mattress.

1,381,814. BOOK-INDEXING MACHINE. WILLIAM FARKAS, New York, and CHARLES GREBENSTEIN, Brooklyn, N. Y. Filed Aug. 10, 1920. Serial No. 402,576. 1 Claim. (Cl. 164—43.)

A machine for cutting indexing notches into leaves of a book, comprising a stand provided with a bracket, a disk mounted to turn on the said bracket and forming a support for a plurality of superposed leaves in step fashion, a lever fulcrumed on the said stand and having its forward end above the said disk, a cutter attached to the said front lever end and having a segmental cutting edge at its lower end, the plane of the said cutting edge being approximately parallel to the face of the said disk to cut a notch into the leaves on the downward movement of the cutter, the cuts in the several leaves increasing gradually in depth, the cut in the lowermost leaf being the deepest,

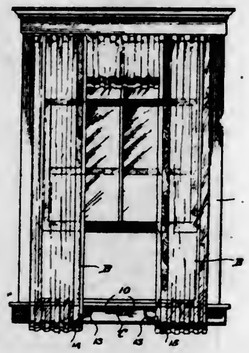


a treadle, a link connecting the said treadle with the said lever, and a spring returning the lever and its cutter to normal inoperative position.

1,381,815. PUNCTURE-PROOF AUTO-TIRE. ROBERT H. FENLEY, Fort Worth, Tex. Filed May 19, 1920. Serial No. 382,661. 1 Claim. (Cl. 152—18.)

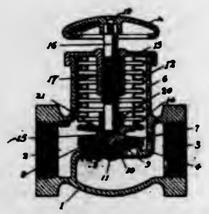
A tire including a carcass, circumferentially extending protector plates secured to the carcass on each side of the tread portion of the latter, said plates having thickened portions, radially extending flanges formed on the thickened portions of the plates and spaced from the outer edges of said plates, and a tread positioned between the flanges and resting on the plate and cemented to the tread portion of the carcass.

1,381,816. MOTOR-DRIVEN AGRICULTURAL MACHINE. OLOF FRANKMAN, Malmo, Sweden. Filed Oct. 25, 1919. Serial No. 333,339. 4 Claims. (Cl. 180—20.)



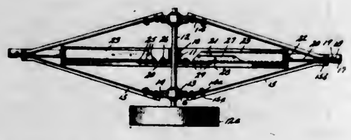
1. A motor-driven agricultural machine including a shaft, a series of wheels adjacently mounted thereon, one of said wheels being mounted to rotate with the shaft, the remaining wheels being rotatably mounted on said shaft, the wheels having hubs and coöperable means carried thereby, whereby motion imparted to the shaft and fixed wheel may be applied to the rotatable wheels by operating the coöperable means.

1,381,817. CURTAIN-HOLDER. ALLIE M. FREEMAN, Helena, Mont. Filed Oct. 2, 1920. Serial No. 414,196. 3 Claims. (Cl. 156—33.)



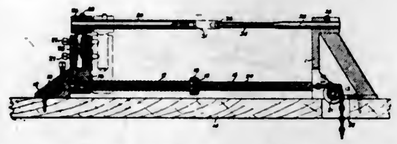
2. Means for holding the lower end of a curtain to prevent blowing thereof across the sill comprising a pene-

trating member adapted for engagement beneath a window sill, a flexible member connected with said penetrating



member, and a securing member carried by the other end of the flexible member and detachably engageable with the edge of the curtain.

1,381,818. PACKLESS VALVE. WESTON M. FULTON, Knoxville, Tenn., assignor to The Fulton Company, Knoxville, Tenn., a Corporation of Maine. Filed Aug. 21, 1916. Serial No. 116,003. 5 Claims. (Cl. 251—141.)



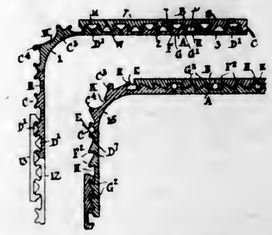
2. A packless valve comprising a valve casing, a valve member therein, an expansible and collabsible corrugated tubular wall having an inherent resiliency and connected to said valve member, said wall providing a fluid-tight partition in said valve casing, a socket member connected to said wall on the opposite side from said valve member, and a valve stem loosely fitting in but unattached to said socket member, said valve member being moved in one direction and said wall stressed by the corresponding movement of said valve stem, and said valve member being moved in the opposite direction throughout its range of movement by the resiliency inherent in said wall as said valve stem is withdrawn.

1,381,819. FAN OR BLOWER. EDWARD L. GARFIELD, Tuckahoe, N. Y. Filed Mar. 22, 1920. Serial No. 367,945. 6 Claims. (Cl. 253—179.)

4. A fan or blower including a frame, a fan casing within said frame, means connecting the fan casing with the frame, spider arms divergent toward their outer ends, means rigidly connecting the outer ends of the spiders with the frame and the first-mentioned means, alined bearing mounts rigid with the respective spiders, bearings in said mounts, a shaft turning in said bearings, fan blades within said casing and means mounting said blades and arranged to turn with said shaft.

1,381,820. TURNOVER-MACHINE. LOUIS GOLDSTEIN, Brooklyn, N. Y. Filed Jan. 19, 1921. Serial No. 438,431. 4 Claims. (Cl. 139—47.)

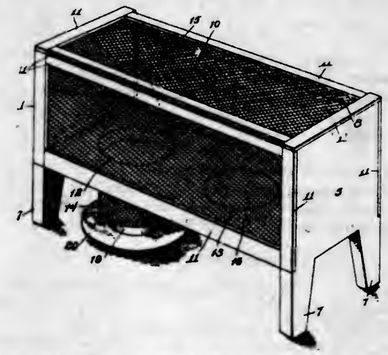
1. A turnover machine for turning over open-ended tubular fur pieces, comprising a fixed rod and a movable rod, one of the rods extending through the open ended tubular piece to be turned over, the axes of the rods being on line and the adjacent ends of the rods having clamping means clamping between them the open end of a tubular piece to allow an operator to strip the tubular piece onto the other rod.



1,381,821. DRY COFFEE COMPOUND. JOSEPH GREENBERG, Philadelphia, Pa. Filed Apr. 12, 1920. Serial No. 373,377. 5 Claims. (Cl. 99—11.)

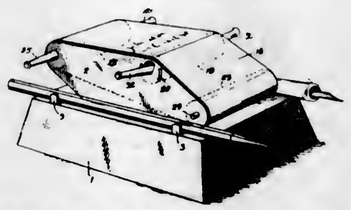
2. A dry coffee mixture comprising dry coffee extract, and dry milk having a fat content greatly reduced as compared with unmodified dry milk.

1,381,822. PREPARED DRY COFFEE-SUBSTITUTE COMPOUND. JOSEPH GREENBERG, Philadelphia, Pa. Filed May 18, 1920. Serial No. 382,268. 5 Claims. (Cl. 99—11.)



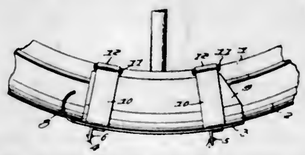
2. A dry coffee substitute mixture comprising an extract of parched vegetable ingredient imitative of the coffee flavor and milk having a fat content greatly reduced as compared with unmodified dry milk.

1,381,823. BUILDING COMPONENT. WALTER BURLEY GRIFFIN, Melbourne, Victoria, Australia. Filed Apr. 30, 1918. Serial No. 231,704. 2 Claims. (Cl. 72—38.)



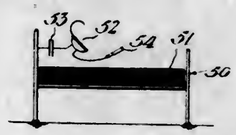
1. A wall structure made up of oppositely arranged plate-like sections, with each plate-like section formed on its inner face with spaced ribs, each rib being formed beyond the plate to provide two divergent portions, the divergent portions of adjacent ribs projecting toward each other to form the space intermediate the ribs as a complement of the rib, so that in the coöperation of the sections, the rib of one section accurately fits the space between the ribs of the other section, the divergent portions of each rib providing a space between such rib and the adjacent section when the sections are assembled.

1,381,824. FLYTRAP. WILLARD LESLIE HALL, Howard, Kans. Filed Aug. 26, 1919. Serial No. 319,972. 1 Claim. (Cl. 43—118.)



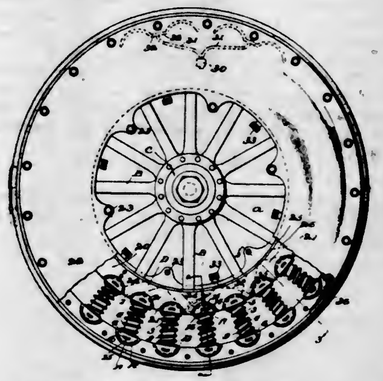
A fly trap of the class described comprising a cage of reticulated material and having its ends and bottom constructed of wood, legs provided at the corners thereof, longitudinal strips connecting said ends, said bottom having an opening and a reticulated cylinder secured in said opening and projecting above and below the bottom, a reticulated conical member connected with the cylinder and projecting into the cage and having its reduced end provided with an opening and disposed below the top of the cage.

1,381,825. DESK FURNITURE. WILLIAM P. HANLON, New York, N. Y., assignor of one-half to Arthur A. Camerer, New York, N. Y. Filed Nov. 22, 1919. Serial No. 339,853. 1 Claim. (Cl. 281—13.)



A device of the character described comprising a base formed of sheet metal and having a plurality of elongated apertures formed therein, a removable member stamped from a single sheet of metal formed with a flat top section and a flat end section and a pair of side sections formed with hooks interlocking with said base and extending through said elongated openings, a plurality of rollers mounted on said removable member and a belt mounted on said rollers and positioned exteriorly of said top section and said end section so that when writing on the belt it will be pressed against one of said sections.

1,381,826. AUTO-WHEEL SHOE. ANTON G. HANSEN, Boelus, Nebr. Filed Oct. 22, 1918. Serial No. 259,186. 1 Claim. (Cl. 152—14.)



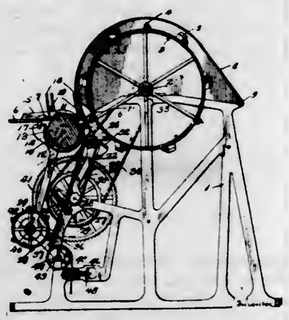
A shoe of the character described comprising a pair of longitudinal plate elements having traction lugs on one face, means swingingly connecting the plate elements together at one longitudinal edge, each plate being formed with a lateral flange portion on the edge at which it connects with the other plate, the flange portion being formed with a pair of spaced strengthening plates which connect with the first said plate adjacent the edge opposite the flange, and means for attaching the device on an auto vehicle tire at a specified point to shroud the tire at that point for the purpose herein specified.

1,381,827. WIRELESS PHONOGRAPH FOR HOSPITALS. EARL C. HANSON, Los Angeles, Calif., assignor to Title Insurance and Trust Company, a Corporation of California. Filed June 3, 1918. Serial No. 238,045. 4 Claims. (Cl. 179—82.)

3. A receiving system for electrostatic energy comprising a telephone receiver, a connection from said telephone receiver to a capacity means and another connection from said telephone receiver to the human body whereby said body serves as a collector of electrostatic energy.

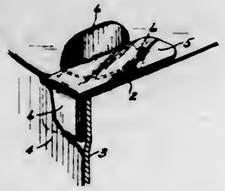
1,381,828. VEHICLE-WHEEL. JACOB G. HARTMAN, Baltimore, Md. Filed Mar. 8, 1919. Serial No. 281,470. 3 Claims. (Cl. 152—37.)

1. A vehicle wheel including spaced apart inner and outer rims, each of said rims having a series of semi-cylindrical concaved seats on the face opposed to the other rim, expansible spacing spokes between said inner and outer rims, the ends of said spacing spokes being semi-cylindrical respectively seated within the concavities of said rims and having a freely movable guided engagement therewith, said spokes having no fixed pivotal connection with said rims in combination with a driving connection between said inner and outer rims.



1,381,829. NOSTRIL-CLEANING DEVICE. ROBERT R. HARTMAN, Chicago, Ill. Filed June 21, 1916. Serial No. 104,890. 5 Claims. (Cl. 128—357.)

2. A nostril cleaner comprising a handle, a holding piece connected with said handle, adapted to be inserted



in the nostril, a removable cleaner piece connected with said holding piece shaped to conform to the cavity of the nostril, and a limiting device for limiting the distance the cleaner can be inserted in the nostril.

1,381,830. MACHINE FOR PULPING PLANTS CONTAINING TEXTILE FIBERS. ANDRÉ HAUSER, La Chaux-de-Fonds, Switzerland. Filed June 12, 1919. Serial No. 303,730. 8 Claims. (Cl. 13—18.)

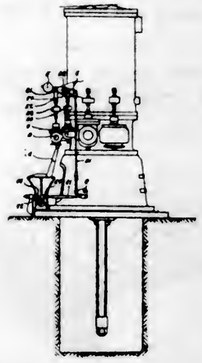
1. A machine of the character described including a supporting frame, a table having a protected extension, a scraping drum rotatably mounted on the frame and coacting with the extension, means for feeding plants between the drum and the table, coacting crushing rollers rotatably mounted in the frame, conveying means between the scraping drum and the crushing rollers, a secondary table beneath the rollers, a protecting strip on the lower portion of the table, a secondary scraping drum for coacting with the strip on the table, a rotatably mounted conveying drum for receiving material from the secondary drum and squeezing rollers rotatably mounted in the frame between which material is passed from the conveying drum.

1,381,831. SNUFF-BOX OPENER. BENJIMAN HEBBEN, Minneapolis, Minn. Filed Mar. 31, 1920. Serial No. 370,069. 1 Claim. (Cl. 229—51.)

The combination with a box or can and a flanged cover therefor, of a cutter slidably interlocked to the flange of said cover and adapted to be moved thereon, the said box or can having a paper wrapper that is normally stuck to the body thereof and to the rim of said cover, the said cutter comprising a U-shaped blade that embraces the flange of said cover and a body plate that rests on the top of said cover, the said body portion having a flange adapted to be bent down against the same or to be turned upward for use.

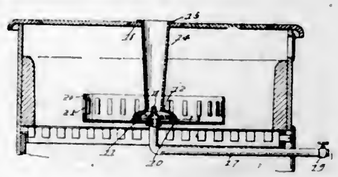
1,381,832. RUG. EMANUEL HEIDENHEIM, New York, N. Y. Filed Mar. 1, 1920. Serial No. 362,302. 1 Claim. (Cl. 28—25.)

The method of manufacturing rugs which consists of forming a strand of two parallel cords of material, two strands of material of different color braided around and through said parallel cords in such a manner that the color of one of said strands predominates on one side of the finished product and the other color predominates



upon the opposite side of said finished product, and subsequently wrapping said strand to form the rug, said strand being twisted at different points to form areas of different colors throughout the finished product.

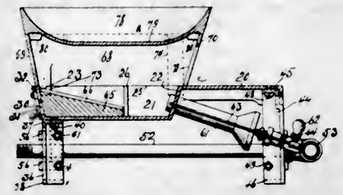
1,381,833. PRESERVED MALT PREPARATION. BRUNO A. HOEHL, Wheeling, W. Va. Filed Apr. 3, 1920. Serial No. 371,110. 2 Claims. (Cl. 99—8.)



1. As a new product, a stable mixture comprising hops and malt and a syrup of saccharine liquid.

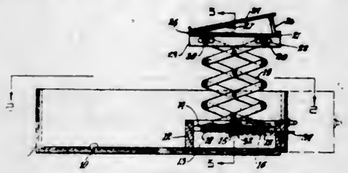
1,381,834. CONTROLLING-GEAR FOR HYDRAULIC PRESSES. THOMAS EDMUND HOLMES, Glasgow, Scotland. Filed Sept. 19, 1919. Serial No. 324,989. 4 Claims. (Cl. 138—16.)

1. A lifting cylinder control mechanism for hydraulic presses, comprising a normally open steam inlet valve, a normally closed steam exhaust valve, a hand lever and lost-motion devices operatively connecting the lever to the said steam valves to close the inlet valve and open the exhaust valve at one end of the lever stroke, and, at the other end of the lever stroke, to open the inlet valve and close the exhaust valve.



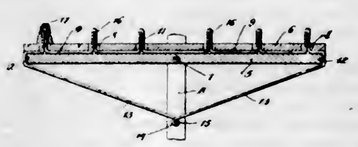
1,381,835. CRUDE-OIL BURNER. WATSON W. HOLMES, Austin, Tex. Filed Sept. 25, 1919. Serial No. 326,143. 2 Claims. (Cl. 158—91.)

1. A burner having a burner plate and a fuel supply jet for depositing fuel thereon, an arched burner cap



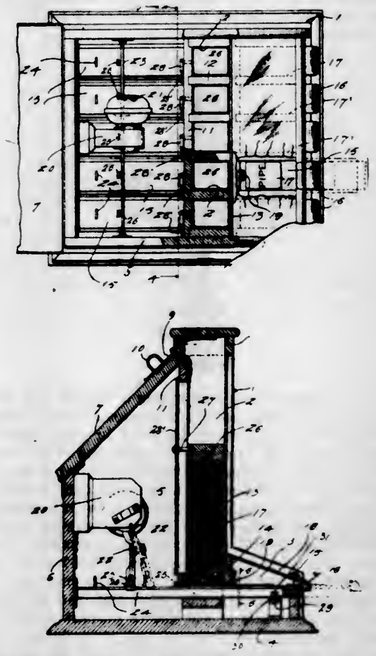
spanning the burner plate around the jet outlet and provided in its wall with burner openings, a down draft conductor communicating with the burner cap in an area surrounding said jet outlet, and a heat concentrating basket surrounding the burner cap and the adjacent portion of said conductor and having perforated upstanding walls.

1,381,836. AUTOMATIC BLAST SOLDERING-FURNACE. CHARLES A. HONES, Rosedale, N. Y. Filed Feb. 10, 1920. Serial No. 357,545. 8 Claims. (Cl. 263—9.)



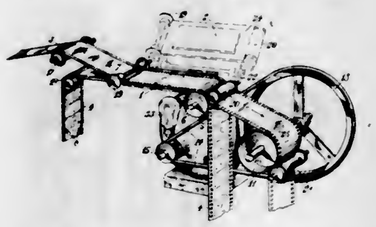
1. In a furnace the combination of a table having a well formed therewith, legs for the table and well, gas supply piping for the furnace, detachable brackets connected to a pair of said legs supporting said piping, a Bunsen burner connected to the gas supply piping and extending into the well and a pilot light for the burner.

1,381,837. TABLE. FREDERICK HOPAIDASZKA, Cobalt, Ontario, Canada. Filed May 5, 1920. Serial No. 379,018. 2 Claims. (Cl. 45—111.)



1. A table of the class specified, comprising a pair of horizontally telescoping box elements, a base block in one of said box elements, said base block having a horizontal slot extending therethrough from side to side and having vertical apertures intersecting said slots, a pair of rods movable transversely of themselves in the said apertures and having their ends projecting beyond the said block, lazy-tong legs secured to the ends of said rods, a pair of rods connecting the upper ends of said legs, a table proper having slotted cleats through which said rods extend, a shaft extending through the said block and the walls of the said box element, flexible members secured at one end to said first mentioned rods and adapted to wind on said shaft, and expansion springs interposed between said rods and said shaft.

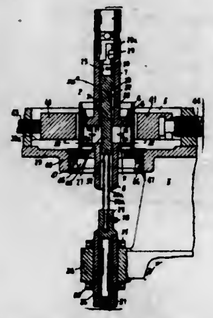
1,381,838. INSULATOR-SUPPORT. BERRY B. JACKSON, Mudlick, Ky. Filed Mar. 30, 1920. Serial No. 370,052. 2 Claims. (Cl. 173—321.)



1. An insulator support of the character described, comprising a pair of bars, one superimposed relative to the other, and provided with apertures, a reinforcing member interposed between the bars and having projections extended through apertures in the uppermost bar and provided with means for the fastening of insulator members thereon, and end portions extending from the reinforcing member and inclined toward each other and provided with securing means at their ends.

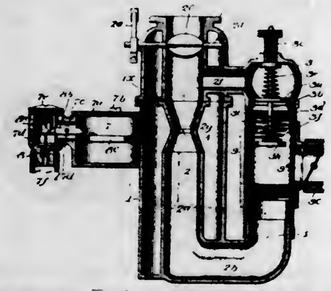
1,381,839. TICKET-VENDING MACHINE. EDMOND A. JACKSON, Asheville, N. C. Filed May 6, 1919. Serial No. 295,126. 1 Claim. (Cl. 211—8.)

A ticket vending machine including a casing, storage and examining compartments in said casing and said examining compartment having an exit in its front wall, a slide extending through said compartments and normally having its forward end terminating in said exit, a finger grip secured to the forward end of the slide and normally closing the exit, said slide having a notch therein, a rod journaled in said casing, a lug carried by said rod and adapted to move into and out of the notch on rotation of said rod, and a lock for said rod to hold the lug in said notch.



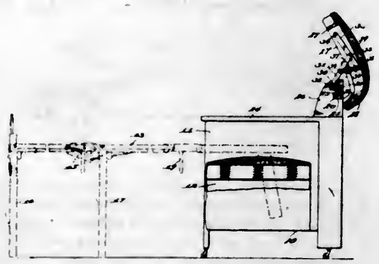
1,381,840. CINEMATOGRAPH-FILM-FEEDING APPARATUS. WILLIAM CECIL JEAPES, London, England. Filed Mar. 30, 1920. Serial No. 369,885. 7 Claims. (Cl. 95—75.)

1. In cinematographic apparatus, mechanism for simultaneously feeding two superimposed cinematograph films having feed perforations therein, through feeding apparatus, and for driving one film from the other, comprising



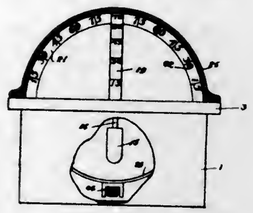
an intermediary member which engages the feed perforations in both films and is driven by one film and transmits such drive to the other film, and means for imparting a pull to the first said film in advance of the said intermediary member.

1,381,841. COLLAPSIBLE TAP. HARRY M. JOHNSTON, McKeesport, Pa., assignor to National Tube Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Mar. 29, 1920. Serial No. 369,694. 12 Claims. (Cl. 10—144.)



12. A collapsible tap comprising a hollow and radially slotted head having collapsible thread cutting chasers, said chasers being slidably mounted in said radial slots, a tubular stem on one end of said head with the bore thereof in axial alinement with said hollow head, a slot in the wall of said stem, a fluted star cam slidably and rotatably mounted in said tubular stem and hollow tap head, said cam having taper surfaces between the flutes thereof engaging with the chasers, an adjustable stop for holding said cam against lengthwise movement during the thread cutting operations, a pin on one end of said cam extending into the elongated slot and arranged to engage the side walls of the slot to prevent relative axial turning movement of the cam and stem during relative lengthwise movement thereof, said elongated slot having an offset in one end arranged to receive the pin in said cam and permit a limited relative rotative movement between said fluted cam and said stem, to thereby bring said flutes opposite the ends of said radial chasers and permit radial inward movement of the chasers into collapsed position, and a sleeve on said stem for locking said pin to prevent rotative movement between the cam and stem when opposite the offset in said slot.

1,381,842. CARBURETER. GEORGE D. JORDAN, Chevy Chase, D. C., assignor, by direct and mesne assignments, to Jordan Carburetor Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 10, 1913, Serial No. 794,448. Renewed June 27, 1918. Serial No. 242,312. 15 Claims. (Cl. 261—12.)

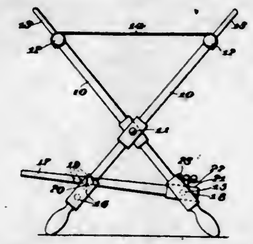


13. In a carbureter the combination of a casing having an interior air passage surrounded by a heating chamber or passage for exhaust gases, a fuel inlet to said passage, a valve controlling said inlet, a fuel heater within the said heating chamber and beside the air passage and communicating with said fuel inlet and with a fuel supply, and means for electrically heating said heater independently of the heat in the chamber; with an auxiliary air valve chamber communicating with the said air passage, and a hot air supply communicating with said auxiliary air valve and with the said passage.

1,381,843. BED-DAVENPORT. THOMAS F. KELLY, Clinton, Iowa, assignor of one-half to Joseph A. Kelly, Clinton, Iowa. Filed Oct. 15, 1920. Serial No. 417,114. 3 Claims. (Cl. 5—47.)

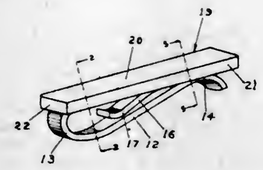
1. In a davenport-bed, a frame having end members and a fixed cushion, a movable back portion, standards rising above said end members, a cross-piece connecting said standards, an angle plate secured to said cross-piece, a metallic plate fastened to said back portion, an arm pivotally connected at each end to said plate, a slotted link pivotally connected to said metallic plate and a pin secured to said arm engaging in the slot of said link.

1,381,844. LEVEL. JOSEPH KIDD, Winnipeg, Manitoba, Canada. Filed July 17, 1918. Serial No. 245,381. 3 Claims. (Cl. 33—215.)



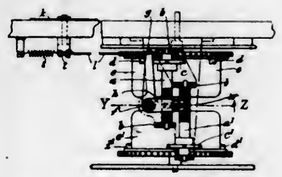
1. In combination, a support providing a stationary outer ring, an intermediate ring pivoted to the outer ring at diametrically opposite points, an inner ring pivotally connected to the intermediate ring and with the pivot points located 90 degrees from the connections between the intermediate ring and the outer ring and a pointer located centrally of the inner ring and mounted on a pivot spindle located at right angles to the pivot suspension of the inner ring, the pointer being threadedly engaged with the spindle and adjustable longitudinally thereof.

1,381,845. CONVERTIBLE CANE AND STOOL. USHIA KOLCHINSKY, Philadelphia, Pa. Filed Oct. 16, 1920. Serial No. 417,349. 1 Claim. (Cl. 155—136.)



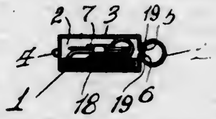
A convertible cane and stool comprising a plurality of uprights pivotally connected in pairs, bars connecting the upper ends of said pairs of uprights, handles on said bars, a flexible sheet having its ends secured to said bars, a cross piece connecting one pair of the uprights near their lower ends, a pair of cross pieces connecting the other pair of uprights near their lower ends, an elongated stick member pivotally mounted upon said single cross piece,

a wing screw carried by the pivoted end of said stick member, means for connecting said stick member with the upper of said pair of cross pieces whereby to hold the device in extended position, said pairs of uprights being foldable upon their pivots whereby to lie substantially



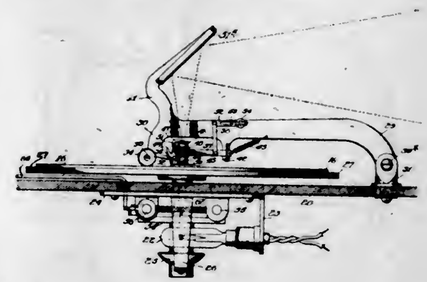
together with said stick member extending downwardly substantially in alinement with the folded uprights, one side of said stick member lying against said pair of cross pieces, and said wing screw being adapted to be passed between said pair of cross pieces and turned whereby to engage against them.

1,381,846. TIE-CLIP. FRED S. MAKER, Seekonk, Mass., and RALPH K. MAKER, Providence, R. I. Filed Jan. 27, 1921. Serial No. 440,503. 6 Claims. (Cl. 24—259.)



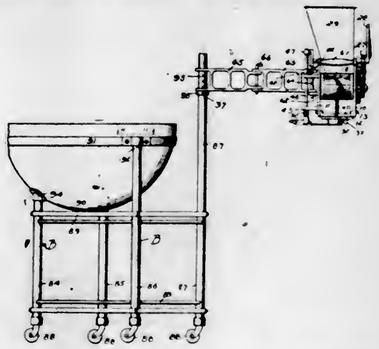
1. A tie clip provided with a base portion, a tongue having its free end arranged in proximity to said base portion, and a second tongue forced down from the base portion into a position opposed to the said first named tongue whereby the said tongues resiliently engage material interposed therebetween.

1,381,847. POWER-INDICATOR FOR SPRING-MOTORS. FOSTER RITCHIE, Ealing, England. Filed Jan. 10, 1921. Serial No. 436,080½. 4 Claims. (Cl. 185—44.)



4. A power indicator for spring motors comprising in combination, a toothed wheel having an axial journal, a pair of screw threaded members, each member having a thread in mesh with teeth of the said toothed wheel, a star wheel fixed on each of said members and having teeth arranged for engagement by detachable clip projections securing on a rotating part of the said spring motor, a bell-crank lever having one arm slotted lengthwise for receiving the said axial journal and having its other end pierced for connection to a link, a pointer pivoted between its ends, a graduated scale parallel to the path of said pointer, a link for connecting that arm of the pointer opposite its indicating end to the pierced end of said bell crank lever and means for supporting the parts of the device, substantially as described for the purposes specified.

1,381,848. SAFETY-RAZOR. WILLIAM E. ROSENBAUM, St. Louis, Mo. Filed Jan. 21, 1918. Serial No. 212,878. 4 Claims. (C 30—12.)

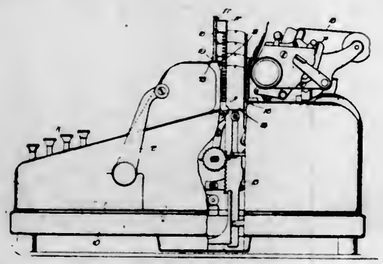


1. In combination, a receptacle, an article to be contained in said receptacle, and a member forming a combined fastener and handle for said receptacle and said article.

1,381,849. ART OF PRODUCING MOVING PICTURES. HENRY K. SANDELL, Chicago, Ill., assignor to Herbert S. Mills, Chicago, Ill. Filed May 22, 1919. Serial No. 298,961. 28 Claims. (Cl. 88—18.8.)

5. In a moving picture machine, in combination, a continuously moving transparency containing a sequence of pictures and provided with engaging means in identical relation with the successive pictures of the sequence, a lens, and a lens support having means adapted to intermittently engage the engaging means on the transparency to cause movement of the lens.

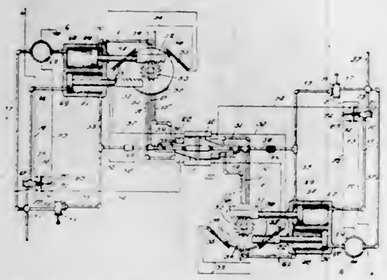
1,381,850. DOUGHNUT-MACHINE. AUGUST SCHOEL, Waterloo, Iowa, assignor of three-tenths to George Schoel, Waterloo, Iowa. Filed Jan. 22, 1921. Serial No. 439,109. 14 Claims. (Cl. 107—14.)



2. A doughnut forming and cutting machine having a crank thereon, a fender below said crank for preventing

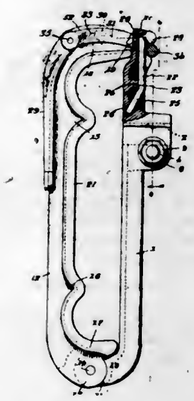
heat from coming in contact with the arm of the operator and a cutoff device for preventing any dough from leaving the machine, said cutoff device having a handle thereon extended through the fender whereby it may be moved to open or closed position.

9. In a device of the class described, a portable frame, a vat removably mounted on said frame, a doughnut forming and cutting machine rotatably mounted on said frame, and means for varying the vertical position of said machine with relation to the frame, the parts being so arranged that the doughnut forming and cutting machine may be swung over said vat for filling said machine with dough and swung away from said vat when cutting doughnuts.



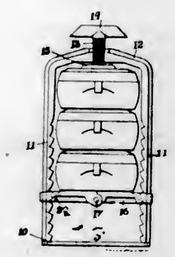
10. In a device of the class described, a portable frame, a vat mounted on said frame to one side thereof, a doughnut forming and cutting machine rotatably mounted on said frame, the parts being so arranged that the vat acts as a counter weight when the machine is swung away from the vat when cutting doughnuts.

1,381,851. CALCULATING-MACHINE. PHILIP N. SEA, Chicago, Ill. Filed Apr. 18, 1919. Serial No. 291,041. 2 Claims. (Cl. 235—58.)



1. In combination with an adding machine of the Dalton or Sundstrand type of an information indicating attachment comprising pointers secured in a horizontal row on top of the machine type sectors, a supporting frame hinged on the machine in front of the path of said pointers, and a dial supported by said frame, said frame when swung into one position supporting said dial in front of said pointers, said dial having decimal rows of numerals 0 to 9 thereon with which said pointers coöperate during operation of the machine to indicate what the set-up is, said frame when swung to another position holding said dial away from in front of said pointers.

1,381,852. AUTOMATIC CAR AND ELECTRIC COUPLING AND REVERSING-SWITCH. CHARLES H. TOMLINSON, Mansfield, Ohio, assignor to The Tomlinson Coupler Company, Mansfield, Ohio, a Corporation of Ohio. Filed June 7, 1916. Serial No. 102,163. 40 Claims. (Cl. 173—332.)



1. The combination with a car and electric couplers for a plurality of circuits, of a combined air and electric connector on each coupler, reversing switch mechanism in each car for the electric coupler circuits, and means in each car operable through said connector for controlling the said mechanism in both cars.

1,381,853. BOW REST AND CLAMPING DEVICE. HARRY B. WHITE, Canton, Ohio, assignor, by mesne assignments, to Auto Specialties Manufacturing Co., San Francisco, Calif., a Corporation of California. Filed Feb. 15, 1917. Serial No. 148,754. 9 Claims. (Cl. 296—128.)

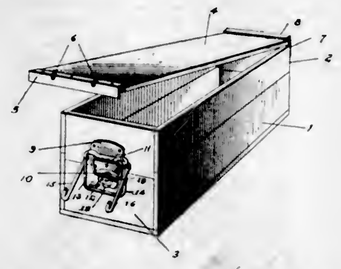
1. A device of the character described, comprising a stock arranged to be attached to a vehicle body, a spring located near one extremity of said stock, an arm hinged to the other extremity of said stock, a clamping lever pivotally mounted upon the free end of said arm, a spacing member carried by the upper extremity of said arm and arranged to engage said stock and a link carried by said lever and arranged to engage the spring upon said stock, said lever and link arranged to draw said arm toward said stock to clamp the bows of a top therebetween.

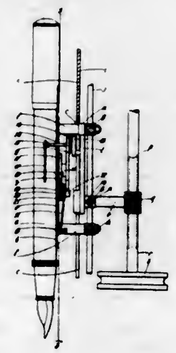
1,381,854. FLASK-CLAMP. SAMUEL HOGG WILSON, Glasgow, Scotland. Filed Mar. 5, 1921. Serial No. 450,055. 11 Claims. (Cl. 18—33.)

1. A flask clamp comprising, in combination, side members, a bridge piece uniting same and an adjustable platform beneath said bridge piece.

1,381,855. LOCKING DEVICE. HOMER E. ASHCRAFT, Davenport, Iowa. Filed Jan. 10, 1920. Serial No. 350,676. 3 Claims. (Cl. 292—113.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A fastening device for boxes or the like having a handle plate, a pivot plate secured to one end of the box immediately below said handle plate, a loop pivoted to said handle plate, a cover, means extending from said loop for engaging the cover, an arm mounted on said pivot





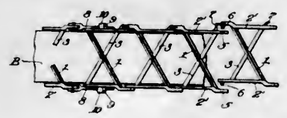


plate for holding the loop in locked position and means extending through said arm and pivot plate for securing the arm in locked position.

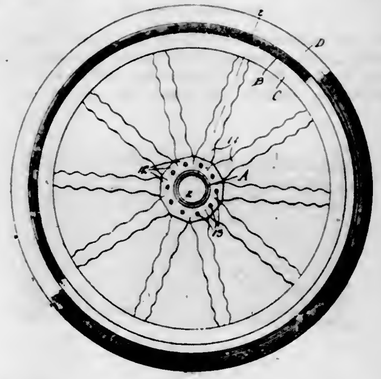
1,381,856. MECHANICALLY-OPERATED ADVERTISING DEVICE. ARCHER ASTON, Leeds, England, assignor to L. E. Waterman Company, New York, N. Y., a Corporation of New York. Filed Feb. 4, 1921. Serial No. 442,468. 6 Claims. (Cl. 35—16.)

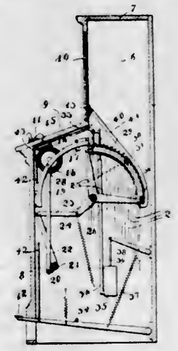
1. A mechanically operated advertising device for the purposes set forth comprising a model mounted for vertical reciprocating movement, a lever thereon, means for raising and lowering said model and means for angularly displacing the lever on said model at predetermined points in the path of said reciprocating movement of the model, substantially as described.

1,381,857. TRACTOR-TREAD. ANDERS L. BERTHELSEN, Chicago, Ill., assignor to Henry Morton, Chicago, Ill. Filed Sept. 3, 1919. Serial No. 321,378. 11 Claims. (Cl. 301—40.)



1. A tractor tread member or lug for vehicle wheels comprising spaced side members, a transversely arranged relatively heavy rigid rib joined at an acute angle to opposite ends of said side members, and means engageable with the edge of the wheel rim for holding the tread members against displacement.

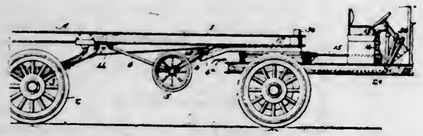
1,381,858. FOOD PRODUCT. JESSE D. BOURDEAU, Detroit, Mich., and WILLIAM B. FINK, Washington, D. C., assignors to The Quaker Oats Company, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 25, 1919, Serial No. 292,574. Renewed Aug. 9, 1920. Serial No. 402,298. 4 Claims. (Cl. 99—11.)



1. A process of treating cereal grains having carbohydrate constituents and oily constituents which render the grains subject to deterioration by the development of rancidity, which process comprises subjecting the grains to the action of an alkaline solution sufficient to combine with the free acid of the oily constituents, and in addition to form a loose chemical combination with the carbohydrate constituents whereby any free acid which is subsequently formed from the oily constituents is then neutralized by the alkali which is loosely combined with the carbohydrates.

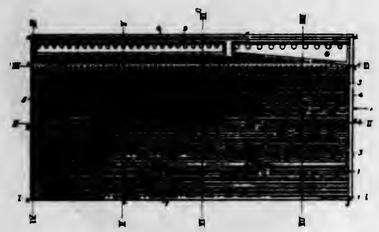
1,381,859. VEHICLE-WHEEL. CHARLES S. CRAWFORD, Indianapolis, Ind., assignor to Premier Motor Corporation, Indianapolis, Ind., a Corporation of Delaware. Continuation of application Serial No. 285,178, filed Mar. 26, 1919. This application filed Sept. 2, 1920. Serial No. 407,616. 4 Claims. (Cl. 152—50.)

1. A wheel composed of a hub, a rim and spokes interposed between said hub and rim consisting of metal tubes corrugated circumferentially.



1,381,860. INFORMATION DEVICE. WILLIAM C. CUTLER, North Glendale, Calif. Filed Feb. 16, 1921. Serial No. 445,534. 5 Claims. (Cl. 40—65.)

1. In an information device, a series of tables, a handle, a table carriage, means operative by the handle to move

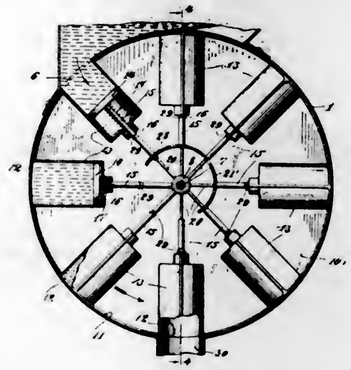


the carriage so as to bring one of the tables on the carriage to a selective position, means operating to move the selected table into view position away from the other tables, and means inside of the cabinet in view behind the glass front actuated by the movements of said handle to indicate which one of the tables is in selective position.

1,381,861. VEHICLE-TRAIN. MANSELL A. DAVIS, Lapeer, Mich. Filed Mar. 1, 1920. Serial No. 362,547. 9 Claims. (Cl. 280—33.1.)

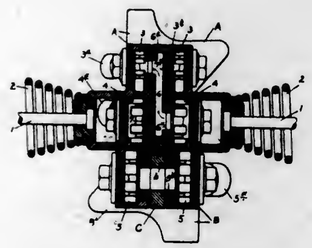
1. The combination with a tractor, of a fifth wheel mounted on the rear end thereof and adapted for connection to a trailer, and means extending to a point adjacent the driver's seat for turning said fifth wheel about its axis.

1,381,862. ORE-CONCENTRATOR. EMIL DEISTER, Fort Wayne, Ind., assignor to Deister Machine Company, Fort Wayne, Ind., a Corporation. Filed June 23, 1919. Serial No. 305,977. 5 Claims. (Cl. 83—88.)



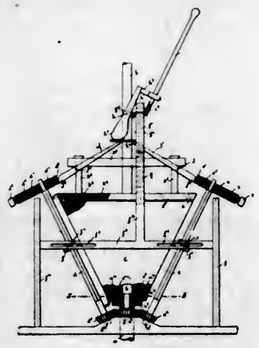
1. A differentially reciprocating concentrating table having riffles thereon and having a plurality of downwardly inclined coterminous sections on its surface, one section extending along the feed side of the table being both longitudinally and transversely inclined downwardly, a second section coterminous with the first section and extending from the head end of the table toward the mineral discharge end thereof being longitudinally and transversely inclined downwardly, the transverse inclination downward of said second section being greater than that of the first section, and a third section coterminous with both of the other two sections and extending along a portion of both the mineral discharge end and the tailings discharge side of the table, being longitudinally inclined downwardly from the second section to the mineral discharge end of the table and said longitudinal inclination downwardly being less than the longitudinal inclination downwardly of said second section, said third section also being transversely inclined downwardly from the first section to the tailings discharge side of the table, said transverse inclination downwardly of said third section being least at the mineral discharge end of the table and greatest at the juncture of said section and the second section.

1,381,863. PROCESS OF MAKING ARTIFICIAL RESINS. CARLETON ELLIS, Montclair, and HARRY M. WEBER, Bloomfield, N. J., assignors to Ellis-Foster Company, a Corporation of New Jersey. Filed Oct. 2, 1920. Serial No. 414,279. 5 Claims. (Cl. 134—26.)



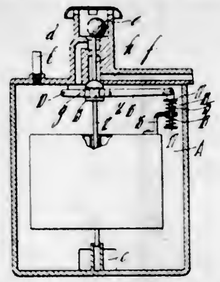
4. A resinous product comprising the reaction products of fusible copal resin, ordinary rosin and glycerin.

1,381,864. FILLING APPARATUS FOR LIQUID-FUEL TANKS AND THE LIKE. FRED EVANS, Summit, N. J., and JOSEPH CORCOS, New York, N. Y., assignors, by direct and mesne assignments, to International Gas Recorder Manufacturing Company, Newark, N. J., a Corporation of New Jersey. Filed Mar. 29, 1919. Serial No. 286,148. 6 Claims. (Cl. 221—107.)



1. In apparatus of the class described, in combination, a casing, a funnel disposed above said casing and having a passageway leading thereinto, a rotatable cylinder located within said casing, provided with a plurality of measuring elements, each of which is adapted to register with said passageway during a rotation of said cylinder member, and means associated with each of said measuring elements operable upon rotation of the same for automatically locking said cylindrical member against rotation.

1,381,865. TRAIN-PIPE COUPLING. JOSEPH E. FORSYTH, Chicago, Ill. Filed June 21, 1920. Serial No. 390,574. 7 Claims. (Cl. 285—24.)

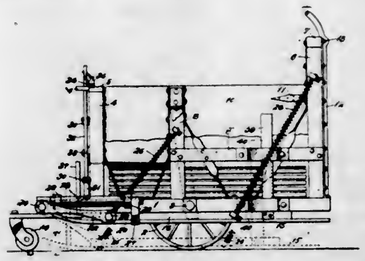


1. The combination with a pair of train-pipe coupling heads provided with a plurality of passages adapted to register in pairs, of an interposed plate provided with a conduit through which a passage of one coupling head communicates with a non-registering passage of the other coupling head.

1,381,866. PROGRESSIVE AND REVERSIBLE CHANGE-SPEED MECHANISM. NICOLAS GHERASSIMOFF, St. Germain en Laye, France. Filed Dec. 9, 1920. Serial No. 429,507. 10 Claims. (Cl. 74—26.)

1. A transmission mechanism comprising in combination a driving shaft, a driven shaft, a cone on said driven shaft, means actuated by said driving shaft to rotate said cone, and means actuated by said cone-rotating means to couple said driving and driven shafts directly to each other.

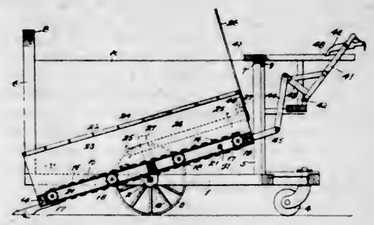
1,381,867. FUEL-FEEDING DEVICE FOR CARBURETERS. PIERRE P. GILLES, Chicago, Ill. Filed July 28, 1919. Serial No. 313,781. 3 Claims. (Cl. 158—36.)



1. In a device of the class described, two valves each adapted to be held in closed position by suction, means to actuate the valves one from the other so that one is opened when the other is closed and the first is closed when the second is open, a float by the rise and fall of which the valves are to be operated, and means connecting the float to one valve; said means including a lever to increase the force exerted by the float, a spring through which the force from the float is transmitted to the last named valve on rising movement, and a second spring through which the force from the float is transmitted to the last named valve on falling movement.

1,381,868. STACK-FORMER. DAVID M. GRAHAM, Bordulac, N. D. Filed May 15, 1917, Serial No. 168,786. Renewed Sept. 7, 1920. Serial No. 408,778. 27 Claims. (Cl. 214—9.)

1. A stack former for harvesting machines having in combination, a frame and supporting ground wheels, a bottom which is swingably connected with said frame near the forward end of the bottom, links forming such swingable connection and adapted to swing toward the ground, springs supporting the rear end of said bottom, and releasable means for holding said bottom in elevated stack-receiving position.

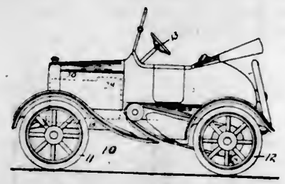


11. A stack former for harvesting machines, having therein a longitudinally collapsible stack-ventilating space-former.

13. A stack former for harvesting machines, having therein a rearwardly collapsible and resiliently returnable stack-ventilating space-former.

20. In a stack former for harvesters, the combination of a wheeled frame, stack-forming walls thereon, and a horizontal rigid bottom suspended on said frame and adapted for downward and upward movement as a unit for the deposit of the stack upon the ground without substantial displacement of the stack out of the forward and rearward limits of the stack-former and for return to stack-receiving position, said bottom being constructed with longitudinal rods permitting the engagement of the stack with the ground through the bottom.

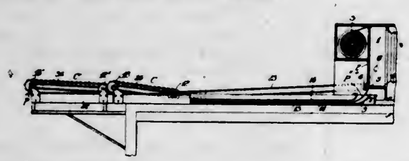
1,381,869. STACK-FORMER. DAVID M. GRAHAM, Bordulac, N. D. Filed May 17, 1917, Serial No. 169,254. Renewed Sept. 10, 1920. Serial No. 409,498. 24 Claims. (Cl. 214—9.)



1. A stack former for harvesting machines having in combination, a tiltable bottom and ground wheels, a support on which said bottom is nearly balanced and is tiltable, means for confining and forming the lower part of the stack, means for forming a permanent ventilating space in said lower part of the stack, means for forming the upper and major part of the stack on the top of the space-forming means and confining and shaping the sides of the said upper part of the stack, means on said bottom for carrying the formed stack therefrom and away from said space-forming means, and mechanism for actuating such stack-carrying means.

19. A stack former for harvesters having in combination, a ground wheel support, a tiltable and nearly balanced bottom, a stack ventilating space former within the stack former, and means for positively forcing a formed stack out of the former while said bottom is tilted for the deposit of the stack.

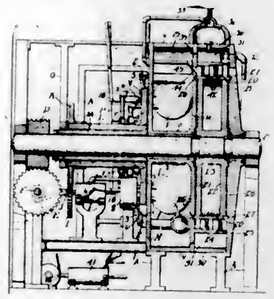
21. A stack former for harvesting machines, having therein an inwardly collapsible stack-ventilating space-former.



24. In a stack former for harvesters the combination of a wheeled frame, stack-forming walls thereon including side walls, a tiltable stack-sustaining bottom, the forward ends of which said side walls are removed to form side openings, and shields attached to said tilting bottom and arranged opposite to said openings to close the same against the escape of straw.

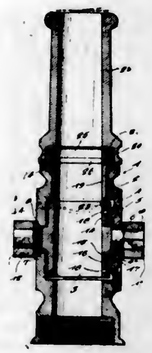
1,381,870. SPRING-MOTOR VEHICLE. BERTE C. GRAY, Sedgwick, Kans. Filed Dec. 16, 1919. Serial No. 345,340. 1 Claim. (Cl. 180—1.)

In a self propelled vehicle, a crank, a shaft operatable thereby, a coiled spring within a barrel case arranged on said shaft, the opposite ends of said spring connecting between said spring and barrel case whereby crank rotation operates to store up energy in said spring and means for holding said tension; a jack shaft carrying gears; teeth on the periphery of said barrel case engaging one of said jack shaft gears; a driving shaft carrying gears in mesh with the other gearing on the jack shaft; clutch shifting mechanism controlling the position of clutch mechanism as arranged upon said driving shaft and adapted to selectively engage said driving shaft to said specified gearing for forward or reverse motion; gears, shafting and belting in operative combination with said driving shaft and in driving engagement with the driving wheels of the vehicle for propelling purposes; a pedal, a plate slidably operated by the clutch shifting mechanism; said plate engaging said pedal when the clutch mechanism is in neutral and preventing pedal movement but disengaging from said pedal when and after clutch engagement has been effected to permit of pedal movement; brake members comprising plates mounted on a shaft having a spiral gear portion thereon in meshed engagement with a gear on the said jack shaft, said brake plates through spring pressure being normally held in brake contact and through the spiral gear in engagement with said jack shaft gear preventing the coiled spring from releasing its stored energy; said pedal connecting to said brake members so that after and during selected clutch engagement, pedal movements operate to release the brake engagement whereby the stored energy in said coiled spring operates as specified through the functioning elements to exert desired traction upon the driving wheels of the vehicle.



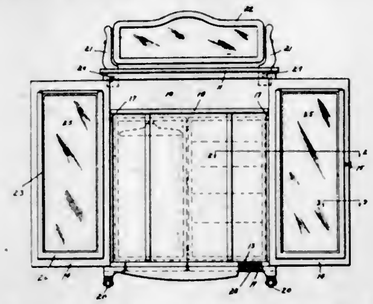
1,381,871. PHOTOGRAPHIC DEVELOPING APPARATUS. JOHN S. GREENE, Rochester, N. Y., assignor to Photostat Corporation, Providence, R. I., a Corporation of Rhode Island. Filed June 17, 1919. Serial No. 304,789. 7 Claims. (Cl. 193—2.)

1. The combination with a supporting element having a surface over which photographic prints are adapted to slide, and driving gear, of a flexible conveyer operated by the latter to traverse the surface and composed of successive non-abrasive contact members adapted to frictionally engage the print.



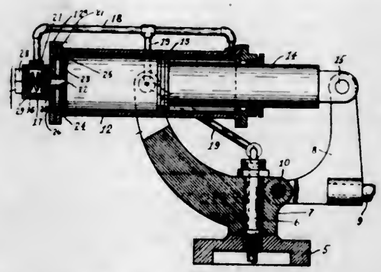
1,381,872. INTERNAL-COMBUSTION ROTARY ENGINE. ANNIBALE A. GUERINI, Middleboro, Mass. Filed Oct. 31, 1917. Serial No. 199,560. 4 Claims. (Cl. 60—42.)

1. In an internal combustion engine a rotor, a plurality of explosion chambers spaced concentrically about the rotor, a nozzle communicating with the explosion chambers and directed toward the rotor, a cylinder communicating with each chamber, a piston slidable in the cylinder, means to admit and discharge the scavenging air under pressure, a spring carried by the piston having sufficient tension to resist the pressure of scavenging air, a nozzle valve controlled by the piston and held normal



yieldingly closed, means to admit gas to the chamber, means to ignite the contained gas, the tension of the ignited gas actuating upon the piston to open the nozzle valve, and means carried by the rotor to actuate the scavenging valves, the gas admission valves and the igniter in timed relation and progressively for the several chambers.

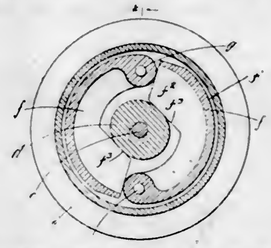
1,381,873. NOZZLE. CLARENCE LEELAND HARDY, Dayton, Ohio, assignor to Maurice D. Larkin, Dayton, Ohio. Filed Oct. 30, 1919. Serial No. 334,435. 4 Claims. (Cl. 299—151.)



1. In a hose nozzle, a valve casing having a longitudinal bore extending therethrough, and intersected by a transverse cylindrical valve chamber which is open at one end, a removable cap closing this end of the chamber, the inner face of the cap being convex and there being a central bearing-opening formed therein, a rotary cylindrical valve in said chamber, said valve having a transverse opening for registration with the aforesaid bore and being provided in its end adjacent the cap with a recess, there being a journal extending from this recessed end through the bearing-opening in the cap and there also being a plurality of openings formed in this end of the valve which intersect said recess and permit passage of water therethrough, and a flexible packing ring surrounding said journal and seated in said recess, said ring being forced into tight contact with the convex face of the closing cap by the water which passes through the aforesaid openings and against it.

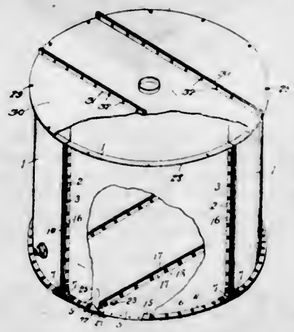
1,381,874. TRAVELING-SUITETTE. ANNA ROSALTHA HARPER, Ames, Iowa. Filed Mar. 25, 1921. Serial No. 455,667. 2 Claims. (Cl. 45—118.)

2. A device of the class described, having a back, sides, top and bottom members, said bottom, side and back members being provided with protecting strips, the device being adapted to receive a wardrobe trunk or the like, and having on its interior on its sides horizontal strips, a detachable shelf adapted to rest on said strips, a detachable bottom provided with rollers adapted to be removed and placed in said device, a detachable mirror adapted to be supported on said device at the top thereof or to be removed therefrom and placed on the interior of the device, hinged doors for said device, mirrors detachably mounted on the inner sides of the doors and adapted to be removed therefrom and placed on the interior of said device.



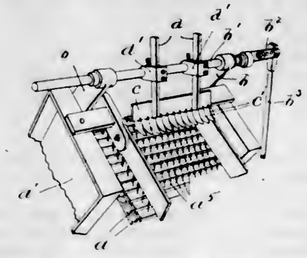
1,381,875. TROLLEY-RETRIEVER. GEORGE E. HARPHAM, Los Angeles, Calif. Filed May 16, 1918. Serial 234,940. 2 Claims. (Cl. 191—90.)

2. In a trolley retriever, a trolley pole; an air cylinder; a piston in said cylinder operatively connected to said pole and adapted to move the free end of the pole either upwardly or downwardly; a valve chamber at the rear end of said cylinder in communication with the interior of said cylinder through an opening in the rear head; a valve in said chamber adapted to control said communication; and means to operate said valve to open said communication when the trolley wheel accidentally leaves the feed wire when the car is running, whereby the wheel is brought below the span wires.



1,381,876. CLUTCH OR FREE-WHEEL MECHANISM. ALBERT CHARLES HAYWARD, Ashford, England. Filed Jan. 6, 1921. Serial No. 435,473. 2 Claims. (Cl. 192—43.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

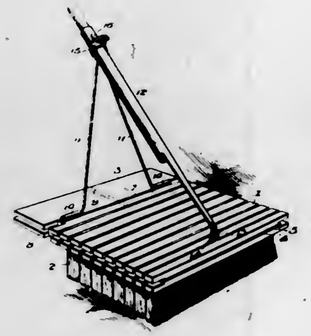
1. A two-way free wheel clutch for the wheels of motor vehicles comprising a member mounted directly on and adapted for free independent rotation with respect to the driving axle, frictional shoes pivotally supported at diametrically opposite points on said member, a drum carried by the wheel to be engaged by said shoes, the pivotal terminal of each shoe forming a limit for the non-clutch position of the other shoe, and a cam fixed



on the axle and coöperating with the shoes in a line substantially at a forty-five degree angle to their pivots to force the shoes into frictional engagement with the drum.

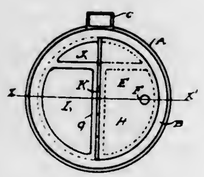
1,381,877. KNOCKDOWN TANK. PETER C. ICKES, Chanute, Kans., assignor of one-half to Edward T. Neyhard, Chanute, Kans. Filed May 12, 1919. Serial No. 296,462. 2 Claims. (Cl. 220—4.)

1. In a knockdown tank, a side section having at its lower end an outwardly extending peripheral flange, two bottom sections bolted to the under side of said flange, each having an upwardly extending flange bolted to the corresponding flange of the other bottom section, a sealing plate overlapping said upwardly extending flanges and overlapping and being bolted to said two bottom sections and said outwardly extending peripheral flange, and packing between the bottom sections and said peripheral flange, between the bottom sections and the sealing plate, and between said upwardly extending flanges.



1,381,878. RAG-STOCK FEEDER. JULIAN S. JACOBS, Springfield, Vt., assignor to John T. Slack Corporation, Springfield, Vt., a Corporation of Vermont. Filed Oct. 20, 1919. Serial No. 332,053. 8 Claims. (Cl. 19—9.)

4. A comb for distributing rag-stock or the like over the apron of a rag-stock feeding machine embracing a



transverse blade-bar, a series of flat thin edge blades secured directly to said bar in position to present thin cutting edges to the approaching rag-stock, and means for suspending said bar to permit oscillation of the comb in proximity to the surface of the apron, substantially as described.

1,381,879. MOP. CHRISTOPHER JUSKA, Rochester, Minn. Filed Aug. 12, 1919. Serial No. 316,963. 4 Claims. (Cl. 15—13.)

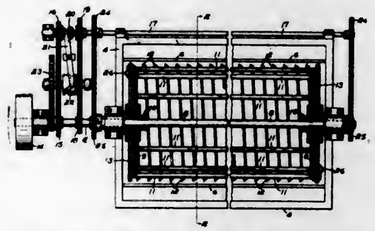
1. A mop composed of a plurality of slats or strips, and an end piece, said parts having grooved ends, and the outermost slat a grooved side, a bail extending through said grooves and having threaded ends, rags held between the slats, and means screwed on the threaded ends for holding the rags securely between the slats.

1,381,880. ASH-RECEIVING DEVICE. CARL KRAFT, New York, N. Y. Filed Feb. 12, 1920. Serial No. 358,084. 2 Claims. (Cl. 131—51.)

1. In an ash receiving device, a well, so situated and divided into compartments that a cover, suitably hinged, may be made to cover one compartment completely at any one time, thereby providing a means to cut off oxygen supply to the covered compartment and hence extinguish any combustion in said covered compartment, at the same time leaving the other uncovered compartment or compartments in a condition ready to receive the ashes.

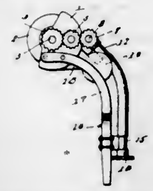
1,381,881. DATE-INDICATOR. GEORGE P. LELY, Parkstone Heights, England. Filed Apr. 29, 1919. Serial No. 293,475. 4 Claims. (Cl. 40—109.)

4. A date indicator comprising a support provided with independent and relatively fixed non-adjustable numerical scale and diurnal scale in combination with pointers cooperating respectively with said scales and adapted for adjustment with relation to one another to initially register the respective pointers with a particular number and a particular day, and provide for the maintenance of



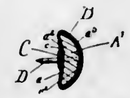
this adjusted relation of the pointers throughout a predetermined use of the date indicator.

1,381,882. ELECTROLYTIC APPARATUS AND PROCESS. MATTHEW M. MERRITT, South Middleton, Mass., assignor to Copper Products Company, Boston, Mass., a Corporation of Maine. Filed Nov. 2, 1917. Serial No. 199,812. 3 Claims. (Cl. 204—8.)



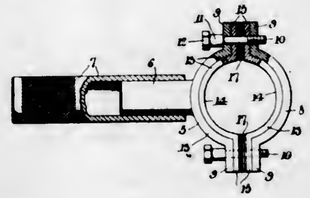
1. The process of electrolytically depositing metal of uniform thickness, which comprises revolving a cylindrical cathode drum, while partially immersed in an electrolyte, and while passing an electric current through a mass of relatively small pieces of metal immersed in the electrolyte as an anode, and while maintaining the general surface of the anode in a position substantially equidistant in radial plane from the surface of the cathode drum.

1,381,883. ELECTROLYTIC PROCESS, PRODUCT, AND APPARATUS. MATTHEW M. MERRITT, South Middleton, Mass., assignor to Copper Products Company, Boston, Mass., a Corporation of Maine. Filed Aug. 2, 1918. Serial No. 247,962. 4 Claims. (Cl. 204—11.)



1. Electrolytic apparatus for use in depositing metal on a flexible cathode comprising, in combination, a reel on which a flexible cathode may be wound, said reel providing means to which the ends of said cathode may be secured, and bars for supporting the intermediate portion of said cathode and differential speed driving means for driving said bars and said means to which the ends of said cathode may be secured at different rates, thereby to vary the points of contact of said flexible cathode on said bars.

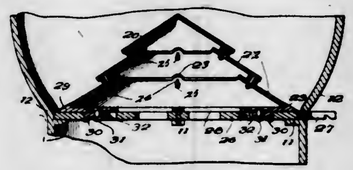
1,381,884. WINDOW-CLEANING DEVICE. JOHN J. PETERSON, Steubenville, Ohio. Original application filed Oct. 17, 1919, Serial No. 331,350. Divided and this application filed Feb. 9, 1920. Serial No. 357,114. 1 Claim. (Cl. 15—59.)



In a device of the character described, a semi-cylindrical casing provided with a rearwardly projecting throat member, a dust receiving casing supported by the throat member and in direct communication therewith, said dust receiving casing being provided with an air outlet, a roller rotatably mounted in the casing axially thereof, and a baffle projecting from the upper wall of the forward end of said throat member to within a short distance of the periphery of the roller.

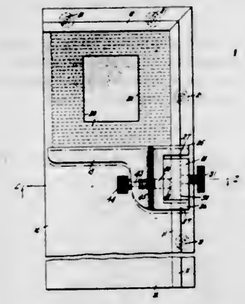
1,381,885. COVERED FINISHING-MOLDING. HOWARD D. RANDALL, Cincinnati, Ohio, assignor to The J. D. Randall Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 23, 1920. Serial No. 368,064. 4 Claims. (Cl. 155—184.)

1. As a new article of manufacture a molding comprising a central metallic strip, a covering for the strip, and staples passing through the edges of the covering and upset against the metallic strip.



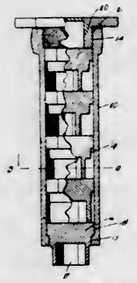
1,381,886. ADJUSTABLE HAND-TOOL FOR FILING ROUND SURFACES. DREW D. ROBERTS, Perry, Fla. Filed Jan. 20, 1921. Serial No. 438,709. 1 Claim. (Cl. 29—80.)

In a device of the character described, a pair of separable circular clamping members having lateral flanges, a pair of circular file plates having like flanges and fitting within the clamping members, a plurality of adjusting shims between the flanges of the plates, a handle member projecting centrally from one of said clamping members, and screw bolts extending through all of said flanges and through the shims.



1,381,887. LIGNITE-GRATE. ADALBERT A. RUMBEICH, Pisek, N. D. Filed Oct. 9, 1918. Serial No. 257,451. 3 Claims. (Cl. 126—163.)

3. In combination with the usual stove grate, a base supported thereon and consisting of a plurality of radial arms, said arms having shoulders near their free ends, a supplemental grate composed of hollow frusto-conical sections adjustably held together with air spaces there-

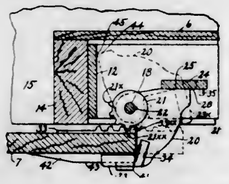


between and a top conical section, the lowermost section resting on said base and held in a central position by said shoulders.

1,381,888. COMPOSING-STICK. CHARLES BLUE WRIGHT, Jersey City, N. J., assignor of one-half to Edward G. Nelson, New York, N. Y. Filed Aug. 16, 1920. Serial No. 403,699. 6 Claims. (Cl. 276—39.)

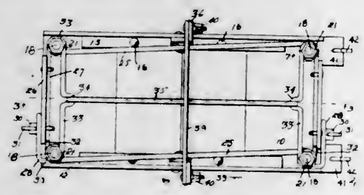
4. A composing stick comprising a body having a fixed end wall, a fixed side wall and knee slidable on the side wall, and a setting member slidable on the side wall and adapted to be fastened thereto, the said knee having a limited sliding movement relative to the said setting member to allow of opening the stick without disturbing the set thereof, and a locking means adapted to lock the knee to the setting member when in set position and to allow of unlocking and opening the knee relative to the setting member.

1,381,889. COMBINATION-WRENCH. EDWIN M. ARNOLD, Tulsa, Okla. Filed Jan. 25, 1921. Serial No. 439,854. 6 Claims. (Cl. 81—73.)



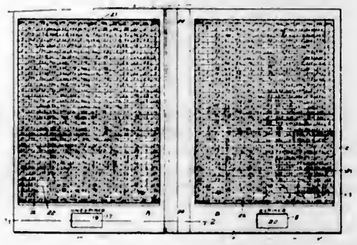
6. A wrench comprising a handle having a container, a series of detachable wrench members for said container, and means for locking any one of said wrench members in operative position only when all of said wrench members are in position in said container.

1,381,890. VALVE-PULLER. ROY W. BROUHARD and WILLIAM H. DONALDSON, Colo, Iowa. Filed July 6, 1920. Serial No. 394,314. 4 Claims. (Cl. 29—86.3.)



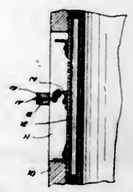
1. A tool of the kind described having a shank, a head on said shank, divergent resilient arms on said shank, terminating in inwardly inclined fingers, and a hammer member slidably mounted on said shank.

1,381,891. SLIDING-DOOR FASTENER. WILLIAM H. BURNS, St. Paul, Minn. Filed Nov. 30, 1920. Serial No. 427,420. 8 Claims. (Cl. 292—199.)



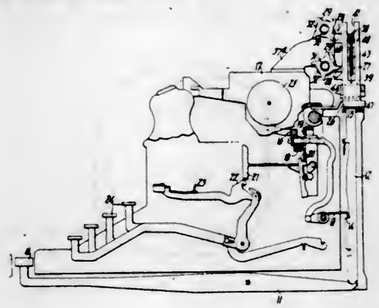
1. The combination with a car and the sliding door of same, of a metal frame secured on the side of the car near the door opening, an arm pivoted in the frame and arranged to engage the rear edge of the door to resist opening of it, means on the door for automatically bringing the arm to the resisting position during the closing of the door, and an automatically moving locking member engaging the arm to hold it firmly in the resisting relation to the door.

1,381,892. KNOCKDOWN HOG-CRATE. WILLIAM E. BUTE, Stanhope, Iowa. Filed July 8, 1919. Serial No. 309,393. 3 Claims. (Cl. 119—20.)



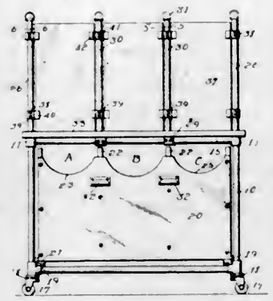
1. In a knock-down crate, a wheel mounted base comprising laterally spaced, longitudinally arranged, angle irons, caster wheels for supporting said angle irons, a floor resting on said angle irons, upright posts detachably mounted on said angle irons, side frame members on opposite sides of the crate, pivotally supported on said posts, doors pivotally supported on the posts at each end of the crate, cross members pivoted to the upright posts at each end of the crate, a central longitudinal member, pivoted at its ends to the respective cross members.

1,381,893. INTEREST-COMPUTING TIME-TABLE. TORKEL O. HEGGEN, Fort Dodge, Iowa. Filed July 8, 1919. Serial No. 309,395. 1 Claim. (Cl. 283—1.)



An interest computing time table, comprising two adjacent sets of indicating characters, one, being provided with columns indicating the months of the year and with lines at right angles thereto indicating the days of the month and with numerals arranged between said columns and lines for indicating the number of expired days in the year for any given month or day of the year, the other being similarly provided with columns for indicating the months and lines for indicating the days and also being provided with figures indicating the number of unexpired days in a year for any given date, substantially as set forth, and a device adjacent to each of said sets of indicating characters capable of receiving pencil marks and also capable of having said marks erased without deterioration of said member, with the word "Expired" printed adjacent to one of said devices and the word "Unexpired" adjacent to the other for the purposes stated.

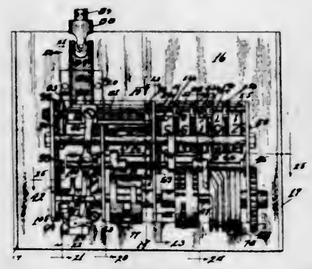
1,381,894. SILO STRUCTURE. FREDERICK A. STAFFORD, Chariton, Iowa. Filed Mar. 18, 1919. Serial No. 283,410. 1 Claim. (Cl. 20—14.)



In a device of the class described, the combination of a circular structure having a door opening therein, a door member for said opening comprising a sheet of somewhat resilient metal curved from side to side to conform to the curvature of the structure and overlapping the wall of the structure at the sides and top and bottom of the opening, transverse brace members on the outer surface of said door member near the top and bottom thereof, terminating short of the side edges of said door member, and adapted to engage the wall of the opening for properly positioning the door member with relation to said opening, a central transverse, reinforcing angle member on the outer surface of said door member, a second angle member secured to said first angle member, a cross bar designed to overlap the door opening on the opposite side thereof from the door member, a bolt mounted in said second angle member extending through said cross bar, and a nut for said bolt.

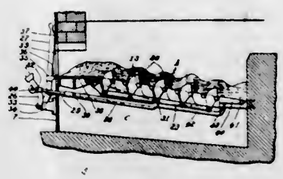
1,381,895. TYPEWRITING-MACHINE. BURNHAM C. STICKNEY, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 18, 1918. Serial No. 217,873. 5 Claims. (Cl. 197—179.)

1. In a typewriter, in combination, a carriage, a support therefor, a tabulating mechanism comprising a tabulator-stop mounted at the rear of said support and an attachment mounted on said carriage so as not to extend to the rear of the typewriter frame, said attachment comprising a set of column-stops so mounted as to be movable with the carriage over said tabulator-stop, each of said column-stops being slidable vertically from a normal ineffective position to a set position in which it may cooperate with said tabulator-stop to arrest said carriage, and a selective stop-setting device capable of effecting a setting of a plurality of stops of said set at a single operation, and also capable of effecting a plurality of different settings of stops of said set at a plurality of successive operations.



1,381,896. PORTABLE LAUNDRY-SEGREGATING BIN. RICHARD H. TYNER, Cincinnati, Ohio. Filed Jan. 24, 1920. Serial No. 353,898. 4 Claims. (Cl. 211—36.)

1. In a device of the class described, a frame comprising upright corner members, means for connecting said corner members near their lower ends, means for connecting said corner members near their upper ends, opposite supporting guides mounted on the lower portion of said frame members, a receptacle supported on said guides, upright members at the corners of said device at the upper end of said first named corner members, a platform supported on said frame above said receptacle, upright members capable of adjustment to a variety of positions, said platform being provided with slots to receive said last named upright members, and partition members for connecting the opposite adjustable members.

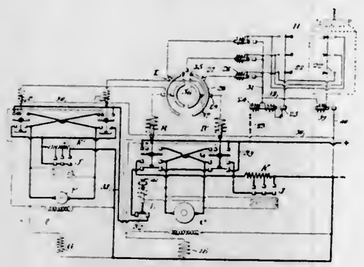


REISSUES.

15,123. COIN AND TICKET FARE REGISTER. JAY M. JOHNSON, Chicago, Ill., assignor, by mesne assignments, to Johnson Fare Box Company, Chicago, Ill., a Corporation of New York. Filed Feb. 7, 1920. Serial No. 357,018. Original No. 1,310,833, dated July 22, 1919, Serial No. 872,919, filed Nov. 19, 1914. 31 Claims. (Cl. 235—32.)

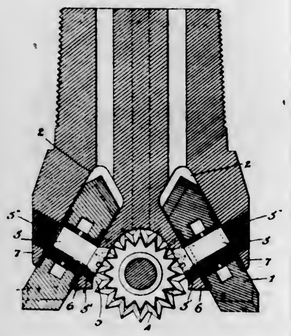
1. In a machine of the class described a register, a mechanism for operating the same set in initial motion by contact of coins, a carrying element for coins having pockets therein and means permitting the coins dropping deeper into the pockets prior to the coins contacting a part of the operating mechanism.

15,124. FURNACE-GRATE. CHARLES J. HUBER, Baltimore, Md., assignor to Huber Grate Bar & Stoking Company, Baltimore, Md., a Corporation of Delaware. Filed June 11, 1919. Serial No. 303,526. Original No. 1,232,687, dated July 10, 1917, Serial No. 75,503, filed Feb. 1, 1916. 12 Claims. (Cl. 110—39.)



10. A hand stoker consisting of transversely-extending grate sections in downwardly inclined series from front to rear, the sections being pivoted near their rear portions and having arcuate front portions concentric with the pivot, means connecting the alternate grate sections in separate sets, and manually controlled means for swinging the sections of each set independently of the other set about their respective pivots, the grate sections swinging upward and backward into position substantially at right angles to the grate, and a separately actuated drop bar at the rear.

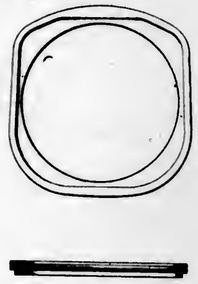
15,125. ELEVATOR. DAVID L. LINDQUIST, Yonkers, N. Y., and FREDERICK HYMANS, Glen Ridge, N. J., assignors to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 30, 1920. Serial No. 420,840½. Original No. 1,283,827, dated Nov. 5, 1918, Serial No. 64,396, filed Dec. 1, 1915. 15 Claims. (Cl. 172—152.)



10. In an elevator, the combination of an electric hoisting motor adapted to drive the car at normal full speed,

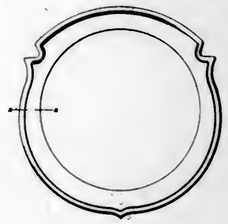
an additional electric motor adapted to drive the car at a reduced speed, an electrically controlled friction clutch between said additional motor and the car, electro-responsive means for simultaneously releasing said clutch and closing a circuit to the motor for full speed operation of the car, automatic means for applying said clutch and interrupting the circuit of said last named motor as the

car approaches a predetermined stopping point, means dependent for its operation upon a predetermined speed reduction of the car for closing a circuit to the additional motor whereby the latter operates to drive the car at reduced speed, a brake for the additional motor, and means for interrupting the circuit of said additional motor and applying the brake to stop the car at the predetermined stopping point.



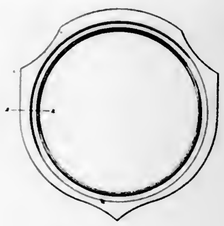
15,126. DRILL-HEAD. CLARENCE E. REED, Houston, Tex. Filed May 16, 1920. Serial No. 380,309. Original No. 1,279,759, dated Sept. 24, 1918, Serial No. 238,328, filed June 5, 1918. 7 Claims. (Cl. 255—71.)

3. In a tool for deep well drilling, a head having means at the upper end thereof for attachment to a drill stem, a transversely extending recess in the lower end thereof opening out through the bottom of the same, and a second recess located between one of the longer sides of the first named recess and the periphery of the head, a disk cutter located in the second recess, a retaining and bearing pin for the disk cutter insertible into position through said first named recess, coöperating surfaces associated with the outer portion of the pin and the wall between the second recess and the periphery of the head for retaining the pin in position, and a member adapted to be placed and held within the first named recess, in coöperative relation to the pin, after the latter has been inserted in position.



DESIGNS.

58,126. BEZEL. ARTHUR S. ALEXANDER, New York, N. Y., assignor to The J. Alexander Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Dec. 13, 1919. Serial No. 344,664. Term of patent 14 years.



The ornamental design for a bezel, substantially as shown.

58,127. BEZEL. ARTHUR S. ALEXANDER, New York, N. Y., assignor to The J. Alexander Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Apr. 6, 1920. Serial No. 371,784. Term of patent 14 years.

The ornamental design for a bezel, substantially as shown.

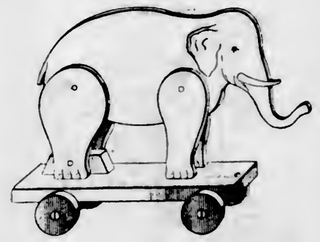
58,128. BEZEL. ARTHUR S. ALEXANDER, New York, N. Y., assignor to The J. Alexander Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Apr. 6, 1920. Serial No. 371,785. Term of patent 14 years.

The ornamental design for a bezel, substantially as shown.

58,129. COLLAR-HOLDER. LAWRENCE E. BAER, Attleboro, Mass. Filed Jan. 17, 1921. Serial No. 438,025. Term of patent 14 years.

The ornamental design for a collar holder as shown.

58,130. SEESAW. JOSEPH P. BODENMILLER, St. Louis, Mo., assignor to The Mengel Company, Louisville, Ky., a Corporation of New Jersey. Filed Mar. 7, 1921. Serial No. 450,492. Term of patent 14 years.

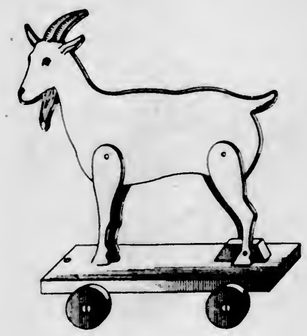


The ornamental design for a seesaw, as shown.

58,131. GASOLENE-DISPENSER CASING. JAMES HENRY BRADY, Louisville, Ky., assignor to Visible Measure Gasoline Dispenser Company of America, Louisville, Ky., a Corporation of South Dakota. Filed Aug 25, 1919. Serial No. 319,830. Term of patent 14 years.

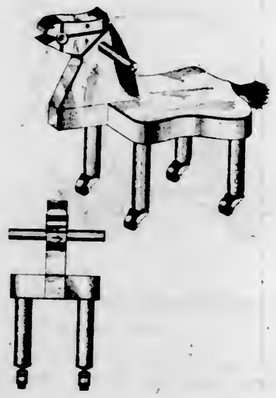
The ornamental design for a gasolene dispenser casing, as shown.

58,132. TOY. ALFRED SCOTT BUCHER, Decatur, Ga. Filed Aug. 27, 1920. Serial No. 406,489. Term of patent 3½ years.



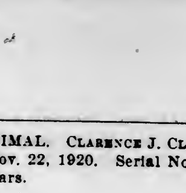
The ornamental design for a toy, substantially as shown.

58,133. TOY. ALFRED SCOTT BUCHER, Decatur, Ga. Filed Aug. 27, 1920. Serial No. 406,490. Term of patent 3½ years.



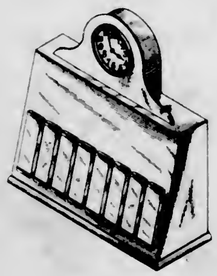
The ornamental design for a toy, substantially as shown.

58,134. TOY. ALFRED SCOTT BUCHER, Decatur, Ga. Filed Aug. 27, 1920. Serial No. 406,491. Term of patent 3½ years.



The ornamental design for a toy, substantially as shown.

58,135. TOY ANIMAL. CLARENCE J. CLOUSER, Columbus, Ohio. Filed Nov. 22, 1920. Serial No. 425,919. Term of patent 7 years.

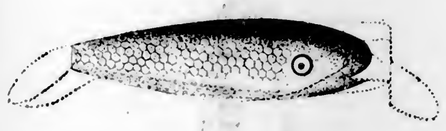


The ornamental design for a toy animal, as shown.

58,136. RADIATOR-CAP. CARL B. COOMBS, Indianapolis, Ind. Filed Mar. 9, 1921. Serial No. 450,976. Term of patent 7 years.

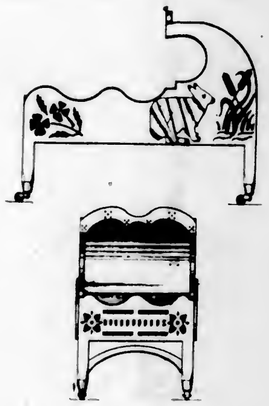
The ornamental design for a radiator-cap, as shown.

58,137. ADVERTISING DISPLAY DEVICE. FRANK P. CONNOLLY, York, Pa. Filed Nov. 11, 1920. Serial No. 423,494. Term of patent 14 years.



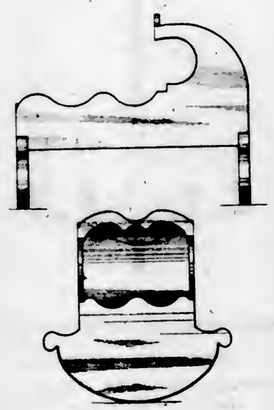
The ornamental design for an advertising display device, as shown.

58,138. COMBINATION CHECKER-BOARD AND TRAY. ANDREW M. DEIG, Seattle, Wash. Filed Feb. 14, 1921. Serial No. 445,009. Term of patent 7 years.



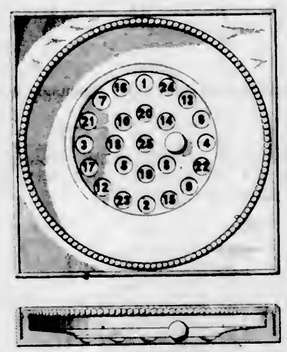
The ornamental design for a combination checker-board and tray, substantially as shown.

58,139. SURFACE ORNAMENTATION FOR ARTIFICIAL BAIT. HENRY S. DILLS, Garrett, Ind., assignor of one-half to James Heddon's Sons, Incorporated, Dowagiac, Mich., a Corporation of Michigan. Filed June 17, 1918. Serial No. 240,514. Term of patent 14 years.



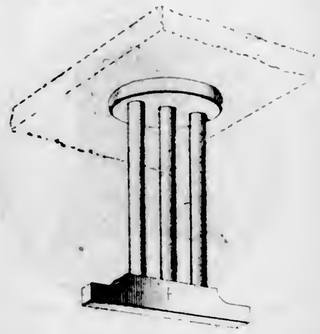
The ornamental design for a surface ornamentation for artificial bait, substantially as shown.

58,140. BED. RICHARD C. EAST, Evanston, Ill. Filed Oct. 25, 1920. Serial No. 419,542. Term of patent 7 years.



The ornamental design for a bed as shown.

58,141. CRADLE. RICHARD C. EAST, Evanston, Ill. Filed Oct. 25, 1920. Serial No. 419,543. Term of patent 7 years.

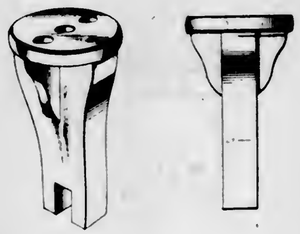


The ornamental design for a cradle as shown.

58,142. TOY. PHILLIP GOEHRING, Seattle, Wash. Filed Apr. 4, 1921. Serial No. 458,538. Term of patent 7 years.

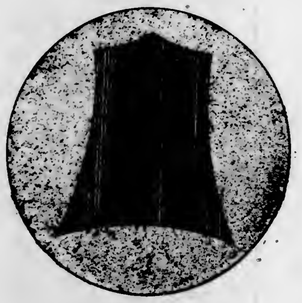
The ornamental design for a toy as shown.

58,143. FOOTREST FOR CHILDREN'S VEHICLES. WARREN T. GREEN, St. Louis, Mo., assignor to The Mengel Company, Louisville, Ky., a Corporation of New Jersey. Filed Jan. 31, 1921. Serial No. 441,476. Term of patent 14 years.



The ornamental design for a footrest for children's vehicles as shown.

58,144. WHEEL-FORK FOR CHILDREN'S VEHICLES. WARREN T. GREEN, St. Louis, Mo., assignor to The Mengel Company, Louisville, Ky., a Corporation of New Jersey. Filed Jan. 31, 1921. Serial No. 441,477. Term of patent 14 years.

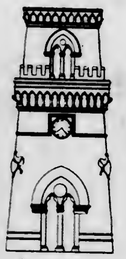


The ornamental design for a wheel fork for children's vehicles, as shown.

58,145. STEERING-HEAD FOR CHILDREN'S VEHICLES. WARREN T. GREEN, St. Louis, Mo., assignor to The Mengel Company, Louisville, Ky., a Corporation of New Jersey. Filed Jan. 31, 1921. Serial No. 441,479. Term of patent 14 years.

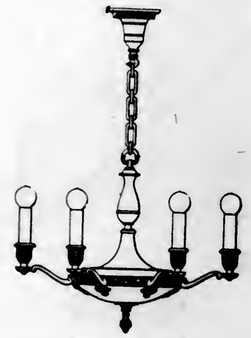
The ornamental design for a steering head for children's vehicles, as shown.

58,146. AUTOMOBILE-LENS. HERBERT J. HANDS, Dallas, Tex. Filed Jan. 12, 1920. Serial No. 351,059. Term of patent 3½ years.



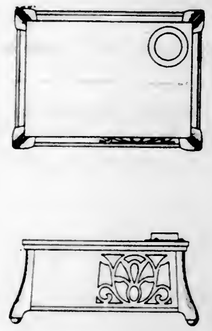
The ornamental design for an automobile lens as shown.

58,147. RADIATOR-CAP. WILLIAM C. HAUN, Indianapolis, Ind. Filed Mar. 23, 1921. Serial No. 454,919. Term of patent 7 years.



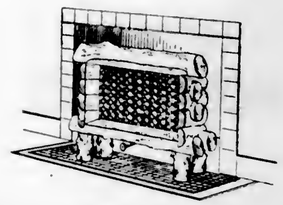
The ornamental design for a radiator-cap, as shown.

58,148. PHONOGRAPH. FRANK IUCULANO, New York, N. Y. Filed Apr. 21, 1920. Serial No. 375,633. Term of patent 3½ years.



The ornamental design for a phonograph as shown.

58,149. LIGHTING-FIXTURE. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 28, 1920. Serial No. 420,288. Term of patent 3½ years.

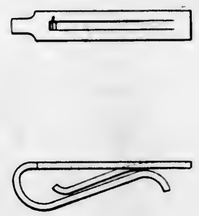


The ornamental design for a lighting fixture as shown.

58,150. PHONOGRAPH-CASING. GEORGE R. KUNKLE, Elyria, Ohio, assignor to The General Phonograph Manufacturing Company, Elyria, Ohio, a Corporation of Ohio. Filed Dec. 1, 1919. Serial No. 341,815. Term of patent 7 years.

The ornamental design for a phonograph casing, as shown.

58,151. RADIANT GAS-HEATER. EDWARD L. LOPE, Brooklyn, N. Y. Filed Nov 11, 1920. Serial No. 423,490. Term of patent 3½ years.



The ornamental design for a radiant gas heater, as shown.

58,152. WASHTUB. CARMELO MAGANUCO and FRANCESCO MAGANUCO, Philadelphia, Pa. Filed Dec. 13, 1919. Serial No. 344,603. Term of patent 14 years.

The ornamental design for a washtub as shown.

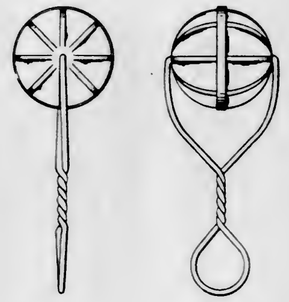
58,153. TIE-CLIP. FRED S. MAKER, Seekonk, Mass., and RALPH K. MAKER, Providence, R. I. Filed Jan. 27, 1921. Serial No. 440,504. Term of patent 14 years.

The ornamental design for a tie-clip substantially as shown.

58,154. LUBRICATING ATTACHMENT. CHARLES W. MANSEL, Buffalo, N. Y. Filed Sept. 28, 1920. Serial No. 413,407. Term of patent 14 years.

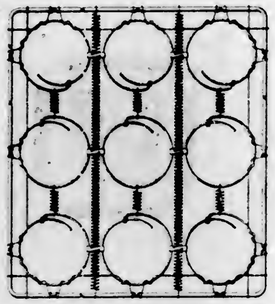
The ornamental design for a lubricating attachment, as shown.

58,155. SIGN. BRUCE MEEK and FRED W. MILLER, Des Moines, Iowa. Filed July 8, 1919. Serial No. 309,519. Term of patent 3½ years.



The ornamental design for a sign, as shown.

58,156. PHONOGRAPH-CABINET. MELVILLE W. MIX, Mishawaka, Ind. Filed Feb. 12, 1920. Serial No. 358,240½. Term of patent 14 years.

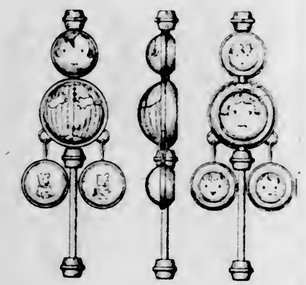


The ornamental design for a phonograph cabinet, as shown.

58,157. RATTLE. FREDERICK C. MONKHOUSE, Rochester, N. Y. Filed Mar. 30, 1920. Serial No. 370,011. Term of patent 3½ years.

The ornamental design for a rattle as shown.

58,158. BED-SPRING. JACOB L. MOORE, Muncie, Ind. Filed July 19, 1920. Serial No. 397,505. Term of patent 14 years.

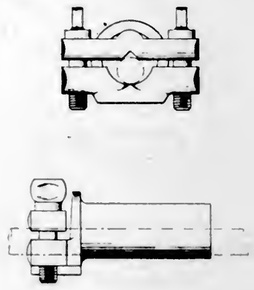


The ornamental design for a bed spring, as shown.

58,159. CHAIN RATTLE. LEO MORSE, New York, N. Y. Filed Oct. 16, 1920. Serial No. 417,525. Term of patent 7 years.

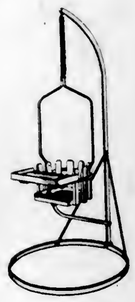
The ornamental design for a chain rattle, as shown.

58,160. RATTLE. LEO MORSE, New York, N. Y. Filed Jan. 6, 1921. Serial No. 435,521. Term of patent 7 years.



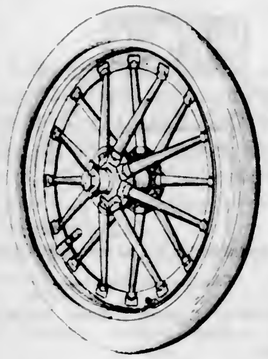
The ornamental design for a rattle, as shown.

58,161. SURFACE ORNAMENTATION OF AN ARTICLE OF MANUFACTURE. GEORGE H. NEVIUS, East Orange, N. J., assignor to Hugo Schneider, Tarrytown, N. Y. Filed Sept. 22, 1917. Serial No. 192,817. Term of patent 3½ years.



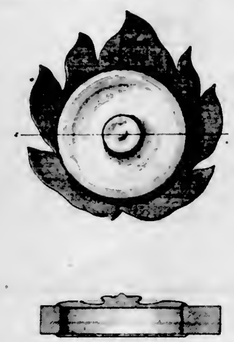
The ornamental design for surface ornamentation of an article of manufacture, as shown and described.

58,162. CARBON-HOLDER. HAROLD D. REGAR, Reading, Pa. Filed Sept. 9, 1920. Serial No. 409,259. Term of patent 14 years.



The ornamental design for a carbon holder, as shown.

58,163. BABY-JUMPER. JOHN REUTHER, Hamburg, N. Y. Filed Mar. 18, 1921. Serial No. 453,400. Term of patent 14 years.

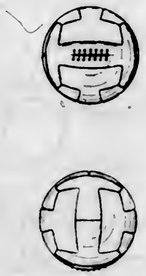


The ornamental design for a baby jumper, as shown.

58,164. VEHICLE-WHEEL. ARTHUR M. STANLEY, Lynn, Mass., assignor to Stanley Steel Welded Wheel Corporation, Boston, Mass., a Corporation of Delaware. Filed Mar. 25, 1921. Serial No. 455,637. Term of patent 14 years.

The ornamental design for a vehicle wheel as shown and described.

58,165. CANDY-CONTAINER. COLLIS H. STEERE, Palo Alto, Calif. Filed Dec. 18, 1919. Serial No. 345,899. Term of patent 3½ years.

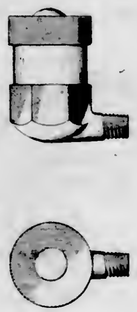


The ornamental design for a candy container, as shown.

58,166. LEATHER FOOTBALL-COVER. JOHN R. THOMLINSON, Partick, Glasgow, Scotland. Filed Sept. 14, 1920. Serial No. 410,338. Term of patent 14 years.

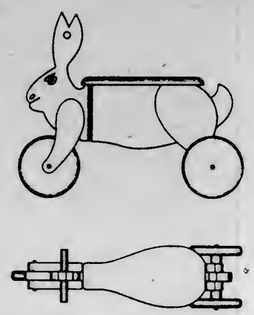
The ornamental design for a leather football cover, as shown and described.

58,167. LEATHER FOOTBALL-COVER. JOHN R. THOMLINSON, Partick, Glasgow, Scotland. Filed Sept. 14, 1920. Serial No. 410,339. Term of patent 14 years.



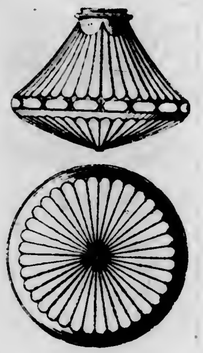
The ornamental design for a leather football cover, as shown and described.

58,168. FURNITURE-COVER. ELSIE MAY THOMPSON, New York, N. Y. Filed Sept. 8, 1920. Serial No. 409,009. Term of patent 3½ years.



The ornamental design for a furniture cover as shown.

58,169. LUBRICATOR. ALLEN A. VAN ORSDALE and JOHN B. LINN, Philadelphia, Pa. Filed Sept. 25, 1920. Serial No. 412,880. Term of patent 3½ years.

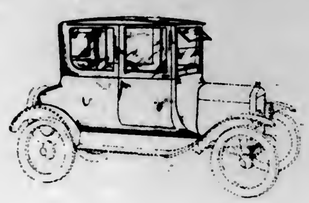


The ornamental design for a lubricator as shown.

58,170. TOY COASTER. CARL VOORHEES, Flora, Ind. Filed Mar. 12, 1921. Serial No. 451,818. Term of patent 7 years.

The ornamental design for a toy coaster as shown.

58,171. LIGHTING-GLOBE. ALBERTUS B. WAGGONER, Philadelphia, Pa., assignor to Pennsylvania Sales and Export Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 6, 1920. Serial No. 415,172. Term of patent 7 years.

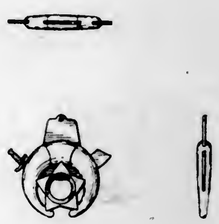


The ornamental design for a lighting globe as shown.

58,172. EMERGENCY-TANK FOR AUTOMOBILES. WILLIAM LEE WASHINGTON, East Youngstown, Ohio. Filed Apr. 4, 1921. Serial No. 458,551. Term of patent 14 years.

The ornamental design for an emergency tank for automobiles, as shown.

58,173. AUTOMOBILE-BODY. ERIC F. WILLER, Milwaukee, Wis., assignor to Charles Abresch Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed July 9, 1920. Serial No. 395,167. Term of patent 7 years.



The ornamental design for an automobile body, as shown.

58,174. BOTTLE. SAMUEL J. WOOD, Los Angeles, Calif. Filed Oct. 29, 1920. Serial No. 420,576. Term of patent 7 years.

The ornamental design for a bottle, substantially as shown.

58,175. CIGAR-CUTTER. CARL E. ZAPFFE, Seattle, Wash. Filed Dec. 27, 1920. Serial No. 433,490. Term of patent 3½ years.

The ornamental design for a cigar cutter, as shown.

TRADE-MARKS

OFFICIAL GAZETTE, JUNE 14, 1921.

[PUBLISHED JUNE 24, 1921.]

CHAMPION

Particular description of goods.—Ten-Pound Cakes of Sweet-Chocolate Coatings.
Claims use since January, 1910.

Ser. No. 134,271. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MATTHEW RICHARTZ, New York, N. Y. Filed June 26, 1920.

The portrait shown in the drawing is my photograph and the facsimile signature is my signature.
Particular description of goods.—Food-Salt for Diabetes.
Claims use since Apr. 1, 1920.

Ser. No. 134,340. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ANAHEIM CITRUS FRUIT ASSOCIATION, Anaheim, Calif. Filed June 29, 1920.

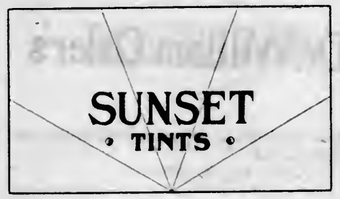
BALBOA

Particular description of goods.—Fresh Citrus Fruits.
Claims use since Jan. 1, 1920.

Ser. No. 134,388. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) F. W. STEWART MANUFACTURING CORPORATION, Chicago, Ill. Filed June 29, 1920.

No claim is made to the word "Chicago" apart from the mark shown in the drawing.
Particular description of goods.—Replacement Parts for Speedometers.
Claims use since Jan. 1, 1916.

Ser. No. 134,429. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE RED BALL COMPANY, Madrid, Iowa. Filed June 30, 1920.



Particular description of goods.—Chemical and Toilet Preparations—viz., Herb Preparation Used as a General Tonic, Liquid Laxative, Digestive Preparations Made of Fruit-Juices, Liquid Preparation for Destruction of Germs and Bacteria, Camphor Cream, General Medicinal Tonic, Cough-Syrup, Vegetable Anodyne Liniment, Rheumatic Preparation, Throat and Lung Compound, Dyspepsia Remedy, Corn Remedy, Foot-Powder; Paste for Catarrh, Coughs, and Colds; Menthol Camphorine, Diuretic Tablets, Laxative Tablets and Wafers, Digestive Tablets, Aspirin Tablets, Roup and Cholera Medicine, Cold-Cream, Vanishing Cream, Skin-Lotion; Face-Cream, Toilet Water, Dandruff Remedy, Massage-Cream, Liquid Shampoo, Glycerin and Rose-Water, Complexion-Powder, Dental Cream, Liquid Preparation and Tablets for the Relief of Liver and Kidney Troubles and Tonsillitis, Sore Throat and Biliousness, Antiseptic Healing-Powder, Fly-Powder, Insect-Destroyer, Stock-Dip, and Tablets for the Destruction of Worms.
Claims use since August, 1918.

Ser. No. 134,832. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE JOHN MUELLER LICORICE CO., Cincinnati, Ohio. Filed July 12, 1920.

FAMOUS

Particular description of goods.—Licorice Confections.
Claims use since 1887.

Ser. No. 134,973. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE ORLANDO CHEMICAL CO., Orlando, Fla. Filed July 14, 1920.

No claim is made to the word "Tints" apart from the mark shown in the drawing.
Particular description of goods.—Water-Color Paints.
Claims use since June 1, 1920.

Ser. No. 135,069. (CLASS 3. BAGGAGE, HORSE EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) THE RUSSELL MANUFACTURING COMPANY, Middletown, Conn. Filed July 16, 1920.

No claim being made to the words "Products" and "They Speak for Themselves" except in connection with the mark shown.
Particular description of goods.—Halters, Surcingles, Girths, Web-Harness; Auto, Bag, School, Lowering and Bundle Straps.
Claims use since February, 1920.

Ser. No. 135,283. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LEE R. WELLINGTON, Inglewood, Calif. Filed July 22, 1920.

No claim being made to the words "Reg. in U. S. Pat. Office" apart from the mark as shown.
Particular description of goods.—Medicinal Preparations in the Form of Powder, Liquid, and Tablets for the Treatment of Liver Troubles in Poultry.
Claims use since July 1, 1920.

Ser. No. 135,328. (CLASS 39. CLOTHING.) I. B. KLEINERT RUBBER COMPANY, New York, N. Y. Filed July 23, 1920.

Junior

Particular description of goods.—All-Rubber Baby-Pants, All-Rubber Waders, and All-Rubber Garment-Protectors.
Claims use since July 21, 1920.

Ser. No. 135,329. (CLASS 39. CLOTHING.) I. B. KLEINERT RUBBER COMPANY, New York, N. Y. Filed July 23, 1920.

Jiffy Junior

Particular description of goods.—All-Rubber Baby-Pants, All-Rubber Waders, and All-Rubber Garment-Protectors.
Claims use since July 20, 1920.

Ser. No. 135,352. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE WANDER COMPANY, Chicago, Ill. Filed July 28, 1920.

We hereby specifically disclaim the words "Net Weight 2 1/2 lbs. Pure Barley Malt Extract" as a part of the mark shown on the drawing.
Particular description of goods.—Barley-Malt Extract.
Claims use since Mar. 1, 1920.

Ser. No. 135,623. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE CHAS. R. SARGENT COMPANY, Cleveland, Ohio. Filed July 30, 1920.

No claim is made to the words "The Sign of Service" except in the arrangement shown.
Particular description of goods.—Paint-Oils, Paint-Colors, Paint-Pigments, and Turpentine.
Claims use since May, 1920.

Ser. No. 135,854. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) IMPERIAL DYEWOOD CORPORATION, Lynchburg, Va., and New York, N. Y. Filed Aug. 6, 1920.

SILVER-SALVARSAN

No exclusive right to the use of the word "Silver" is claimed.

Particular description of goods.—A Remedy Against Syphilis, Sleeping-Sickness, Trypanosomiasis, and other Tropical Infectious Diseases.
Claims use since Sept. 9, 1920.

Ser. No. 138,629. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) JAMES G. BAIN, Helena, Mont. Filed Oct. 21, 1920.

IDEAL HEAT

Particular description of goods.—Parts Used in Steam-Heating Systems—Namely, Inlet-Valves, Return-Line Valves, Receivers Placed in Return-Line to Allow Water of Condensation to Return to the Boiler But to Prevent Said Water from Escaping to the Atmosphere, Eliminators Placed Upon Such Receivers to Allow Air to Escape from the System But Prevent Escape of Steam, and Drip-Traps.
Claims use since January, 1916.

Ser. No. 138,634. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) ARTHUR FRANKENSTEIN, New York, N. Y. Filed Oct. 21, 1920.

"HITCH"

Particular description of goods.—Military Game-Board.
Claims use since Sept. 1, 1920.

Ser. No. 138,664. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FRED W. CLEMENTS, Rochester, N. Y. Filed Oct. 22, 1920.

MOONE'S EMERALD OIL

No claim being made to the word "Oil" apart from the mark as shown.

Particular description of goods.—Antiseptic, Germicidal, and Anodyne Oil.
Claims use since January, 1913.

Ser. No. 138,699. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) S. F. ZALOOM & Co., New York, N. Y. Filed Oct. 22, 1920.

Particular description of goods.—Salted Pistachio-Nuts.
Claims use since July, 1918.

Ser. No. 138,758. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EASTMAN CHEMICAL CO., Cincinnati, Ohio. Filed Oct. 25, 1920.

Consists of the representation of a green Greek cross, together with the word "Eastman" and the words "Safety Cross," the latter appearing in green color in an arc above the cross and the whole being inclosed in a circle or girdle of green color. The word "Salve" also appears in said green color below the cross, within said circle. The word "Eastman" appears in both vertical and horizontal array in white plain block capital letters on the intersecting or centrally-crossing arms of the said green Greek cross, the letter "T" of that word being in the center of the cross and the central letter, in common, of the intersecting arrangement of the word. The black shading on the drawing indicates the said green color of the Greek cross, of the circle that girdles it, and of all the words excepting "Eastman," which alone is in white letters and as above fully noted. No claim is made to the exclusive use of the word "Eastman" apart from the mark as shown in the drawing. Neither is the word "Salve" claimed apart from the mark appearing on the drawing and on the specimens filed herein.

Particular description of goods.—A Medical Compound in Salve Form Used in the Treating and Healing of Boils, Felons, Blood-Poison, Cuts, Bruises, Burns, Frost-Bites, and Skin Ailments Generally.
Claims use since Sept. 6, 1920.

Ser. No. 138,793. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) UNIVERSAL SPECTACLE CO., New York, N. Y. Filed Oct. 25, 1920.

No claim being made to the words "Trade Mark" or to the representation of the eyeglasses apart from the mark shown.

Particular description of goods.—Spectacles and Thermometers.
Claims use since July 26, 1920.

Ser. No. 138,794. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) UNIVERSAL SPECTACLE CO., New York, N. Y. Filed Oct. 25, 1920.

No claim being made to the words "Trade Mark" and "Sunproof" apart from the mark shown.

Particular description of goods.—Spectacles and Goggles.
Claims use since July 26, 1920.

Ser. No. 138,919. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) LOUIS NEKRITZ, Brooklyn, N. Y. Filed Oct. 28, 1920.

NEK-RITZ'S

Particular description of goods.—Varnishes.
Claims use since Apr. 15, 1920.

Ser. No. 139,006. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Oct. 30, 1920.

Idle Hour

Particular description of goods.—Candies.
Claims use since July 16, 1920.

Ser. No. 139,100. (CLASS 8. SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.) "TURMAC" TURKISH MACEDONIAN TOBACCO COMPANY, Arnhem, Netherlands. Filed Nov. 2, 1920.

Claims use since Sept. 15, 1914.

Ser. No. 141,061. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE CEDA-ODA COMPANY, Franklin Park, Mass. Filed Dec. 14, 1920.

CEDA-ODA

Particular description of goods.—A Polish for Furniture, Floors, Pianos, Automobiles, or Any Waxed or Varnished Surface.
Claims use since June, 1920.

Ser. No. 141,097. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LOUIS G. BURNS, Seattle, Wash. Filed Dec. 15, 1920.

The diagonal lines of the accompanying drawing represent a plaid of red and blue on a yellow ground. No claim is made to the words "Butter Scotch" in the trade-mark apart from the mark as shown as a whole.
Particular description of goods.—Candy.
Claims use since Nov. 1, 1920.

Ser. No. 141,118. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) KELSALL & KEMP LIMITED, The Butts, Rochdale, England. Filed Dec. 15, 1920.

THE DOCTOR

Particular description of goods.—Flannel Shirtings and other Similar Cloths and Stuffs in the Piece Made Wholly of Wool or of Material Which Wool Predominates.
Claims use since Mar. 11, 1914.

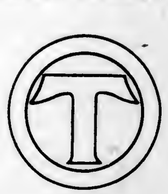
Ser. No. 141,126. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ANTHONY OVERTON, Chicago, Ill. Filed Dec. 15, 1920.

L'AZURMERE

Particular description of goods.—Talcum Powder, Face-Cream, Hair-Powders, Hair-Oils, Hair-Tonic, Shampoo, Cream for Use After Shaving, Rouge, and Depilatory.
Claims use since Dec. 6, 1920.

Ser. No. 141,159. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DILLING & COMPANY, Indianapolis, Ind. Filed Dec. 16, 1920.

Katy-Did



Particular description of goods.—Candy Kisses.
Claims use since February, 1908.

Ser. No. 141,209. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE BEAVER VARNISH COMPANY, INC., Buffalo, N. Y. Filed Dec. 17, 1920.

Particular description of goods.—Mixed Paints in Oil, Paint Enamels, Varnishes, Waterproof Paint-Coatings, Japans, Wood-Stains, Lacquers, Wood-Fillers, and Colors in Oil.
Claims use since Sept. 1, 1920.

Ser. No. 141,283. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) TRANTER MANUFACTURING COMPANY, Pittsburgh, Pa. Filed Dec. 18, 1920.

Particular description of goods.—Steam-Pumps, Reciprocating Pumps, Triplex Pumps, Centrifugal Pumps, Rotary Pumps, Deep-Well Pumps, Jet-Pumps; Woodworking Machinery—Namely, Power-Driven Circular-Saw Machines, Power-Driven Band-Saw Machines, Power-Driven Wood-Molding Machines, Power-Driven Wood-Planing Machines; Iron-Working Machinery—Namely, Power-Driven Drill-Presses, Power-Driven Lathes, Power-Driven Shapers, Power-Driven Milling-Machines; Internal-Combustion Engines, Steam-Engines, Farm-Tractors, Tractor-Plows, Grain-Grinding Mills, Iron and Steel Shaft-Hangers, and Cast-Iron Shaft-Couplings.
Claims use since about Jan. 15, 1907.

Ser. No. 141,294. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CAPITOL REFINING CO., South Washington, Va. Filed Dec. 20, 1920.

CAPITOL

Particular description of goods.—Cooking-Oils Produced from Cotton-Seed.
Claims use since January, 1914.

Ser. No. 141,299. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) F. & F. POULTRY REMEDY CO., Humeston, Iowa. Filed Dec. 20, 1920.

Particular description of goods.—Poultry Remedies, Comprising a Tonic and Conditioner for Increasing the Production of Eggs, a Cholera Remedy for Poultry, a Roup Remedy, a Chicken-Pox Remedy, a White-Diarrhea Remedy, and a Disinfectant Prepared Especially for Poultry Diseases.
Claims use since Mar. 4, 1920.

Ser. No. 141,357. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CAPITOL REFINING CO., South Washington, Va. Filed Dec. 21, 1920.

CAPRECO

Particular description of goods.—Salad-Oils Produced from Cotton-Seed.
Claims use since June, 1914.

Ser. No. 141,404. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE WHITE TAR ANILINE CORP., New York, N. Y. Filed Dec. 2, 1920.

WHITAR

Particular description of goods.—Dyestuffs and Coal-Tar Intermediates.
Claims use since Nov. 19, 1920.

Ser. No. 141,437. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) SOCIETE ANONYME PARFUMERIE RAMSES, Paris, France. Filed Dec. 22, 1920.

RAMSÈS

Particular description of goods.—Toilet Soaps, Perfumed Toilet Soaps, and Household Soaps.
Claims use since May 30, 1919.

Ser. No. 141,441. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE VAPORETOR CORPORATION, Milwaukee, Wis. Filed Dec. 22, 1920.

CALORETOR

Consists of the word "Caloretor."
Particular description of goods.—Carbureters and Vaporizers for Internal-Combustion Engines.
Claims use since about Oct. 10, 1920.

Ser. No. 141,472. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ROBERT SUTER, Baltimore, Md. Filed Dec. 23, 1920.

The picture is that of the applicant.
Particular description of goods.—Cough-Drops.
Claims use since Apr. 1, 1920.

Ser. No. 141,661. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) BINNEY & SMITH COMPANY, New York, N. Y. Filed Dec. 30, 1920.

MICRONEX

Consisting of the word "Micronex."
Particular description of goods.—A Gas-Black and Carbon-Black.
Claims use since Dec. 1, 1920.

Ser. No. 141,663. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOHN HART BRITTAIN, INC., New York, N. Y. Filed Dec. 30, 1920.

No claim being made to the words "For the Scalp" and "For the Hair."
Particular description of goods.—Hair-Tonic for the Treatment of Diseases of the Hair and Scalp.
Claims use since Apr. 1, 1919.

Ser. No. 141,678. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MARGARET GAST, New York, N. Y. Filed Dec. 30, 1920.

GAST-O-PINE

Particular description of goods.—Liniments for Rheumatic Affections and other Body-Pains.
Claims use since about Dec. 10, 1920.

Ser. No. 141,698. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SMITH-FRANK PACKING CO., Sacramento, Calif. Filed Dec. 30, 1920.

The lining on the drawing indicating red color.
Particular description of goods.—Canned Fruits, Canned Fruit Salad, Canned Vegetables, and Dried Fruits.
Claims use since Dec. 22, 1919.

Ser. No. 141,711. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) AMERICAN SHEET & TIN PLATE COMPANY, Pittsburgh, Pa. Filed Dec. 31, 1920.

ARROW BRAND

No claim to the registration of the word "Brand" being made herein apart from the mark shown in the drawing.

Particular description of goods.—Black Sheets of Rolled Soft Steel.

Claims use since Nov. 20, 1920.

Ser. No. 141,723. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSEPH HENRY KARP, New York, N. Y. Filed Dec. 31, 1920.

Noble-Heart

Particular description of goods.—Cold-Cream, Vanishing Cream, Massage-Cream, Tooth-Paste, Face-Powder, Talcum Powder, Complexion-Powder, Tooth-Powder, Perfume, Toilet Water, Lotions, Witch-Hazel, Sachet-Powder, Lip-Sticks, Rouge, Cosmetics, Hair-Tonic, Glycerin, Rose-Water, Almond-Cream, Astringent, Brilliantine, Bay-Rum, Foot-Powder, and Florida Water.

Claims use since May 1, 1919.

Ser. No. 141,727. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) METROPOLITAN-VICKERS ELECTRICAL CO., LTD., London, England. Filed Dec. 31, 1920.

No claim being made to the letters "E" and "C" appearing thereon.

Particular description of goods.—Electrical Measuring, Indicating, and Recording Meters, Merz Demand-Indicators, Printometers, Rotating Substandards, Ammeters and Voltmeters; Shunts for Use with Electric Measuring, Indicating, and Recording Instruments; Wattmeters, Watt-Hour Meters, Frequency-Meters, Power-Factor Meters, Synchroscopes; Electric Portable Measuring, Indicating, and Recording Instruments; Polarity-Indicators, Telltale-Indicators, Static Ground-Detectors, Static Potential-Indicators, House-Service Meters, Electric Pyrometers, and Portable Testing Instruments.

Claims use since September, 1919.

Ser. No. 141,773. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CARL J. FLOM, Baltimore, Md. Filed Jan. 3, 1921.

ALBUM-OL

The lining shown in the drawing being for shade purposes only.

Particular description of goods.—A Nerve and Blood Tonic.

Claims use since June 15, 1920.

Ser. No. 141,800. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE PEROLIN COMPANY OF AMERICA, Chicago, Ill. Filed Jan. 3, 1921.

No claim is made to the words "The Water System Treatment" apart from the mark shown on the drawing.

Particular description of goods.—A Compound or Preparation for the Elimination and Prevention of Rust, Corrrosion, Pitting, Clogging, and Discoloration of Water in Water-Supply and Hot-Water Systems and Maintaining the Water System in a Clean Condition.

Claims use since Oct. 1, 1920.

Ser. No. 141,802. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) PRECISION THERMOMETER & INSTRUMENT COMPANY, Philadelphia, Pa. Filed Jan. 3, 1921.

PRINCO

Particular description of goods.—Sphygmomanometers, Thermometers, Hydrometers, Hygrometers, Barometers, and Precision Mercurial and Diaphragm Pressure and Draft Gages.

Claims use since October, 1914.

Ser. No. 141,825. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ANDERSON D. BROWN, Chicago, Ill. Filed Jan. 4, 1921.

CAFE MARROW

Particular description of goods.—Concentrated Coffee Essence.

Claims use since Feb. 2, 1920.

Ser. No. 141,837. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) HASKINS BROS. & COMPANY, Sioux City, Iowa, and Omaha, Nebr. Filed Jan. 4, 1921.

VOLCANIC

Particular description of goods.—Toilet Soap.

Claims use since 1892.

Ser. No. 141,867. (CLASS 39. (CLOTHING.) OLD COLONY SHOE COMPANY, Brockton, Mass. Filed Jan. 5, 1921.

Ocolco

Particular description of goods.—Boots and Shoes of Leather and Combinations of Leather, Fabric, and Rubber.

Claims use since Dec. 21, 1920.

Ser. No. 141,887. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) U-RUB-IT CHEMICAL CO., Philadelphia, Pa. Filed Jan. 5, 1921.

U-RUB-IT

Comprising a substantially-rectangular field composed of upper and lower red panels with an intermediate white panel, on which latter appears the word "U-Rub-It" in blue.

Particular description of goods.—A Preparation for Use in the Treatment of Pneumonia, Rheumatism, Headache, Toothache, Earache, Stomachache, Backache, Cramps, and other Congestive Pains, Cold in the Head, Hay-Fever, Bronchitis, Asthma, and other Diseases of the Respiratory Organs, as Well as for Frost-Bites.

Claims use since May 1, 1920.

Ser. No. 141,915. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE MENTHOLATUM COMPANY, Wichita, Kans., and Buffalo, N. Y. Filed Jan. 6, 1921.

The picture in the mark being fanciful, no claim being made to the exclusive use of the words "Trade Mark" appearing in Chinese and the English words "Buffalo, N. Y., U. S. A., and London, England" apart from the mark shown in the drawing.

Particular description of goods.—A Salve for External Application in the Treatment of Inflammations and Eruptions of the Skin and in the Treatment of Croup, Sore Throat, Catarrh, and Like Afflictions Involving or Resulting from Congestion.

Claims use since Oct. 20, 1920.

Ser. No. 141,942. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) AARON BURDWISE, Baltimore, Md. Filed Jan. 7, 1921.

Testimonial

Particular description of goods.—Harmonicas or Mouth-Organs, Mandolins, Guitars, Banjos, Ukuleles, Cornets, Clarinets, Trombones, Saxophones, Flutes, Drums and Violins.

Claims use since May, 1920.

Ser. No. 141,943. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) AARON BURDWISE, Baltimore, Md. Filed Jan. 7, 1921.

Any right whatever to the word "Harmonica" as shown in the drawing is hereby disclaimed.

Particular description of goods.—Harmonicas or Mouth-Organs, Accordions, Mandolins, Guitars, Banjos, Ukuleles, Cornets, Clarinets, Trombones, Saxophones, Flutes, Drums, and Violins.

Claims use since May, 1920.

Ser. No. 141,944. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE CONVERSE TREATMENT CO., Columbus, Ohio. Filed Jan. 7, 1921. Under ten-year proviso.

CONVERSE TREATMENT

Particular description of goods.—A Medicine Intended for Use in Epilepsy and other Nervous Disorders.

Claims use since Jan. 1, 1894.

Ser. No. 141,975. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) GREENFIELD TAP AND DIE CORPORATION, Greenfield, Mass. Filed Jan. 8, 1921.

Little Giant

Particular description of goods.—Screw-Cutting Dies, Taps; Tapping Attachments, (Devices for Attachment to Machines for Receiving and Operating Taps;) Diestocks, Tap-Wrenches; Screw-Plates, (Sets of Dies, Taps, Wrenches, Stocks, and Collets;) Reamers, Drilling-Machines, Metal-Working Drills, Holders for Dies, Mandrels, Pulleys, Counter-Shafts, Bolt-Threaders, Tool-Grinders, Lathes, Pipe-Wrenches, Pipe-Cutters; Receders, (Receding Pipe-Threaders;) Pipe-Vises, and Pipe-Plates.

Claims use since 1876.

Ser. No. 141,977. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) GREENFIELD TAP AND DIE CORPORATION, Greenfield, Mass. Filed Jan. 8, 1921.

LIGHTNING

Particular description of goods.—Screw-Cutting Dies, Taps, Tapping Attachments, Diestocks, Tap-Wrenches; Screw-Plates, (Sets of Dies, Taps, and Accessories;) Reamers, Drilling-Machines, Metal-Working Drills, Holders for Dies, Mandrels, Pulleys, Counter-Shafts, Bolt-Threaders, Cold-Saw Cutting-Off Machines, Tool-Grinders, Lathes, Pipe-Wrenches, Pipe-Cutters; Receders, (Receding Pipe-Threaders;) Pipe-Vises, and Pipe-Plates.

Claims use since July, 1874.

Ser. No. 141,978. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) GREENFIELD TAP AND DIE CORPORATION, Greenfield, Mass. Filed Jan. 8, 1921.

O.K.

Particular description of goods.—Screw-Cutting Dies, Taps, Tapping Attachments, Diestocks, Tap-Wrenches, Screw-Plates, (Sets of Dies, Taps, and Accessories;) Reamers, Metal-Working Drills, Holders for Dies, Mandrels, Pulleys, Counter-Shafts, Bolt-Threaders, Cold-Saw Cutting-Off Machines, Tool-Grinders, Pipe-Wrenches, Pipe-Cutters; Receders, (Receding Pipe-Threaders;) Pipe-Vises, and Pipe-Plates.
Claims use since December, 1912.

Ser. No. 141,979. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) GREENFIELD TAP AND DIE CORPORATION, Greenfield, Mass. Filed Jan. 8, 1921. Under ten-year proviso.

GREEN RIVER

Particular description of goods.—Screw-Cutting Dies, Taps, Tapping Attachments, Diestocks, Tap-Wrenches; Screw-Plates, (Sets of Dies, Taps, and Accessories;) Reamers, Drilling-Machines, Metal-Working Drills, Holders for Dies, Mandrels, Pulleys, Counter-Shafts, Bolt-Threaders, Cold-Saw Cutting-Off Machines, Tool-Grinders, Lathes, Pipe-Wrenches, Pipe-Cutters; Receders, (Receding Pipe-Threaders;) Pipe-Vises, and Pipe-Plates.
Claims use since July, 1874.

Ser. No. 141,980. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) GREENFIELD TAP AND DIE CORPORATION, Greenfield, Mass. Filed Jan. 8, 1921.

GTD

Particular description of goods.—Screw-Cutting Dies, Taps, Tapping Attachments, Diestocks, Tap-Wrenches; Screw-Plates, (Sets of Dies, Taps, and Accessories;) Reamers, Drilling-Machines, Metal-Working Drills, Holders for Dies, Mandrels, Pulleys, Counter-Shafts, Bolt-Threaders, Cold-Saw Cutting-Off Machines, Tool-Grinders, Lathes, Pipe-Wrenches, Pipe-Cutters; Receders, (Receding Pipe-Threaders;) Pipe-Vises, and Pipe-Plates.
Claims use since Oct. 1, 1915.

Ser. No. 141,997. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) W. M. ROBERTS, Chicago, Ill. Filed Jan. 8, 1921.

The trade-mark is a portrait of the applicant.
Particular description of goods.—A Medical Preparation for Use in the Treatment of Asthma.
Claims use since Dec. 21, 1920.

Ser. No. 142,001. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE AMERICAN AUTOMOBILE ACCESSORIES COMPANY, Cincinnati, Ohio. Filed Jan. 10, 1921.

KICK

Particular description of goods.—A Chemical Preparation to Increase the Efficiency and Power of Gasolene.
Claims use since on or about Mar. 12, 1920.

Ser. No. 142,031. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) PAINT SPECIALTIES CORPORATION, New York, N. Y. Filed Jan. 10, 1921.

PASCO

Particular description of goods.—Ready-Mixed Paints.
Claims use since Nov. 10, 1920.

Ser. No. 142,063. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE FREE-FLOATING POPPET VALVE COMPANY, Salt Lake City, Utah. Filed Jan. 11, 1921.

Particular description of goods.—Internal-Combustion Engines and Parts Thereof.
Claims use since July 15, 1920.

Ser. No. 142,085. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HYMAN MILLER, Boston, Mass. Filed Jan. 11, 1921.

DR. MILLER'S
SPECIAL FOOT POWDER

The portrait shown in the drawing and specimens filed is that of the applicant, Hyman Miller. No claim is made to exclusive right to use of the words "Special Foot Powder" apart from the mark shown in the drawing.
Particular description of goods.—Foot-Powder.
Claims use since July 1, 1920.

Ser. No. 142,086. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) MANGANO MANUFACTURING COMPANY, Rahway, N. J. Filed Jan. 11, 1921.

UNIFORMITY · QUALITY · STRENGTH

No claim is made to the words "Uniformity," "Quality," and "Strength" apart from the mark shown in the drawing.
Particular description of goods.—Dry Colors, Which Colors are Adapted for Use and Used in the Manufacture of Paints and Painters' Materials.
Claims use since Sept. 30, 1919.

Ser. No. 142,117. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) VICTOR SHOE MACHINERY COMPANY, Lynn, Mass. Filed Jan. 11, 1921.

V.S.M.C.
VICTOR

Particular description of goods.—Shoe-Sewing Machines, Shoe-Repair Outfits, Shoe-Finishing Machines, Rough-Rounding Machines, Channeling-Machines, Cutter-Grinders, Nailers, Burnishing-Machines, Scouring-Wheel-Actuating Machines, Sanding-Roll-Actuating Machines, Sanding-Wheel-Actuating Machines, and Skiving-Machines.
Claims use since Oct. 1, 1912.

Ser. No. 142,155. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LA FRANCE LABORATORIES, INC., New York, N. Y. Filed Jan. 12, 1921.

HENNAFOAM

Particular description of goods.—A Liquid Shampoo.
Claims use since about Dec. 30, 1920.

Ser. No. 142,178. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) W. F. SEVERA CO., Cedar Rapids, Iowa. Filed Jan. 12, 1921.

Gothardol

Particular description of goods.—A Liniment for External Application for the Treatment of Rheumatic and Neuralgic Pains, Sprains, Bruises, Swellings, Sore Muscles, Muscular Cramps, and Aching and Stiff Joints.
Claims use since Oct. 1, 1920.

Ser. No. 142,353. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHARLES MUNTER, New York, N. Y. Filed Jan. 17, 1921.

NULIFE

Particular description of goods.—Tooth-Paste.
Claims use since Oct. 1, 1920.

Ser. No. 142,356. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHARLES H MILLER, Dayton, Ohio. Filed Jan. 17, 1921.

MILCO

Particular description of goods.—Stomach-Salts.
Claims use since on or about Jan. 1, 1920.

Ser. No. 142,359. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PROTO CHEMICAL CO., INC., New York, N. Y. Filed Jan. 17, 1921.

Proto-Mal

Particular description of goods.—Galactagogue Preparations.
Claims use since Dec. 28, 1920.

Ser. No. 142,376. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JACOB N. WOLODARSKY, New Haven, Conn. Filed Jan. 17, 1921.

ORALKA

Particular description of goods.—Dental Cream.
Claims use since July 1, 1918.

Ser. No. 142,414. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) HERMAN D. STEEL, Philadelphia, Pa. Filed Jan. 18, 1921.

SWISS JEWEL CO
LOCARNO

Exclusive right being disclaimed apart from the remainder of the drawing as shown to "Swiss Jewel Co. S. A., Locarno (Suisse), Swiss Scientific" and to the representation of a jewel.
Particular description of goods.—Meter, Watch, and Industrial Jewels and Synthetic and Natural Cut Stones.
Claims use since about Jan. 1, 1918.

Ser. No. 142,416. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SAN ANTONIO DRUG CO., San Antonio, Tex. Filed Jan. 18, 1921.

SODICATE

Particular description of goods.—Silicate of Soda.
Claims use since Mar. 12, 1920.

Ser. No. 142,419. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) SAN ANTONIO DRUG CO., San Antonio, Tex. Filed Jan. 18, 1921.

Particular description of goods.—Razors, Scissors, and Sprayers for Insecticides, Disinfectants, and Germicides.
Claims use since Dec. 15, 1919.

Ser. No. 142,424. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SAN ANTONIO DRUG CO., San Antonio, Tex. Filed Jan. 18, 1921.

KREFECTO

Particular description of goods.—Disinfectant, Insecticide, and Deodorizer.
Claims use since Feb. 4, 1920.

Ser. No. 142,425. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SAN ANTONIO DRUG CO., San Antonio, Tex. Filed Jan. 18, 1921.

FLY-NO

Particular description of goods.—Disinfectant and Insecticide.
Claims use since Mar. 6, 1920.

Ser. No. 142,427. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SAN ANTONIO DRUG CO., San Antonio, Tex. Filed Jan. 18, 1921.

GLYCO-BORINE

Particular description of goods.—Gargle and Nasal Spray.
Claims use since Jan. 1, 1905.

Ser. No. 142,428. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SAN ANTONIO DRUG CO., San Antonio, Tex. Filed Jan. 18, 1921.

VOLMINE

Particular description of goods.—A Medical Preparation for Relief of Colds, Croup, Bronchitis, Whooping-Cough, Pneumonia, Catarrh, Tonsilitis, Asthma, Rheumatism, Piles, Burns, Sprains.
Claims use since Sept. 1, 1919.

Ser. No. 142,429. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SAN ANTONIO DRUG CO., San Antonio, Tex. Filed Jan. 18, 1921.

THYBORINE

Particular description of goods.—Gargle, Mouth-Wash, and Nasal Spray.
Claims use since Jan. 1, 1905.

Ser. No. 142,432. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) UNITED RETAIL CHEMISTS CORPORATION, New York, N. Y. Filed Jan. 18, 1921.

Particular description of goods.—Beef, Iron, and Wine, White-Pine Compound Cough-Syrup, Children's Cough-Honey; a Penetrating Liniment for External Use for the Relief of Sprains, Bruises, Scalds, Neuralgia, Rheumatism, Lameness, Stings of Insects; Castor-Oil, a Gargle for Relief of Tonsilitis and Inflammatory Sore Throat; Lauer's Cough Remedy for Coughs, Colds, Hoarseness, and Bronchial Troubles; White-Pine Cough-Syrup with Tar, Syrup of Hypophosphites; Iron Phosphate, Quinin, and Strychnin; Cod-Liver Extract with Malt, Wild Cherry, and Hypophosphites; a Solution of Peptonized Iron and Manganese Compound, Syrup of Figs and Senna Compound.
Claims use since Jan. 1, 1920.

Ser. No. 142,433. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) H. WOLFF & CO., New York, N. Y. Filed Jan. 18, 1921.

VICTORIA

Particular description of goods.—Beaded Bags.
Claims use since Nov. 10, 1920.

Ser. No. 142,434. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE CLYDE COLLINS COMPANY, Memphis, Tenn. Filed Jan. 19, 1921.

CLY-CO

Particular description of goods.—Tonic, a Medicine Preparation to be Taken for Chills, Fever, Biliousness, Indigestion, Malaria, Bad Colds, and General Rundown Condition.
Claims use since about Oct. 1, 1920.

Ser. No. 142,435. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE CALCO CHEMICAL COMPANY, Boundbrook, N. J. Filed Jan. 19, 1921.

SALICAINE

Particular description of goods.—A Medicinal Preparation for Use as a Local Anesthetic for All Purposes for Which Procain (Monohydrochlorid of Para-Amido-Benzoyl-Diethyl-Amino-Ethanol) is Used and for Which Anesthesin (Ethyl Ester of Paraminobenzoic Acid) is Used.
Claims use since about Apr. 5, 1920.

Ser. No. 142,449. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) A. A. PEARSON, Greensboro, Ga. Filed Jan. 19, 1921.

Particular description of goods.—A Medicine for Treatment of Gonorrhea, Syphilis, Blood Medicine for Females, and Salve for Treatment of Syphilitic Sores.
Claims use since Jan. 1, 1920.

Ser. No. 142,455. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE SCALP GERMICIDE COMPANY, Youngstown, Ohio. Filed Jan. 19, 1921.

Particular description of goods.—A Germicidal Preparation Which Kills the Germs That Destroy the Hair, Promotes a Full Growth of Hair, Prevents Falling Hair and Itching Scalp, and Eradicates Dandruff.
Claims use since Dec. 10, 1920.

Ser. No. 142,533. (CLASS 39. CLOTHING.) W. H. ROGERS CO., Chicago, Ill. Filed Jan. 20, 1921.

The representation of the goods and the words "Yoke Front" are disclaimed except in conjunction with the mark as shown.
Particular description of goods.—Ladies' Ready-to-Wear Petticoats, Skirts, and Bloomers.
Claims use since Aug. 1, 1920.

Particular description of goods.—Coin-Operated Pianos and Orchestrions, Pianos, Player-Pianos, Piano-Players, Harps, Organs, Musical Bells, Musical-Bell Combinations, Pipe-Organs, Pipe-Organ Combinations, Pipe-Pianos and Pipe-Piano Combinations Operated by Electric Power, Foot-Power, or Mechanical Power, and Perforated Music-Rolls.
Claims use since July, 1916.

143,856. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) J. F. KURFEES PAINT COMPANY, Louisville, Ky. Filed Dec. 14, 1920. Serial No. 141,071.

KURFEES

Particular description of goods.—Mixed Paint, Enamel Paint, Varnish, Varnish-Stain, and Wood-Filler.
Claims use since Jan. 1, 1907.

143,857. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) LESTER PIANO COMPANY, Philadelphia, Pa. Filed Apr. 15, 1920. Serial No. 131,182.

ALDEN

Particular description of goods.—Pianos and Player-Pianos.
Claims use since Feb. 20, 1920.

143,858. (CLASS 12. CONSTRUCTION MATERIALS.) E. M. LONG & SONS, Cadiz, Ohio. Filed Dec. 24, 1920. Serial No. 141,496.

IMPROVED

Particular description of goods.—Wooden Gutters and Rubber Roofing.
Claims use since Dec. 1, 1914.

143,859. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) VIRGINIA MOSLEY, Des Moines, Iowa. Filed Dec. 13, 1920. Serial No. 141,008.

VIRGINIA MOSLEY GLOSSINE

Particular description of goods.—Hair-Tonics, Either Liquid or Salve.
Claims use since January, 1919.

143,860. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) NAUMKEAG STEAM COTTON CO., Salem, Mass. Filed Apr. 7, 1921. Serial No. 145,848.

POTOMAC

Particular description of goods.—Sheets and Pillow-Cases.
Claims use since 1902.

143,861. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) LONG HANDKERCHIEF CO., INC., Passaic, N. J., and New York, N. Y. Filed Mar. 17, 1921. Serial No. 144,866.

Quality

Particular description of goods.—Handkerchiefs.
Claims use since about January, 1906.

143,862. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) NAUMKEAG STEAM COTTON CO., Salem, Mass. Filed Apr. 7, 1921. Serial No. 145,851.

LENOX

Particular description of goods.—Sheets and Pillow-Cases.
Claims use since July, 1910.

143,863. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) NAUMKEAG STEAM COTTON CO., Salem, Mass. Filed Apr. 7, 1921. Serial No. 145,852.

NEWPORT

Particular description of goods.—Sheets and Pillow-Cases.
Claims use since 1905.

143,864. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) F. J. O'NEILL MEDICINE CO., St. Louis, Mo. Filed Nov. 26, 1920. Serial No. 140,200.

O'NEILL'S Vegetable Remedy

Particular description of goods.—A Medicinal Preparation in Tablet Form Which Acts on the Liver, Kidneys, Stomach, and Bowels.
Claims use since September, 1918.

143,865. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE OWL DRUG COMPANY, San Francisco, Calif. Filed Mar. 31, 1920. Serial No. 130,429.

MUSTARD-RUB

Particular description of goods.—Ointments Employed in the Treatment and Relief of Coughs, Colds, Croup, and Bronchial Affections, Rheumatism, Neuralgia, Stiff Joints, and Muscles.
Claims use since Mar. 6, 1920.

143,866. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PENICK & FORD, LTD. INCORPORATED, New Orleans, La. Filed Nov. 23, 1920. Serial No. 140,064.

Douglas

Particular description of goods.—Gloss-Starch.
Claims use since Jan. 15, 1918.

143,867. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) O. W. PIERCE COMPANY, La Fayette, Ind. Filed Feb. 11, 1921. Serial No. 143,450.

BONA COFFEE

Particular description of goods.—Coffee.
Claims use since July, 1910.

143,868. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) PINES MANUFACTURING COMPANY, Chicago, Ill. Filed Jan. 5, 1921. Serial No. 141,868.

WINTERFRONT

Particular description of goods.—Automobile-Radiator Shutters.
Claims use since July 12, 1919.

143,869. (CLASS 37. PAPER AND STATIONERY.) A. I. RANDALL, INC., Rockland, Mass. Filed Sept. 10, 1920. Serial No. 137,042.

A. I. Randall, Inc.

Particular description of goods.—Blank or Partially-Printed Labels, Ruled Office-Forms, Letter-Heads, Mailing-Envelops, Billheads, Blank or Partially-Printed Statements, Shipping and Merchandise Tags, and Blotters.
Claims use since Apr. 1, 1920.

143,870. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE ROBBINS & MYERS COMPANY, Springfield, Ohio. Filed Jan. 15, 1921. Serial No. 142,297.

THE ROBBINS & MYERS CO.

Particular description of goods.—Electric Fans, Motors, and Generators.
Claims use since 1897 on fans and since 1899 on motors and generators.

143,871. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SMITH-FAUS DRUG CO., Salt Lake City, Utah. Filed Jan. 12, 1921. Serial No. 142,171.

Particular description of goods.—Bay-Rum, Camphorated Oil, Castor-Oil: Cascara, Aromatic; Spirit of Camphor, Spirit of Niter, Tincture of Arnica, Glycerin, Rose-Water and Glycerin, Bay-Rum and Glycerin, Rose-Water, Witch-Hazel, Paregoric, Elixir Catnip and Fennel; Spirit of Ammonia, Aromatic; Antiseptic Solution, Alkaline Antiseptic Solution, Tincture of Iron, Carbolic Acid; Carbolic Acid, Ten Per Cent.; Tincture of Iodin, Tincture of Aconite, Tincture of Lobelia, Extract Ergot, Syrup Ipecac, Spirit of Ether, Syrup of Rhubarb; Syrup Rhubarb, Aromatic: Syrup Squill; Syrup Squill, Compound; Tincture Benzoin; Tincture Benzoin, Compound; Tincture Capsicum and Myrrh, Toothache-Drops, Powdered Cream Tartar, Rhubarb Powder, Rochelle Salt, Saltpeter, Sulfur, Tartaric Acid; Turmeric, Powdered; Licorice, Powdered, Compound; Moth-Balls, Epsom Salt, Powdered Alum, Boric Acid, Flaxseed, and Flaxseed-Meal.
Claims use since Feb. 26, 1916.

143,872. (CLASS 2. RECEPTACLES.) ERICH STEUDEL, Chicago, Ill., assignor to Self-Locking Carton Company, Chicago, Ill., a Corporation of Illinois. Filed July 7, 1919. Serial No. 120,321.

EVER-READY

Particular description of goods.—Bands for Wrapping Cake and Pie.
Claims use since June 9, 1919.

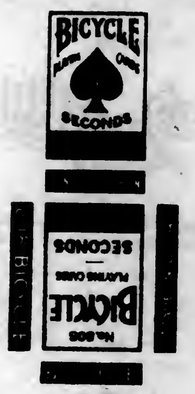
143,873. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NICHOLAS L. THOMAS, O'Fallon, Ill. Filed Nov. 21, 1918. Serial No. 114,305.

CUTANE

Particular description of goods.—Preparation for the Treatment of Skin.
Claims use since Nov. 1, 1913.

143,874. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) G. & J. TIRE COMPANY, Indianapolis, Ind. Filed Feb. 15, 1921. Serial No. 143,625.

HERRINGBONE



Particular description of goods.—Vehicle-Tires Made of Rubber.
Claims use since December, 1918.

143,875. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) TURNER & WALLS, New York, N. Y. Filed Dec. 30, 1919. Serial No. 126,662.

Crepette

Particular description of goods.—Cotton Piece Goods.
Claims use since Dec. 19, 1919.

143,876. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) THE UNITED STATES PLAYING CARD COMPANY, Cincinnati, Ohio. Filed July 30, 1920. Serial No. 135,625.

Particular description of goods.—Playing-Cards.
Claims use since about 1898.

143,877. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) THE R. WALLACE & SONS MFG. CO., Wallingford, Conn. Filed Dec. 13, 1920. Serial No. 141,056.

R·WALLACE

Particular description of goods.—Silver-Plated Flat-Ware and Hollow Ware—Namely, Knives, Forks, Spoons, Ladles, Tongs, Servers, Trays, Shears, Bottle-Openers, Nut-crackers, Salad Sets, Dishes, Tea and Coffee Sets, Waiters, Meat-Dishes, Pitchers, Bowls, Plates, Cups, Saucers, and Urns.
Claims use since June, 1918.

143,878. (CLASS 37. PAPER AND STATIONERY.) WHITE & WYCKOFF MANUFACTURING COMPANY, Holyoke, Mass. Filed Mar. 22, 1920. Serial No. 130,078.

THE MARK
OF
MASTER MAKERS

Particular description of goods.—Writing-Paper Tablets, Composition-Books, Note-Books and Memorandum-Books, Stenographers' Note-Books, Block-Pads, Typewriter-Paper, Papeteries, Writing-Paper, Mailing-Envelops, and Correspondence-Cards.
Claims use since Mar. 11, 1920.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

BERGHOFF BREWING ASS'N *v.* POPEL-GILLER CO., INC.

Decided April 4, 1921.

1. TRADE-MARKS—ACQUISITION—AFFIXING MARKS TO GOODS.

"It is settled law in this court that a trade-mark is not acquired by the invention or discovery of a word or symbol, or by advertisement. It only becomes a trade-mark by attaching or affixing it to certain articles of merchandise." Therefore the mere use of "Burg" as an abbreviation for the word "Burgmeister" in conversation or in written orders for goods is not sufficient to establish a trade-mark use.

2. SAME—CONFLICT—"BERGO" AND "BURGMEISTER."

There is no conflict between the marks "Bergo" and "Burgmeister."

3. SAME—EXTENSION OF MARKS TO SIMILAR GOODS.

The owner of a mark may extend its use to goods of the same descriptive properties; but the right of extension applies only to the specific mark and not to a similar mark. The extension of the mark "Burg Brau" on beer to "Burg" on non-alcoholic beverages would not come within the rule, since the marks are radically different; nor would the use of the mark "Burg Brau" for lager-beer or its extension to non-alcoholic cereal beverages produce confusion with the word "Bergo" on non-alcoholic cereal beverages.

Mr. H. J. Jacobi, *Mr. J. L. Stewart*, and *Mr. S. R. Perry* for the Berghoff Brewing Ass'n.

Mr. A. E. Wallace for the Popel-Giller Co., Inc.

VAN ORSDEL, *J.*:

This is a trade-mark interference, in which the appellant, Berghoff Brewing Ass'n, applied to register the word "Bergo" as a trade-mark—

for a non-alcoholic, maltless cereal beverage, sold as a soft drink.

Appellee, Popel-Giller Co., Inc., applied to register the word "Burg" as a trade-mark for a—

non-intoxicating non-alcoholic cereal maltless beverage sold as a soft drink.

It is conceded, as indeed, it must be, that the goods are of the same descriptive properties, and that the marks are deceptively similar. Appellant adopted and used the mark "Bergo" in 1917, while appellee did not show use of its mark "Burg" prior to 1918. At this point, the controversy could be easily disposed of in appellant's favor, but it appears that in 1916 appellee company was using the word "Burgmeister" as the dominating feature of a mark for beer. It appears that customers occasionally ordered "Burgmeister" beer by the abbreviated name of "Burg." It is, therefore, urged that appellee company has established a prior use of the word "Burg" and should be accorded registration. On this point the Examiner of Interferences turned the case in favor of appellee company.

We are not impressed by this contention. The mere use of "Burg" as an abbreviation for the word "Burgmeister," in conversation or in written orders for goods, is not sufficient to establish a trade-mark use.

It is settled law in this court, that a trade-mark is not acquired by the invention or discovery of a word or symbol, or by advertisement. It only becomes a trade-mark by attaching or affixing it to certain articles of merchandise. (*Consumers Co.* v. *Hydrox Chemical Co.*, 40 App. D. C., 284.)

There is no proof that appellee ever attached the word to goods of the kind for which it is sought to register it as a trade-mark prior to 1918. Its adoption, if adopted at all, was by its customers, not as a mark to designate the goods, but as a name to designate goods bearing the mark "Burgmeister." This did not, therefore, constitute a trade-mark use. (*Coca-Cola Co.* v. *Branham*, 216 Fed., 264.)

There is no room for the assumption of confusion between the marks "Bergo" and "Burgmeister." There is testimony, however, by witnesses for appellee that, since 1907, it has used the trade-mark "Burg Brau" on lager-beer. It is accordingly insisted that it may now claim "Burg" as a logical extension of the use of the original mark to non-alcoholic cereal beverages. The rule relating to the use of marks in the natural development of business extends only to the use of the same mark on goods of the same descriptive properties. In the case of *re Independent Breweries Co.* (39 App. D. C., 118) we held that beer and a beverage containing less than one-half of one per cent. alcohol are goods of the same descriptive properties, and in *Sexton and Co.* v. *Schoenhofen Co.*, this day decided, we held cereal beverages, alcoholic and non-alcoholic, to be goods of the same descriptive properties within the Trade-Mark Act. We also upheld

the right of the owner of a trade-mark to extend its use from alcoholic to non-alcoholic cereal beverages. But the right of extension applies only to the specific mark, and not to a similar mark. The extension of the mark "Burg Brau" on beer to "Burg" on non-alcoholic beverages, would not come within the rule, since the marks are radically different. Nor would the use of the mark "Burg Brau" on lager-beer, or its extension to non-alcoholic cereal beverages lead to confusion with the use of the mark "Bergo" on non-alcoholic cereal beverages.

It, therefore, follows that registration should be accorded appellant company, and denied to appellee company.

The decision is reversed.

Reversed.

Court of Appeals of the District of Columbia.

DUNHAM *v.* DYSON AND ERICKSON. DYSON *v.* ERICKSON AND DUNHAM.

Decided April 4, 1921.

1. PATENTS—INTERFERENCE—CONCURRING DECISIONS OF OFFICE TRIBUNALS.

Where the Examiner of Interferences and the First Assistant Commissioner found that an applicant had failed to establish conception of the invention in issue prior to his filing date, while the Examiners-in-Chief found an earlier conception date, but in a later companion interference the Examiners-in-Chief held, on evidence substantially, if not exactly, the same, that such applicant had failed to establish conception prior to his filing date and refused on rehearing to recede from this position, it is concluded that the three tribunals are in accord upon the point that applicant is limited to the filing date for conception.

2. SAME—SAME—DILIGENCE IN PERFECTING ELECTRIC SWITCH.

An inventor of a complicated switch for an automatic telephone system was reasonably diligent when he was actively experimenting for less than eight months before filing.

Mr. J. G. Roberts and *Mr. G. W. Rich* for Dunham.

Mr. C. B. Camp, Mr. C. C. Bulklet, and *Mr. C. C. Bradbury* for Dyson *et al.*

SMYTH, *C. J.*:

We have before us appeals in three interferences numbered respectively 34,534, 39,810, and 39,614. The issues of all are very closely related. We shall, however, consider them separately.

We take up first 34,534. In this the contest is between Dyson, Erickson and Dunham. As stated by the First Assistant Commissioner, the invention of this interference relates to automatic telephone systems and has for its object the reduction of the number of first selector switches. Prior to the time this invention was made it had been the practice to employ a first selector-switch for each subscriber. The parties here sought to simplify the system by using what is termed a line-switch for each subscriber and a smaller number of first-selector switches, say ten for each one hundred subscribers, each selector being connected to all of the line-switches, so that when a call was initiated by any subscriber his line-switch would connect to the trunk leading to a selector which was not "busy."

The Examiner of Interferences refused to give Dyson any earlier date for conception than March 13, 1905, the date on which he filed. The Examiners-in-Chief thought he conceived in December, 1903, but was the last of the three rivals to reduce to practice; was lacking in diligence when Erickson and Dunham came into the field and consequently must be assigned a date subsequent to them. The First Assistant Commissioner seems to agree with the Examiners-in-Chief as to Dyson's date of conception but held that even if he did conceive when the Examiners said he did, he was the last to reduce to practice and was not diligent in the meantime. We have, then, the three tribunals in effect concurring on the point that even if Dyson was the first to conceive, he was the last to reduce to practice and was not diligent just before Dunham and Erickson became active. The question is one of fact, and not perceiving that the conclusion reached is clearly wrong we approve it on the authority of *Greenawalt* v. *Dicight*, (49 App. D. C., 82; 258 Fed., 982, and cases cited;) *Kennicott* v. *Caps* (49 App. D. C., 187; 262 Fed. Rep., 641;) *Hopkins* v *Rigger*, (49 App. D. C., 188; 262 Fed. Rep., 642;) *Allen* v. *Hill*, 50 App. D. C.,——; 270 Fed. Rep., 691;) *Nelson C. Massey et al.* v. *Herman De Witt Ridge*, (50 App. D. C., ——; 270 Fed. Rep., 879;) *John Stewart Thomson et al.* v. *George T. Pearsons*, (50 App. D. C., ——; 270 Fed. Rep., 1013,) and *Ball* v. *Barnhurst*, (50 App. D. C., ——; 270 Fed. Rep., 693.)

Dyson being out of the running, the contest is between Dunham and Erickson. Dunham filed October 6, 1904. The Examiner of Interferences, after analyzing the testimony, found that he had not conceived before that date, but the Examiners-in-Chief believed he had and gave him July 26, 1904, for conception, and his filing date for reduction to practice. The First Assistant Commissioner agreed with the Examiner of Interferences. Later, in No. 39,810, the Examiners-in-Chief held on evidence substantially, if not exactly, the same as in this case, that Dunham must be confined to his filing date for conception and refused to recede from this position on a motion for rehearing. The three tribunals consequently must be regarded as being in accord upon the point that Dunham should be limited to his filing date for conception and reduction to practice. We think this conclusion is fully sustained by the evidence.

Turning now to Erickson's case we find that the Examiner of Interferences, after a very brief review of Erickson's evidence, refused to give him a date for conception prior to that which he had awarded to Dunham, October 6, 1904. The Examiners-in-Chief and the First Assistant Commissioner went into the testimony quite thoroughly and they concur in the view that he was entitled to a date prior to July 26 for conception. It appears to us satisfactorily that in the summer of 1904 Erickson built two switches, known as the first and second specimens, which disclosed a conception of the

issue; that the first was constructed, and that he was working on the second, before July 26.

Was Erickson diligent just before Dunham came into the field? In view of the conclusion which the Examiner of Interferences reached with respect to Erickson's conception, he had no occasion to consider his diligence. The Examiners-in-Chief reviewed the testimony relating to this subject critically and at length. They pointed out that the invention was a complicated one, requiring many experiments to give it practical form, and that Erickson was active either personally or through others from the time of his conception until he filed on March 10, 1905; and they held that he was diligent throughout. In this conclusion the First Assistant Commissioner concurs.

The question of reasonable diligence in any case depends, of course, upon all the circumstances. A complicated invention, requiring many experiments and much study to give it practical form, would reasonably delay a reduction to practice after the first conception for a greater length of time than where the idea and the machine embodying it were of a simple character. (*Christie* v. *Seybold*, C. D. 1893, 515; 65 O. G., 1650; 55 Fed. Rep., 69. See also *O'Connell* v. *Schmidt*, C. D., 1906, 662; 122 O. G., 2065, 27 App. D. C., 77.)

For the reasons given by the Examiners-in-Chief, and approved by the First Assistant Commissioner, we are persuaded that Erickson should prevail.

No. 39,810: The issue of this interference consists of four counts, and, like the previous one, concerns automatic telephone systems, involving certain details of a line-switch and its associated circuit. The parties, the dates involved, and the testimony, so far as material, and the conclusions of the three tribunals, are the same as in No. 34,534. Erickson was awarded priority, and we think this is correct.

No. 39,614: The contest here is between Erickson and Dunham. The invention relates, as in the other interferences, to telephone systems and is defined in two counts. The testimony is the same as in No. 39,810. The Examiner of Interferences awarded priority to Dunham. He was reversed by the Examiners-in-Chief, who held in favor of Erickson. In this they were affirmed by the First Assistant Commissioner. Each tribunal supports its conclusion by substantially the same reasoning as it advanced in No. 39,810. We are convinced that Erickson is entitled to succeed.

The decision of the First Assistant Commissioner in each of the interferences is affirmed.

Affirmed.

Mr. Justice HITZ, of the Supreme Court of the District, sat in the place of Mr. Justice ROBB.

Court of Appeals of the District of Columbia.

BEECHNUT CEREAL COMPANY *v.* BEECH-NUT PACKING COMPANY.

Decided May 2, 1921.

TRADE-MARKS—"BEECHNUT"—PART OF NAME OF OPPOSER—NOT REGISTRABLE.

The word "Beechnut" as a trade-mark for cereal breakfast foods denied registration on the ground that it is a substantial part of the name of opposer—the Beech-Nut Packing Company—which was organized long prior to applicant's entry into the field.

Mr. Vernon E. West and *Mr. S. W. Banning* for Beechnut Cereal Company.

Mr. J. H. Milans and *Mr. C. T. Milans* for Beech-Nut Packing Company.

PER CURIAM:

Appeal from a decision of the Patent Office sustaining the opposition of the Beech-Nut Packing Company, appellee here, to the registration by the appellant of the term "Beechnut" as a trade-mark for cereal breakfast foods.

"Beech-Nut" being a substantial part of the corporate name of the appellee company, which was organized long prior to appellant's entry into the field, the case is ruled by prior decisions of this court. (*Mansfield Tire & Rubber Co.* v. *Ford Motor Co.*, 44 App. D. C., 205; *in re United Drug Co.*, 44 App. D. C., 209; *Burrell* v. *Simplex Electric Heating Co.*, 44 App. D. C., 452, and *Howard Co.* v. *Baldwin Co.*, 48 App. D. C., 437.)

The decision is affirmed.

Court of Appeals of the District of Columbia.

CADMAN *v.* HUDSON.

Decided May 2, 1921.

PATENTS—PRIORITY—DILIGENCE.

Where the junior party, Hudson, made drawings of the autotruck-trailer in issue prior to July, 1916, and work was done on the invention by checking over these drawings during August, and on September 29, 1916, a trailer was ordered to be constructed and was promptly built in accordance with the drawings, he cannot be charged with lack of diligence.

Mr. L. B. Smith for Cadman.

Mr. H. A. Toulmin and *Mr. H. A. Toulmin, Jr.*, for Hudson.

MEMORANDUM OPINION BY MR. JUSTICE VAN ORSDEL.

This appeal is by the senior party Cadman from the decision of the Commissioner of Patents awarding priority of invention to the appellee Hudson. The invention relates to steering mechanism for four-wheel trailers for autotrucks. It is conceded Hudson was the first to conceive the invention. We think the evidence discloses, as held by the Commissioner and Board of Examiners, that Cadman reduced to practice about the middle of November, 1916, and that the Hudson reduction occurred a few weeks later. The case turns upon the question of Hudson's diligence when Cadman entered the field.

The date of conception accorded Cadman, August 31, 1916, is supported by the testimony. Hudson discloses drawings illustrating the invention, which were made prior to July, 1916. Work was done in checking over these drawings during August, and, on September 29, 1916, Hudson ordered a trailer constructed. A trailer was promptly built in accordance with the drawings. On this showing, which is fully supported by the record, we find no basis for the charge of lack of diligence on the part of Hudson.

The decision of the Commissioner of Patents is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

IN RE REID BROS.

Decided May 2, 1921.

TRADE-MARKS—DESCRIPTIVE MARKS—"EFFICIENCY."

A mark for hot-water bottles consisting of a shield bearing the word "Efficiency" in ordinary block type is descriptive.

Mr. H. C. Robb for Reid Bros.

Mr. T. A. Hostetler for the Commissioner of Patents.

PER CURIAM:

Appeal from a decision of the Patent Office refusing to register as a trade-mark for hot-water bottles, ice-bags and certain other hospital supplies, a shield bearing the word "Efficiency" in ordinary block type, the ground of the decision being that the mark is descriptive.

We are constrained to hold that this case is controlled by our decision in *in re Crosby Steam Gage & Valve Company*, (47 App. D. C., 382,) in which it was ruled that the words "High Efficiency" were not registrable as a trade-mark for safety relief-valves because "more descriptive than suggestive." Accordingly, the decision is affirmed.

Court of Appeals of the District of Columbia.

WASSERFALLEN *v.* STRIFLER.

Decided May 2, 1921.

PATENTS—PRIORITY—CONCURRING DECISIONS OF PATENT OFFICE.

Decision of the Commissioner of Patents, not being clearly wrong and the case turning upon a question of fact, on which all tribunals of the Patent Office concurred, affirmed.

Mr. O. F. Barthel and *Mr. T. K. Bryant* for Wasserfallen.

Mr. F. S. Lyon for Strifler.

PER CURIAM:

Appeal from the Commissioner of Patents in an interference proceeding involving an invention for attachments to automobiles for carrying spare rims and tires. The case turns solely upon issues of fact. The tribunals of the Patent Office concurred in awarding priority to Strifler. A careful review of the record convinces us that no error has been committed.

The decision of the Commissioner of Patents is affirmed.

Affirmed.

Patents Nos. 1,381,897 to 1,382,610.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 287—No. 3. TUESDAY, JUNE 21, 1921. Price—$5 per year.
[PUBLISHED JULY 1, 1921.]

THE OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Order of Examination Where Division Has Been Required.

(ORDER NO. 2,670.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 24, 1921.

Where the first action by the Examiner upon an application is limited to a requirement for division, the application will thereafter be given preference in the order of examination over other applications previously acted upon until it has received one action upon the merits, provided the applicant makes prompt response to the Examiner's requirement for division.

THOMAS E. ROBERTSON,
Commissioner.

Adverse Decisions in Interference.

PATENT NO. 1,233,176.

On May 27, 1921, a decision was rendered that Percy Douglas Brewster was not the first inventor of the subject-matter covered by claims 1, 3, and 15 of his Patent No. 1,233,176, subject, "Apparatus for printing cinematographic films," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,351,953.

On May 25, 1921, a decision was rendered that Nils D. Levin was not the first inventor of the subject-matter covered by claims 25 and 27 of his Patent No. 1,351,953, subject, "Loading-machines," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,355,380.

On May 25, 1921, a decision was rendered that Ernest H. Baxter was not the first inventor of the subject-matter covered by claims 1 and 4 of his Patent No. 1,355,380, subject, "Transmission-locks," and no appeal having been taken within the time allowed such decision has become final.

ADJUDICATED PATENTS.

(U. S. C. C. A. Mich.) The Schultz and Sweeny patent, No. 999,678, for seat-back springs for vehicles, *Held* void for lack of novelty, and also not infringed. *Schultz et al.* v. *Jackson Cushion Spring Co.*, 271 Fed. Rep., 665.

(U. S. D. C. N. Y.) The Welles patent, No. 1,101,223, claim 1, for a wooden fish-bait, the novelty in which was asserted to arise from the so-called "throat," *Held* not valid in view of evidence that the throat performed no useful function, and, if valid, not infringed by a bait having no throat. *James Heddon's Sons et al.* v. *Rush et al.*, 271 Fed. Rep., 689.

Important Information.

In ordering manuscript copies much time will be saved if the order states specifically what is desired, viz:

Application as originally filed. (Petition, specification, oath, and drawings as received.) Application as amended. (Petition, specification, oath, and drawings with amendments entered.)
Application as allowed. (Petition, specification, oath, and drawings as passed by the Examiner for issue.)
Original application. (Facsimile petition, specification, oath, and drawings at present time.)
Specification as originally filed. (As received in Office.)
Specification as amended. (With amendments entered.)
Specification as allowed. (As passed by the Examiner for issue.)
Original specification. (Facsimile at present time.)
File-wrapper. (File-wrapper only.)
File-wrapper and contents. (File-wrapper, contents of record, including photoprints of any tracings or of prints within file-wrapper. In patented cases, printed copy of the specification and drawings of the patent is furnished.)
File-wrapper, contents, and drawings. (File-wrapper and all of the contents of record, including photoprints of any tracings, exhibits, or prints within the file-wrapper. In pending cases, photoprints of the pending drawings only, omitting any canceled. If patented, copy of the specification and drawings of the patent being furnished, photoprints are not made of the original drawings unless specially ordered. If canceled drawings are wanted, they must also be specially ordered.)
Assignment. (Give the liber and page of the record as well as the name of the inventor.)
Printed publications in possession of the Office. (Give title and date of publication, also page and exact portion to be copied.)

Orders for copies of any other records not mentioned above must state specifically the exact paper to be copied.

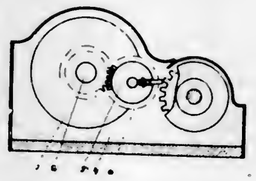
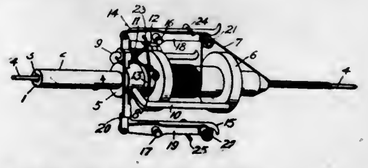
PATENTS



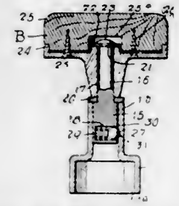
GRANTED JUNE 21, 1921.

1,381,897. CARBURETER. FRED D. ACKLEY, Seattle, Wash. Filed May 28, 1920. Serial No. 385,046. 1 Claim. (Cl. 137—103.)



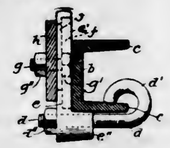
A liquid fuel discharge control including a drum to receive liquid gas particles in the gas stream between the carbureter and the intake manifold, a tank removably supported by the drum, an opening controlled by a valve between said drum and tank, an air inlet to the drum controlled by a valve, a lever pivotedly supported in the drum and actuating said valves in opposite directions, a disk for operating said lever, a valve controlled fluid outlet from the tank, a lever supported within said tank and adapted to actuate said valve for the fluid outlet, and a float connected to said last mentioned lever and adapted to operate the disk, whereby the valve between the drum and tank are reversely actuated, and the air inlet control valve is actuated reversely to the valve between the drum and tank.

1,381,898. CALCULATING-MACHINE. WICTOR OSKAR JULIUS ANDERSSON, Malmo, Sweden. Filed June 3, 1919. Serial No. 301,533. 3 Claims. (Cl. 235—79.)



1. In a calculating machine, the combination with a setting mechanism including disks, mechanism adapted to receive a value transmitted from the setting mechanism, a revolutions counting mechanism comprising numeral wheels and gear wheels and adapted for counting the revolutions of the crank operating the setting mechanism, of a pin rotating together with the setting disks and normally meshing with one of the gear wheels in the revolutions counting mechanism at every revolution of the crank, said pin being swingable in a direction transversely of the last mentioned gear wheels, and means for operating said pin from outside of the machine casing.

1,381,899. WINDING-MACHINE. GEORGE F. ATWOOD, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 6, 1918. Serial No. 265,618. 7 Claims. (Cl. 28—6.)



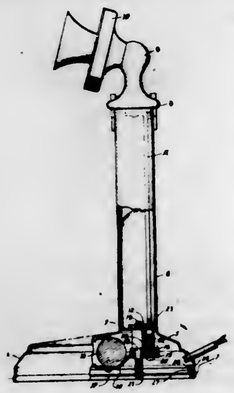
2. In a serving head, a spool for carrying the serving material, a brake for the spool and centrifugally balanced means controlled by the serving material for automatically controlling the brake.

1,381,900. SOCKET-WRENCH. WILLIAM BARNES, Worcester, Mass., assignor to Walden Worcester, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 23, 1918. Serial No. 230,243. 4 Claims. (Cl. 81—121.)

4. The combination with a wrench socket, of a plygonal shank formed with a reduced and axially disposed stem and provided at the end of the stem with a shoulder, a base plate rotatable on the stem, a washer fitted on the stem and confined thereon between the base plate and the shoulder and extending beyond the shank, and a hand block applied to the base plate.

1,381,901. BUMPER-ATTACHING DEVICE. SIDNEY A. BECK, Burlingame, Calif., assignor to Hoover Spring Company, San Francisco, Calif., a Corporation of California. Filed Feb. 14, 1921. Serial No. 444,670. 2 Claims. (Cl. 293—55.)

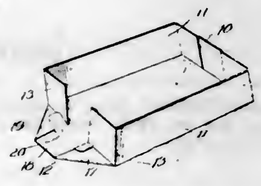
2. Means for adjustably mounting bumpers on automobile-frames including a slotted hanger-block secured to the automobile frame; a fastening device for securing the hanger-block to the automobile-frame; a bumper-attaching



iron free from engagement by the fastening device and freely movable up and down along the slot in the hanger-block; and means mounted in the slot for securing the bumper-attaching iron to the hanger-block when the iron is in the position desired.

1,381,902. LEDGER-TRAY. JOHN EMMONS BEMIS, Cedar Rapids, Iowa. Filed June 21, 1920. Serial No. 390,543. 4 Claims. (Cl. 45—58.)

1. A device of the class described comprising a pair of upright end members arranged to face each other, a plurality of horizontally alined bottom slats, alternate slats being rigidly secured to the same end member, whereby the ends are movable longitudinally with respect to the device, means for limiting the longitudinal movement of said end members, and an extensible side arm connected with the side edges of said end members.

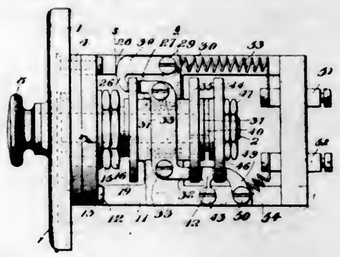


1,381,903. TELEPHONE DESK SET. PETER C. BURNS, Chicago, Ill., assignor to American Electric Co., Chicago, Ill., a Corporation of Illinois. Filed June 16, 1920. Serial No. 390,209. 7 Claims. (Cl. 179—147.)

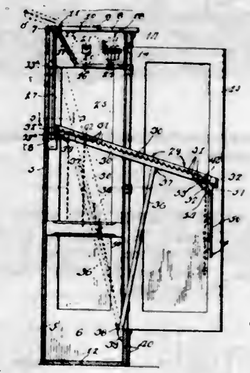
1. In a telephone desk set, a hollow base, a supporting member extending upwardly from said base, an induction coil within said base, a bracket for supporting said induction coil and provided with a lateral extension, a terminal block mounted upon said extension, and a bolt passing through said bracket and terminal block, said bolt being provided with a threaded end portion extending through the upper portion of said base and through the lower end of said supporting member.

1,381,904. WRAPPER. JOHN L. CHRISTENSEN, Chicago, Ill. Filed July 28, 1919. Serial No. 313,724. 8 Claims. (Cl. 229—40.)

1. A blank having, in combination, a central portion bounded by side and end flaps and defined by crease lines extending beyond its corners across said side and end flaps to outline a corner flap at each corner of the blank, additional crease lines extending convergently and outwardly across the end flaps from the corners of said central portion at an angle to the end thereof and dividing said end flap into a central symmetrical trapezium flanked by two triangular portions, and tabs struck up from said trapezium adjacent the end of said central portion and adapted to fold along lines which are perpendicular to the end crease of said central portion and pass in prolongation approximately through the intersection of said convergent creases and the outer edge of the paper.



1,381,905. PILE-CUTTER. ALEXANDER CLAPPERTON, Yonkers, N. Y. Filed May 27, 1920. Serial No. 384,538. 5 Claims. (Cl. 139—23.)

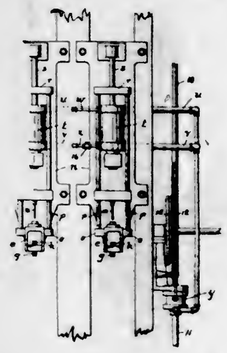


1. A pile cutter comprising a reciprocatory cross head, a knife pivoted thereon, and an actuating connection between the cross head and knife for throwing the knife into and out of cutting position before each reciprocation.

1,381,906. SAFETY SWITCH-LOCK. WILLIAM B. CLARK, Lyons Farm, N. J. Filed Apr. 13, 1920. Serial No. 373,619. 3 Claims. (Cl. 200—43.)

1. In circuit closing means, a frame, a shaft mounted on and disposed longitudinally of the frame, a plurality of non-conductive disks on said shaft, contacts carried by the disks, contact arms on the frame disposed for engagement with said contacts and adapted to complete an electrical circuit therethrough, certain of the faces of the non-conducting disks being formed with circularly disposed detents adjacent their points of bearing, spring pressed spherical checks slidably mounted in pockets formed in said frame and engageable with said ratchet teeth of the various disks, and means on said shaft for selectively engaging and rotating said disks with the same whereby to bring the contacts carried by said disks to positions for engagement with the contact arms.

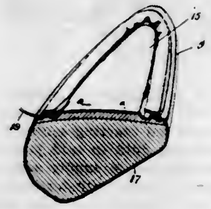
1,381,907. FILING-CABINET. HAROLD L. DE LISLE, Chicago, Ill. Filed Apr. 29, 1920. Serial No. 377,509. 3 Claims. (Cl. 45—2.)



1. In a collapsible filing device of the class described, the combination of walls forming a cabinet having a front opening, a pair of spaced-apart guides in fixed substantially vertical position substantially parallel to each other in the upper rear portion of the cabinet, an open frame having means at the sides thereof for holding filing rods, filing rods held by the frame, means for holding the frame slidably and tiltably upon the guides whereby the frame may move in the longitudinal directions of the guides and also swing outwardly thereupon so as to extend in a forward direction away from the guides in one position of the frame and to extend downwardly and forwardly at an angle adapted to provide material space throughout the forward length of the frame for down-hanging sheets between the vertical planes of the rod-like supports and the front end of the frame, the front end of the frame being within the cabinet in said last-mentioned position, and means for holding the frame in its last-mentioned position.

1,381,908. BURIAL-CASKET. FRED O. DOWNER, Battle Creek, Mich., assignor to Shirley Brothers Company, Incorporated, Indianapolis, Ind. Filed Mar. 31, 1920. Serial No. 370,149. 1 Claim. (Cl. 27—7.)

A burial casket having a monolithic body and a separate monolithic cover, the upper corners of the cover being curved and each of said casket members being reinforced with wires woven to approximately a two inch mesh welded at the meeting places of the wires and formed into baskets with rigid walls and corners, the wires of said baskets being filled and covered with a cementitious material forming a light and readily portable casket the surfaces of which are finished smoothly and have a covering of thin material adhesively applied thereto, said body and cover meeting in a tongue and groove joint to keep the joined members in register, said joint being finally sealed with a water-proof cement.

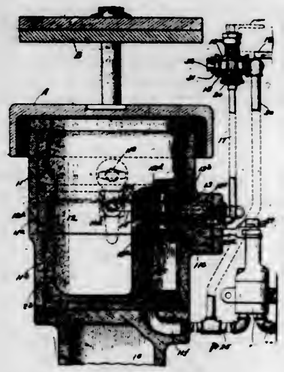


1,381,909. MACHINE FOR PACKING FUSES. ELEUTHERE PAUL DU PONT, Montchanin, Del. Filed May 13, 1918. Serial No. 234,316. 15 Claims. (Cl. 86—20.)

1. In a machine for packing time fuse powder in fuse containers, a holder comprising an abutment adapted to engage one end of the container, a support for the other end of the container movable toward and from the abutment, a turnable handle engaging the support, and a cam engaged by the handle and determining the distance of the support from the abutment.

6. In a machine for packing time fuse powder in fuse containers, the combination with a press comprising two members, one of said members being a holder for the container and the other a ram adapted to engage the bore of the container, of hydraulic mechanism for reciprocating one of said members; said hydraulic mechanism comprising a cylinder, a piston, pipes and a valve to control the direction of flow through the pipes, a check valve in one of said pipes adapted to permit a free flow of water in one direction, and means permitting a leakage through the check valve while it is seated during the flow of the water in the opposite direction.

1,381,910. METHOD OF MAKING TURN-SHOES. GEORGE FERGUSON, Quincy, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 7, 1920. Serial No. 387,040. 5 Claims. (Cl. 12—142.)



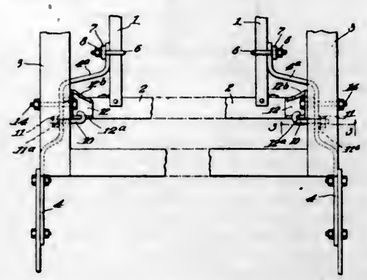
1. The method of making a turned shoe which comprises assembling wrong side out upon a last upper material and a sole provided with an upstanding rib spaced from the edge thereof, tensioning the upper material about the last and sole and fastening it to the top of the rib, sewing the upper to the rib by stitches which pass through the base of the rib, so that, as the stitches are drawn tight, a further tension is imparted to the upper material, and subsequently turning the shoe right side out and completing its manufacture.

1,381,911. GOVERNOR FOR PLAYER-PIANOS. CHARLES FREBORG, Kankakee, Ill., assignor to Price & Teeple Piano Company, Chicago, Ill., a Corporation of Illinois. Filed July 31, 1919. Serial No. 314,524. 5 Claims. (Cl. 230—36.)

1. A governor for vacuum motors comprising a bellows member having a movable wall, and means to resist the collapsing of said bellows, said means comprising a pivoted bell crank, one end of said bell crank being attached to a spring member.

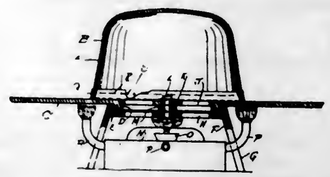
1,381,912. COMBINATION JOLT RAMMING AND SQUEEZING MACHINE. PHILETUS W. GATES, Chicago, Ill., assignor to Mumford Molding Machine Company, a Corporation of New Jersey. Filed Apr. 17, 1917. Serial No. 162,627. 2 Claims. (Cl. 121—14.)

1. In combination, a cylinder, a plunger reciprocably mounted therein, said cylinder and plunger having co-acting jolting portions and coacting squeezing portions, a duct to supply actuating fluid to said jolting portion of said cylinder, a second duct to supply actuating fluid to said squeezing portion of said cylinder and a third duct to permit flow of relief air to and from said squeezing cylinder during jolt ramming, a valve to open and close said second duct, and a valve to open said first and third named ducts simultaneously and to close said first and third-named ducts simultaneously.



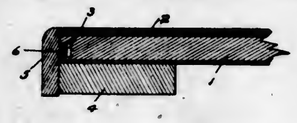
1,381,913. CARPET-ATTACHMENT DEVICE. WALTHER GLOOR and LOUIS HAACK, New York, N. Y. Filed Mar. 8, 1921. Serial No. 450,592. 12 Claims. (Cl. 16—26.)

2. In a device for attaching a carpet to a staircase, a stationary member and movable member for each riser, co-operating with each other to clamp the carpet, and means for moving each movable member parallel to itself and



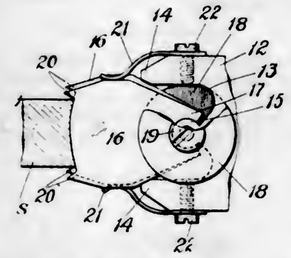
said stationary member, said members and means being concealed behind the carpet.

1,381,914. REAR BUMPER FOR FORD CARS. OSCAR H. GOETZ, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Nov. 15, 1920. Serial No. 424,012. 4 Claims. (Cl. 293—55.)



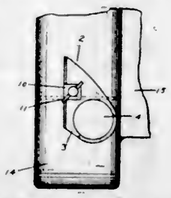
2. In combination with an automobile frame, a cross-bar and a member which crosses the end of the cross-bar above the same, making an upwardly, inwardly opening angle therewith and which laterally overhangs the end of the cross-bar, making an outwardly and downwardly opening angle therewith, a longitudinally extending bracket arm which abuts laterally against the end of said cross-bar in said downwardly and outwardly opening angle, and a hook bolt having its hook engaging said inwardly and upwardly opening angle and its stem extending through the bracket arm, and tightening means on the end of the bolt to draw the bracket arm into said outwardly and downwardly opening angle.

1,381,915. FORM FOR HAT-CROWNS. HARRY B. GOLDSTEIN, St. Paul, Minn. Filed May 18, 1920. Serial No. 382,303. 3 Claims. (Cl. 223—21.)



1. A hat blocking device, comprising, in combination, four coöperating elements, one a portable stand, another a brim supporting plate held by said stand and having an air circulating passage near its central portion another a crown element placed over said passage with its lower edge resting on said brim plate, and the other a heater having a burner placed below said passage in position to circulate heated air and gases up through said passage to heat said crown element.

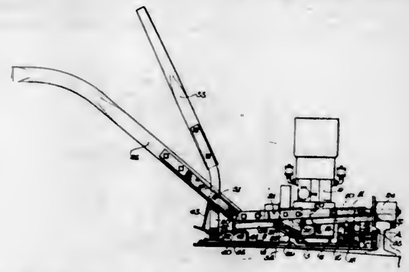
1,381,916. DESK-TOP OR LIKE STRUCTURE AND METHOD OF MAKING SAME. WILLIAM A. GUNN, Grand Rapids, Mich. Filed May 3, 1920. Serial No. 378,412. 2 Claims. (Cl. 45—31.)



1. The method of making tops for desks or like furniture which consists in gluing a cover of flexible material to the upper side of the bed for the top, then cutting the bed and attached cover to size, and then gluing relatively narrow border strips to the sides and ends of the bed and the side and end edges of the cover and in conforming the strips to locate the upper edges thereof flush with the adjacent upper surface of the cover.

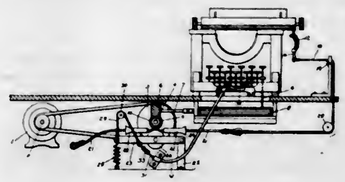
1,381,917. SOLE-EDGE-TREATING TOOL. JOHN B. HADAWAY, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 8, 1919. Serial No. 322,445. 8 Claims. (Cl. 12—104.)

3. In a sole-edge setting machine, a holder, and a plurality of edge finishing irons yieldingly carried thereby side by side, said irons being mounted to present their operative surfaces in subetantially the same profile during all movements of the irons relatively to each other.



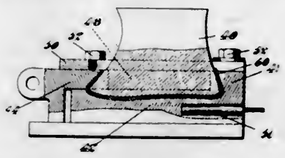
1,381,918. SIGNAL FOR MOTOR-VEHICLES. ROBERT S. HALL, Detroit, Mich. Filed Oct. 18, 1920. Serial No. 417,593. 6 Claims. (Cl. 116—37.)

1. In a signal for vehicles, the combination with a support, of an indicating member rotatably mounted on said support and normally occupying a predetermined position relative to said support, said indicating member being unbalanced to rotate from its normal position due to its inertia upon change of speed of the vehicle.



1,381,919. RAIL-DRILL. ARTHUR HANDY and CLIFFORD E. KRUEGER, Milwaukee, Wis. Filed July 17, 1919. Serial No. 311,565. 6 Claims. (Cl. 77—8.)

1. In a rail drill, the combination with a base, of a drill, means for driving the drill, means for feeding the drill, a frame operatively connected to the base and engaging the rail, and means controlled by the feeding means for rais-

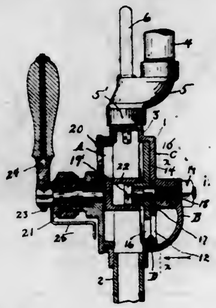


ing the rear end of the base while the front end is supported upon the rail by said frame.

1,381,920. ATTACHMENT FOR TYPEWRITERS. HAROLD L. HEDRICK and HENRY C. CHANTLER, Columbus, Ohio. Filed Nov. 5, 1919. Serial No. 335,827. 5 Claims. (Cl. 197—65.)

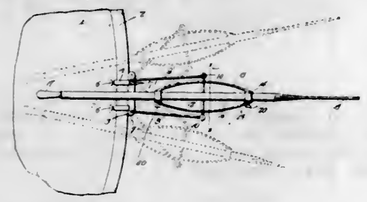
1. An attachment for typewriters comprising a friction drive wheel, a cord attached to the line spacer at one end of the typewriter carriage for returning such carriage when retracted, and means for moving said cord into contact with said friction wheel.

1,381,921. METHOD OF MAKING SHOES. JOHN J. HEYS, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 18, 1917. Serial No. 143,087. 35 Claims. (Cl. 12—142.)



18. The method of making shoes which comprises molding a flat blank into a shoe part comprising sole, side and end portions of the shoe, forming a groove adjacent to the peripheral margin of the shoe part, trimming away the margin at a predetermined distance from the groove, and then sewing a tip piece to the margin of the forepart on a machine in which the work is guided by the groove and the stitches are located in the groove.

1,381,922. THERMAL MIXTURE-FIXTURE. SVEN N. HOLM, Dorchester, Mass. Filed Apr. 13, 1918. Serial No. 228,336. 3 Claims. (Cl. 251—88.)

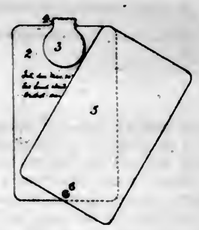


1. A mixing fixture, comprising a shell providing a superposed mixing chamber, said shell having a depending inlet chamber portion extending across the bottom of said

mixing chamber at one side of the central axis of the shell and said depending inlet portion providing a valve seat portion and providing hot and cold water inlet chambers communicating with a superposed mixing chamber, the bottom wall of said mixing chamber beyond said de-

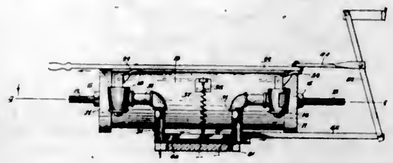
pending inlet portion constituting a valve seat portion alined with said valve seat portion of the depending inlet portion of the shell, and a valve seated on said seat portions and controlling the passage of water from said hot and cold inlet chambers to said mixing chamber.

1,381,923. BOW-FACING OAR. JOHN LEVI KEMP, Charleston, S. C. Filed June 30, 1920. Serial No. 392,961. 11 Claims. (Cl. 9—25.)



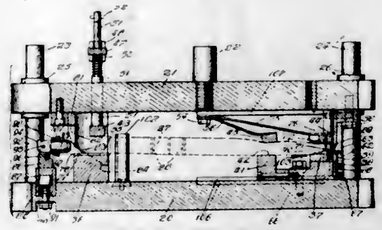
1. An oar lock, comprising a supporting member, means for securing said member to a boat, angular rods pivoted to the member, a rod connecting the outer ends of the angular rods and pivoted thereto, an oar support pivotally mounted on the said rod and means for adjustably securing an oar to said support.

1,381,924. FIREPOT. CHARLES R. LAMBERT, Detroit, Mich., assignor to Clayton & Lambert Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed May 4, 1918. Serial No. 232,446. 1 Claim. (Cl. 126—240.)



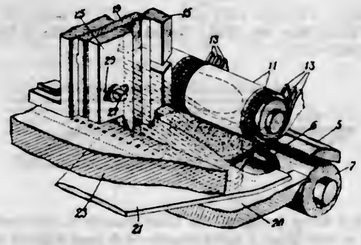
In a fire pot or the like, a top plate comprising a sheet metal stamping having a central apertured portion and a flanged portion adjacent said opening, and inwardly projecting supporting lugs, said supporting lugs being channel shaped in cross section.

1,381,925. MEMORANDUM-CARD. ALFRED V. H. LUND, Philadelphia, Pa., assignor of one-half to William J. Strandwitz, Haddonfield, N. J. Filed Feb. 27, 1920. Serial No. 361,766. 3 Claims. (Cl. 40—10.)



1. A vest pocket memorandum card device, comprising a card of general rectangular shape having a finish upon one side suitable to receive writing, and further provided at its upper end with a clamping tab facing the finished side aforesaid of the card, said tab constituting an integral extension of the card material at the top edge thereof and positioned by a bent over neck portion, whereby the tab has a spring clamping action adapted to clamp the card to the vest pocket.

1,381,926. MEASURING AND FILLING MACHINE. JAMES MCNERNEY, Buffalo, N. Y., assignor, by mesne assignments, to Swan & Finch Company, New York, N. Y., a Corporation of New York. Filed Oct. 7, 1919. Serial No. 329,056. 9 Claims. (Cl. 221—103.)

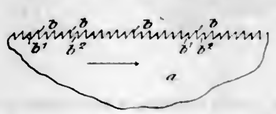


1. A measuring and filling machine comprising a three-way cock, an outlet pipe connected therewith, and a restraining outlet valve which closes synchronously with said three-way cock but which offers a greater resistance to the flow of the fluid therethrough.

1,381,927. BROOM-TRIMMING MACHINE AND METHOD. GEORGE W. MANNING, Chicago, Ill. Filed Mar. 8, 1919. Serial No. 281,331. 53 Claims. (Cl. 15—40.)

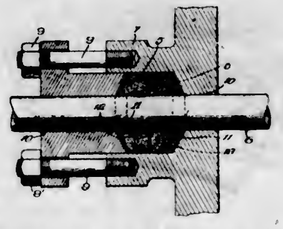
1. In a broom trimming machine, the combination with head and foot blocks comprising surfaces in a common plane adapted to support respectively the head and foot of a broom, of a platen between said blocks comprising a broom supporting surface without said common plane.

1,381,928. MACHINE FOR SKIVING SHOE-SHANKS. RALPH S. MEGATHLIN, Somerville, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 6, 1919. Serial No. 328,782. 16 Claims. (Cl. 12—60.)



1. A machine of the class described, having in combination, a die member having a cavity therein, a cutter constructed and arranged to remove from a blank, a portion of which is forced into the cavity, that portion which extends above the cavity, and a presser coöperating with the cavity to hold the blank during the cutting operation, the die cavity having its longitudinal axis obliquely disposed with respect to the line of the edge of the cutter during the entire cutting operation.

1,381,929. METHOD OF MAKING HYDROMETERS. THOMAS MIDGLEY, Jr., Lancaster, Ohio, assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 31, 1916. Serial No. 88,164. 2 Claims. (Cl. 265—45.)

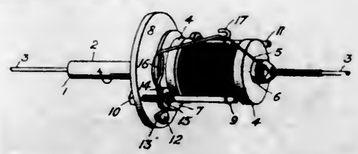


1. The method of making hydrometers of the type specified, which consists in determining the specific gravity of a plurality of sectional units, and then selecting and uniting certain of said units having respectively such specific gravities that each of the completed units thus formed thereby shall have, as a whole, a predetermined specific gravity.

1,381,930. SAW FOR CUTTING WOOD, METAL, OR OTHER SUBSTANCES. JOHN HENRY MORGAN, Harrogate, England. Filed Nov. 24, 1919. Serial No. 340,365. 4 Claims. (Cl. 143—133.)

1. A saw for cutting wood, metal or other substances, having a blade comprising teeth lying wholly in the plane of the blade and teeth inclined to the plane of the blade, each tooth lying wholly in the plane of the blade being intermediate of two teeth inclined to the plane of the blade in opposite direction to each other.

1,381,931. YIELDABLE PACKING. JAMES OSTRANDER, Indianapolis, Ind., assignor to Grapho-Metal Packing Company, Indianapolis, Ind., a Corporation. Filed Apr. 5, 1919. Serial No. 287,919. 8 Claims. (Cl. 286—1.)

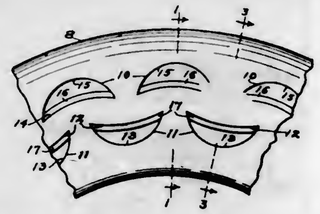


1. The combination with a cylindrical element, of a yieldable packing therefor; a housing for said packing having a restricted opening through which said element extends; and annular means fitting between the packing and the shaft for preventing crowding thereof into said opening.

1,381,932. AUTOMATIC SLACK-ADJUSTER. JOHN E. REDFORD, Kinloch, Mo., assignor to American Brake Company, St. Louis, Mo., a Corporation of Missouri. Filed June 12, 1919. Serial No. 303,739. 5 Claims. (Cl. 188—198.)

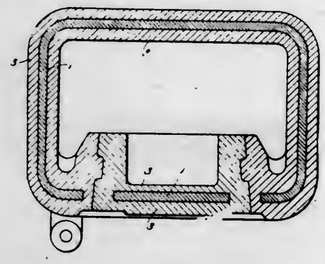
1. In an automatic slack adjuster, the combination with a pair of brake levers and a bottom rod comprising longitudinally adjustable members connected to the ends of said levers, of a spring acting on one of said members, a rod operated by excess movement of the brake levers in applying the brakes for compressing said spring, and a clutch mechanism for preventing relative longitudinal movement of said members in one direction.

1,381,933. WINDING-MACHINE. WILLIAM E. RIECKEN, Glendale, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 6, 1918. Serial No. 265,598. 6 Claims. (Cl. 28—6.)



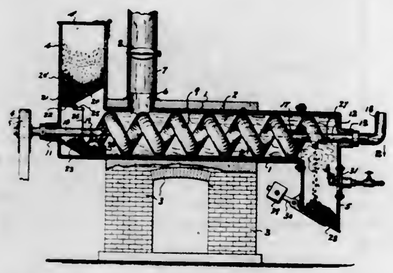
1. In a serving head, a spool for the serving material, a frictional brake with a flexible bearing portion for controlling the spool, and means controlled by the serving material for gradually varying the extent of contact of the brake.

1,381,934. CORE FOR RESILIENT WHEEL-TIRES. FREDERICK V. ROESEL, Wellington, Ohio, assignor of one-half to Eben Miller, Perry, Iowa. Filed Nov. 6, 1919. Serial No. 336,062. 1 Claim. (Cl. 152—5.)



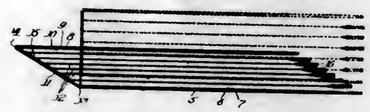
An elastic and compressible non-inflatable tire-core which is provided in its outer half with holes spaced circumferentially of the inner half and extending from side

to side of the core and also has holes formed in the last-mentioned half of the core, the last-mentioned or inner holes and the first-mentioned or outer holes being in staggered relation, each hole being substantially crescent-



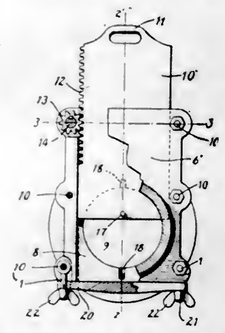
shaped in end view, each outer hole having its main wall in the form of a segmental arch and being arranged with said wall facing inwardly, and the inner holes being arranged reversely in relation to the outer holes.

1,381,935. SAFE. ALEXANDER N. SCOTT, Canton, Ohio, assignor to The Diebold Safe & Lock Company, Canton, Ohio, a Corporation of Ohio. Filed Dec. 4, 1918. Serial No. 265,279. 4 Claims. (Cl. 109—1.)



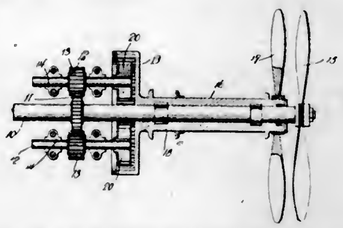
1. A safe or vault having continuous walls, said safe consisting of a continuous integral center layer or core of flame-proof material, and cast upon and integrally united thereto on each side a layer of drill-proof material.

1,381,936. RETORT. SCHUYLER SCHIEFFELIN, Tuxedo Park, N. Y., assignor to Harry L. Brown, Newark, N. J. Filed June 19, 1920. Serial No. 390,130. 8 Claims. (Cl. 196—20.)



8. In an apparatus of the kind described, a rotary spirally convoluted tubular still, said still having an open forward end adapted to dip up material to be treated and an open rearward end for discharging the material passing therethrough, means for tapping the still interior intermediate its ends for conveying out of the same the vapors liberated from the material passing therethrough, and a heating chamber within which said still is mounted wherein a pressure may be maintained sufficient to resist the escape of vapors from the open ends of said still.

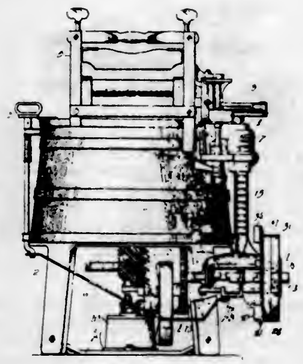
1,381,937. FILING DEVICE. PHILIP N. SEA, Chicago, Ill. Filed Mar. 18, 1920. Serial No. 366,942. 2 Claims. (Cl. 281—15.)



1. In a filing device of the class described, the combination of a base part, a non-foldable back part hinged to the rear edge of said base part, and leaves hinged to said back part at spaced intervals, said back part being free to assume inclined position whereby said leaves will at all times be horizontal.

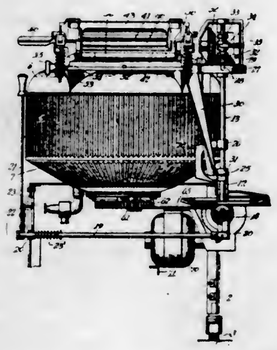
1,381,938. VALVE. DEE L. SHEAFOR, Chicago, Ill., assignor, by mesne assignments, of one-half to Homer D. Martindale, Middletown, Ohio. Filed Jan. 29, 1920. Serial No. 355,007. 7 Claims. (Cl. 251—54.)

4. A valve comprising a body, a gate slidable therein and means on the inner end of said gate for preventing said gate from being entirely withdrawn from said body.



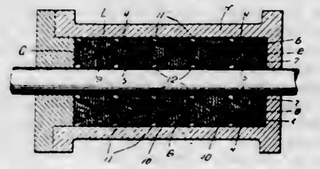
1,381,939. PROPELLING MECHANISM. ROBERT E. SMALL, Schenectady, N. Y. Filed Dec. 15, 1919. Serial No. 345,063. 1 Claim. (Cl. 115—37.)

A propelling means including a main shaft, a propeller member fixed to said shaft and adapted to rotate therewith, a driving gear on said main shaft, a hollow shaft receiving said main shaft, a propeller fixed to said hollow shaft and adapted to rotate therewith, means to prevent independent longitudinal movement of said shafts with respect to each other, countershafts, said countershafts being positioned in parallel relation to said driving shaft,



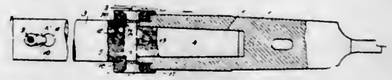
pinions on said countershafts meshing with said driving gear, an inverted crown gear carried by said hollow shaft, other pinions on said countershafts meshing with said crown gear, and said main shaft being adapted to be driven substantially as described.

1,381,940. WASHING-MACHINE. HOWARD F. SNYDER, Newton, Iowa, assignor to The Maytag Company, Newton, Iowa, a Corporation of Iowa. Filed July 19, 1915. Serial No. 40,561. 3 Claims. (Cl. 74—7.)



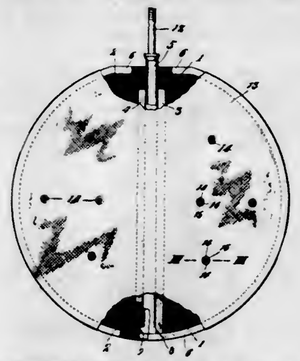
1. In a washing machine, having a power plant of unit construction, including an internal combustion engine, a driven mechanism, suitable reduction gearing interposed between the driven mechanism and the engine including a high reduction element adjacent the engine, a starter, and a clutch capable of connecting the starter with the engine through the high reduction element while leaving the driven mechanism stationary, or of connecting the engine with the driven mechanism through the entire train of gearing while leaving the starter free.

1,381,941. WASHING-MACHINE. HOWARD F. SNYDER, Newton, Iowa, assignor to The Maytag Company, Newton, Iowa, a Corporation of Iowa. Filed Oct. 6, 1915. Serial No. 54,351. 5 Claims. (Cl. 74—59.)



4. In apparatus of the class described, a stand, a support thereon, a vertical oscillatory shaft in said support, a horizontal driving shaft, a vertical driven shaft, driving connection between said horizontal shaft and said vertical driven shaft, said connection also including means to operate said oscillatory shaft.

1,381,942. PACKING. GEORGE W. STEWART, Weehawken, N. J. Filed Feb. 24, 1920. Serial No. 360,604. 11 Claims. (Cl. 288—1.)

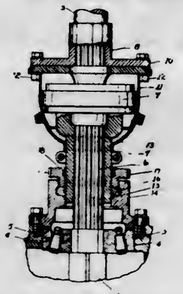


11. A packing comprising a body rectangular in cross section and having a wedge shaped opening therein providing spaced leg portions, a wedge element engaging within said wedge shaped opening, and said leg portions comprising alternate layers of fabric and rubber.

1,381,943. BORING-BAR. AXEL R. SWANSON, Chicago, Ill. Filed Aug. 26, 1918. Serial No. 251,531. 5 Claims. (Cl. 279—103.)

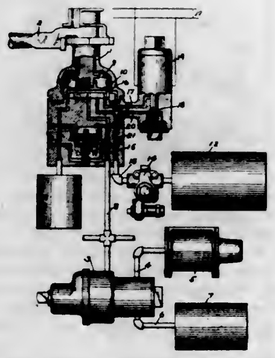
1. The combination of a shouldered boring bar having a tapered shank and having an aperture extending transversely therethrough, a socket member having a tapered aperture adapted to receive the shank, a key adapted to be inserted in said transversely extending aperture in said boring bar, an operating ring threaded on the socket member and having a flange portion overlapping the end of the socket member, the flange portion of said operating ring being adapted to engage the key to force the shank of the boring member into the tapered aperture of the socket member, and adapted to engage the shoulder of the boring bar to draw the shank out of the aperture.

1,381,944. FILTER. ERNEST J. SWEETLAND, Montclair, N. J., assignor, by mesne assignments, to United Filters Corporation, a Corporation of Delaware. Filed Feb. 2, 1917. Serial No. 146,055. 17 Claims. (Cl. 210—195.)



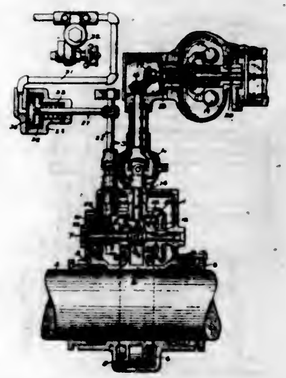
11. A filter leaf provided with means for supporting it in vertical position and comprising a drainage area, a covering of filter fabric thereover and a tube flattened in the plane of the leaf and rigidly incorporated therein to support the leaf, said tube extending to the lowest section of the drainage area and communicating therewith only at that point, and having an extension at the top of the leaf to furnish a combined outlet and support for the leaf.

16. A filter leaf comprising a foraminous plate, a filtering fabric for inclosing said plate and forming therewith an interior drainage chamber for filtered liquid drawn



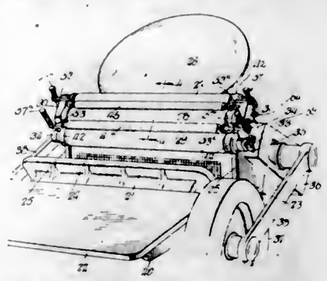
through the faces of the leaf, a discharge tube individual to said leaf and communicating with the interior drainage chamber thereof, said discharge tube being adapted to permit a cleaning fluid to be forced from the interior of the leaf outwardly through the filter fabric to dislodge the filter cake collected on the outer surfaces of the said fabric, in combination with means for preventing bulging of the said fabric and the compression of the said filter cake between the fabrics of adjacent leaves during the said reverse operation, said means comprising hollow shank rivets distributed over the face of said leaf and extending therethrough, said rivets being provided with metallic washers for forming enlarged bearing surfaces and with compressible washers for preventing leakage past the shanks of the rivets.

1,381,945. DRIVING-GEARING. GEORGE JOSEPH THOMAS, Lansing, Mich. Filed Oct. 31, 1919. Serial No. 334,752. 1 Claim. (Cl. 64—89.)



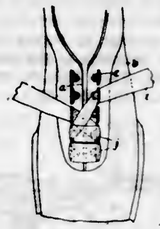
In a structure of the class described, the combination of a gear box having a bearing in a wall thereof, a shaft in said gear box projecting from said bearing, a coacting shaft, a universal joint connection for said shafts comprising a tubular shaft member having sliding and driving engagement with said shaft projecting from said gear box, a housing member mounted on said casing to inclose said bearing and projecting outwardly to embrace said joint shaft member, said housing member having an internal annular gasket seat, a gasket arranged within said housing member against said seat to embrace said joint shaft member, and a packing gland threaded into said housing member to engage said gasket.

1,381,946. BRAKE-VALVE DEVICE. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed July 11, 1919. Serial No. 310,125. 3 Claims. (Cl. 303—84.)



1. The combination with a brake pipe, a source of fluid pressure, and a brake valve having a position for supplying fluid from the source of supply to the brake pipe, of an electric brake circuit and means operated when there is no current in the electric brake circuit for cutting off communication through which fluid is supplied from the source of pressure to the brake pipe.

1,381,947. AUTOMATIC SPEED-CONTROL DEVICE. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 12, 1920. Serial No. 380,899. 5 Claims. (Cl. 303—21.)

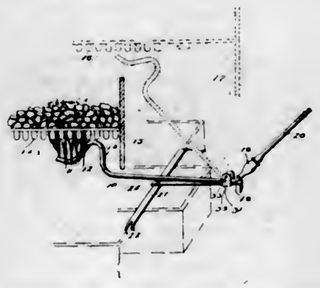


5. In a train speed control apparatus, the combination with a train speed controlled governor device for controlling the speed of the train, of a locomotive axle, trains of gears driven by said axle for operating said governor device at different speeds relative to the speed of the train, means for operatively connecting the different trains of gears to the governor device, a feed valve device for supplying fluid at different degrees of pressure, and mechanism operated according to the pressure of fluid supplied by the feed valve device for operating said means.

1,381,948. INK-DISTRIBUTING ATTACHMENT FOR PLATEN PRINTING-PRESSES. ROBERT O. VANDERCOOK, Evanston, Ill. Filed Feb. 13, 1919. Serial No. 276,740. 12 Claims. (Cl. 101—338.)

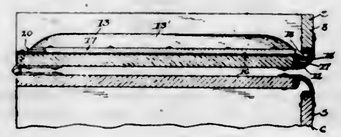
1. An ink distributing attachment for platen presses having form rollers and saddles therefor, said attachment comprising a shaft, a distributing roller rotatively mounted on said shaft and adapted to engage with one of the form rollers and to be rotated thereby, said distributing roller also being capable of an endwise movement on said shaft, means for removably attaching said shaft to the form roller saddles, and co-acting means on said shaft and roller for limiting the endwise movement of said distributing roller on said shaft without increasing the frictional resistance against a free rotative movement of said roller on said shaft after it has reached the limit of its endwise travel thereon.

1,381,949. LACING-EYELET. MACARTHUR VAN DEUSEN, Midland Park, N. J.; Annie P. Van Deusen administratrix of said MacArthur Van Deusen, deceased. Filed Aug. 21, 1919. Serial No. 318,846. 7 Claims. (Cl. 24—141.)



4. In combination, with the placket portion of a shoe, a lacing eyelet including a gromet secured to said portion at one side of the placket opening and a head on and upstanding from the gromet having a lace-receiving opening elongated and extending substantially parallel with the adjoining edge of the placket, said head being canted away from said edge of the placket.

1,381,950. TIE ATTACHMENT FOR SHOES. MACARTHUR VAN DEUSEN, Midland Park, N. J.; Annie P. Van Deusen administratrix of said MacArthur Van Deusen, deceased. Filed Aug. 21, 1919. Serial No. 318,847. 3 Claims. (Cl. 36—1.)

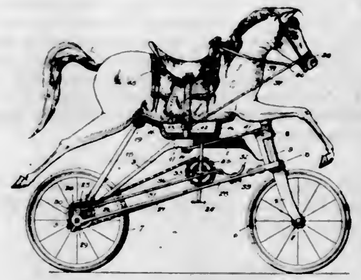


3. As an article of manufacture, a tie attachment for shoes including, in combination, a flexible lace arranged in a succession of loops, and an elongated stiff back for the lace having its opposite edge portions bent up in the same general direction and having means in said edge portions to receive and hold the respective loops.

1,381,951. FUEL-IGNITER. CHARLES JOSEPH VLASAK, St. Louis, Mo. Filed Jan. 18, 1921. Serial No. 438,225. 2 Claims. (Cl. 158—10.)

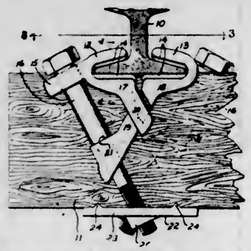
1. A fuel igniter including a burner pipe having one free curved end provided with burner forming means and having a handle at its opposite end, a supporting cross piece having support engaging means at its opposite ends, and an adjusting bar pivoted at one end to the cross piece intermediate the ends of the latter and having a pivotal mounting adjacent to its opposite end for the burner pipe and on which the latter is vertically swingable.

1,381,952. REMOVABLE TRUNK-PAD. GEORGE HENRY WHEARY, Racine, Wis. Filed June 10, 1919. Serial No. 303,099. 3 Claims. (Cl. 190—13.)



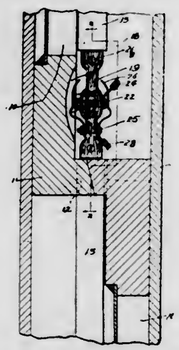
3. A removable trunk pad, comprising a non-flexible member having a pad portion formed on one of its side faces with a covering of soft non-abrading material, and reinforcing members mounted on the opposite side edge portions of the non-flexible member and having front and side edge projecting offset portions for easily removable connection with a trunk cover.

1,381,953. VALVE-GRINDING COMPOUND. JOHN V. WICKS, Seattle, Wash., assignor to Marvel Manufacturing Co., Seattle, Wash., a Firm composed of W. D. Tripple, George Tripple, and J. V. Wicks. Filed June 3, 1920. Serial No. 386,327. 3 Claims. (Cl. 51—280.)



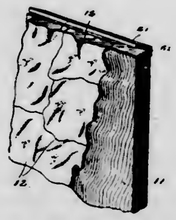
2. A valve grinding compound comprising petroleum hard oil, a pulverized abrasive, and lard oil, intermixed.

1,381,954. CHILD'S VEHICLE. MARTIN B. ZIMMERMAN, Unionville, Conn. Filed Aug. 11, 1920. Serial No. 402,744. 3 Claims. (Cl. 208—42.)



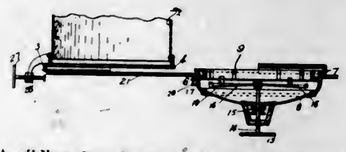
1. A child's vehicle comprising a frame, front and rear wheels supporting said frame, a rotatable stud mounted in said frame, said stud having arms on its upper and lower ends, a riding member mounted for rocking movement on said stud, a steering column for said front wheel having a cross bar connected to said lower arms, a steering cord passing loosely through the head of said riding member, and a rein member connected to said steering cord for actuating the same.

1,381,955. RAIL-CLAMP. JOHN C. ZWART and GERRIT C. ZWART, Glenbrook, Conn. Filed Mar. 14, 1921. Serial No. 452,100. 6 Claims. (Cl. 238—314.)



4. A rail clamp comprising flange clamps having interlocking shanks, and means engaging one flange clamp and the shank of the other flange clamp for simultaneously forcing said flange clamps inward and downward.

1,381,956. SASH-OPERATED CIRCUIT-CLOSER. JOSEPH AMODEO, Brooklyn, N. Y. Filed July 28, 1919 Serial No. 313,685. 1 Claim. (Cl. 200—54.)

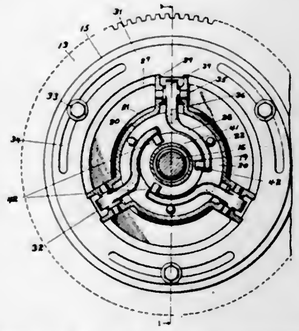


A circuit closer for a window alarm comprising an insulated block having a central enlarged portion and enlarged end portions resulting in intermediate narrow neck portions, a metal terminal contact member disposed through the central enlarged portion of the block, a metal terminal member disposed through one of the neck portions, and a pair of bowed leaf spring members secured to the opposite ends of the last-named terminal member with their intermediate portions normally extending across the ends of the first terminal member and out of contact therewith, and with their free ends directed inwardly toward the other neck portion.

1,381,957. MAP. CHARLES EDWARD ANDERSON, Philadelphia, Pa. Filed Dec. 29, 1920. Serial No. 433,877. 3 Claims. (Cl. 35—6.)

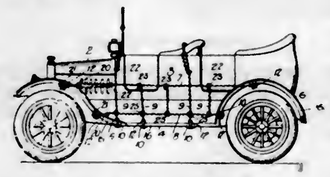
3. A map of the character described, comprising a baseboard, a plurality of sections corresponding to States, counties or the like associated with said base board, cooperating means carried by concealed portions of the sections and by the base board for securing the sections to the base board against all except upward movement and an end piece pivoted to the base board pivoted to the section to prevent upward displacement of said sections.

1,381,958. DOOR. DANIEL B. BANKS, Baltimore, Md.; Garey T. W. Banks executrix of the will of said Daniel B. Banks, deceased. Filed July 6, 1917. Serial No. 178,996. 9 Claims. (Cl. 220—55.)



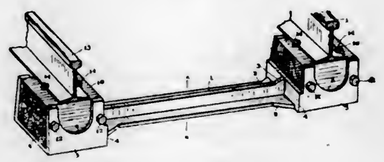
1. A sliding door having a section posteriorly concave terminating in a plane face parallel to the plane in which said door slides, said door having on the advancing portion thereof a projecting rim and on the following portion thereof one or more posteriorly projecting lugs in combination with a container, having about the opening thereof a continuous plane face opposing, when said door is closed, the plane face on said door, and having one or more projecting lugs engaging, when said door is closed, the rim of said door, and a projecting rim engaging, when said door is closed, the lugs of said door, and in further combination with a movable gland lying within the concavity of said door, and engaging, when advanced, the inner edge of the rim or opening of said container.

1,381,959. STORAGE BATTERY. ARTHUR J. BARACHEE, Chicago, Ill. Filed Mar. 24, 1919. Serial No. 284,521. 2 Claims. (Cl. 204—29.)



1. In a storage battery, means for supporting the plates in spaced relation, said means comprising members having spaced parallel grooves in which the ends of the plates seat, said grooved portions having perforations.

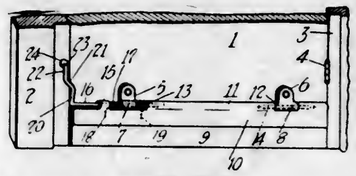
1,381,960. CLUTCH. EDWARD H. BELDEN, Toledo, Ohio, assignor, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed July 22, 1918. Serial No. 246,208. 10 Claims. (Cl. 192—68.)



1. A device of the class described, comprising the combination of a driving fly wheel having a chamber formed therein; a thrust ring within said chamber movable axially of the fly wheel; laterally extending projections upon said thrust ring; a driven shaft; a clutch ring fixed to said driven shaft and disposed in said chamber between said fly wheel and said thrust ring; a cover plate secured upon said fly wheel and having forwardly extending portions engaging and interlocking with said projections; levers pivotally supported on said cover plate independently of said thrust ring and inclosed by the cover plate; and means for actuating the levers to move said thrust ring into engagement with said clutch ring.

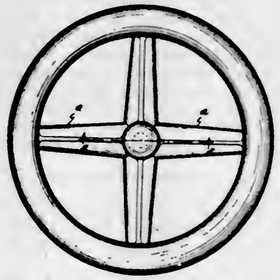
1,381,961. LUGGAGE-RACK. JOHN W. BEMENT, Denver, Colo. Filed Oct. 5, 1918. Serial No. 257,022. 5 Claims. (Cl. 224—29.)

1. A luggage-rack for automobiles comprising a net of chains, and devices to secure the ends thereof, consisting of folding lugs adapted to be fastened at the edges of the running boards or mud-guards of an automobile and having slots in their movable parts, and anchors on the chains coöperating with the slotted parts of the lugs.



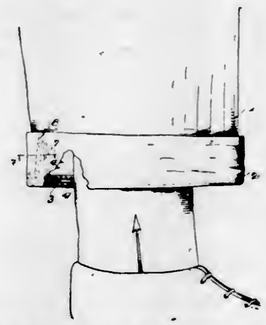
1,381,962. RAILWAY-TIE. ANTHIME BERNIER, Montreal, Quebec, Canada. Filed Nov. 19, 1920. Serial No. 425,225. 1 Claim. (Cl. 238—69.)

A railway tie, a T-bar terminating in cross walls slightly higher and slightly broader than the T-sections and integral with bottom and converging side walls all of metal, said side walls having curved slots from the upper side reducing the central depth of said side walls to approximately the height of said cross walls, wooden blocks inserted from the outer ends of said side walls therebetween and abutting the cross walls and flush with the top of the wing or end portions of the side walls and bolts inserted through said side walls and through said blocks at each side of the central slots in the side walls and securing the said wooden blocks rigidly between said side walls, said bottom having longitudinal drain openings therethrough.



1,381,963. WEATHER-STRIP FOR DOORS. HERBERT EDWARD BRICE, Toronto, Ontario, Canada. Filed Dec. 5, 1919. Serial No. 342,795. 1 Claim. (Cl. 20—65.)

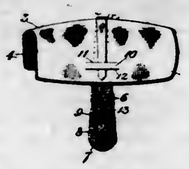
The combination with a door and a door jamb, of a pair of sleeve brackets carried upon one side of the door above the lower edge thereof, a weather strip having a sleeve-like portion cut away at different points along the length thereof to accommodate said brackets, one of the cut outs being of greater width than the bracket accommodated therein to provide space between the ends of the bracket and the ends of the cut out, a pivot rod passing through said last mentioned bracket and engaged in the sleeve like portion of the weather strip, one end of said rod extending beyond the end of the weather strip and formed into a crank arm having an integral offset disposed for engagement with the door jamb, a spring element having the intermediate portion thereof disposed behind said bracket and the ends thereof coiled about the pivot rod in the



spaces between the ends of the bracket and the cut out and then extended into engagement with the weather strip, and a pivot passing through the remaining bracket and engaged in the sleeve like portion of the weather strip.

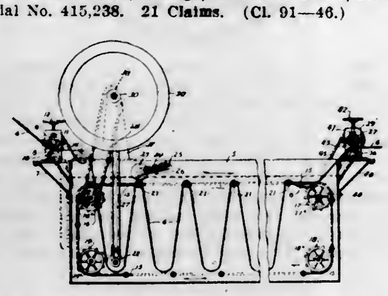
1,381,964. STEERING-WHEEL. HARRY W. BUNDY, Detroit, Mich. Filed June 3, 1920. Serial No. 386,172. 3 Claims. (Cl. 74—33.)

1. A steering wheel, comprising a rim, a spindle provided with a threaded end, a plurality of strips of spider arms extending from side to side of the rim and overlapping at the center and provided with registering non-circular central openings and bosses, a hub piece provided with a non-circular upper portion for fitting complementarily into the openings through the said spider arm strips and provided with a shoulder at its base against which the overlapping spider arm strips can abut, and a nut adapted to screw on to the threaded end of the spindle and hold the overlapped spider arms from moving off from the hub piece.



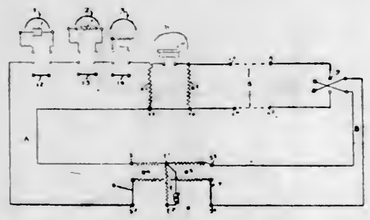
1,381,965. SHAPE-RETAINER FOR THE BOTTOMS OF TROUSERS-LEGS. FRANK CAMERON, Jr., Harrison, Ohio, assignor of one-third to Albert C. Kneffle, Harrison, Ohio. Filed July 12, 1920. Serial No. 395,572. 2 Claims. (Cl. 2—124.)

2. A shape retainer for the bottoms of trouser legs comprising a strip-like body provided with a fold between its



ends to form spaced side portions, and an integral bracing portion upstanding from the upper edge of one of the side portions in the plane thereof and relatively close to the said fold.

1,381,966. TIRE-PATCH. DONALD M. CAMPBELL and HARRY E. LITTLE, Wichita, Kans. Filed May 10, 1920. Serial No. 380,242. 6 Claims. (Cl. 152—24.)

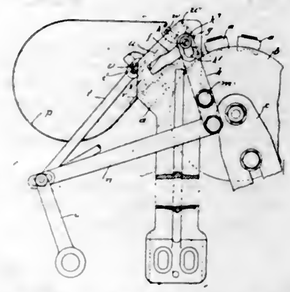


6. A device of the character described, comprising a patch formed of a plurality of plies or tire building material and adapted to be wrapped around the inner tube of a resilient tire; a securing strap for the patch, said patch having a raised strap-band formed by parallel slits extending through a part of the plies of the patch, said securing strap being passed under said raised band and yieldingly secured around the patch, and provided on its inner face with a coat of self vulcanizing material, whereby the patch is automatically adjusted to the inner tube according to the balance of force between the inflating power of the inner tube and the resistance offered by the outer casing to the inflation of said inner tube.

1,381,967. DIPPING-VAT FOR BUILDING-PAPER, &c. CECIL M. CLARKE, Chicago, Ill. Filed Oct. 7, 1920. Serial No. 415,238. 21 Claims. (Cl. 91—46.)

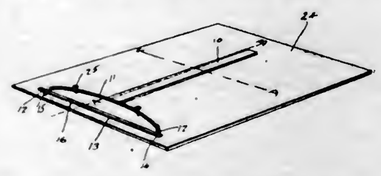
1. In combination, a vat, a conveyer in said vat having a plurality of individual members adapted to receive each the individual loop of a looped web, and means for feeding said web to and from the vat.

1,381,968. ELECTRICAL MEASURING APPARATUS. JOHN L. CLARKE, Montreal, Quebec, Canada. Filed Feb. 10, 1920. Serial No. 357,717. 5 Claims. (Cl. 175—183.)



1. In an electrical measuring apparatus, an electrical circuit having two branches, each terminating in an impedance and having therebetween a break and means for determining the condition of one branch in respect to the other, one of said branches having a gap wherein the line or apparatus is inserted for test and electrical means in the other branch for making the current in the two branches equal in magnitude and in phase.

1,381,969. PRODUCTION OF CATALYSTS. CLARENCE BROOKS CLUFF, Westfield, N. J., assignor to The American Cotton Oil Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 5, 1920. Serial No. 421,864. 7 Claims. (Cl. 23—28.)



1. The method of producing a catalyst, which comprises subjecting a mixture of a reducible nickel compound and melted tallow to reduction with hydrogen at a temperature of about 240° to 245° C.

1,381,970. STRIPPING MECHANISM FOR TRAVELING FLATS OF CARDING-ENGINES. REUBEN T. COMER, Comer, Ga. Filed June 25, 1920. Serial No. 391,656. 8 Claims. (Cl. 19—15.)

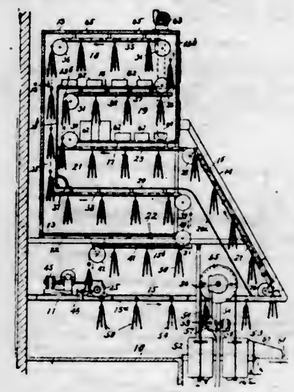
7. The combination with a chain of traveling flats, of a reciprocating flat-stripper, a strippings-receiver, and a reciprocating strippings-clearer working oppositely with respect to the flat-stripper, taking the strippings away from the latter and moving the same to the receiver.

1,381,971. DRAWING IMPLEMENT. EDMUND CORBIN, Chicago, Ill. Filed June 4, 1920. Serial No. 386,637. 4 Claims. (Cl. 33—77.)

1. A drafting implement comprising a straight-edge blade, a resilient strip attached crosswise to one end thereof, and means for adjusting said strip to assume an arcuate curve, said curved strip being adapted for sliding contact with a means for guiding it in a circular path having for its center the center of the arc to which the strip is curved.

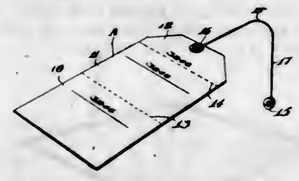
1,381,972. RIM AND TIRE CARRIER. WILBUR M. DACE, Rushville, Ill. Filed Aug. 18, 1919. Serial No. 318,250. 4 Claims. (Cl. 224—29.)

4. A rack for demountable rims or tire casings comprising a split band having overlapped ends and provided with casing or rim holding means, a longitudinally curved lever contacting at one of its ends with the inner peripheral face of the innermost end of the band, said lever being spaced from the inner peripheral face of the outer end of said band a distance equal to the thickness of said band, radial pivots connecting said lever with the ends of said band, one of said pivots extending across the



space between said lever and said outer end of the band, said inner end of the band being receivable in said space when said lever is thrown into band contracting position, and means for holding said lever in band expanding position.

1,381,973. BRUSH-CLEANER FOR CARPET-SWEEPERS. HELEN L. DAVIS, Arlington, N. J. Filed May 1, 1918. Serial No. 231,913. 1 Claim. (Cl. 15—25.)

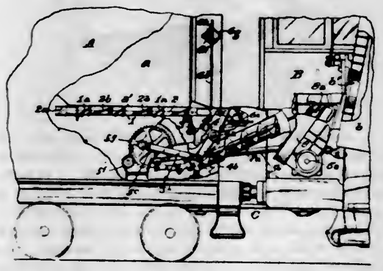


A brush cleaner for use in connection with a rotary brush carpet sweeper comprising a single piece of wire looped to provide a handle portion, and portions adjacent its ends twisted together to provide a shank, its free ends terminating in a pair of hook-shaped prongs, a second piece of wire intertwined with such twisted portions with its outer end terminating in a hook portion between the two first menioned hooks, said hooks having shanks extending upward and forward, and end portions extending in a rearward and downward direction so as to form collecting and retaining recesses for waste.

1,381,974. DRYING-OVEN. DAVID F. DOMIZI, Cleveland, Ohio. Filed June 27, 1917. Serial No. 177,188. 13 Claims. (Cl. 34—12.)

7. In an apparatus of the character described, a vertical structure including an oven having a plurality of superposed compartments, means for heating certain of the compartments, a loading and unloading platform beneath the oven, a series of horizontal tracks beneath the oven and through the several compartments thereof, an inclined track leading from the lowermost track upwardly to a compartment of the oven, a drip wall beneath said inclined track, and a conveyer for conveying the articles to be japanned over the platform, along the inclined track over the drip wall, then back and forth through certain compartments of the oven, then downwardly back and forth along certain tracks again to the loading and unloading platform.

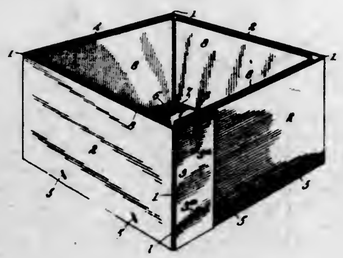
1,381,975. IDENTIFYING MEANS. MCKENZIE DUMAIS, Hull, Quebec, Canada. Filed Oct. 11, 1920. Serial No. 416,226. 1 Claim. (Cl. 40—20.)



In an identifying means of the character described, a flexible member, a male member having an enlarged head of semi-ovoid shape, the under face of the said head being flat, a face plate beneath the head, a rectangular locking slot between the head and face plate, a female member having a socket to receive the head of the male member, and a spring locking wire formed with a parallel portion adapted to spring into and engage with the locking groove.

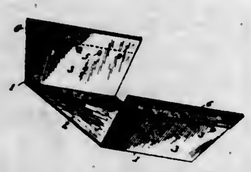
1,381,976. BRAKE-BAND CONSTRUCTION. WILLIAM B. DUNN, Detroit, Mich. Filed Dec. 15, 1919. Serial No. 344,872. 7 Claims. (Cl. 188—259.)

1. A flexible brake band having a circumferentially extending channel formed therein.



1,381,977. MECHANICAL STOKER. ALBERT G. ELVIN, Plandome, and ADAM B. FAHNESTOCK, Great Neck, N. Y., assignors to Elvin Mechanical Stoker Company, Dover, Del., a Corporation of Delaware. Filed Oct. 4, 1920. Serial No. 414,634. 7 Claims. (Cl. 110—101.)

1. In a mechanical stoker, the combination of a fuel receptacle, having a bottom delivery opening; a feeder

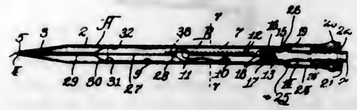


trough, located below said opening; a feeding appliance, adapted to be reciprocated in said feeder trough; a crusher casing, located below said feeder trough, and open at its top thereto; a movable crusher jaw, mounted in said casing; a subjacent conveyer, adapted to receive fuel from said casing, and deliver it, at a point adjacent to a steam boiler furnace; means for projecting the delivered fuel into the furnace; and a motor, actuating the feeding appliance and the crusher jaw.

1,381,978. FOLDING LOOSE-BOTTOM BOX. ORIN C. FENLASON, Portland, Oreg. Filed Sept. 30, 1919. Serial No. 327,497. 3 Claims. (Cl. 217—2.)

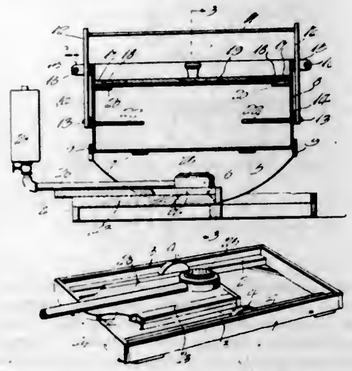
1. A foldable loose bottom box comprising a body member formed of a single strip of veneer with the grain running longitudinally thereof, scored transversely and bent along said score lines to form the side panels of the box, the two ends being stapled forming a rectangular box which may be folded flat, cleats stapled to the inner faces of the panels at the bottom edges thereof, said cleats terminating short of the score lines so as not to interfere with the folding of said body member, and said cleats reinforcing the body member and serving as supports, loose bottom members formed of single strips of veneer, with the grain running longitudinally thereof, and scored and bent to form bottom sections adapted to rest upon the said cleats, and upstanding end sections to bear against the inner faces of the side panels, and being substantially equal in length to the height of said panels, said bottom members being arranged at right angles to each other and placed crosswise of and loosely upon each other and supported solely by said cleats.

1,381,979. WOOD AND TIN BOUND BASKET. ORIN C. FENLASON, Portland, Oreg. Filed Sept. 30, 1919. Serial No. 327,498. 2 Claims. (Cl. 217—2.)



1. A wood and tin bound basket, composed of two members placed crosswise of each other forming a rectangular box, said members being formed of veneer with the grain running longitudinally, relatively narrow veneer strips arranged transversely along and cemented to the outside of said members at their upper edges and substantially flush with said edges, said strips having the grain running at right angles to the grain of said members, and means connecting said members together at the several corners.

1,381,980. SHOE-HEEL. DAVID H. FINBERG, St. Louis, Mo. Filed Apr. 22, 1920. Serial No. 375,736. 7 Claims. (Cl. 36—40.)



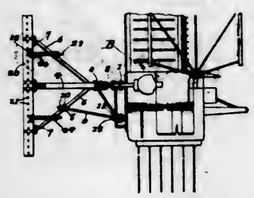
1. In combination with a heel provided with a socket leading from the tread of the heel, a lift for the heel, a plug coupled to the lift and secured in the socket, and a stiffener member embedded in the lift and plug, the outer portions of the stiffener terminating within the compass of the confines of the socket and betnt toward the roof of the socket sufficiently to communicate thereto the stresses imposed by the weight sustained by the heel.

1,381,981. PENCIL. HOWARD L. FISCHER, St. Paul, Minn. Filed Dec. 17, 1918. Serial No. 267,205. 9 Claims. (Cl. 120—17.)

1. In a pencil having a thin tubular barrel, an ejecting means collectively and removably held in said barrel, a removable cap for holding said ejecting means in said barrel and means for holding a marking lead in writing position so that its marking end can be projected out of the apex of said pencil barrel, said lead holding means being firmly held to said ejecting mechanism so as to be removed therewith when said ejecting mechanism is removed from said barrell, and said holding means being separable from said ejecting mechanism when the same is removed from said pencil barrel, whereby a new marking lead can be inserted freely into said lead holding means, and said lead holding means can be again attached to said ejecting mechanism and reinserted in operating positions in said pencil barrel.

1,381,982. WASHING-MACHINE. WILLIAM C. FORSEE, Kansas City, Mo. Filed Mar. 18, 1920. Serial No. 366,891. 1 Claim. (Cl. 126—350.)

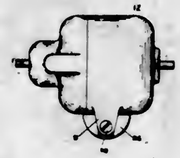
A device of the class described comprising a tank, a base frame for supporting said tank, said frame including



parallel side bars, end bars connecting said side bars, and an intermediate transverse bar parallel with said end bars, a horizontal elongated plate secured at its ends to said transverse bar and one of said end bars and flush with the upper surface of the latter, a pair of parallel undercut guide tracks secured on the upper surface of said plate along the edges thereof, a stop cleat secured to the inner end of said plate and extending between said guide tracks, a flat horizontal slide plate resting on said first named plate and slidably engaged with said guide tracks, the inner end of said slide plate abutting said cleat and the outer end of said slide plate resting on the aforesaid end bar, a burner carried by the inner end of said slide plate, a fuel supply pipe extending from said burner outwardly along the upper surface of said slide plate and projecting beyond the outer end of said plate, and a fuel supply tank supported by the outer end of said pipe and spaced outwardly from the first named tank.

1,381,983. SIGN. JOSEPH PETER FOX, St. Cloud, Minn. Filed May 12, 1920. Serial No. 380,742. 12 Claims. (Cl. 40—129.)

11. In a sign of the character described, a sign carrier adapted to be mounted on the extra wheel or tire carried on the automobile and including a hook adapted to engage the extra wheel or tire and spring means connecting the hook and the sign carrier.

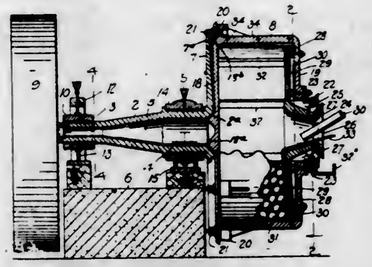


1,381,984. BINDER ATTACHMENT. ALBERT J. GAPP, Wales, N. D. Filed Nov. 13, 1920. Serial No. 423,841. 2 Claims. (Cl. 97—44.)

1. The herein described weed seed covering attachment for binders, the same comprising a rake consisting of a cross bar and a series of upright teeth therethrough, a beam and rearwardly diverging braces hinged at their rear ends to the front lower corner of said bar, means for attaching the front end of the beam to the binder, and yielding means connecting the top of the bar with said braces for holding the bar normally in position to maintain its teeth upright.

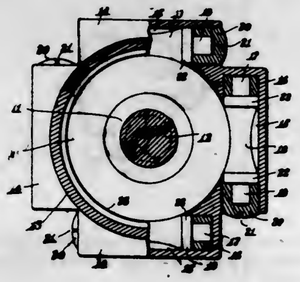
1,381,985. ELECTRIC MOTOR. ALFRED C. GILBERT, New Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Connecticut. Filed Nov. 26, 1917. Serial No. 203,975. 4 Claims. (Cl. 172—36.)

4. In an electric motor, a casing divided transversely into sections, a pair of lugs integral with one of said sections, said lugs located substantially at the central part of the motor casing, and a supporting member interposed between said lugs and detachably secured to the same, the



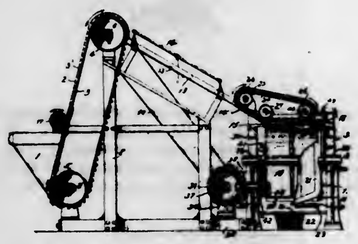
casing section having the lugs being provided with a conductor opening extending to the adjacent edge of the other casing section.

1,381,986. ELECTRIC MOTOR. ALFRED C. GILBERT, New Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Connecticut. Original application filed Nov. 26, 1917, Serial No. 203,975. Divided and this application filed Mar. 8, 1919. Serial No. 281,329. 10 Claims. (Cl. 248—30.)



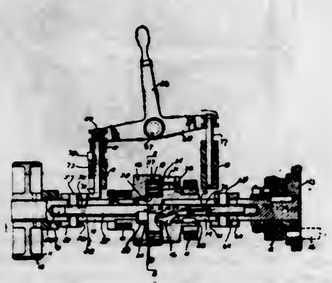
1. In an electric motor provided with a casing, supporting lugs formed upon said casing, a block mounted between said lugs, securing means extending through said lugs into said block, a base for said motor, and means independent of said securing means for adjustably mounting said block upon said base.

1,381,987. GRINDING-MILL. ROBERT W. GORDON and ARTHUR C. DAMAN, Denver, Colo., assignors to The Stearns Roger Manufacturing Company, a Corporation of Colorado. Filed Nov. 3, 1919. Serial No. 335,396. 3 Claims. (Cl. 83—9.)



1. A mill of the class described comprising a rotary shaft, inner and outer bearings for the said shaft, the inner bearing having a ball and socket joint and the outer bearing having means for adjusting the shaft both vertically and horizontally, a carrying member rigid with the inner end of the shaft and a grinding cylinder adjustably connected to said carrying member.

1,381,988. ANTIFRICTION MECHANISM FOR LIFTING-JACKS. FRANK L. GORMLEY, Brookline, Mass. Filed Jan. 20, 1921. Serial No. 438,539. 8 Claims. (Cl. 254—103.)

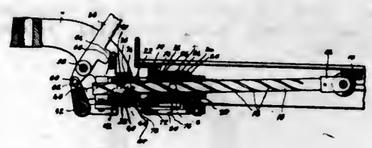


1. In a lifting jack, a fixed cylindrical standard; a member movable thereon; and anti-friction members on said movable member and oppositely disposed coacting with the wall of said standard.

1,381,989. MACHINE FOR POSITIONING AND CUTTING FISH. CHARLES W. GRAHAM, Allendale, N. J., assignor to American Can Company, a Corporation of New Jersey. Filed Nov. 12, 1917. Serial No. 201,514. 24 Claims. (Cl. 17—10.)

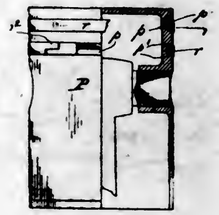
12. The combination of an endless series of channels movable sidewise for carrying the fish, gaging and decapitating means, fish positioning means, and means for propelling the fish head first into the ends of said channels and along the same to the gaging means.

1,381,990. CLUTCH. BENGT M. W. HANSON, Hartford, Conn. Filed Aug. 6, 1919. Serial No. 315,668. 8 Claims. (Cl. 192—35.)



4. In a clutch, a carrier, an expansible member carried thereby, a radially movable slide, a slidable bar having a cam adapted to move the slide outwardly when the bar is shifted in one direction, said shiftable bar also having a second cam operatively connected to said slide and adapted to move the same inwardly when the bar is shifted in the opposite direction.

1,381,991. ENAMEL FOR PAPERS. RICHARD HEIM, Philadelphia, Pa. Filed Sept. 2, 1919. Serial No. 321,194. 2 Claims. (Cl. 184—50.)

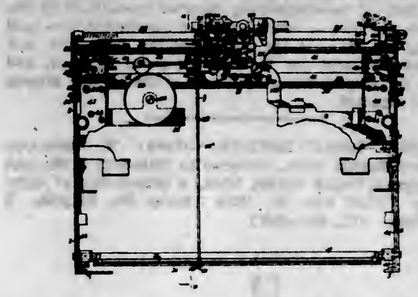


2. An enamel consisting of pigments, a size, and an oil reduced to a putty-like state.

1,381,992. JACK. DANIEL E. HENNESSY, Holyoke, Mass., assignor to Herbert W. Cowan, J. Lewis Wyckoff, and Edward N. White, trustees, doing business as Cowan Truck Company. Filed July 14, 1915. Serial No. 39,729. 20 Claims. (Cl. 254—2.)

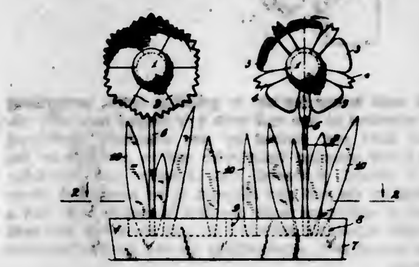
1. A jack comprising, in combination, a jack-post having a thread thereon so inclined to its axis that a nut screwed upon said thread may be turned by relative movement of said post and said nut along said axis, a nut on said post, means for reciprocating said nut, and means acting automatically as said nut is moved in one direction to prevent its turning on said post whereby it carries said post with it.

1,381,993. PISTON-PACKING. ROBERT R. HILL and RALPH G. LAW, Manhasset, N. Y. Filed Nov. 22, 1919. Serial No. 339,861. 4 Claims. (Cl. 74—109.)



1. A piston formed with a packing groove with inwardly-convergent walls, and a packing ring with inwardly-convergent sides for contactual engagement with the walls of the groove, the convergent walls of the piston and ring being parallel throughout, the said ring being loosely received in said groove and free to shift in the direction of movement of the piston.

1,381,994. TYPEWRITING-MACHINE. JOSEPH B. HOLDEN, Utica, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Jan. 20, 1920. Serial No. 352,659. 28 Claims. (Cl. 197—108.)



1. In a collapsible tire core, a key section having ears protruding from the opposite ends thereof, separable body sections coöperative with said key section, said body sections having certain of the ends thereof provided with sockets arranged to receive said ears, and a plurality of

nut carrying threaded and tapering bolt elements arranged to pass through openings provided in said ears

and the walls of said sockets, whereby upon the tightening of the nuts of said elements said section ends will be securely united.

1,381,995. TOY. RICHARD EDWARD HUMBERT, Montclair, N. J., assignor to Humbert Toymakers, Inc., Newark, N. J., a Corporation of New Jersey. Filed Mar. 17, 1919. Serial No. 283,119. 1 Claim. (Cl. 35—16.)

A toy comprising a slotted base, a stem removably carried by the slotted base, a head having a transverse slot with which the stem engages whereby the angle of the head may be adjusted, said head being also provided with a circumferential slot and petals removably carried by and frictionally held in said circumferential slot, substantially as set forth.

1,381,996. CUSHION-WHEEL. CHARLES J. JACKSON, Galva, Ill. Filed Mar. 23, 1917. Serial No. 157,007. 8 Claims. (Cl. 152—36.)

3. In a cushion wheel, a pair of rings, one of which comprises angular sections, a cushion interposed between said rings, and locking plates provided with lugs engaging openings in the sections for locking the sections together.

1,381,997. HANDSAW. WILLIAM LOUIS JACQUES, Central Falls, R. I. Filed July 2, 1920. Serial No. 393,563. 2 Claims. (Cl. 7—13.)

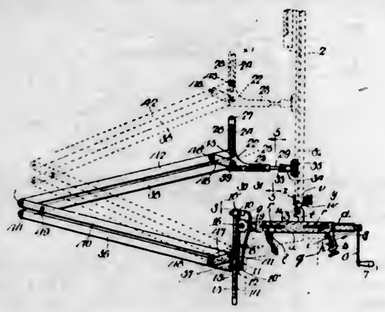
1. A handsaw having a blade with a sight opening, a handle on the blade, said handle having on one side a raised angular ledge which extends entirely across the handle and onto the saw blade, and on the other side a

raised right-angular ledge with a corner which extends to the center of the sight opening, for the purpose as described.

1,381,998. REPRODUCER FOR TALKING-MACHINES. JOHN W. KAUFMANN, Baltimore, Md. Filed June 9, 1920. Serial No. 387,640. 8 Claims. (Cl. 274—35.)

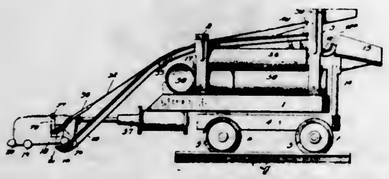
4. In a reproducer, a sound box, a reproducing lever, a needle holder, self supporting pivots for the said lever and said needle holder on the sound box, and a bow shaped spring in normal condition connected at opposite ends to said lever and said holder.

1,381,999. SAFETY-LOCK FOR DOORS AND THE LIKE. HERMAN L. KLESS, Houston, Tex. Filed May 15, 1920. Serial No. 381,642. 1 Claim. (Cl. 292—292.)



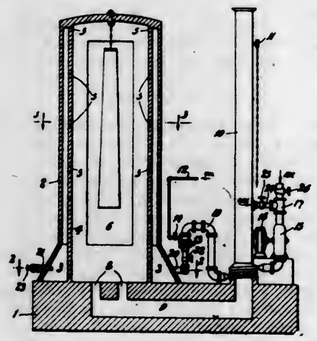
A safety lock including two jaws provided with alined slots, a bearing pin working through said slots, the corresponding ends of said jaws being outwardly turned forming a lip flange and a stop and eccentrics carried by the respective ends of said pin, bearings carried by said jaws between which the eccentrics work forming means for adjusting the jaws relative to each other.

1,382,000. WINDOW-CLEANING MECHANISM. LOUIS L. KORACH, Chicago, Ill. Filed Sept. 20, 1917. Serial No. 192,309. 7 Claims. (Cl. 15—59.)



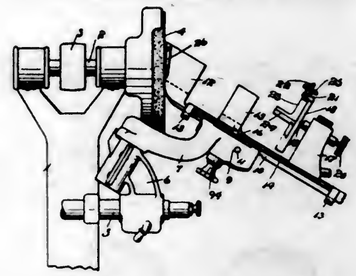
1. In a window cleaning mechanism of the class described, the combination of a set of pivotally connected levers comprising a lower pair of parallel levers pivotally connected with an upper pair of parallel levers, links connecting the lever members of each pair of said levers, a supporting member pivotally connected with one of the lower levers and adapted to support said levers in position to extend in a plane at right angles to the plane of a vertical window pane to be operated upon, lever-operating mechanism comprising a reciprocating member pivotally connected with the other of said lower levers at a point near its extremity, means for operating said reciprocating member, and a tool-holding member upon and movable

with the extremities of the upper pair of connected levers in a direction parallel to the path of movement of said



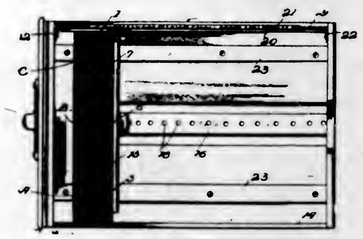
reciprocating lever-operating member, said links being oblique to the length of said levers.

1,382,001. SHOVELING-MACHINE. SPANOJE JOSEPH KAULY, Miami, Ariz. Filed Nov. 17, 1917. Serial No. 202,476. 3 Claims. (Cl. 214—102.)



1. In a machine of the character specified, a trackway, a dipper moving on the trackway, said dipper being open at its forward end and having a gate closing the front of the top thereof, means for moving the dipper on the trackway, and a connection between the said means and the gate for holding the gate closed when the dipper is moved in loaded condition, the dipper having a gravity-controlled discharge gate at its rear end, means in connection with the trackway for inclining the dipper at the discharge end of the trackway, latches for holding the gate closed, and means controlled by the inclining of the dipper for releasing the latches.

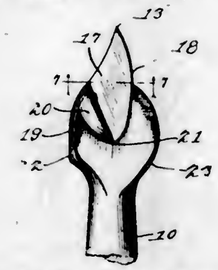
1,382,002. FURNACE FOR HEATING METALS. EDWARD A. LESLIE and HENRY M. BRIGHAM, Brooklyn, N. Y. Filed Nov. 18, 1918. Serial No. 262,976. 2 Claims. (Cl. 158—7.)



1. A furnace for heating metals comprising in combination a combustion chamber, a heating chamber, an annular distributing chamber surrounding the heating chamber into which the gaseous products of combustion are discharged from the combustion chamber, ports in the inner wall of the distributing chamber through which the gaseous products of combustion are distributed into said heating chamber, means for supplying fluid fuel and air and a diluent gas to the combustion chamber, and means for varying the proportions of the air and diluent gas so supplied.

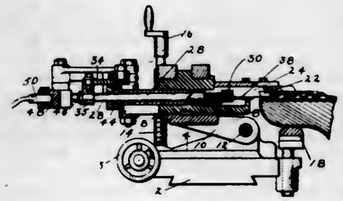
1,382,003. DRILL-HOLDER. HENRY W. LIGHTNER, Grand Rapids, Mich., assignor to Wilmarth & Morman Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Feb. 24, 1920. Serial No. 361,035. 8 Claims. (Cl. 51—219.)

1. A drill holder for use in grinding drills, comprising a bar provided at one end with a V-shaped upwardly extending drill rest formed by two angularly positioned sides, a rod mounted lengthwise and to one side of the bar, a second V-shaped rest slidably and rotatably mounted on the rod and adapted to be positioned above the bar in alinement with the first V-shaped rest, and a tail block adjustably mounted on and above the bar back of the second rest, substantially as and for the purposes described.



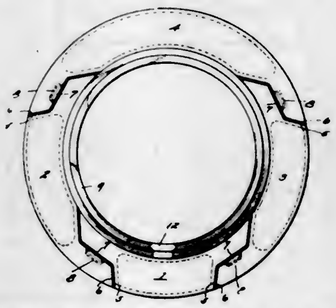
1,382,004. SELECTIVE CARD-INDEX SYSTEM. ISAAC W. LITCHFIELD, Washington, D. C. Filed Oct. 24, 1917. Serial No. 198,348. 20 Claims. (Cl. 129—16.1.)

16. In a selective card-index system, a series of cards, a container therefor permitting lateral displacement of said cards therein, means to displace laterally all cards of a classified group, and means to elevate the displaced cards with respect to the remaining cards.



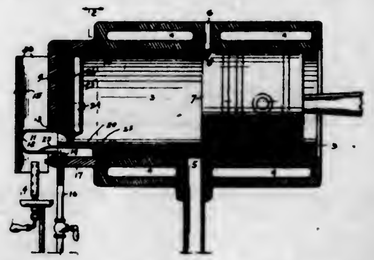
19. In a selective card-index system, a series of cards so constructed as to provide a passage extending through all of the series, all cards of a classified group projecting into said passage to such a position that they may be engaged by a displacing device inserted into said passage, and means insertible into said passage for positively displacing the cards projecting into the same.

1,382,005. NAIL. THADDEUS J. LORDS, Chicago, Ill., assignor to Sears, Roebuck and Co., Chicago Ill., a Corporation of New York. Filed Mar. 5, 1920. Serial No. 363,513. 8 Claims. (Cl. 85—30.)



1. A fastening having a tapered shank terminating in a barb, the radial dimensions of said barb being materially greater than the small end of the shank but materially less than the large end of the shank.

1,382,006. LASTING MECHANISM. THOMAS LUND, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 12, 1918. Serial No. 253,693. 20 Claims. (12—14.)

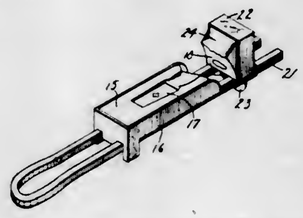


1. In mechanism of the class described, in combination, means for gathering an upper inwardly around the end of a shoe, and independently operable upper trimming means permanently associated with said gathering means, said upper trimming means comprising a cutter guided for trimming movement inwardly over the shoe bottom in a direction substantially parallel to the lengthwise dimension of the shoe and constructed to extend continuously across the shoe from one side of the gathered upper to the other side to trim off the entire surplus margin of the upper around the end of the shoe at a single operation.

1,382,007. COLLAPSIBLE CORE. THOMAS MIDGLEY, Sr., Worthington, Ohio, assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Mar. 19, 1919. Serial No. 283,533. 6 Claims. (Cl. 18—45.)

1. A collapsible core having a plurality of separate sections having their abutting surfaces shaped to provide portions extending substantially circumferentially, interfitting connections located in said circumferential portions and adapted to resist separation of the sections in a circumferential direction, and means whereby said connections are strained in a circumferential direction.

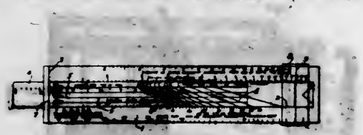
1,382,008. HYDROCARBON-ENGINE. DUDLEY R. MORRISON, Anderson, Ind. Filed Apr. 26, 1920. Serial No. 376,677. 11 Claims. (Cl. 123—32.)



1. In a hydrocarbon explosive engine utilizing oil as a source of hydrocarbon supply, a cylinder, a piston reciprocating in the cylinder, a resilient partition within the cylinder defining a separate chamber said plate making a loose fit at its edges with the cylinder, means for supplying fuel-oil to the chamber defined by the plate, and means for heating the plate to vaporize the oil.

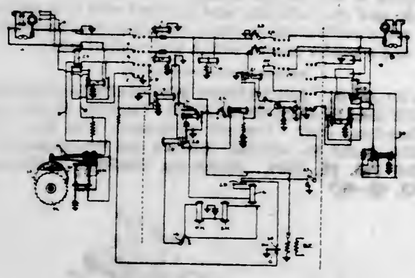
1,382,009. TOY. CHARLES NEMETHY, Yonkers, N. Y. Filed May 13, 1920. Serial No. 381,026. 2 Claims. (Cl. 244—12.)

2. A glider of the class described comprising a body portion having enlarged heads at each end thereof, a slot provided in the forward enlarged head, a plane situated within said slot, said rear head provided with a horizontal slot and a vertical slot, a plane situated in said horizontal slot and a rudder carried within said vertical slot.



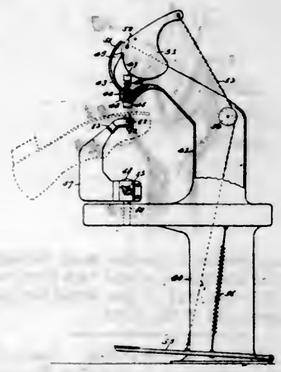
1,382,010. APPARATUS FOR MANUFACTURING PORCELAIN JACKET-CROWNS. CHOTOKU NISHI, San Francisco, Calif. Original application filed Mar. 22, 1920, Serial No. 367,842. Divided and this application filed Feb. 14, 1921. Serial No. 444,706. 6 Claims. (Cl. 32—6.)

5. A hand tool for the making of porcelain jacket crowns, comprising a handle provided with a wax-holding tray,



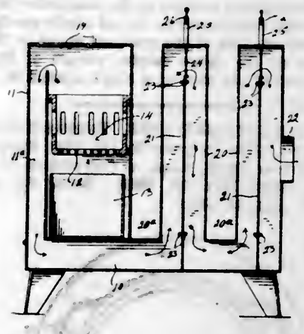
and a receptacle mounted on the handle and having an open side disposed toward the tray so that upon movement of the opposed ends into juxtaposition the occlusal surface of a model in the tray will be impressed in the wax in the receptacle.

1,382,011. SLIDE-RULE. HAYLETT O'NEILL, Larchmont, and STEPHEN H. PAYNE, Brooklyn, N. Y. Filed Aug. 24, 1917. Serial No. 188,059. 2 Claims. (Cl. 235—70.)



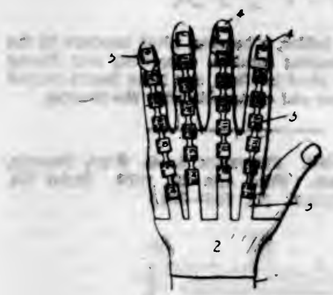
1. In a slide rule for determining the efficiency of steam plants, and other facts relating thereto, the combination with a casing having a cross index line, a slotted face and, along the margin of said slot, a scale representing different values of combustible per unit of fuel, and a slide mounted in said slot and having on the slide face a series of longitudinally extending parallel lines representing different flue temperatures, a series of curved lines intersecting these parallel lines and representing the summation of heat-losses in a standard boiler plant which is producing the percentages of CO_2 in said flue gases under varying conditions as designated on said lines, and a graduated scale, parallel to the flue temperature lines, representing the percentages of efficiency at which boilers are being operated, of a marker adapted to slide longitudinally on the casing, whereby upon placing the marker over the graduation on the casing scale representing the value of combustibles, in an assumed fuel, and moving the slide until the intersection point of the line representing a given flue temperature and of the curve representing a given CO_2 percentage, comes under the marker, the graduation on the slide representing the efficiency of a standard boiler operating under conditions so assumed will appear opposite the index line on the casing.

1,382,012. LINE-SWITCH SYSTEM. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed May 14, 1919. Serial No. 297,086. 14 Claims. (Cl. 179—18.)



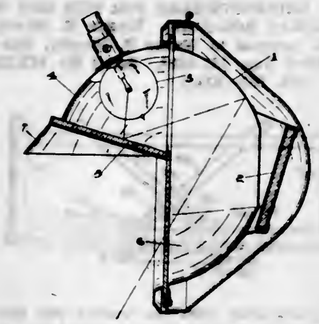
1. In a telephone system, telephone lines, connector switches having contacts in which said lines terminate, a line switch provided with fixed and movable contacts having no normal position, each of said telephone lines terminating in the movable contacts of one of said line switches, means for connecting with any line through one of the said connector switches, and means effective thereupon for moving said movable contacts of the associated line switch out of engagement with its fixed contacts.

1,382,013. SHOE-REPAIRING MACHINERY. WILLIAM L. ROACH, Corinth, Miss. Filed Juy 7, 1920. Serial No. 394,494. 1 Claim. (Cl. 1—4.)



In a shoe repairing machine, a base having a standard terminating in a hollow head, a plunger rod slidable in the said head, a collar secured to the plunger rod within the head, means interposed between the collar and the end of the head for holding the plunger rod in normal position, a plunger head carried by the outer end of the plunger rod and having a circular seat in its face, means for pressing the plunger rod outwardly, a goose neck work support, means for rotatably mounting the support under the axis of the plunger, the said work support having an anvil in the axis of the trunnion of the support, staple guides mounted for reciprocation at the edges of the anvil, and means for holding the staple guides in normal positions.

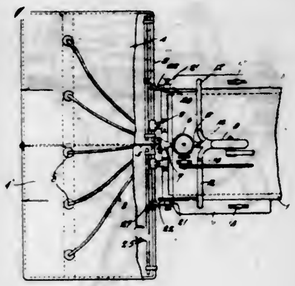
1,382,014. HEATING-STOVE. ROWLEY ROBINSON, Camas, Wash. Filed July 14, 1919. Serial No. 310,612. 2 Claims. (Cl. 126—58.)



1. A heating stove or furnace comprising a body provided at one end with a fire pot and ash pit, with means for admitting air for combustion, the opposite end of the body being formed with an outlet flue, said body being formed with a plurality of upwardly extending, radiation drums opening into the body and spaced from each other whereby air may pass between the drums, and baffle partitions extending upward from the bottom of the body into said radiation drums and nearly to the upper ends thereof whereby to cause the products of combustion to pass successively through the several drums, said baffles being vertically shiftable independently of each other.

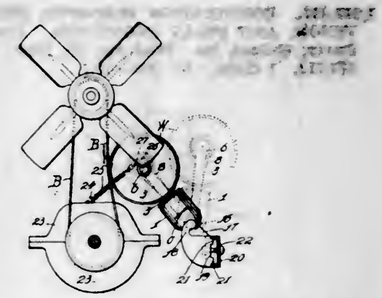
1,382,015. WEIGHER'S RAPID WEIGHT-STAMPER. JAMES W. RUDOLPH, Dayton, Ohio. Filed Apr. 30, 1921. Serial No. 465,738. 3 Claims. (Cl. 101—379.)

1. A device of the type described comprising a cuff adapted to be slipped over the wrist of a human hand, and stamping means attachable to the back portions of the fingers of said hand, projecting forwardly from said cuff for the purpose specified.



1,382,016. LIGHT-PROJECTING APPARATUS. JOHN C. RYAN, Toronto, Ontario, Canada. Filed May 8, 1920. Serial No. 379,912. 6 Claims. (Cl. 240—41.)

1. In light projection apparatus, the combination of a concave reflector having as the central part of its reflecting surface a plane mirror; a source of light supported outside the concave reflector above the optical axis thereof and facing the plane mirror; and means for reflecting the light from the source into the concave reflector, the plane mirror being set at a suitable inclination to reflect light received by it from the source.



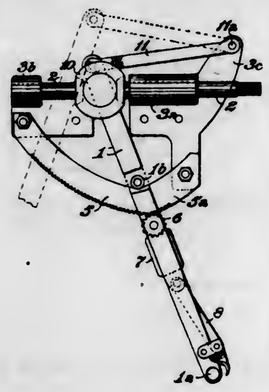
1,382,017. COTTON-PEST-DESTROYING MACHINE. JOSEPH M. SALADINER, Bryan, Tex. Filed May 1, 1920. Serial No. 378,272. 5 Claims. (Cl. 43—148.)

1. The combination with a movably supported structure, a wing thereon and means for scattering a dust upon plants beneath the wing, of means carried by said structure

for spraying plants in advance of the powder distributing means.

1,382,018. AIR-PUMP. JOHN H. SCHREIBER, St. Louis, Mo. Filed May 17, 1920. Serial No. 381,987. 1 Claim. (Cl. 230—27.)

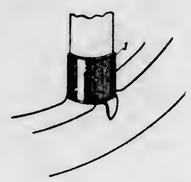
In an air pump of the character described the combination which comprises a cylinder provided at one end with a groove, a supporting member for the cylinder, said supporting member having a plate secured thereto, said plate having terminal arms projecting therefrom, a pin spanning said arms, one of said arms being shaped to permit the groove in the cylinder to be longitudinally passed over the pin whereby the pin and groove comprise a hinge connection, a piston operating in said cylinder, and means for reciprocating the piston.



1,382,019. CLEANSING AND POLISHING PASTE. JOHN MARTIN SCHWANER, Brooklyn, N. Y. Filed June 14, 1919. Serial No. 304,303. 2 Claims. (Cl. 87—5.)

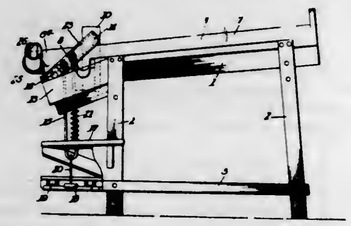
1. A polishing and cleansing paste comprising whiting, powdered pumice, kerosene oil, sal-soda, salt and essential oils.

1,382,020. VALVE-OPERATING LEVER. FRANK F. SCOVILLE, Schenectady, N. Y. Original application filed Nov. 1, 1919, Serial No. 335,132. Divided and this application filed Sept. 25, 1920. Serial No. 412,887. 3 Claims. (Cl. 74—39.)



1. The combination of a fixed support; a valve stem, fitted to slide in guides therein; a block, fitted in the valve stem, and slotted in the axial line thereof; a valve operat-

ing lever, fitting and extending through the slot of said block, and longitudinally movable, relative to the valve

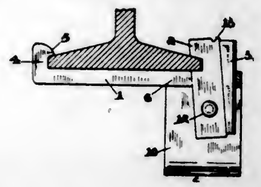


stem; a segment, over which the operating lever is fitted to traverse; and means for maintaining said lever in normal relation to the segment.

1,382,021. COMBINATION SLIP-OVER SPOKE END, TENON, AND FELLY PROTECTOR. JUSTIN ISAAC SHARP, Wallace, Mo. Filed Apr. 29, 1920. Serial No. 377,711. 1 Claim. (Cl. 301—70.)

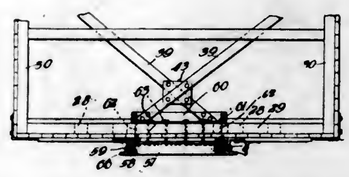
In a device of the kind described, a split metal tenon member having a disk like head, a ferrule adapted to slip over the tenon to inclose the head and receive the end, and the spoke, to connect the tenon to the spoke, said ferrule having tangs at its closed end to embrace the sides of a felly when the device is in use.

1,382,022. CUTTING AND BUNCHING DEVICE. WILLIAM H. SIKMA, Oakglen, Ill. Filed Feb. 26, 1921. Serial No. 447,962. 13 Claims. (Cl. 146—7.)



1. The device of the character described comprising a table supported upon legs, provided with a cradle below one of its edges and a knife mounted in a plane transverse to said edge.

1,382,023. COLLAR-HOLDER. CHARLES SILVERMAN, Providence, R. I. Filed Apr. 15, 1921. Serial No. 461,472. 2 Claims. (Cl. 24—81.)

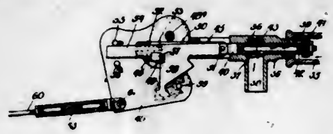


1. In a collar holder, a housing, pivot members in the housing, and clamping members comprising rear fingers supported on the pivot members, and front fingers carried by the rear fingers and engageable with the housing.

1,382,024. CLAMP. FREDERICK L. H. SIMS, Toronto, Ontario, Canada. Filed Apr. 20, 1920. Serial No. 375,319. 7 Claims. (Cl. 238—324.)

5. A clamp comprising a reach bar formed of an integral bar doubled on itself to form a key bearing at the bend and having hooks formed on its free ends extending parallel to the key bearing and adapted to engage one edge of a flange of a structural steel member; a cramp bar passing between parts of the reach bar and having a notch formed therein adapted to wedge over the adjacent edge of the aforesaid flange; and a wedge key adapted to be driven between the cramp bar and the key bearing.

1,382,025. REINFORCEMENT FOR THE END WALLS OF RAILWAY BOX-CARS. VINTON E. SISSON, Chicago, Ill., assignor to Walter P. Murphy, New York, N. Y. Filed Aug. 22, 1919. Serial No. 319,126. 19 Claims. (Cl. 105—411.)



1. The combination with the wooden end wall of a railway car, of a metal reinforcing construction for said wall comprising a pair of upright members on the outside of the car wall, and a bracing structure within the car including a transverse element bearing against the inner side of the wall the ends of which stand at right angles to the main portion thereof and are alined with said upright members respectively, to which said members are secured each with a plurality of fastening devices.

1,382,026. STOVE-POLISH. AUGUST JOHN STENCELL, Pembroke, Ontario, Canada. Filed Oct. 10, 1919. Serial No. 329,850. 1 Claim. (Cl. 134—25.)

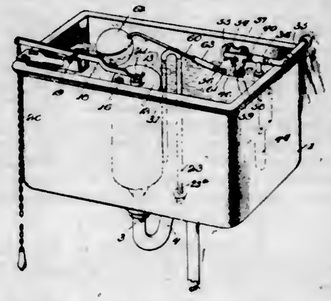
A stove polish of the character described, comprising a pasty mass having the following ingredients in the proportions stated:

Lubricating graphite	2 lbs.
Shoe polish	2 lbs.
Oil of sassafras	½ oz.

1,382,027. VALVE FOR FLUSHING-TANKS. JOHN S. SWEENY, Galveston, Tex. Original application filed Jan. 22, 1919, Serial No. 272,526. Divided and this application filed Nov. 21, 1919. Serial No. 339,540. 7 Claims. (Cl. 137—104.)

1. A valve for flush tanks comprising a casing formed with a valve guide and an outlet, a hollow valve operating in the valve guide and provided with lateral inlet openings and an outlet opening, a packing at the end of the valve adjacent the inlet openings, a pivotally mounted plate, a float carried thereby, means between the plate and the valve to positively open the latter when the float is lowered, a trip pivoted to the valve and provided with an abutment, fixed means against which the abutment is adapted to rest to hold the valve open, and means carried by the plate for actuating the trip and releasing the abutment when the float is elevated to permit the pressure of the water behind the valve to close said valve.

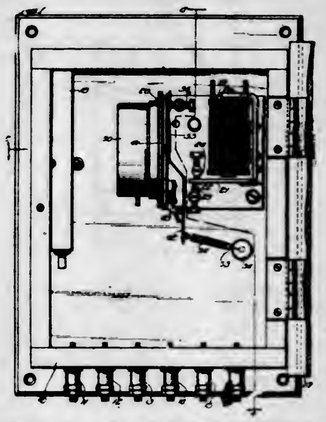
2. A valve for a flush tank comprising a casing, a hollow slide valve in the casing, a plate pivoted to the casing, a float on the plate, the plate having a slot, a stud extending from the casing and through the slot, a lever pivoted to the valve and provided at its free end with a slot, a stud on the plate to engage the wall of the slot in the lever to open the valve, a trip pivoted to the valve and provided with an abutment which coöperates with the first-mentioned stud to hold the valve open, and means on the plate for tilting the trip to release the abutment from the first-mentioned stud to permit the pressure of water to close the valve.



3. A valve for a flush tank comprising a casing, a hollow slide valve in the casing, a plate pivoted to the casing, a float on the plate, the plate having a slot, a stud extending from the casing and through the slot, a lever pivoted to the valve and provided at its free end with a slot, a stud on the plate to engage the wall of the slot in the lever to open the valve, a trip pivoted to the valve and provided with an abutment which coöperates with the first-mentioned stud to hold the valve open, means on the plate to tilt the trip and release the abutment from the first named stud to permit the pressure of the water to close the valve, and additional means for insuring the closing of the valve if the first mentioned means fails.

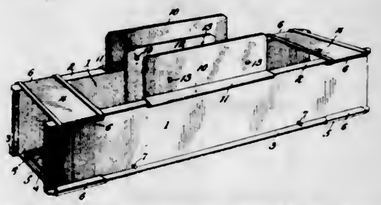
4. In a flush tank the combination of a flush pipe, means for flushing the water in the tank through the flush pipe, a water inlet pipe, a valve on the inlet pipe, said valve being out of contact with the water in the tank, a float for controlling the valve, and means for insulating the float from the valve to prevent electric currents being shunted from the earth to the water pipe passing through the float to the tank.

5. A valve for a flushing tank, including a valve opened against the pressure of the water, a member operated by the descent of the float in the tank to force said valve open, a locking element connected to and movable with said valve to hold the member in valve opening position during a rising movement of the float, and means operated as the float reaches a predetermined elevation to release said locking element to permit the valve to close under the pressure of the water.



1,382,028. FLUSHING-TANK FOR SIPHON-CLOSETS. JOHN S. SWEENY, Galveston, Tex. Filed Jan. 22, 1919, Serial No. 272,526. Renewed Apr. 30, 1921. Serial No. 465,924. 6 Claims. (Cl. 4—5.)

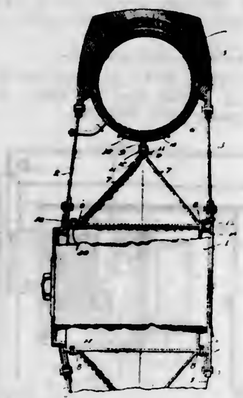
6. In a flushing apparatus, the combination of a tank, a shell in the tank and open at the bottom, a flush pipe extending into the shell, a hollow plunger fitted over the shell and operative to cause a partial vacuum in the shell on the outward movement of such plunger relative to the shell, means for operating the shell, and a short pipe of comparatively restricted bore carried by and opening



through the shell, said pipe terminating in an open end within the flush pipe below the normal level of water in the tank.

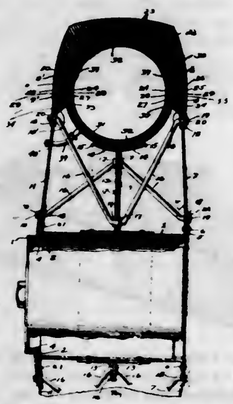
1,382,029. SWITCHING DEVICE. WILLIAM W. THOMPSON, Chicago, Ill. Filed Apr. 12, 1919. Serial No. 289,533. 10 Claims. (Cl. 200—90.)

1. A relay of the character described comprising an electromagnet, a vibratory armature therefor, a circuit controlling element movable therewith, a coöperating circuit controlling element, and means for pressing said circuit controlling elements together, said means including a relatively strong spring and a relatively light spring.



1,382,030. ANIMAL-TRAP. ABRAHAM L. TOWNSEND, Iola, Kans. Filed Mar. 8, 1921. Serial No. 450,788. 2 Claims. (Cl. 43—69.)

1. An animal trap comprising elongated side members having flanges along their top and bottom edges, upper transversely disposed end members having flanged edges to slidably engage the flanges at the top edges of the side members, lower transversely disposed end members having flanged edges to slidably engage the flanges of the



bottom edges of the side members, whereby the top and bottom end members may be separated from the side members by sliding the same lengthwise, a pair of tilting bottom sections occupying the space at the bottom of the trap between the lower end members, removable pivot rods carried by the tilting bottom sections and having their ends fitting in holes of the side members, said upper and lower end members holding the side members from spreading and the lower end members serving as supports for the outer ends of the tilting bottom sections, longitudinally slidable upstanding plates engaged with the top flanges of the side members and extending above the same, spring plates carried by the upstanding plates and provided with alined perforations, and a bait carrying pintle adapted to be snapped into a pair of said perforations.

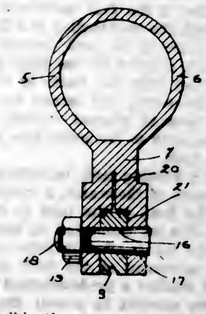
1,382,031. AUTOMOBILE-WHEEL. RUBY R. VALE, Milford, Del. Filed June 22, 1920. Serial No. 390,793. 4 Claims. (Cl. 301—63.)

1. The combination with a hub and tire supporting means carried thereby of a cradle formed of two annular sections the sections of the cradle being joined toward their outer periphery and diverging from their jointures to their inner periphery and being fastened to the hub at their inner periphery.

1,382,032. VEHICLE-WHEEL. RUBY R. VALE, Milford, Del. Filed June 22, 1920. Serial No. 390,794. 17 Claims. (Cl. 301—63.)

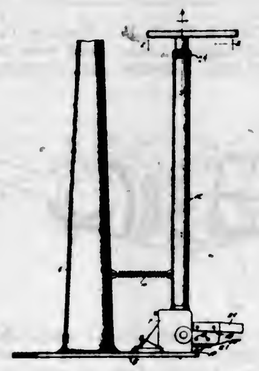
1. The combination with a wheel formed of side plates and a hub, of a cradle mounted on the hub, an air chamber and a two-part casing, comprising inner and outer sections connected to the side plates, one section of said tire being supported on said cradle for vertical support.

1,382,033. PESSARY. GEORGINA JANE WALLACE, Kensington, London, England. Filed June 29, 1920. Serial No. 392,740. 4 Claims. (Cl. 128—129.)



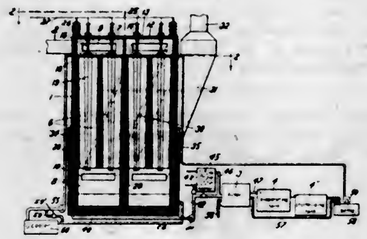
1. In a pessary, a stem, a hollow head of elastic material secured to the stem, and an operating device slidable longitudinally of the stem and having one end portion secured to the outer end of the hollow head and affording a means for drawing its ends together and thereby expanding its middle portion.

1,382,034. BRACELET. WALFRID WALLENTHIN, Attleboro, Mass., assignor to Eisenstadt Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 13, 1919. Serial No. 270,773. 4 Claims. (Cl. 63—11.)



1. A bracelet comprising a one piece open band of ductile material provided with integral peripherally disposed resilient ridges adapted to cause the ends to separate in a longitudinal direction when released, means for holding the ends together, and means for guiding and limiting the relative motion of the ends.

1,382,035. COLLAPSIBLE TIRE-CORE. FRANK A. WATSON, Springfield, Ohio. Filed Aug. 25, 1920. Serial No. 406,018. 9 Claims. (Cl. 18—45.)



1. In a collapsible tire-core, a key section having ears protruding from the opposite ends thereof, separable body sections coöperative with said key section, said body sections having certain of the ends thereof provided with sockets arranged to receive said ears, and a plurality of nut carrying threaded and tapering bolt elements arranged to pass through openings provided in said ears and the walls of said sockets, whereby upon the tightening of the nuts of said elements said section ends will be securely united.

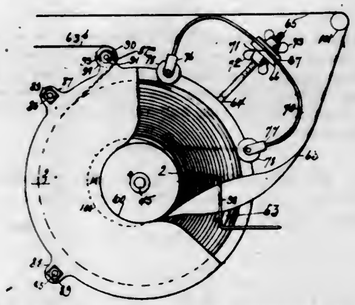
1,382,036. UNIVERSAL WORK-SUPPORT FOR STITCHING-MACHINES. HENRY WEBER, Chicago, Ill., assignor to Latham Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed June 20, 1919. Serial No. 305,645. 11 Claims. (Cl. 1—15.)

4. A work support for stitching machines comprising a frame; a pin mounted in the frame; a substantially L-shaped arm pivoted on said pin with one part disposed horizontally and the other part disposed vertically; a work supporting table at the top of the vertical part; a locking bolt slidably mounted and extending under said horizontal part holding the arm from rocking in one direction; a stop on the frame engaging said vertical part and holding the arm against movement in the other direction; and a lever pivoted on said pin and having a part adapted to engage the bolt and move the latter out of engagement with said horizontal part and a part adapted to engage the horizontal part of said arm and rock said vertical part away from said stop.

1,382,037. PROCESS AND APPARATUS FOR RECOVERING SOLUBLE CONSTITUENTS FROM FURNACE-FUMES. HARRY V. WELCH, Los Angeles, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Aug. 11, 1917, Serial No. 185,779. Renewed May 2, 1921. Serial No. 466,218. 8 Claims. (Cl. 23—22.)

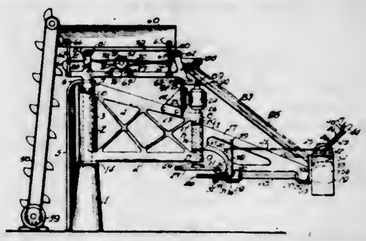
5. The process of obtaining potassium compound from the suspended matter of cement kiln flue gases, which consists in treating said material with water in such manner as to produce a saturated solution, then heating the resulting sludge to cause solution of insoluble potassium compound therein, and separating the resulting solution from the remaining insolubles.

1,382,038. FOOD PRODUCT AND PROCESS OF MANUFACTURE. VERNON A. WHITE, Chicago, Ill. Filed Apr. 29, 1920. Serial No. 377,454. 11 Claims. (Cl. 99—11.)



8. A process of treating food particles including first coating the particles with glycerin and then covering the coated particles with a powdery substance whereby adhesion between the particles is prevented.

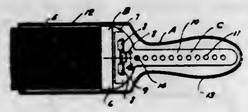
1,382,039. SAFETY-HATPIN. JOSEPH WIENER, Philadelphia, Pa. Filed Oct. 21, 1920. Serial No. 418,413. 3 Claims. (Cl. 132—68.)



1. A hat fastener consisting of a single piece of wire bent upon itself to provide a manipulating member, the opposite ends of the wire being continued from the manipulating member to provide a pair of fastening pin members, and said members being curved longitudinally, a pair of fastening tines formed on the fastening pin members and adapted to bite into the crown of a hat and at one side of the crown of the hat and at a point above the manipulating member, said fastening pin members having their free ends in engagement with the crown of the hat at diametrically opposite points from the tines.

1,382,040. ENDLESS-FILM REEL. LYMAN A. WILSON, New York, N. Y. Filed Sept. 25, 1919. Serial No. 326,215. 9 Claims. (Cl. 88—18.7.)

1. In an endless film reel the combination of a rotary turntable for supporting and winding up an endless film and a rotating guide cone to unwind the film at its core, the said cone rotating at a greater speed than said turntable to compensate for the difference of diameters of said film at its core and at its outer windings.



1,382,041. MACHINE FOR MAKING MOLDS. CHARLES B. WORTH, Chicago, Ill. Filed Oct. 22, 1920. Serial No. 418,827. 11 Claims. (Cl. 22—36.)

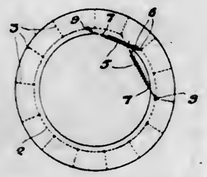
4. In a machine for making molds, the combination of a projector blade, means for movably supporting said

projector blade for movement in an orbital path, means for operating said projector blade, and means for operating said last named means to vary the rate of speed thereof at will.

1,382,042. ADJUSTABLE WIRE BRUSH. ASA WRIGHT, Long Beach, Calif. Filed Oct. 27, 1920. Serial No. 419,864. 2 Claims. (Cl. 15—32.)

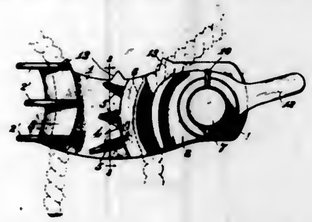
1. A brush structure comprising the combination of a socket having an aperture, a detachable head slidably mounted in said socket, said head having a series of apertures for registration with the aperture of said socket, a bristle carrier detachably secured to said head, and a pin for insertion in registering apertures whereby the projection of the bristles may be adjusted.

1,382,043. FINGER-RING ATTACHMENT. ELMER F YOUNG, Bay City, Mich. Filed May 21, 1920. Serial No. 383,045. 2 Claims. (Cl. 63—17.)



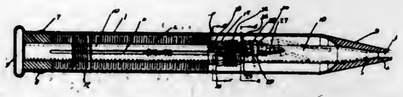
1. A finger ring attachment comprising an arcuate member having a thick center, the free ends tapering to a vanishing point at substantially the horizontal axis of the ring, downwardly projecting lips integral therewith adapted to straddle the ring and vanish at the free ends of the attachment.

1,382,044. BELT-FASTENER. WILLIAM F. YOUNGBLODT, Denver, Colo. Filed July 18, 1919. Serial No. 311,858. 2 Claims. (Cl. 24—31.)



2. A belt fastener comprising a substantially cylindrical body member inwardly split at its opposite ends to provide a pair of prongs at each end and a metal body portion of relatively short length.

1,382,045. TIRE-CHAIN RETAINER. ELMER ZIGLER, Fort Pierre, S. D. Filed Oct. 2, 1919. Serial No. 327,905. 1 Claim. (Cl. 152—14.)



A tire chain retainer comprising a pair of coiled springs provided at the opposite ends with hooks, the hooks at one end being adapted for connection to the free ends of one of the side chains of a tire chain, a plurality of links secured to the hooks at the opposite ends of said springs to permit a special chain drawing tool to be passed through one of these links, and separate hooks attached to the end links, said last hooks being adapted to be connected with one of the links of the aforesaid side chain to retain the entire chain in position on the tire.

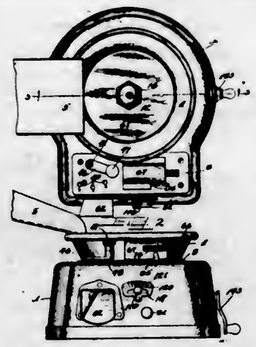
1,382,046. CABLE TAKE-UP. WILLIAM C. F. ZIMMERMAN, Jr., Davenport, Iowa. Filed Sept. 14, 1918. Serial No. 254,093. 3 Claims. (Cl. 24—134.)

1. A cable take-up comprising a substantially flat elongated plate stiffened with ribs along its under face and at its upper face having a hook also stiffened by continuations of the ribs from the under face, the said plate having a ridge spaced from the hook and outstanding from the same face of the plate as the hook, said ridge being formed with a cable receiving groove facing in the same direction and lying in substantially the same longitudinal planes of the plate as the bight of the hook, and an eccentric clamp pivoted to the plate in position to coöperate with the groove in the ridge for clamping a cable therebetween.

1,382,047. PENCIL. ALBERT E. ALLSWORTH, Peoria, Ill. Filed July 29, 1920. Serial No. 399,824. 13 Claims. (Cl. 120—15.)

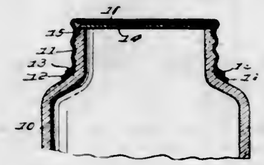
13. In a self sharpening pencil, in combination, a tubular casing, alined tubes in said casing, one rotatable and the other being non-rotatable, a lead holder, propelling means for said holder connected to said rotatable tube, means to rotate said tube, sharpening means on said non-rotatable tube and arranged to be engaged by the lead and moved therewith axially of said casing, means to guide the sharpening means as it is propelled to permit the passage of the lead, and retractable means for said sharpening means.

1,382,048. WIRE-CONNECTING DEVICE. ANTOINE ASCHERI, Neuilly-sur-Seine, France. Filed Aug. 17, 1920. Serial No. 404,189. 1 Claim. (Cl. 173—259.)



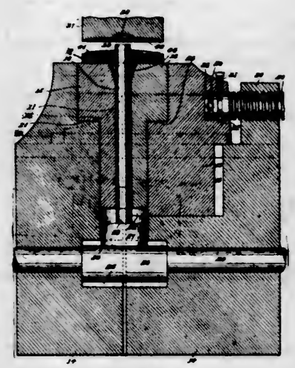
In a wire connection, the combination of a screw-threaded rod; a lower part screwed on said rod and having a diametrical open end slot provided therein for the reception of the wire to be connected; an upper part adapted to snugly fit and telescope with the lower part and having a diametrical open end slot coinciding with the slot in the lower part and coöperating therewith to secure the wire between the upper and lower parts; and means comprising a pin and slot connection between the upper and lower parts to maintain said slots alined and to permit the upper part to be slid upward away from the lower part and then to be swung aside to facilitate the introduction of the wire to the slots while maintaining the upper part and the lower part structurally connected.

1,382,049. METHOD OF SECURING A NIPPLE TO A HOLLOW SHELL AND ARTICLE PRODUCED THEREBY. ROBERT SAYER ASPINWALL, Detroit, Mich., assignor to Lincoln Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed June 22, 1920. Serial No. 390,983. 6 Claims. (Cl. 113—116.)



1. The method of securing a nipple to a shell which consists in forming an aperture through the wall of the shell by forcing into the interior thereof in split apart portions a section of said wall, inserting a nipple through such aperture, splitting the end of said nipple and bending the split apart portions outwardly so as to interlock between the tongue portions formed from the wall of the shell.

1,382,050. COIN-COUNTING MACHINE. HUGO J. BAUR, Chicago, Ill., assignor to Johnson Coin Counting Machine Company, a Corporation of New York. Filed June 25, 1919. Serial No. 306,606. 17 Claims. (Cl. 133—8.)

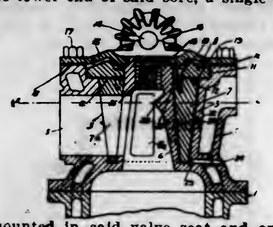


1. In a coin counting device, the combination of a disk, a ring through which coins are deposited on the disk and spaced from the latter to afford an annular passageway adapted to receive the coins flatwise therein, means for rotating the disk and ring simultaneously in opposite directions, and counting mechanism adjacent the annular passageway adapted to be actuated by coins in the passageway moving thereby.

1,382,051. LINING FOR JAR-CAPS AND METHOD OF SEALING JARS. ELMER BEAVERS, Waltham, and WILLIAM A. WEBBER, Watertown, Mass., assignors to Sani-Tite Cap Company, Boston, Mass., a Corporation of Massachusetts. Filed June 30, 1919. Serial No. 307,835. 3 Claims. (Cl. 215—43.)

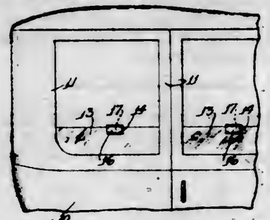
1. As a new article of manufacture a disk of sheet material adapted to be used within the cap or top of a fruit jar or the like, said disk being coated with a quantity of paraffin or the like sufficient to flow into and close the joint between the skirt of the jar cap and the neck of the jar when heat is applied thereto.

1,382,052. METHOD OF UNITING THE HEADS AND STEMS OF VALVE MEMBERS. JAMES BIRRELL, Chicago, Ill., assignor, by direct and mesne assignments, to Super Valve Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 11, 1919. Serial No. 281,965. 5 Claims. (Cl. 29—156.7.)



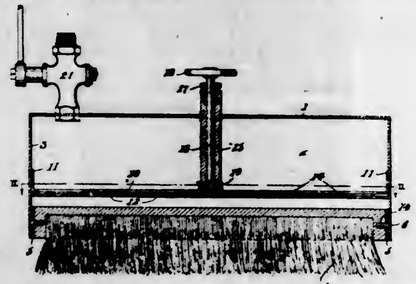
1. A method of mounting a valve head upon a heated mobile stem, consisting in the following steps, to wit: preventing movement of one end of the stem, forcibly engaging the other end of the stem with a die for upsetting into engagement with the outer face of the valve head, and then exerting longitudinal pressure upon the stem whereby an integral shoulder is formed upon the stem in engagement with the inner face of the valve head.

1,382,053. VALVE FOR INTERNAL-COMBUSTION ENGINES. JOHN BLACK, Hulatt, British Columbia, Canada. Filed Apr. 15, 1920. Serial No. 374,109. 1 Claim. (Cl. 123—190.)



In an internal combustion engine, a cylinder head having an inlet and an outlet port and a valve seat through which said ports extend, a hollow stem disposed centrally of said valve seat having a port through which communication between said inlet and outlet ports respectively and the engine combustion chamber may be established, said stem having a threaded bore through its upper end, and

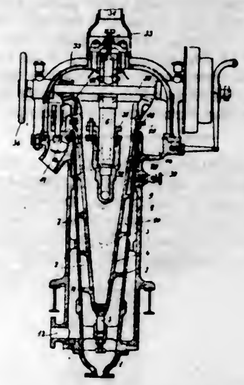
its inner periphery provided with a deflecting projection adjacent the lower end of said bore, a single ported valve



rotatably mounted in said valve seat and on said stem, and a gear secured to the upper end of said valve rotatable therewith.

1,382,054. ANTIRATTLER. HAROLD S. BLAIR, Long Branch, N. J. Filed Apr. 30, 1919. Serial No. 293,715. 1 Claim. (Cl. 296—48.)

An anti-rattler for the glass panel of an automobile comprising a pair of normally divergent resilient legs connected by a curved bight portion, and a sheet of friction material secured to the inner faces of the legs and bight portion and terminating adjacent the marginal edge portions of the legs and bight portion.

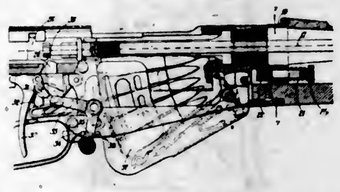


1,382,055. FOUNTAIN-BRUSH. IWAN BOJKO, Rome, N. Y., assignor of one-third to Joseph Yadwisinczak, Rome, N. Y. Filed Jan. 22, 1921. Serial No. 439,214. 2 Claims. (Cl. 15—13.)

1. In a fountain brush of the type described wherein a casing has an apertured partition secured therein and a brush head secured in the casing below the partition, with guide flanges carried by the opposite sides of the partition, a sliding apertured valve plate guided in its movements by the partition flanges, a rack bar carried by the valve plate and extending longitudinally thereof, a perpendicular shaft journaled in said casing and a pinion carried by the lower end of said shaft engaging the said rack bar to shift the valve plate upon rotation of the perpendicular shaft.

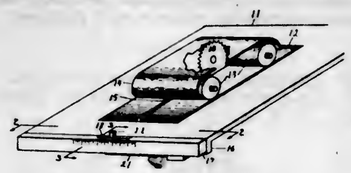
1,382,056. APPARATUS FOR THE CONTINUOUS SEPARATION OF SOLIDS FROM LIQUIDS. ANTOINE BONTEMPS and GERHARD NICOLAAS VIS, Paris, France. Filed Nov. 21, 1917. Serial No. 203,279. 3 Claims. (Cl. 210—186.)

1. In a continuous separating apparatus of the character described, the combination of a vertical cylinder provided with an outlet near its base, an inverted-cone-shaped filtering wall supported therein and having a bottom inlet and an annular upper outlet, an inverted-cone-shaped conveyer-screw with a greater included angle than the



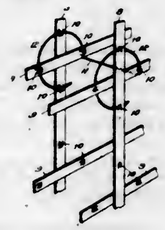
cone-shaped filtering wall and revolubly mounted within said filter wall, a receiving trough surrounding the upper end of said cylinder and having an outlet in its bottom, and conveying means working in said trough.

1,382,057. TRENCH DIGGING AND CLEANING SHOVEL. CHARLES BOSICK, Denver, Colo. Filed Aug. 30, 1920. Serial No. 406,866. 3 Claims. (Cl. 294—55.)



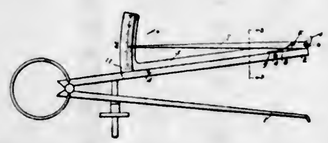
1. A trench shovel comprising a U-shape member whose inner side carries a roller adapted to run upon a sidewalk, and whose outer side has an inclined portion and a vertical portion.

1,382,058. AUTOMATIC FIREARM. EMILE ALEXANDRE LOUIS BOURDELLES, St.-Denis, France, assignor to Societe Anonyme Des Etablissements Delaunay Belleville, St.-Denis, France, a Corporation of France. Filed July 30, 1917. Serial No. 183,617. 4 Claims. (Cl. 42—3.)



1. In a gas operated automatic fire arm, a plug having a plurality of holes enabling the action of the gases of discharge to be increased or diminished, the said plug being capable of adjustment from the outside by means of a lever-handle passing out through the stock and arranged at right angles to the barrel in such position that it does not interfere with the fixing of the bayonet, said plug having a conical head, a seat for the head and a spring active to retain the conical head on its seat to form a gas tight joint.

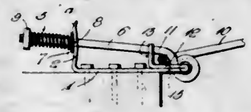
1,382,059. SAW-GAGE. CHARLES H. BUDD, New Albany, Ind. Filed Sept. 29, 1919. Serial No. 327,072. 2 Claims. (Cl. 143—168.)



1. In combination with a saw table having a depending marginal flange, a bar attached to the outer face of said flange, said bar having a recess on its inner face, a flat spring, a stop at one end of said spring projecting therefrom at right angles to its plane and adapted to extend above said table through said recess, and a bracket extended from the other end of the spring provided with means whereby it may be attached to said flange.

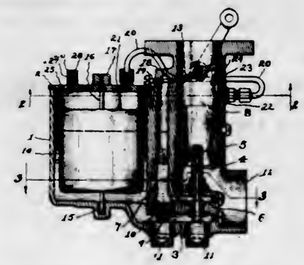
1,382,060. REINFORCED CONCRETE STRUCTURE. SEWARD CHARLES, Washington, D. C. Filed Mar. 26, 1918. Serial No. 224,825. 4 Claims. (Cl. 72—50.)

3. A concrete structure having embedded therein oppositely disposed series of intersecting reinforcing bars, in combination with interposed stirrups, each of said stirrups arranged and adapted to connect the bars of each series and to space one series of said bars from the other.



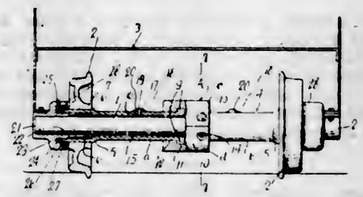
1,382,061. INDICATING CALIPER ATTACHMENT. GUST V. CHELSTROM, Minneapolis, Minn. Filed Jan. 3, 1920. Serial No. 349,304. 2 Claims. (Cl. 33—148.)

1. An attachment for calipers comprising in combination a base adapted to be attached to a caliper leg, a graduated arc shaped extension from said base and in the plane thereof, a bell crank shaped pointer hinged to said base at the opposite end from said arc shaped extension, the legs of said bell crank being of different lengths, one leg of said pointer movable as an indicator over the graduated extension and the other serving as a contact member for the calipers, a spring connecting said base and said pointer.



1,382,062. TRACTOR-HITCH. CHRISTIAN CHRISTIANSEN and EMIL NORDLING, Sioux Falls, S. D. Filed Oct. 4, 1920. Serial No. 414,603. 7 Claims. (Cl. 213—67.)

1. A hitch comprising a support, a draft lever fulcrumed at one end on said support and normally lying adjacent the same, said lever being adapted for passage through a draft link, a lug extending from said support

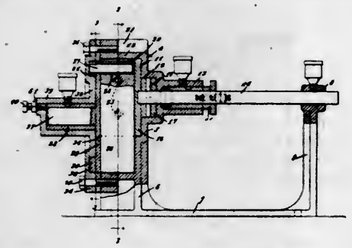


across the free end of said lever, and a spring carried bodily by said lever and coöperable with said lug to releasably hold said lever in draft position.

1,382,063. CARBURETER. JAMES O. CUNNINGHAM, Indianapolis, Ind. Filed Mar. 23, 1920. Serial No. 368,080. 4 Claims. (Cl. 158—36.)

1. The combination with a carbureter formed with a mixture passage, a suction pipe communicating with the mixture passage, fuel lifting means associated with the suction pipe, and air deflecting means arranged within the mixture passage of the carbureter for directing a high velocity jet of air across the mouth of the suction pipe.

1,382,064. BALL-BEARING AXLE. FREDERIC J. COCHRAN, Mount Vernon, Ill. Filed Dec. 22, 1919. Serial No. 346,441. 2 Claims. (Cl. 295—36.)

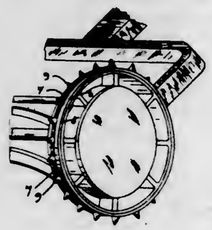


1. A ball and roller bearing axle of the character specified, comprising an inner stationary shaft, a hollow sleeve revolubly mounted thereon and provided at opposite ends with cylindrical enlargements, a circular series of bearing rollers arranged in the enlargement at each end of the sleeve, around said shaft, hollow caps freely mounted on opposite ends of said shaft and held in position by the truck frame, said caps provided at their inner ends with annular ball races and bearing balls arranged in said ball races against the ends of the sleeve.

1,382,065. ROTARY WATER-MOTOR OR PUMP. FELIX H. CRAGO, Hot Springs, Mont. Filed Sept. 25, 1919. Serial No. 326,190. 5 Claims. (Cl. 103—44.)

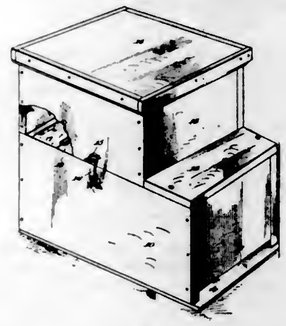
1. In a device of the class described, a stator; a rotor and a plate at one end of the rotor, the rotor and the plate being journaled on different axes, the rotor being in contact throughout a portion of its periphery with the inner curve of the stator, the plate being of larger diameter

than the rotor; a blade mounted for right line reciprocation in the rotor and coöperating at its outer end with



the inner curve of the stator; and a connecting element carried by the plate adjacent to the periphery thereof, the connecting element being mounted to rock in the blade.

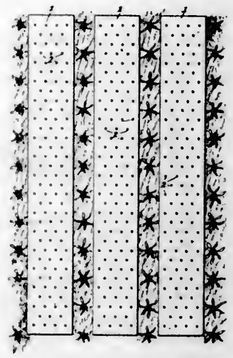
1,382,066. HOG-OILER. JAMES R. CURRAN, Shenandoah, Iowa. Filed Apr. 26, 1919. Serial No. 292,970. 7 Claims. (Cl. 119—157.)



1. In a device of the class described, a frame, a gate mounted therein to swing about a horizontal axis and biased to assume normally a vertical position, a rotary cylindrical oil-container carried at the lower end of the swinging gate, said container having perforations at one side thereof, and means tending to keep the perforate side of the container uppermost.

1,382,067. NON-SKID AND TRACTION BAND FOR LAWN-MOWER WHEELS. LEO B. DE HYMEL, Denver, Colo. Filed Dec. 8, 1919. Serial No. 343,331. 5 Claims. (Cl. 301—40.)

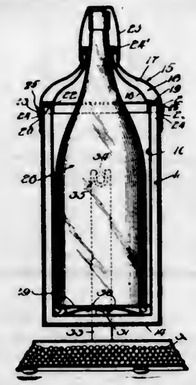
5. A band of the class described, comprising a fibrous body member, a thin metal member applied thereto exteriorly, studs applied to the metal member and having brads which enter the body member on opposite sides of the studs, terminal suds detachably applied to the band, and an adjusting screw engaging said terminal studs, the latter being perforated to coöperate with the screw.



1,382,068. BEEHIVE. JAMES ROBERT DEWEES, Bancroft, W. Va. Filed Feb. 18, 1920. Serial No. 359,831. 3 Claims. (Cl. 6—2.)

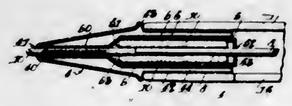
1. A bee hive including a casing, and a plurality of frames mounted within the casing and provided with individual imperforate side walls respectively closing each of the frames at one side thereof.

3. A bee hive including a brood case, and a queen box mounted in said case and formed with solid top, bottom, side and end walls, there being bee passages formed medially through the side walls and other bee passages formed through the top and bottom walls.



1,382,069. METHOD AND MEANS FOR ENHANCING THE GROWTH OF PLANTS. CHARLES F. ECKART, Honolulu, Hawaii. Filed Mar. 1, 1921. Serial No. 448,834. 5 Claims. (Cl. 47—36.)

3. A method of enhancing the growth of plants, which comprises superimposing of the ground a multi-perforated strip of asphalt-treated material, and planting the plants or plant producing stock in the contiguous soil areas in lines which are defined by and are outside of the longitudinal margins of said strip.

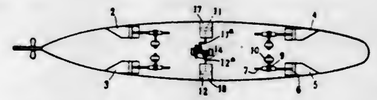


5. A mulching device, comprising a strip of paper impregnated or coated with asphaltum or the like, and having a series of relatively small perforations distributed throughout the body thereof.

1,382,070. ART OF DISPENSING COOL DRINKING-WATER. JOHN LAMPSON FATE, Chicago, Ill.; Daisy L. Fate, executrix of said John Lampson Fate, deceased, assignor, by mesne assignments, to C. Roy Gleason, Chicago, Ill. Filed July 5, 1917. Serial No. 178,561. 4 Claims. (Cl. 215—13.)

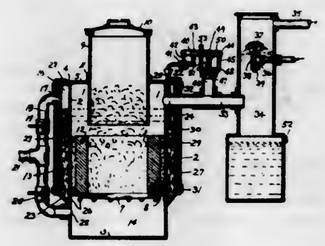
1. An iceless cooler for standard water bottles comprising a metal, double-wall container having air exhausted from the space between the walls and open at its top and adapted to receive through its top a removably mounted bottle, and an upwardly tapered metal, double-wall cover, having air exhausted from the space between its walls, removably applied to the open top of the container and having an open cap receiving neck at its top through which the neck of the bottle extends.

1,382,071. PENCIL AND PEN HOLDER. AMBROSE FLEMING, Alexandria, Va. Filed Aug. 7, 1920. Serial No. 401,950. 4 Claims. (Cl. 120—10.)



4. As a new article, a writing implement of the character described comprising a tubular casing, a pencil holding attachment including a tubular extension slidably mounted within one end of the casing and having an apertured tapered end, the said attachment including a container removably mounted within and frictionally engaging the aforesaid tubular extension and having a guide for holding the pencil lead, as it is being ejected into the opening in the tapered end of the shell, a magazine composed of a series of longitudinal pockets radially disposed about a central longitudinal passage, one end of the pockets of the magazine being closed, the closed end of the magazine having a guide passage, said magazine being slidably mountable within the tubular extension of the container and a plunger pin slidable through the guide aperture in the end of the magazine and through the aforesaid central longitudinal passage, the said pin being adapted for engaging and ejecting a lead sustained within the said longitudinal passage and through the lead guide tube and the aperture in the front end of the outer shell, and means operable from the outside of the casing for effecting adjustment of the pusher pin.

1,382,072. PROCESS AND APPARATUS FOR DETERMINING THE AMOUNT OF CARBON IN FERROUS METAL. WILLIAM F. FINKL, Chicago, Ill. Filed June 16, 1919. Serial No. 304,466. 4 Claims. (Cl. 23—3.)

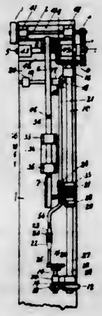


1. The process of determining the amount of carbon in ferrous metal which consists in passing the carbon dioxid produced from the carbon of the ferrous metal through a dry, physical mixture in a finely divided state of an hydroxid of an alkali metal and fibrous material so as to cause the carbon dioxid to be absorbed thereby.

1,382,073. SUBMERGIBLE VESSEL. LOUIS FORT, Jersey City, N. J. Filed June 28, 1917. Serial No. 177,512. 4 Claims. (Cl. 114—16.)

1. A submersible vessel having a plurality of "trimming" tubes opening outwardly through the hull of said vessel, pistons traversing said tubes, individual means for driving each of said pistons in opposite direction to vary the displacement and "trim" of the vessel, means for controlling the movement of said individual means, and means for controlling the buoyancy of the vessel at its critical point of loss of buoyancy.

1,382,074. SUCTION GAS-GENERATOR. JOSEPH FRANKLIN, Smithtown, New South Wales, Australia, assignor to The Efficient Gas Power Company, Limited, Sydney, New South Wales, Australia. Filed June 12, 1919. Serial No. 303,676. 1 Claim. (Cl. 48—63.)



A suction gas generator comprising a gas generating chamber having a cover, a steam generating and superheating chamber surrounding the gas generating chamber, a furnace in the lower portion of the gas generating chamber including brackets secured to the lower walls of the said chamber and firebars supported on said brackets, a lining of firebrick for said furnace carried on said brackets, a fuel feeding hopper provided with a lid extending through the cover of said gas generating chamber and disposed above said firebrick lining, an ash pit below said firebars having a plurality of openings therein communicating with said steam generating chamber, a gas outlet pipe leading from the gas generating chamber and extending through the walls of said steam generating chamber, a water receiving trough mounted on the walls of the gas generating chamber, a plurality of layers of wire netting disposed within said steam generating chamber and around the wall of said gas generating chamber below said trough, and means for feeding air and water to said steam generating chamber.

1,382,075. MACHINE FOR PLACING RINGS ON BOBBINS. STEPHEN R. GLEASON, Lowell, Mass., assignor to H. Hutchins Parker and Allan D. Parker, Copartners, Lowell, Mass., doing business under the name of Walter L. Parker Co. Filed Feb. 21, 1920. Serial No. 360,486. 3 Claims. (Cl. 29—84.)

1. In a machine for placing rings on bobbins, the combination of a base, with a worm feed shaft revoluble thereon, a feed worm carried thereby, a ring feed rod in

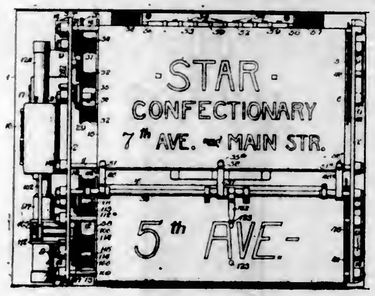
removable contact with said worm, a slidable and detachable cone guide on one end of said rod, a stepped table opposite said cone intermittently revoluble by said worm

shaft, and a plunger having fingers adapted to pass over said cone guide, together with driving means for said plunger and worm shaft.

1,382,076. MUSICAL INSTRUMENT. IVAN GRAČANIN, Barton, Ohio. Filed Dec. 10, 1920. Serial No. 429,750. 6 Claims. (Cl. 46—46.)

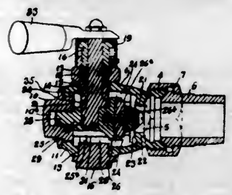
1. A musical instrument of the type described comprising a box like casing having an open side, a plurality of spaced relatively thin strips extending transversely of the open side, and a flexible sheet overlying said transverse strips.

1,382,077. WATERPROOF COMPOSITION. SPENCER C. GRAVES, St. Louis, Mo. Filed Feb. 21, 1921. Serial No. 446,847. 4 Claims. (Cl. 134—11.)



2. An improved water proof composition, comprising denatured alcohol, pure benzol, acetone U. S. P., soluble cotton and corn starch.

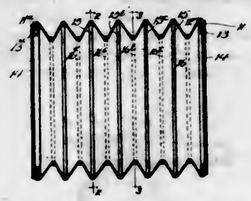
1,382,078. DETACHABLE MUD-SHOE FOR TRACTORS. MORGAN A. GREENE, Rupert, Idaho. Filed Mar. 16, 1920. Serial No. 366,214. 3 Claims. (Cl. 301—41.)



2. A tire-chain comprising traction plates, each formed with inwardly projecting flanges at two opposite edges and with an outwardly projecting traction blade on its opposite side from said flanges, links pivotally connecting the flanges of each traction plate to those of an adjacent traction plate, and tire-engaging studs extending inward from the inner surfaces of the traction plates and adapted to fit into cavities in a tire when the chain is in operative position on the tire, said flanges being adapted to receive the tire therebetween when the chain is being attached to the tire.

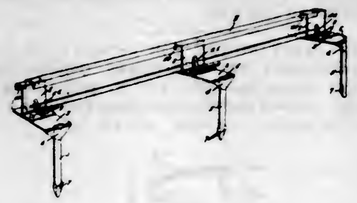
1,382,079. COMBINED ADVERTISING DEVICE AND STREET-INDICATOR. JOHN A. GREER, Chicago, Ill. Filed Aug. 11, 1919. Serial No. 316,822. 8 Claims. (Cl. 40—52.)

1. In a device of the character described, in combination, two rolls, a display web extending between and connected with said rolls, two rotary members, one for each roll, adapted to be driven simultaneously in opposite directions, a clutch for connecting each rotary member with its associated roll, a single solenoid for driving said rotary members, electrically actuated means in circuit with said solenoid for energizing the same and operating one of said rolls at predetermined intervals to wind the web thereon, means in said circuit and controlled by the movement of the web for deënergizing said solenoid and disengaging the clutch from the winding roll at predetermined intervals, and means in said circuit for operating the other clutch for reversing the direction of movement of the web.



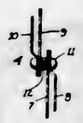
1,382,080. RADIATOR-VALVE. WILLIAM HAAS and CHARLES W. RINGELSPAUGH, Dayton, Ohio, assignors to The William Haas Company, Dayton, Ohio, a Corporation of Ohio. Filed Sept. 18, 1919. Serial No. 324,504. 3 Claims. (Cl. 251—40.)

1. In a radiator valve, a casing comprising a port and oppositely disposed bearing apertures arranged substantially at right angles to said port and a bearing arranged intermediate said bearing apertures substantially at right angles thereto, a piston operable to open and close said port supported in said bearing and having guide lugs to prevent rotative movement of said piston, a valve stem rotatably supported in one of said opposite bearing apertures eccentrically connected with said piston and adapted to actuate the valve piston to full open or closed position by partial rotation of said stem, and a plug in the other of said opposite bearing apertures having a contact surface coöperating with said guide lugs.



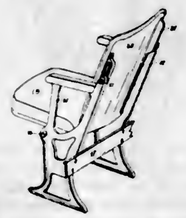
1,382,081. BELLOWS. PAUL HEILIGER, Forest Park, Ill. Filed Sept. 16, 1920. Serial No. 410,604. 2 Claims. (Cl. 230—2.)

1. The method of forming bellows comprising the use of cylindrical fabric, the forcing within said fabric of distending rings, placing restraining rings over said fabric on either side of said distending rings, alternately putting in position distending and restraining rings until the



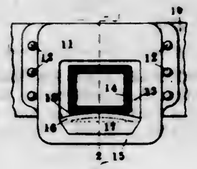
proper length of bellows is formed, placing at the end of said bellows end rings, pulling the fabric over the outside of said rings and securing it in place by a plate ring.

1,382,082. CONCRETE-FORM. JOHN N. HELTZEL and FRANCIS O. HELTZEL, Warren, Ohio. Filed Mar. 28, 1919. Serial No. 285,764. Renewed Mar. 10, 1921. Serial No. 451,332. 10 Claims. (Cl. 25—118.)



8. A structure of the class described, including a supporting pedestal having a base plate and an upright member secured to said base plate, said member being provided with a laterally projecting rib.

1,382,083. VALISE-HINGE. ISIDOR HEYMAN, Oakland, Calif. Filed Feb. 12, 1920. Serial No. 358,115. 2 Claims. (Cl. 16—104.)



1. A valise hinge including two pairs of hinge plates pivoted together one plate of each pair being offset from the other plate.

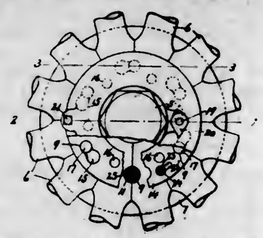
1,382,084. OPERA-CHAIR. ISIAH HIMES, Marshalltown, Iowa. Filed Dec. 30, 1920. Serial No. 434,095. 1 Claim. (Cl. 155—84.)

In a device of the class described, parallel supporting members provided with arm rests and inwardly extending seat and back pins formed integral, a seat and back member pivotally connected to each other, the said seat member being provided with brackets designed to detachably coact with the said seat supporting pins, the said back member being provided with channel members designed to be slidingly mounted on said back supporting pins, each of the said channel members being provided with a slot through which its coacting pin may be released from the channel when the said pin is in one position of its movement.

1,382,085. STRIKING-BLOCK FOR RAILWAY-CARS. LOUIS A. HOERR, St. Louis, Mo. Filed July 19, 1920. Serial No. 397,168. 3 Claims. (Cl. 213—42.)

1. The combination with a coupler provided with a shank, of a striking block provided with an opening adapted to allow the insertion and removal of the coupler shank, said striking block being provided with a coupler shank wear surface, said wear surface being incapable of lateral movement and being curved in a direction at right angles to the length of the coupler shank.

1,382,086. SOUND-REPRODUCER. JOSH HOFFAN, New York, N. Y. Filed Apr. 3, 1913, Serial No. 758,603. Renewed Nov. 15, 1919. Serial No. 338,323. 1 Claim. (Cl. 274—35.)



In apparatus of the class described, the combination with a talking machine sound box having a diaphragm and provided with an opening in the side of said box in the rear of said diaphragm, of a stylus-lever fulcrumed upon said sound box and having an arm which passes through said opening into said sound box, an air-tight closure for said opening permitting movement of said lever arm, and articulating means joining said arm with said diaphragm.

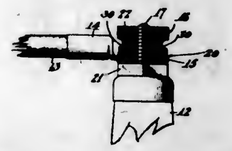
1,382,087. VEHICLE-WHEEL. LAWSON U. HURLBURT, Syracuse, N. Y. Filed Jan. 27, 1920. Serial No. 354,349. 4 Claims. (Cl. 301—9.)

4. In a vehicle wheel, the combination of a hub having its inner end provided with an annular flange, spokes abutting against the outer face of said flange, bolts secured to the flange and extending outwardly beyond the outer faces of the spokes and having their outer ends provided with heads, a clamping ring applied to the outer faces of the spokes and rotatable into and out of

engagement with the heads of the bolts, a cap nut screwed upon the outer end of the hub and against the outer face

of the clamping ring and provided with means for adjusting the ring rotarily, and means for locking the cap nut to the clamping ring.

1,382,088. TYPOGRAPHICAL ELEMENT. SAMUEL A. JACOBS, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Dec. 11, 1919. Serial No. 344,190. 7 Claims. (Cl. 199—66.)

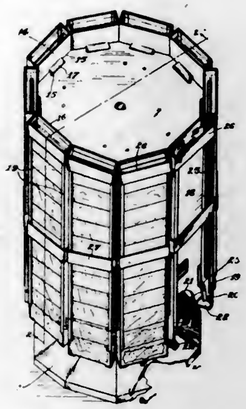


2. In a typographical font, the combination of a set of main elements formed with primary characters, and a group of auxiliary elements each formed with an appendage character consisting of a primary-character-extension and an accent associated therewith and located wholly within the lateral limits thereof, the said accents differing from each other, and the said auxiliary elements being adapted to be used conjointly with the main elements to produce by the juncture of their appendage and primary characters differently accented compound characters having their accents located above or below the same in a setwise direction.

1,382,089. WHEEL FOR LAWN-MOWERS AND THE LIKE. ALLEN JOHNSTON and CHARLES M. KRANER, Ottumwa, Iowa, assignors to Johnston Pressed Gear Company, Ottumwa, Iowa, a Corporation of Iowa. Filed Jan. 25, 1918. Serial No. 213,624. 14 Claims. (Cl. 301—6.)

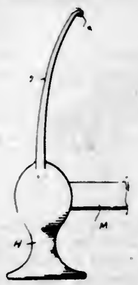
1. A wheel comprising an external sheet metal portion flanged at its outer edge and pressed outwardly at its center, a smaller sheet metal flanged portion joined to the inner side of said first-mentioned portion and pressed oppositely at its center to form a bulging hub, said sheets being perforated centrally to receive a bearing, gearing secured to the inner side of the smaller flanged portion, and a corrugated strip secured to the outer side of the flange of the larger portion.

1,382,090. SPARK-PLUG TERMINAL. EUGENE A. JONES, Los Angeles, Calif. Filed Jan. 6, 1920. Serial No. 349,822. 3 Claims. (Cl. 175—183.)



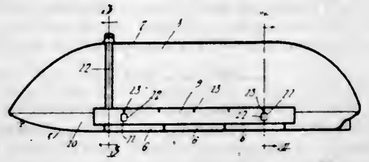
1. In an internal combustion engine, a spark plug having a connection stud in the top thereof; a high tension terminal; insulation interlocked with said terminal and having an opening through which said stud passes without electrical contact with said terminal; and a nut threaded on said stud and clamping said insulation to the top of said spark plug, said insulation being cut away to form a spark gap over which electrical discharges may pass from said terminal to said stud.

1,382,091. MARKING-TAG FOR ANIMALS OR BIRDS. ZEBULUM COLVIN KETCHUM, Ottawa, Ontario, Canada. Original application filed Apr. 2, 1919, Serial No. 287,005. Divided and this application filed July 6, 1920. Serial No. 394,016. 1 Claim. (Cl. 40—3.)



A tag comprising a U-shaped strip of material having one end bent laterally and formed with a V-shaped point and having the other end offset in a curvilinear manner, adapted to fit closely to and support the V-shaped point when bent around the same.

1,382,092. STORE APPARATUS. CHARLES KILMER, Tacoma, Wash. Filed July 3, 1920. Serial No. 393,868. 5 Claims. (Cl. 211—7.)

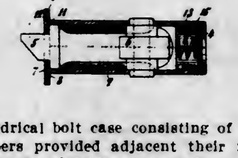


1. An apparatus for the purpose set forth comprising a supporting frame, and a display compartment carried by said frame and having an open front side and provided with means at its lower end for supporting columns of packages, one in front of another with the lowest package in one column in stepped relation to the lowest package in another column.

1,382,093. PEENING-TOOL FOR HARNESS-MAKERS. CHARLES H. KRENGEL, Twin Falls, Idaho. Filed Dec. 6, 1919. Serial No. 342,875. 1 Claim. (Cl. 69—20.)

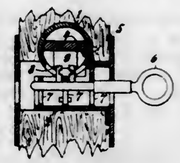
As a new article of manufacture, an implement for a harness maker including an elongated peen curved longitudinally, the outer end portion of the peen having a cylindrical edge overlying the concaved face of the peen and extending in a direction transverse to the peen and entirely thereacross, said cylindrical edge offering no obstruction to the convex face of the peen.

1,382,094. HYDROAIRSHIP. CHARLES E. LABADIE, Michigan City, Ind. Filed June 10, 1920. Serial No. 387,929. 3 Claims. (Cl. 244—6.)



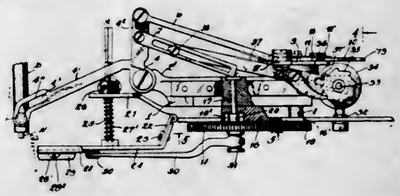
1. A device of the class described including a seaworthy hull, a superstructure rigidly secured to the hull, a passenger compartment common to both the hull and superstructure, a gas compartment partially surrounding the passenger compartment, said gas compartment being common to both the hull and superstructure, passageways leading from the passenger compartment and extending through the hull, closures for the passageways, means for ventilating the passenger compartment, and ballast tanks positioned between the passenger compartment and the keel portion of the hull.

1,382,095. STRUCTURAL UNIT. JOHN RAYMOND LAMBERT, San Antonio, Tex. Filed Feb. 3, 1920. Serial No. 356,097. 3 Claims. (Cl. 72—82.)



1. As a new article of manufacture, a structural unit having a core consisting of waste sheet metal crushed and compressed into suitable form and having a weather proof coating.

1,382,096. BOLT WITH DIVIDED CASE. SOFUS ANDREW EMIL LARSEN, Copenhagen, Denmark. Filed June 3, 1920. Serial No. 386,228. 2 Claims. (Cl. 70—16.)



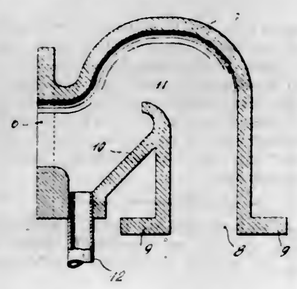
1. A cylindrical bolt case consisting of two semi-cylindrical members provided adjacent their rear ends with holes; a front plate rigidly connected to the front end of one cylindrical member and detachably connected to the front end of the other member; and a back plate having marginal projections fitting in the holes in both cylindrical members and also having a projection separate from said marginal projections which is detachably engaged with one cylindrical member.

1,382,097. DOUBLE TUBULAR LOCK. SOFUS ANDREW EMIL LARSEN, Copenhagen, Denmark. Filed June 3, 1920. Serial No. 386,230. 2 Claims. (Cl. 70—16.)

1. A double cylinder lock comprising two cylinders disposed with their peripheral walls in contact and their axes crossing each other at right angles and offset relatively to each other, one cylinder having an opening in one side thereof, and a hook on the other cylinder engaged in said opening.

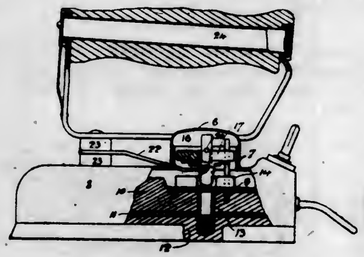
1,382,098. SEWING-MACHINE ATTACHMENT. FREDERICK WILLIAM LÆBERECHT, New York, N. Y. Filed Mar. 17, 1920. Serial No. 366,467. 6 Claims. (Cl. 112—77.)

1. In combination with a sewing machine, an attachment for stitching button holes, comprising a cam controlled horizontally swinging presser plate, a longitudinally slidable gripping member on said presser plate, and a common means for transmitting motion to said cam and gripping member from a reciprocating part of said machine.



1,382,099. JUMP-SPARK ELECTRIC GAS-LIGHTER. ALVIN J. D. LENZ, Evanston, Ill. Filed Oct. 21, 1920. Serial No. 418,399. 5 Claims. (Cl. 175—296.)

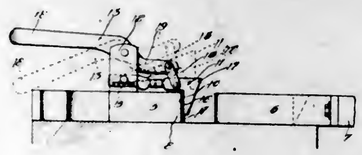
1. In a device of the class described, a central terminal adapted to be supplied with electric energy and a coil of



conducting material about and clear of said central terminal extending beyond the end of said terminal, the end of said coil extending inwardly in the coil to a point in proximity to the first terminal, for the purposes set forth.

1,382,100. STEAM-SEPARATOR. CARL T. LINDSTROM, Allentown, Pa., assignor to John T. Lindstrom, Allentown, Pa. Filed Sept. 13, 1920. Serial No. 409,955. 2 Claims. (Cl. 183—75.)

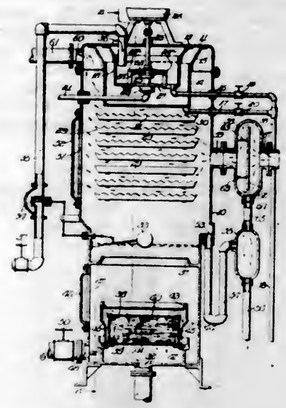
1. A separator comprising an elbow casing having an inlet at the side and a steam outlet at the bottom, the outer bend of the elbow being raised above the inlet to form a dome-shaped chamber, and the inner bend of the elbow having an inclined wall leading upwardly into said chamber and terminating in a backwardly curved lip, and an outlet for liquid at the lower end of said inclined wall.



1,382,101. ELECTRICALLY-HEATED ARTICLE TO AVOID DAMAGE THROUGH OVERHEATING. GEORGE HARRY LOFTS, Hobart, Tasmania, Australia. Filed Apr. 15, 1920. Serial No. 374,146. 2 Claims. (Cl. 219—25.)

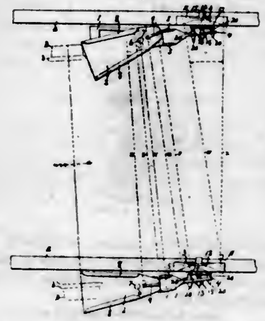
1. In a cutoff for an electrically heated article, the combination of a heated member, a heat conducting spindle projecting therefrom, a non-heat conducting shearing member slidable on the spindle, a fusible pin in the spindle and forming a stop for said shearing member, and against which the shearing member bears, electric contact elements one of which is movable with the shearing member, and a spring exerting its tension on said movable contact element and said shearing member to cause the latter to cut the pin and thereby enable the movable contact element to separate from the other contact element when the fusible pin is rendered soft by excessive heat of the heated member and the conducting spindle.

1,382,102. WORK-CLAMP FOR BULLDOZERS AND LIKE PRESSES. JOZEPH LUKASZEWSKI, Hammond, Ind. Filed May 29, 1920. Serial No. 385,119. 2 Claims. (Cl. 153—25.)



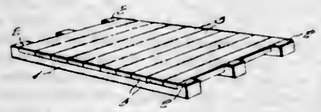
1. A work clamp of the character described, for bulldozers and like presses, comprising a clamp member having a shank portion provided with a jaw at one end thereof for clamping the work against one die of the press, the bearing face of said jaw being arranged at right angles to the length of the shank of the clamp member, a support, said clamp member being fulcrumed on said support at a point back of the work, an operating lever fulcrumed on said support, and having a handle distantly removed from said jaw, and operative connections between said clamp member and lever.

1,382,103. PROCESS OF TREATING WOOD. LEONIDAS N. LYON, San Antonio, Tex. Filed Nov. 3, 1919. Serial No. 335,470. 1 Claim. (Cl. 99—12.)



A method of treating wood which consists in raising the temperature of the body of liquid sealing and permeating medium to a point above the boiling point of water but below the flaming point of the medium; immersing the wood, in a natural state, in the medium, maintaining the wood immersed until the moisture in the wood is converted into steam and rises through the medium, and withdrawing the wood from the medium leaving the wood sealed by the medium to prevent a reabsorption of moisture.

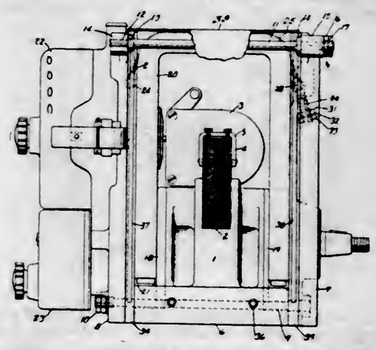
1,382,104. COMBINED FEED-WATER HEATER AND ASPIRATOR. EDWARD F. MCCARTHY, Chicago, Ill., assignor to Vacuum Machinery Co., Chicago, Ill., a Corporation of Wisconsin. Filed Jan. 21, 1918. Serial No. 213,114. 2 Claims. (Cl. 261—124.)



1. An apparatus of the character described embodying a tank, a suction creating device in the upper portion thereof and having communication with a fluid passage, a filter in the tank at the bottom thereof, there being an outlet from the tank through which the liquid passes after passing through the filter, a series of trays arranged in the tank above the water level therein for receiving and breaking up the water from the suction creating device, means for supplying water to the suction creating device, and means for directing exhaust steam through the streams of water from the said trays.

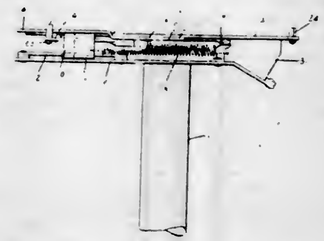
1,382,105. CAR-REPLACER. FREDERICK D. MCGINLEY, Pleasant Beach, N. Y. Filed Oct. 21, 1919. Serial No. 332,245. Renewed May 10, 1921. Serial No. 468,203. 7 Claims. (Cl. 104—260.)

1. In a car replacer, in combination with a rail, a base section supported along one side of the rail and having a longitudinally inclined top face, a leader plate resting on said inclined face and hinged to swing laterally toward and from the rail and provided with raised ribs along its opposite edges in spaced relation and converging toward one end, and means for clamping the base to the rail.



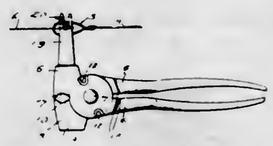
1,382,106. BRIDGE CONSTRUCTION. PHILIP A. MCKENZIE, Houston, Tex. Filed May 13, 1920. Serial No. 381,110. 2 Claims. (Cl. 72—8.)

2. A pre-cast bridge for placement over a gutter comprising a pair of rectangular concrete girders of uniform thickness throughout their lengths, being provided at their opposite ends with comparatively short upstanding lugs forming stops, and a plurality of rectangular concrete slabs associated with the girders, said slabs being of the same thickness as the girders and having their undersurfaces notched at their opposite ends to simultaneously provide shoulders abutting the vertical inner faces of the girders, and reduced end portions resting on the upper faces of the girders, said reduced ends being of a thickness equal to the height of the lugs to render their upper faces flush with the upper ends of said lugs, the outermost slabs bearing against the aforesaid stops to hold the slabs together.



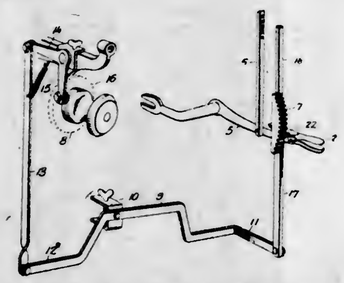
1,382,107. IGNITION-DYNAMO. SAMUEL C. MCKEOWN, East Orange, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed Oct. 19, 1917. Serial No. 197,441. 7 Claims. (Cl. 171—209.)

1. In an ignition dynamo of the type having the plane of its permanent magnets longitudinal with the driving shaft whereby the core pole pieces carrying an induction coil within the arch of the magnets are alternately connected to rotor limbs of constant magnetic polarity, the combination with said core pole pieces of a rotor housing constituting a support for the pole pieces and terminating in a base member, cross members carried by said base and supporting said magnets, end plates for said dynamo, bolts passing through said base for clamping the bottom of said plates securely to the base, rods for spacing and clamping



in fixed position the tops of said plates and a holding strap for the magnets fixed to one plate and adjustably secured to the other as and for the purpose described.

1,382,108. SHOE-SHINING STAND. MAURICE M. MANN, Austin, Ind. Filed Jan. 17, 1921. Serial No. 437,889. 3 Claims. (Cl. 15—58.)

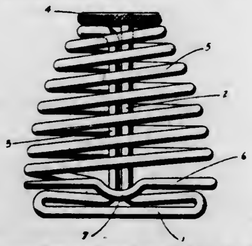


3. In a shoe shining stand, a stationary platform, a plate fixed to said platform, a toe plate slidable on said first mentioned plate, a clip secured to the under face of said toe plate, a guide bar carried by the platform and passing through said clip for holding the toe plate in alinement, and springs for normally holding the toe plate at its innermost position.

1,382,109. COMBINATION-TOOL. COLUMBUS U. MATSLER, Plainview, Tex. Filed Mar. 22, 1920. Serial No. 367,783. 1 Claim. (Cl. 140—123.)

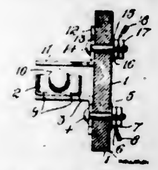
A wire stretching tool of the character described comprising a handle member having an enlarged extension on one end, said extension being disposed in right-angular relation to the handle member, the outer end portion of the extension being reduced to provide a shoulder, said reduced portion tapering from said shoulder to the end of said reduced portion, said end being bifurcated for the reception of one end of a wire, whereby said wire may be wound upon one of the fingers resulting from the bifurcation to prevent slipping.

1,382,110. EJECTOR CONTROL FOR TYPE-BAR MACHINES. JOSEPH U. MEISTRELL, Brooklyn, N. Y. Filed Mar. 30, 1920. Serial No. 370,025. 8 Claims. (Cl. 199—60.)



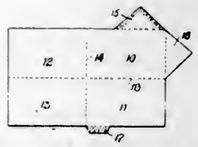
4. In an ejector attachment, the combination of a mold disk pinion, an ejector control lever, a stationary toothed segment, a latch on the lever and adapted to engage the segment, a lever adapted to be actuated when the pinion is shifted, and a rod carried at the outer end of a second lever that is actuated by the latter lever and adapted to shift the latch and release the control lever.

1,382,111. STORE-FRONT CONSTRUCTION. ROBERT MICHAELS, Chicago, Ill., assignor to Blasco Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 2, 1919. Serial No. 327,866. 7 Claims. (Cl. 189—78.)



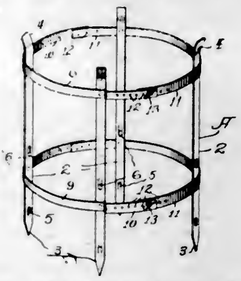
1. An article of the class described, comprising two vertical, opposing members, one of which is movable longitudinally and toward the other, and coacting elements on the respective members that guide such movable member in such movement.

1,382,112. FASTENING DEVICE. GROVER IRA MITCHELL, Madison, Wis. Filed July 1, 1920. Serial No. 393,311. 3 Claims. (Cl. 24—261.)



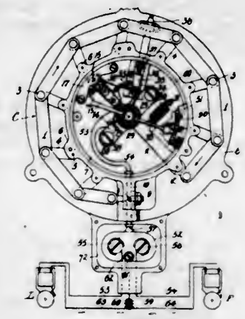
1. A fastening device comprising a cross member, a central stem, and a spring adapted to exert pressure upon parts interposed between the spring and the cross member, said spring having projections adapted to register with slots in the parts held.

1,382,113. SPARK-GAP DEVICE. ALEXANDER Q. NASH, St. Louis, Mo. Filed May 17, 1920. Serial No. 381,903. 5 Claims. (Cl. 175—183.)



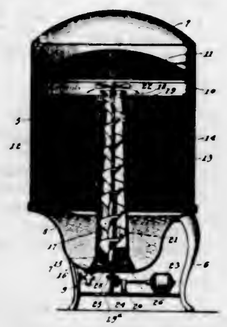
1. In a spark gap device, spaced terminals, one forming a walled inclosure for a contact ball freely movable therein, and the other terminal maintaining the ball against displacement from said inclosure.

1,382,114. ENVELOP. THOMAS J. NORGELL, Alois, Wis. Filed Jan. 19, 1918, Serial No. 212,767. Renewed Aug. 4, 1920. Serial No. 401,280. 1 Claim. (Cl. 229—92.7.)



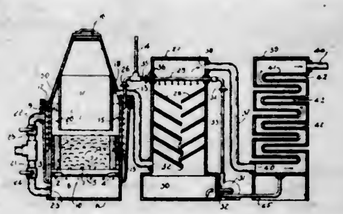
A combined envelop and letter sheet comprising a rectangular portion adapted to be folded into parallel registration to provide letter sheets, and such sheets folded into parallel registration to envelop size so that one portion of one letter sheet forms the back of the envelop and the other portion of the same sheet the front of the envelop, a triangular shaped flap carried by the entire free end edge of the front portion of the envelop, a triangular shaped flap carried by a portion of the longitudinal edge of the front portion of the envelop, and both of said flaps adapted to be folded on to the rear portion of the envelop to occupy a triangular space at one end thereof and overlap each other with the last mentioned flap retaining the first mentioned flap in a folded closed position, and an auxiliary flap on a portion of the free longitudinal edge of the back portion of the envelop adapted to be folded over that portion of the free longitudinal edge of the front portion of the envelop unoccupied by the second mentioned flap, and be sealed against the front portion of said envelop.

1,382,115. COLLAPSIBLE HOLDING DEVICE. WALTER F. OHME, Minneapolis, Minn. Filed Sept. 8, 1919. Serial No. 322,367. 4 Claims. (Cl. 248—41.)



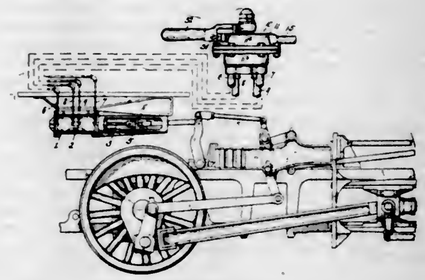
1. A collapsible and adjustable holder adapted to removably hold a receptacle with its bottom away from the ground, including vertically extending legs, having sharp piercing ends, ground engaging barbs formed on said piercing ends to hold said legs against easy disengagement from the ground, upper and lower divided bands adapted to collectively hold said legs, the lowermost band secured to said legs being adapted to form a buoying ring for said holder and support, and shoulders projecting inwardly from each of sair legs and positioned above said buoying ring to hold a receptacle removably in said holder with its bottom away from the ground.

1,382,116. TEMPERATURE-INDICATING APPARATUS. OLOF HENRY OLSON, Kensington, New South Wales, Australia, assignor to William John Whitley Strong, Melbourne, Victoria, Australia. Filed Oct. 14, 1919. Serial No. 330,678. 10 Claims. (Cl. 73—52.)



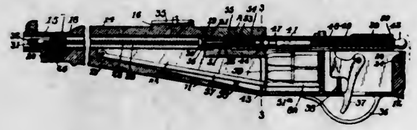
1. In temperature indicators, a chain composed of links of metal possessing a high co-efficient of expansion, a lever connected to the free end of said chain and operable by the expansion of the latter, and means actuated by said lever for indicating temperature.

1,382,117. DISH-WASHER. JOHN OPOČENSKÝ, Chicago, Ill. Filed June 4, 1920. Serial No. 386,553. 3 Claims. (Cl. 141—9.)



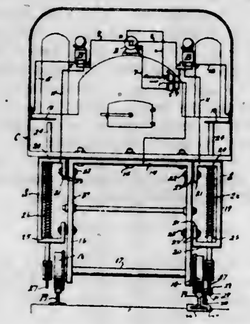
3. A dish washer comprising a suitable closed receptacle, a tube positioned axially within said receptacle, a screen element forming the lower portion of the wall of said tube, propeller blades within said screen element, a shaft extending from said blades through said tube, a helical flange on said shaft from a point adjacent said blades to one adjacent the top of said tube, rotatable blades above the discharge end of said tube, means for actuating said shaft, and suitable structures within said receptacle to receive the articles to be washed.

1,382,118. SUCTION GAS-GENERATOR. STANLEY PHILLIPS, Iluka, New South Wales, Australia, assignor to The Efficient Gas Power Company Limited, Sydney, New South Wales, Australia. Filed Aug. 7, 1919. Serial No. 315,942. 2 Claims. (Cl. 48—63.)



1. A suction gas generator comprising a gas generating chamber, a wire spiral fastened around the exterior of the wall thereof and galvanized thereon, a steam generating and superheating chamber secured to the gas generating chamber and inclosing the wire spiral, a furnace in the last mentioned chamber including brackets secured to the side walls thereof, firebars carried on the brackets and a fireclay lining for said furnace supported on said firebars, an ashpit below said firebars, and the side walls of the ashpits being provided with a plurality of openings establishing communication with the steam generating chamber, a fuel feed hopper mounted on the head of said steam generating chamber and having a gas outlet port in one of its walls, a lid for the hopper, a chute fastened to the interior of the hopper above said port and depending centrally thereon with its lower end located above said fire clay lining, means for feeding water to said wire spiral and means for feeding air to said steam generating chamber or said ashpit substantially as described.

1,382,119. FLUID-PRESSURE CONTROL. CHARLES J. PILLIOD, Toledo, Ohio, assignor to Daniel Searles, trustee, Toledo, Ohio. Filed Dec. 18, 1917. Serial No. 207,704. 6 Claims. (Cl. 121—38.)

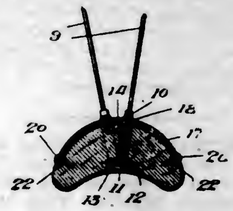


1. In a control of the class described, a valve case having a fluid pressure supply inlet; a pair of working passages, and an exhaust passage; two movable disk valve members one working over the other and mechanically connected together so as to have a limited relative rotary and predetermined movement, each valve member provided with a plurality of passages, said members being operable to cause predetermined relations of these passages and to register to open one of said working passages to said supply inlet, and the other to said exhaust passages and vice versa; and a control means connected to one of said disk valve members, for directly operating both of said valve disk members.

1,382,120. DUMMY PRACTICE-RIFLE. ROBERT E. REARDON, Ottawa, Ontario, Canada. Filed Mar. 12, 1917. Serial No. 154,302. 6 Claims. (Cl. 124—15.5.)

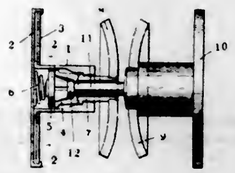
1. As an article of manufacture a dummy gun having a member extensible from the barrel thereof and spring means holding said member normally retracted.

1,382,121. ELECTRIC SIGNALING SYSTEM. JOHN RECKTENWALD, Venedy, Ill., assignor of one-sixth to William Meyer, one-sixth to William F. Segelhorst, and one-sixth to William C. Steinman, Venedy, Ill. Filed Dec. 22, 1920. Serial No. 432,469. 2 Claims. (Cl. 246—71.)



1. An electric signaling system comprising, in combination, a trackway, a highway signal, contact members carried by a rail of the trackway, said highway signal being in electrical connection with the contact members and a rail of the trackway, rolling stock traveling on the trackway, a source of electrical energy carried by said rolling stock, a shoe carried by the rolling stock for contact with the contact members, said shoe being movable in a vertical direction toward or from each of the contact members, means for constantly urging the shoe downwardly, an electrical connection between the shoe and the source of electrical energy, a member carried by the rolling stock and contacting with a rail, means for electrically connecting said last named member with the source of electrical energy, a contact member carried by the rolling stock, a normally open shunt circuit connecting the second named contact member and the electrical connection between the shoe and the source of electrical energy, a signal carried by the rolling stock and interposed in the first named electrical connection, and coacting means carried by the shoe and each of the first named contact members for closing the shunt circuit through the last named contact member and thereby cutting out the last named signal.

1,382,122. BICYCLE OR SIMILAR WHEEL. GILBERT M. RICKETTS, Columbus, Ohio. Filed Aug. 10, 1920. Serial No. 402,620. 6 Claims. (Cl. 301—98.)



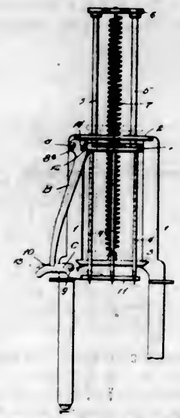
1. A wheel including a wooden felly, wire spokes anchored therein, and a bar secured to the inner periphery of the felly adjacent to the spokes.

6. A wheel including a wooden felly, spokes anchored to the felly, a stiffening and reinforcing bar inserted in

the inner periphery of the felly adjacent to the spokes, and a metal strip fitting the inner periphery of the felly and protecting same from the elements.

1,382,123. CUFF-BUTTON. JEAN BAPTISTE SABOURIN, Norton, Mass., assignor to Eisenstadt Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 30, 1921. Serial No. 456,879. 4 Claims. (Cl. 24—102.)

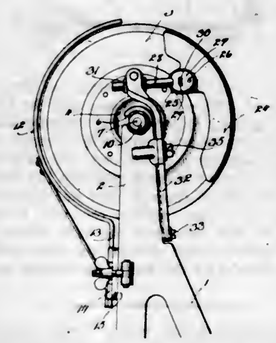
4. A button having two separable parts, one part carrying a locking post, and the other part comprising a barrel, a spring impelled disk therein, locking members in the barrel and engaged by the disk to hold them in locking position relative to the post, and a sleeve slidable in the barrel and through which the locking post extends, the extremity of said sleeve having a tapered surface to engage with the locking members to force them to release position.



1,382,124. PROCESS OF DELIMING HIDES. WALLACE SAVAGE, New York, N. Y. Filed Apr. 26, 1919. Serial No. 292,930. 3 Claims. (Cl. 149—3.)

1. The herein described process of "deliming" depilated hides which consists in subjecting them to the action of a base adsorbing earth paste, allowing the paste to remain in contact with the hides until impurities are removed, and then removing the limed-paste from the hides.

1,382,125. MOLE-TRAP. OSCAR J. SCHROETER, St. Louis, Mo. Filed July 31, 1920. Serial No. 400,457. 1 Claim. (Cl. 43—80.)



A trap, comprising a vertically-disposed supporting frame that is adapted to be arranged in the ground, a spring-actuated, pronged member reciprocatingly mounted in said frame, a lever provided at its upper end with an offset portion that is pivotally connected to said frame, said lever having a shoulder that is adapted to move into the path of said pronged member, a latch pivotally connected to said frame in proximity to the ground and provided at one end with a cam surface on which the lower end of said lever bears when the trap is inoperative, a

notch in said latch in proximity to said cam surface for receiving the lower end of said lever when the trap is set,

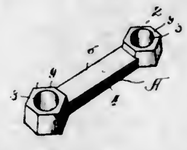
and means at the opposite end of said latch that is adapted to be moved upwardly so as to release the lower end of said lever.

1,382,126. FLESHING-MACHINE. JOHN O. SCHROEDTER and JOHN KELLING, Milwaukee, Wis., assignors to Monarch Fleshing Machine Company, Milwaukee, Wis. Filed Feb. 24, 1920. Serial No. 360,616. 12 Claims. (Cl. 149—15.)

1. The combination with a fleshing machine having a fleshing knife, of a guard plate to be disposed adjacent to said knife, a lever arm pivoted to the machine to have one portion swing toward and away from the plane of the knife, and means connecting the guard plate with the lever arm.

1,382,127. POLISHING COMPOSITION. HARRY SHACKLETON, North Providence, R. I., and JOHN GORDON, New Bedford, Mass. Filed Oct. 18, 1920. Serial No. 417,612. 2 Claims. (Cl. 134—24.)

1. A polishing composition consisting solely of a mixture of raw linseed oil, malt vinegar, turpentine and alcohol proportioned to each other in equal parts.



1,382,128. OIL COOKING-STOVE. JAMES SHANNON, Canonbury, and WILLIAM MORRISON SIMPSON, Hastings, England. Filed Nov. 9, 1920. Serial No. 422,938. 4 Claims. (Cl. 158—59.)

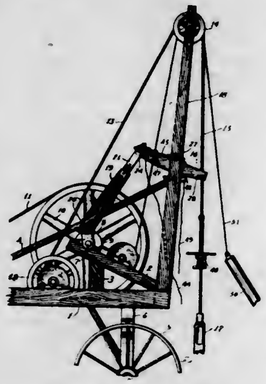
4. In an oil cooking stove the combination of a main burner head, a chamber under and in communication with said head, an oil reservoir, means for creating pressure in said reservoir, a vaporizer located above said head and in communication with the oil reservoir, a fuel nozzle in communication with said vaporizer, an adjustable needle valve controlling the orifice of said nozzle, an induction or mixing tube co-acting with said nozzle and leading into said chamber, a plurality of supplementary burner heads, a conveying tube connecting said chamber with said supplementary burners, cocks or valves for regulating the gas passing to said supplementary burners, a tube mounted to

slide in the induction or mixing tube the inner end of which projects into the chamber beneath the main burner, a coned plug mounted in said chamber and co-acting with the open end of said sliding tube to form a valve, a slot or opening in said sliding tube co-acting with the orifice of the conveying tube of the supplementary burners to keep said conveying tube always open to the induction or mixing tube and a by-pass port in said sliding tube for keeping the chamber beneath the main burner constantly open to the induction or mixing tube.

1,382,129. STORAGE-BATTERY CONNECTOR. LYTTON J. SHIELDS, St. Paul, Minn. Filed Aug. 8, 1918. Serial No. 249,022. 1 Claim. (Cl. 173—324.)

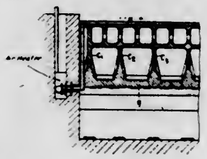
In a battery terminal connector having frustumal pyramidical shaped head portions, a shank connecting said head portions, the lower surface of said shank extending flush with the lower surface of said head portions and the upper surface of said shank being positioned below said head portions, a frustumal conical shaped opening extending through said head portions and a longitudinally extending recess formed in the lower surface of said shank.

1,382,130. BELT-BUCKLE ATTACHMENT. BENJAMIN SLOTE, New York, N. Y. Filed Dec. 1, 1920. Serial No. 427,552. 3 Claims. (Cl. 24—265.)



1. The combination with a buckle including a pivoted tongue carrying bar, of a frame having an intermediate portion, the frame being wholly concealed by the buckle and disposed at the rear side of the latter, and a bendable-tongue-bar-engaging means co-acting with said intermediate portion to secure the frame to the buckle.

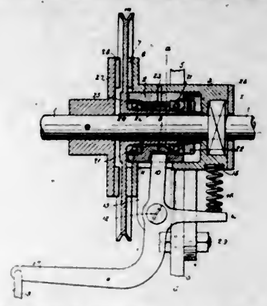
2. A device of the character described comprising a buckle having a tongue bar and a frame carried by the buckle and located at the rear side thereof, tongue bar engaging means on the frame, and spaced fixed bars spaced relatively and respectively located at the opposite sides of said means, the said means and said bars being relatively in different off set positions, the said means and said bars adapted to co-act with each other for the retention of the folded end of a strap therewith.



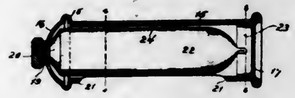
3. In a belt buckle attachment of the design adapted to detachably secure one end of a belt to a buckle comprising a substantially rectangular frame provided with an intermediate portion and bars disposed in spaced relation at respectively opposite sides of said intermediate portion, said intermediate portion and said bars adapted to receive the folded end of a strap and to hold said end fixedly folded upon itself in said frame, and means extending from said frame and adapted for connection with the tongue bar of a buckle, said means serving to position the frame at the rear side of the buckle, as and for the purpose specified.

1,382,131. MEANS FOR COUPLING AND UNCOUPLING RELATIVELY MOVABLE MEMBERS OF MACHINES. FRANCIS MARION SYNDER, Mansfield, Ohio. Filed June 19, 1920. Serial No. 390,230. 11 Claims. (Cl. 255—11.)

1. In combination, a walking beam, a crank shaft, a crank pin secured to the crank, a pitman secured to the crank pin at one end, a yoke provided on its opposite end, a shaft secured to said yoke, a base block member provided with an open bearing for the yoke shaft secured to the walking beam, and a slidable member mounted upon said base block member normally covering the open portion of the bearing.



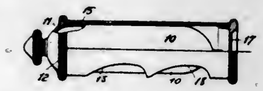
1,382,132. MOVABLE DAM OF FERROCONCRETE. OTTO SOMMER, Zurich, Switzerland, assignor to Stauwerke A.-G., Zurich, Switzerland. Filed July 1, 1920. Serial No. 393,242. 5 Claims. (Cl. 61—26.)



1. A movable dam having a horiozntal axis of rotation, said dam sector-shaped in cross section and having walls of ferro-concrete, and transverse partition walls thickening toward the axis of rotation.

1,382,133. DRIVING MECHANISM FOR SEWING-MACHINES AND THE LIKE. ARTHUR BEDWARD SPENCER and FRANK EDWARD WALKER, Hucknall Torkard, England, assignors of one-third to George Spencer, Lutterworth, Leicestershire, England. Filed Mar. 27, 1920. Serial No. 369,179. 6 Claims. (Cl. 192—18.)

1. A driving mechanism for the purpose described and comprising, in combination, a driving shaft, an outer bearing, an inner bearing therein supporting the driving shaft, a non-rotatable sleeve slidable in the outer bearing, a pulley mounted for rotation between said sleeve and shaft and clear of the latter, a stationary braking surface on the outer bearing, a driving surface fixed to the driving shaft, and means consisting of a spring to effect movement of the sleeve in one direction and an operable lever to move the sleeve in the other direction whereby the pulley is brought into contact with the braking surface and driving surface respectively.



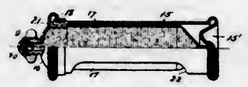
1,382,134. CONTAINER FOR COLLAPSIBLE TUBES. BENJAMIN E. D. STAFFORD, Pittsburgh, Pa. Filed July 31, 1919. Serial No. 314,416. Renewed May 3, 1921. Serial No. 466,536. 3 Claims. (Cl. 221—60.)

1. A portable container for a collapsible tube comprising a hollow body with a head at one end the latter having a threaded opening to receive the threaded nozzle of a collapsible tube, the nozzle projecting through the head and normally closed by a screw cap, the said container having a finger opening therein whereby the contents of the tube may be ejected through said nozzle and opening by the pressure of a finger against the tube, a closure for teh other end of said container, the said closure adapted to be turned and a hood carried by said closure and adapted to be turned by the latter for closing said finger opening.

1,382,135. COLLAPSIBLE TUBE AND CONTAINER FOR THE SAME. BENJAMIN E. D. STAFFORD, Pittsburgh, Pa. Filed Aug. 1, 1919, Serial No. 314,737. Renewed May 3, 1921. Serial No. 466,537. 6 Claims. (Cl. 221—60.)

1. A collapsible tube having an integral head provided with a centrally located discharge nozzle, and also provided at its periphery with means for the removable attachment of a container.

1,382,136. COMBINED COLLAPSIBLE TUBE AND CONTAINER THEREFOR. BENJAMIN E. D. STAFFORD, Pittsburgh, Pa. Filed Aug. 8, 1919. Serial No. 316,143. Renewed May 3, 1921. Serial No. 466,538. 6 Claims. (Cl. 221—60.)

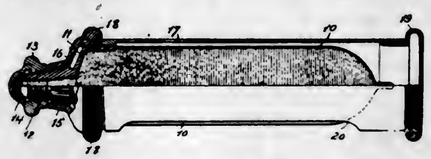


1. The combination of a collapsible tube closed at one end and open at the other, the open end being thickened,

a head detachably secured to the open end of the collapsible tube and provided with a central discharge nozzle, and a container for housing said tube, the said container

being closed at one end and open at the other, the open end being detachably secured to the outer face of the thickened open end of the collapsible tube.

1,382,137. COLLAPSIBLE TUBE AND CONTAINER FOR THE SAME. BENJAMIN E. D. STAFFORD, Pittsburgh, Pa. Filed Aug. 8, 1919. Serial No. 316,144. 4 Claims. (Cl. 221—60.)

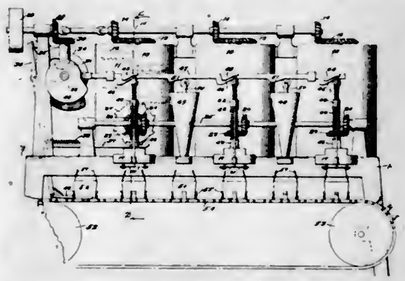


1. The combination of a container open at one end and closed at the other end; externally threaded at its open end and provided with a finger slot in its body, a head screwed to said open end and provided with a centrally located discharge nozzle normally closed by a screw cap, and a collapsible tube housed within said container, the said tube being open at one end, the latter being thickened and flanged outwardly, the said thickened end of the tube forming a snug fit with the container at the open end of the latter, and the flange on said tube overlapping the free end of the container and clamped thereto by the head bearing against the flange.

1,382,138. DISPENSING TUBE OR BOX. BENJAMIN E. D. STAFFORD, Pittsburgh, Pa. Filed Sept. 25, 1919. Serial No. 326,257. 3 Claims. (Cl. 221—64.)

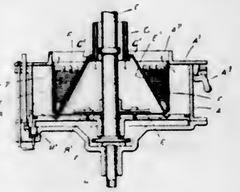
1. A dispensing vessel having a nozzle provided with a discharge opening, a hollow closure mounted within the nozzle and of greater diameter than the neck of the nozzle whereby the closure will be retained within the nozzle the said closure having an opening adapted to be turned into alinement with the opening in the nozzle and with a cylindrical end projecting into the neck of the nozzle, and means secured to the closure and projecting through the nozzle whereby the closure may be turned to open or close the discharge opening in the nozzle.

1,382,139. COLLAPSIBLE TUBE AND CONTAINER FOR THE SAME. BENJAMIN E. D. STAFFORD, Pittsburgh, Pa. Filed Aug. 8, 1919, Serial No. 316,145. Renewed May 3, 1921. Serial No. 466,539. 10 Claims. (Cl. 221—60.)



1. As a new article of manufacture, a collapsible tube having a head, a discharge nozzle communicating with the head, and a conical collar between the head and nozzle.

1,382,140. COLLAPSIBLE DISPENSING-TUBE AND CONTAINER. BENJAMIN E. D. STAFFORD, Pittsburgh, Pa. Filed Aug. 11, 1919, Serial No. 316,716. Renewed May 3, 1921. Serial No. 466,540. 7 Claims. (Cl. 221—60.)

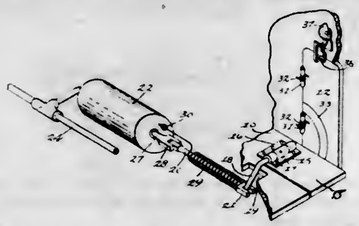


1. A collapsible tube having an integral head, the latter being provided with a discharge nozzle and also with a peripheral flange.

1,382,141. ICE-CREAM-BRICK-PACKING MACHINE. JESSE M. STICKELS, Milwaukee, Wis. Filed May 26, 1920. Serial No. 384,457. 2 Claims. (Cl. 226—100.)

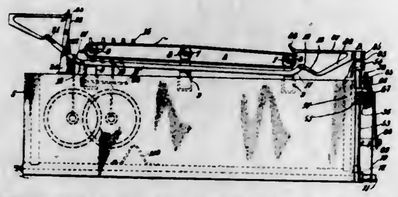
1. A filling machine comprising a plurality of material containers, rotary means for receiving material therefrom, means for intermittently rotating said receiving means, and means for forcing the material from said receiving means including a horizontal bar arranged for interrupted movement and a vertical movable bar operated by the first said bar.

1,382,142. CENTRIFUGAL SEPARATOR. ROBERT ALEXANDER STURGEON, Southsea, Portsmouth, England. Filed July 15, 1919. Serial No. 310,952. 8 Claims. (Cl. 210—63.)



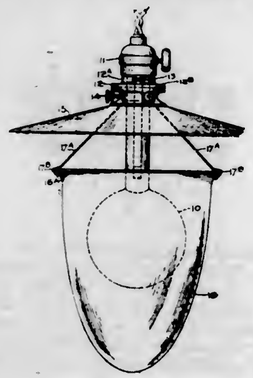
1. In a centrifugal separating machine the combination with a rotary cylindrical chamber having one end adapted to be moved in an axial direction relatively to the other end and to the cylindrical wall, of an inner wall connected to one of the end members so as to form an annular separating chamber at least one wall of this annular chamber being formed to constitute a strainer as set forth.

1,382,143. AIR-OPENER FOR DOORS. JOSEPH SZCZUREK, Chicago Heights, Ill. Filed Feb. 3, 1921. Serial No. 442,049. 4 Claims. (Cl. 105—429.)



1. In a device for operating step covers and doors of passenger cars, the combination with a pair of doors on each side of the car hung on vertical axes, a pair of step covers, one for each of said doors, guide rollers on said covers to contact with said doors to open and close the same, a pair of air cylinders for each pair of step covers

on one side of a car, means for supplying compressed air to said cylinders to operate said step covers, and means



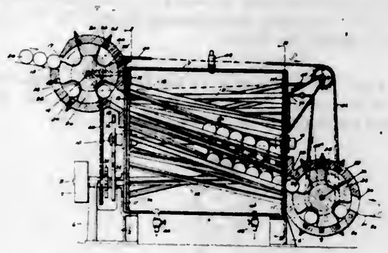
for automatically returning said step covers and doors into the original position upon the interruption of said air supply.

1,382,144. CONVEYING MECHANISM. FLOYD T. TAYLOR, Matawan, N. J., assignor to A. P. Munning & Co., Newark, N. J., a Corporation of New Jersey. Filed Jan. 30, 1919. Serial No. 274,113. 23 Claims. (Cl. 214—89.)

1. A conveying mechanism having a plurality of independently movable conveyers adapted to transport material in different receptacles, and mechanism operable independently for intermittently transferring the material from one conveyer to another.

1,382,145. SEMI-INDIRECT-LIGHTING DEVICE. HERBERT O. TOMLINSON, Wheaton, Ill. Filed Sept. 12, 1919. Serial No. 323,254. 13 Claims. (Cl. 240—92.)

1. A semi-indirect lighting device, comprising a socket to hold a lamp in depending position, a downwardly flaring reflector supported on said socket, a translucent upwardly open diffusing bowl below said reflector to receive a lamp suspended from said socket, and having an outwardly extending flange at its top, a holder having a plurality of flexible resilient arms adapted to detachably engage said flange to support said bowl, so that the bowl can be removed by springing one of said arms outwardly from said flange, and a rigid cylindric ring to which the upper portions of said resilient arms are secured in spaced relative positions, the upper ends of said resilient arms being arranged to detachably engage the inner edge of the reflector to support the bowl therefrom, so that the lower ends of said arms directly engage the bowl while their upper ends directly engage the reflector, substantially as shown and described.

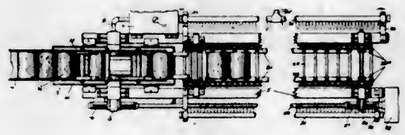


1,382,146. ALLOY. CALVIN VOS, New York, N. Y. Filed Apr. 10, 1920. Serial No. 372,954. 2 Claims. (Cl. 75—1.)

1. An alloy possessing degasifying and deoxidizing properties used in the production of steel and iron and steel castings having unusual strength and density, composed of a major portion of aluminum, a reduced portion of magnesium, and a minor quantity of uranium, ferro-silicon and iron.

1,382,147. ALLOY. CALVIN VOS, New York, N. Y. Filed Sept. 4, 1920. Serial No. 408,150. 2 Claims. (Cl. 75—1.)

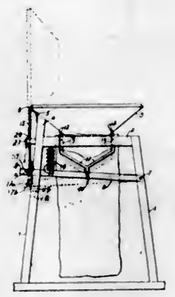
1. An alloy possessing degasifying and deoxidizing properties consisting of a major quantity of aluminum, a minor quantity of magnesium, ferro-silicon and zirconium in relatively small proportions.



1,382,148. CONTINUOUS COOKER FOR FOODS IN CONTAINERS. SELAH E. WALKER, Portland, Oreg. Filed Nov. 15, 1919. Serial No. 338,193. 4 Claims. (Cl. 126—272.)

1. A device for cooking foods in containers, having in combination, a closable boiler, a valve mechanism upon the upper part of the boiler, comprising therein a shell having an outward receiving port and a port of discharge into the boiler in a desired position, a rotatable valve in the shell, provided with a series of semi-circular, transverse pockets in its rim, adapted to receive objects through the receiving port and discharge them through the other port into the boiler in a desired place in sequence, and valve packing means consisting of circular shoulders interiorly upon the shell walls extending into opposing grooves in the valve ends, also like shoulders upon the valve ends extending into opposing grooves in the shell walls, all adapted to receive packing between the shell walls and valve ends within the spaces adjacent to the shoulders and in said grooves, also circumferential shell segments having interior grooves adapted to receive packing, and screws extending through said shell segments, arranged to enter into engagement with such packing and adjust it to a desired position upon the opposing surface of the valve.

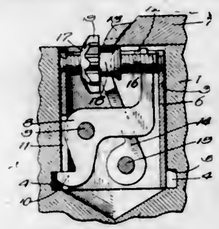
1,382,149. LACQUERING-MACHINE. SELAH E. WALKER, Portland, Oreg. Filed Dec. 1, 1919. Serial No. 341,738. 6 Claims. (Cl. 91—55.)



1. In a lacquering device, the combination of a tank of semi-circular form adapted to retain liquid at a desired depth therein, and a wheel rotatably mounted above the tank and extending downwardly into liquid when placed therein, said wheel having a series of outwardly opening, transverse pockets with end shoulders in each, the same being arranged, to receive objects over one side of the tank, allow them to be passed downwardly through liquid in the tank out of engagement with its ends, to thereafter elevate them out of the liquid and discharge them over the opposite side of the tank, during the rotation of said wheel.

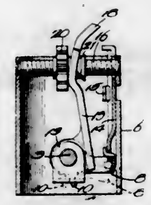
3. In a lacquering device, the combination of a carrier frame having a track, carrier chains having transverse rollers pivoted in the chains, said rollers having shoulders near their ends arranged to travel upon the track and to support objects in a manner to retain them out of engagement with any other part of the carrier mechanism, also to rotate the objects while in transit on the carrier.

5. In a lacquering device, the combination of a carrier, and a pipe secured at a desired distance and position therefrom parallel with the carrier, the pipe having a series of orifices therein and deflectors above and below the orifices, arranged to allow air to be forced through the orifices and to be directed by the deflectors in a desired course toward the surfaces of objects resting upon said carrier.



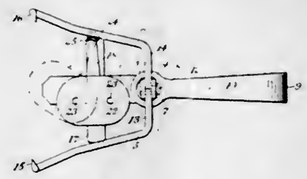
1,382,150. SACK-HOLDER. CARL WALLDOW, near San Jose, Calif. Filed Jan. 10, 1921. Serial No. 436,270. 3 Claims. (Cl. 83—26.)

1. A supporting frame, a hopper pivotally mounted thereon, sack engaging pins mounted thereon, pin actuating means pivotally and resiliently mounted thereon and pivotally connected to said pins, a depending bar pivotally mounted on said hopper and movable downwardly by the raising thereof and having a loop formed on its lower end, a detachable connection between said loop and said pin actuating means, and means mounted on said frame in the path of travel of said loop whereby the connection between the loop and the pin actuating means is separated on the downward movement of said bar and loop.



1,382,151. PRINTING-PLATE HOLDER. WALLACE S. WARNOCK, Chicago, Ill. Filed Nov. 15, 1920. Serial No. 424,026. 9 Claims. (Cl. 101—385.)

5. The combination with a printing foundation formed with cylindrical holes therein; of a carrier in the form of a cylindrical shell of a diameter permitting it to be passed down into any of said holes; a clamping jaw located above said shell and printing foundation and having an inward extension pivoted to and within the shell; a threaded rod mounted upon and extending across said shell; and a jaw adjusting nut upon said rod and formed

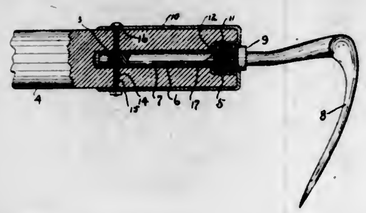


with an annular groove in which the jaw structure is received whereby the jaw is moved back and forth according to the direction in which the nut is turned.

1,382,152. PRINTING-PLATE HOLDER. WALLACE S. WARNOCK, Chicago, Ill. Filed Jan. 25, 1921. Serial No. 439,875. 10 Claims. (Cl. 101—385.)

1. The combination with a carrier; of a clamping jaw upon the carrier; a jaw actuating device upon the carrier; a printing foundation formed to receive the carrier; a lever mounted upon the carrier; and a detent in cam connection with the lever and operable thereby to be engageable with the printing foundation.

1,382,153. ANIMAL-TRAP. WINFIELD A. WELLS, Spencer, N. Y. Filed June 3, 1920. Serial No. 386,178. 3 Claims. (Cl. 43—90.)

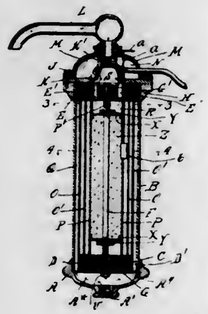


1. The combination, in an animal trap, of a base, a pair of coöperating jaw arms, each pivoted at one end to the base, and each provided at its other end with a deflected terminal prong, the prongs being adapted to overlap each other when the jaw arms are closed, tripping means, embodying a swiveled and laterally adjustable latch, for holding the jaw arms separated, and spring means for closing the same.

1,382,154. TANG-MOUNTING FOR IMPLEMENTS. ASA A. WIRT, Omaha, Nebr. Filed May 14, 1920. Serial No. 381,300. 4 Claims. (Cl. 279—86.)

1. In a tang-mounting for implements, a handle having a recess opening on its end, a ferrule provided with a recess having an aperture formed therein and mounted on the

handle, a tang provided with a boss and disposed in the aperture of the ferrule and recess of the handle, a pin traversing the ferrule, handle and tang, and a spring dis-

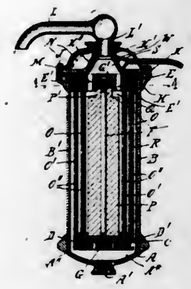


posed in the recess of the ferrule in engagement with the boss of the tang to normally press the latter outwardly of said recess.

1,382,155. TANG-MOUNTING FOR IMPLEMENTS. ASA A. WIRT, Omaha, Nebr. Filed Apr. 11, 1921. Serial No. 460,397. 1 Claim. (Cl. 279—86.)

In a tang mounting for implements, a handle having a tapered part and a recess, a ferrule provided at one of its ends to open on its aperture with a recess having an inwardly convergent wall to lie outwardly of the recess and tapered part of the handle and provided to open on its opposite end and its aperture with a second recess, a tang having an aperture and a boss and disposed in the aperture of the ferrule and recess of the handle, a pin adjacent to the ferrule traversing the handle and aperture of the tang, and a resilient member in the second recess of the ferrule engaging the boss and tending to move the ferrule for causing engagement of the convergent wall of its first named recess with the tapered part of the handle.

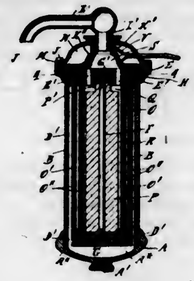
1,382,156. APPARATUS FOR HEATING LIQUIDS. LUIS G. ABOGADO, Mexico, Mexico. Filed May 12, 1919. Serial No. 296,303. 3 Claims. (Cl. 219—40.)



1. An electric heater for liquids, comprising a casing forming a chamber adapted to contain the liquid, an electrode located in said chamber and having its terminal edges located adjacent to each other and both on the same side of the casing, the portion of the electrode adjacent to one of said edges being nearer the center of the casing than the portion adjacent to the other electrode edge, and another similar electrode arranged in step-like fashion relatively to the first-named electrode and extending between said terminal edges of the first-named electrode, but out of contact therewith, said second electrode having an inner portion overlapped by the outer portion of the first-named electrode, and an outer portion overlapping the inner portion of the same first-named electrode.

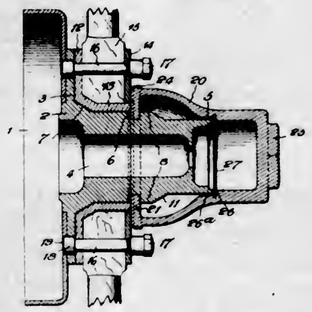
1,382,157. PROCESS OF HEATING LIQUIDS. LUIS G. ABOGADO, Mexico, Mexico. Filed May 12, 1919. Serial No. 296,304. 3 Claims. (Cl. 219—40.)

1. The process which consists in passing an electric current across every portion of a non-whirling film of a conducting liquid moving spirally and helically at a substantially constant speed.



1,382,158. APPARATUS FOR STERILIZING LIQUIDS. LUIS G. ABOGADO, Mexico, Mexico. Filed June 4, 1919. Serial No. 301,772. 5 Claims. (Cl. 219—40.)

1. An electric sterilizer, comprising a casing having means for the admission and delivery of a liquid, and inert electrodes of like shape contained in said casing, each electrode comprising co-axial cylinder segments of different diameters and substantially radial portions connecting said segments, the segments of adjacent electrodes being in overlapping and underlapping arrangement respectively.

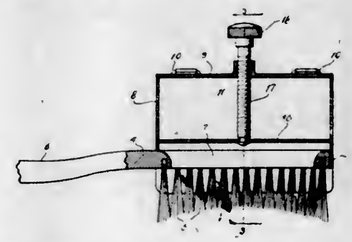


1,382,159. PROCESS OF STERILIZING LIQUIDS. LUIS G. ABOGADO, Mexico, Mexico. Filed June 4, 1919. Serial No. 301,773. 3 Claims. (Cl. 219—40.)

1. The process of sterilizing an electrically-conducting liquid, which consists in passing the liquid, in the form of a film of uniform thickness, in a spiral path, between inert electrodes, and causing a galvanic electric current (of relatively low voltage and comparatively high amper-

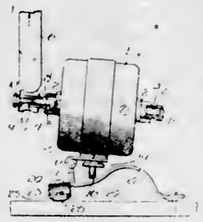
age) to flow across said film between the electrodes engaging the opposite surfaces of the spirally-moving film.

1,382,160. DEMOUNTABLE-HUB-ATTACHING DEVICE. ROBERT E. BAIRD, Salt Lake City, Utah. Filed Mar. 1, 1919. Serial No. 280,013. 7 Claims. (Cl. 301—9.)



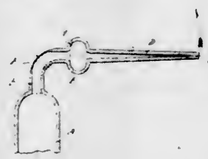
5. A hub member having lugs, and a locking member having a complementary set of lugs adapted to interlock therewith, the interengaging surface of each lug of one set comprising a flat central portion lying in a plane at right angles to the axis of the hub, and a pair of end portions lying in planes inclined to such axis and to each other, whereby relative rotation of the members in either direction causes one set of lugs to ride up the inclined surfaces of the other set, and finally rest upon the flat central surfaces thereof.

7. The combination with a fastening cap or the like adapted to be locked by an angular turning movement, of means for preventing accidental rotation of such cap, said means comprising a series of square shouldered serrations carried by said cap, and a swinging pawl having a pair of wings adapted to engage said serrations, and a pin on which said pawl is pivoted and about which it can swing to either one of two operative positions, said wings projecting substantially radially to the axis of the hub, whereby sad pawl serves to hold the cap against rotation in either direction, when swung to either operative position.



1,382,161. HEAD-BRUSH. JOHN H. BATES, Chicago, Ill. Filed June 7, 1920. Serial No. 387,263. 3 Claims. (Cl. 15—48.)

1. The combination with a brush having a longitudinally extending back provided with an opening extending nearly from end to end thereof, a handle extending and projecting from one end thereof, and bristles at the sides of said opening, of a container for the material to be forced through said opening for application to a surface by the bristles, provided with sides frictionally gripping the brush-back to secure the container and the brush

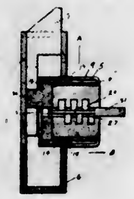


together and an end extended to lap the other end of the back, and means for forcing the material from the container and through the opening.

1,382,162. SEWING-MACHINE MOTOR. CHESTER H. BEACH, Racine, Wis., assignor to Wisconsin Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed Sept. 30, 1915. Serial No. 53,232. 20 Claims. (Cl. 74—26.)

1. In a device of the class described, an electric motor having a friction driving wheel on its armature shaft, a driven wheel adjacent said friction wheel, a supporting base, and a spring engaging said base and said motor to support the latter and hold said driving wheel in yielding engagement with said driven wheel.

1,382,163. VIAL FOR THE CONSERVATION OF MEDICAMENTAL LIQUIDS. LODOVICO BECCARI, Bologna, Italy. Filed July 18, 1919. Serial No. 311,876. 2 Claims. (Cl. 215—32.)



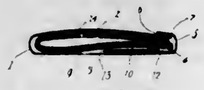
1. A glass vial comprising a container having a body and an extended neck, an enlarged globular portion on the neck, the neck being bent between the body and the globular portion so that the neck extends at right angles to the body, the outer wall of the bent part being thin whereby the neck may be easily broken.

1,382,164. KEY-LOCK. EDWARD O. BENNETT, Berkeley, Calif., assignor of fifty per cent. to Hepburn Ruhl, Chicago, Ill. Filed Apr. 14, 1919. Serial No. 289,848. 8 Claims. (Cl. 70—46.)

1. In a lock the combination of a casing; a shell within said casing; a cylinder within said shell and separable

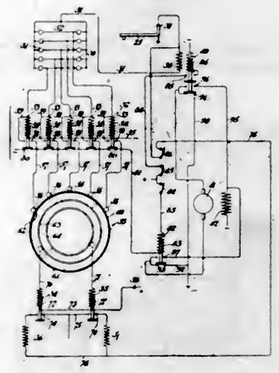
into companion segments on a line parallel with its axis; intermeshing grooves and projections on each of the companion segments for maintaining the cylinder in operative position; shell engaging means carried within the grooves and a key for moving said shell engaging means to and from engagement with the shell.

1,382,165. PROCESS OF MAKING FLUORIDS. HOWARD B. BISHOP, Media, Pa. Filed Aug. 30, 1919. Serial No. 320,796. 9 Claims. (Cl. 23—13.)



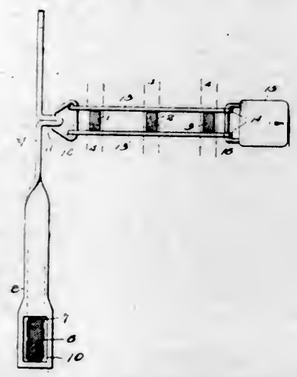
4. In the process of making fluorids the steps which consist in treating a mixture of a fluorid of an alkaline element and a gelatinous silicious compound by chemically reacting on the silicious compound to render it substantially soluble and then separating the resulting substantially soluble silicious compound from the fluorid.

1,382,166. TORPEDO. CHARLES BLUM, Philadelphia, Pa. Filed May 22, 1917. Serial No. 170,138. 7 Claims (Cl. 102—2.)



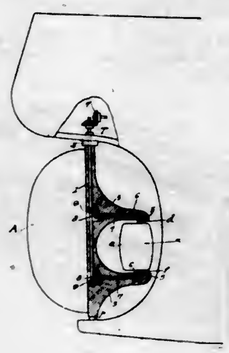
1. A torpedo structure of ultimately separable sections, primarily connected as a unit, each section including self-propelling means constructed and arranged to operate after said sections are separated.

1,382,167. CHECK-HOLDER. HERMAN BOCK, St. Paul, Minn. Filed June 25, 1920. Serial No. 391,660. 2 Claims. (Cl. 281—19.)



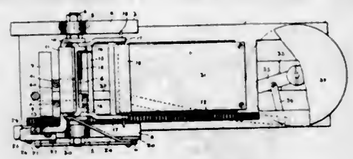
1. In a device of the character described, the combination of a holder centrally foldable to form covers, one of said covers being folded at its end to form a flap foldable over the other cover of the holder, a cross member secured to the inner face of one cover and extending across the face thereof, said cross member being unconnected to said cover intermediate of its sides whereby to form an unobstructed passage way, a check pad consisting of a plurality of checks connected together at one end, and a backing strip secured at one end to the connected end of the pad and extending inwardly underneath the pad, said backing strip having a line of fold whereby said pad may be anchored within said holder by passing said strip inwardly between the cross member and supporting cover and molding the free end of said strip inwardly between said cross member and pad.

1,382,168. AUTOMATIC DOOR-OPENING DEVICE. FREDERICK F. BRUSH, Los Angeles, Calif., assignor to Elevator Safety Appliance Company, a Corporation of California. Filed June 23, 1919. Serial No. 306,230. 8 Claims. (Cl. 188—52.)



1. An elevator comprising a car moving in a hatchway, a door closing a doorway into said hatchway, power operated mechanism for opening and closing said door, a manually operated safety bar closing an opening in said car which registers with said doorway when the car is in a proper position, and means for rendering said mechanism inoperative whenever and during the time said bar is in its open position.

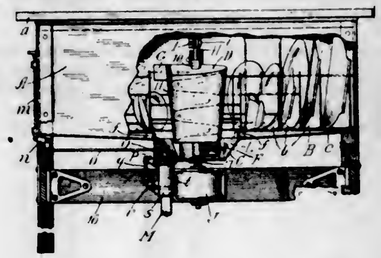
1,382,169. LEVER-LOCK. JOSEPH S. CAMPBELL, Ogden, Utah. Filed Dec. 7, 1920. Serial No. 428,960. 2 Claims. (Cl. 70—126.)



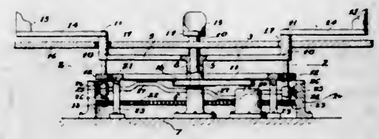
1. The combination with an anchoring device having a slot and attached to an anchor, of a link pivoted to said device, a pair of hasps pivoted to said link and adapted to lie parallel at the front and rear of control devices, and means for joining and locking the free ends of said hasps.

1,382,170. AUTOMATIC BALANCED RUDDER FOR AIR, WATER, AND SUBMARINE CRAFT. FRANCISCO CONTI, Buenos Aires, Argentina. Filed Jan. 24, 1920. Serial No. 353,840. 5 Claims. (Cl. 114—167.)

1. In combination with a ship; of a ship's rudder; means for mounting the rudder on the ship to have a free rotary movement; a controlling rudder connected to the ship's rudder and having a swinging movement relative to the ship's rudder; steering mechanism on the ship; and gearing between the steering mechanism and the controller for swinging the controlling rudder whereby the latter may move the ship's rudder for steering the ship.



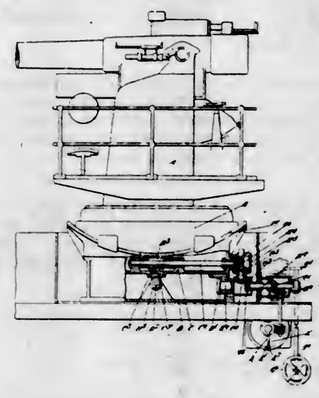
1,382,171. MACHINE FOR PRINTING TUBES. WILLIAM FREELAND CORSON, Toronto, Ontario, Canada. Filed Mar. 17, 1919. Serial No. 283,058. 5 Claims. (Cl. 101—269.)



2. A tube printing machine, comprising, a frame, a carriage reciprocally mounted on said frame, a stationary printing surface, a frame pivotally mounted on said carriage, a mandrel mounted on said pivotal frame, means arranged on the main frame for engaging and rotating said mandrel through the reciprocal movement of the carriage, a handle member pivotally supported on the carriage independent of the mandrel frame, and means operatively connected with said handle member adapted on the movement of the carriage in one direction to lift the mandrel clear of the rotating means and the printing surface and upon the movement of the carriage in the opposite direction to allow said mandrel to coöperate with the rotating means.

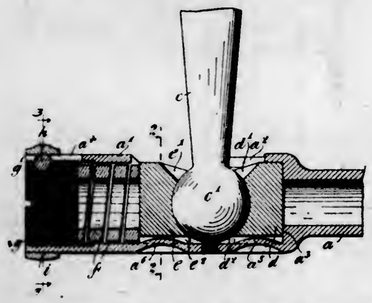
1,382,172. DISH-WASHING MACHINE. JAMES W. CROOKS, Pelham, N. Y. Filed Sept. 18, 1919. Serial No. 324,282. 12 Claims. (Cl. 141—9.)

6. A dishwashing machine having, in combination, a dishholding tank and a rotary water-circulating elevator and distributer in said tank having a spiral water passage of increasing diameter from bottom to top with an intake at its bottom and an outlet at its upper end, said outlet being of greater area than the intake.



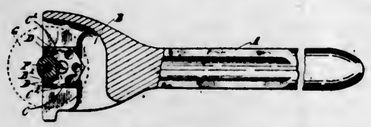
1,382,173. ROUNDABOUT. JOSEPH CZERWONKA, Chicago, Ill. Filed Apr. 24, 1920. Serial No. 376,323. 4 Claims. (Cl. 46—27.)

1. An amusement apparatus comprising a support, a rotatable member carried by a support, driving means for said member, rotatable shafts carried by said member, lateral arms carried by the shafts, passenger supports carried by the arms, pinions loose on the shafts, external and internal stationary annular racks with which the pinions respectively mesh, slidable clutch members on the shafts for establishing driving connections between the pinions and their shaft in alternation, and means for operating the clutch members.



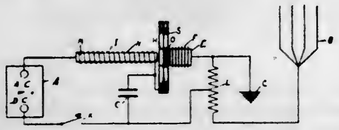
1,382,174. GUN-MOUNTING. ARTHUR TREVOR DAWSON and GEORGE THOMAS BUCKHAM, Westminster, London, England, assignors to Vickers Limited, Westminster, London, England. Filed Mar. 25, 1920. Serial No. 368,739. 8 Claims. (Cl. 89—41.)

1. The combination with a gun mounting including training and elevating mechanism for use on ships, of a leveling device which supports the mounting as a whole, power operated means for operating said leveling device and gyroscopic means on the leveling device for controlling



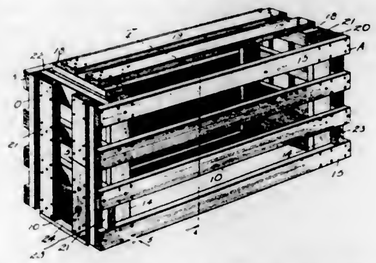
said power operated means whereby the training axis of the mounting is automatically maintained truly vertical notwithstanding the rolling, pitching and tossing of the ship.

1,382,175. DRAG-LINK. CASCIOUS H. DE LA MONTE, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 22, 1919. Serial No. 319,093. 1 Claim. (Cl. 287—90.)



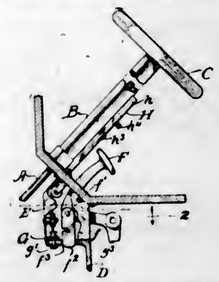
In combination, a drag link formed with a slotted tubular sleeve at one end, socket members slidably mounted in a sleeve, said members having channels, a steering arm having a ball formed at its end, the ball end adapted to rest between the socket members, said sleeve being formed with a shoulder at one end on which seats one of said socket members, a spring bearing against the other of said socket members, lugs struck inwardly in the metal of said sleeve to engage the channels in the socket members, a plug cap threaded in the end of the sleeve and forming a seat for said spring, said cap having a milled section, a split ring clamp encircling the slotted end of the sleeve, and a bolt passing through the clamp and engaging the milled section of the cap to hold it against rotation.

1,382,176. GRINDING-WHEEL DRESSER. JOSEPH DOBSON, Sheffield, England. Filed Nov. 22, 1919. Serial No. 340,014. 2 Claims. (Cl. 125—37.)



1. In a grinding wheel dresser, the combination of a holder, jaws to said holder, slots in said jaws, a pair of polygonal carriers detachably mounted in said slots, a plurality of bearing holes in said carriers, and a spindle mounted in two of said bearing holes.

1,382,177. RADIOSIGNALING APPARATUS. WILLIAM DUBILIER and PHILIP DUBILIER, New York, N. Y., assignors to Sperry Gyroscope Company, a Corporation of New York. Filed July 10, 1916. Serial No. 108,287. 7 Claims. (Cl. 250—37.)

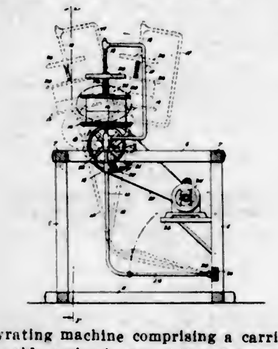


1. In a wireless telegraph apparatus, a primary current circuit containing an electro-magnetic inductive resistance, an oscillating current circuit containing a highly quenched oscillator and a radiating circuit, an electrode of the oscillator being movable and affected by the primary electromagnetic inductance, said electrode being made almost wholly of magnetic material, whereby the magnetic lines of force are brought into close proximity with the gap.

1,382,178. COLLAPSIBLE SHIPPING-CRATE. FRANK J. DULTMEIER, Manning, Iowa. Filed July 12, 1920. Serial No. 395,639. 6 Claims. (Cl. 217—15.)

1. In a collapsible crate, a bottom, a top and sides, each having longitudinal and cross members, the cross members of the sides being hinged to the cross members of the top and bottom, the longitudinal members of the sides being extended beyond the cross members thereof, the extending ends of the longitudinal side members being provided with receiving means, end gate members comprising upright members and cross members projecting beyond the upright members and adapted to have their ends received in said receiving means, said last-named cross members being spaced from each other, a locking member for each end member arranged to be received between the spaced cross members of the end member and to project between the longitudinal members of the sides.

1,382,179. LOCKING DEVICE FOR AUTOMOBILES. CHRISTOPHER W. DUNN, Milwaukee, Wis. Filed Dec. 26, 1919. Serial No. 347,403. 3 Claims. (Cl. 70—128.)

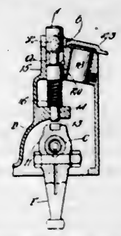


3. A locking means for automobiles, comprising a pedal, a notched link actuated therefrom and moving in a fixed path, a slide provided with a lug for engagement with the notch and movable transversely to the link, a lock for holding the link and slide in engagement, and means connecting the lock and the slide to actuate the latter into locking position when the pedal is depressed.

1,382,180. SOLE-TAP FOR BOOTS AND SHOES. ELIAS J. EMERY, Lynn, Mass. Filed Dec. 22, 1919. Serial No. 346,617. 4 Claims. (Cl. 36—29.)

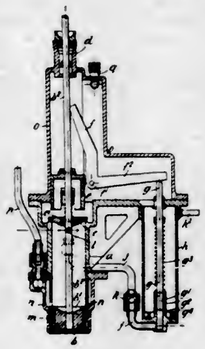
1. A tap-sole for boots and shoes adapted for attachment to the under side of the sole, having a stiffly flexible body of substantially uniform thickness throughout comprising a peripheral portion sloping upwardly toward the edge, and having a depressed central portion joined to the peripheral portion by a sloping offset, the margin of the offset and the peripheral edge being adapted when attached, by reason of the flexibility of the structure, to bear against the sole and form a double seal against air trapped in the depressed central portion and compressed by the collapse into the concavity thereof of the depressed central portion upon treading pressure by the wearer.

1,382,181. GYRATING-MACHINE. JAMES H. EMERY, New York, N. Y. Filed Feb. 17, 1921. Serial No. 445,868. 15 Claims. (Cl. 74—14.)



1. A gyrating machine comprising a carrier, means for revolving said carrier in an orbit and means for rotating said carrier on an axis making an angle other than a right angle with said orbit.

1,382,182. RAILWAY-TIE AND RAIL-FASTENER. CHARLES ELSWORTH ESTABROOK, Springport, Ind. Filed Aug. 6, 1920. Serial No. 401,710. 5 Claims. (Cl. 238—111.)



1. A railway tie comprising, anchor members, rail securing means carried by each of the members, a connecting rod extending through said members and connecting the same, keys of different sizes insertible through said connecting rod and engaging said anchor member, and means for locking said keys within said connecting rod.

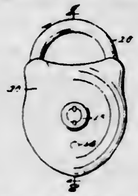
1,382,183. TRANSMISSION-LOCK. STEPHEN I. FEKETE, Detroit, Mich., assignor to Essex Motors, Detroit, Mich., a Corporation of Michigan. Filed July 2, 1920. Serial No. 393,683. 4 Claims. (Cl. 70—131.)

1. The improved transmission locking device comprising a lock, a locking pin, a socket on a movable part of the transmission to coöperate with the pin, and a cover for the lock, said locking device having provision for holding said cover against movement to uncover said lock when said pin is out of engagement with said socket.

1,382,184. PUMP FOR EXHAUSTING AIR AND GASES. HENRY ALBERT FLEUSS, Thatcham, England, assignor to The Pulsometer Engineering Company, Limited, Reading, England. Filed Jan. 4, 1919. Serial No. 269,693. 9 Claims. (Cl. 230—6.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

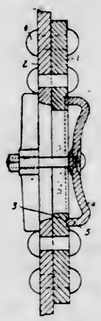
1. In combination a cylinder, a piston in the cylinder, a cylinder cover forming an outlet valve of the cylinder, the top of the piston being shaped to correspond with the underside of the cylinder cover, an inlet port in the cylinder, a ram for supplying oil to the cylinder, means for actuating the ram, a casing inclosing the ram and the ram actuating mechanism, and means for exhausting air from the casing.

1,382,185. FIRE-ALARM. STANLEY GERON, Yorkville, N. Y. Filed Apr. 17, 1920. Serial No. 374,590. 4 Claims. (Cl. 200—142.)



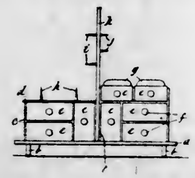
1. A device of the class described comprising, a fusible member adapted to close the upper end of a pipe connected to a source of water supply, a cap having a nozzle orifice adapted to hold said fusible member in position closing said pipe, a head adapted to be supported above said cap, a pair of normally spaced contact members on said head, adapted to close an alarm circuit when impinged upon by the water discharged from the said nozzle orifice.

1,382,186. LOCK-CASING. ELMER G. GODSHALK, Blackwell, Okla. Filed June 25, 1920. Serial No. 391,654. 6 Claims. (Cl. 70—16.)



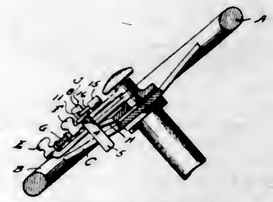
1. A lock casing comprising curved members having welded joints, rivets extending through the said sections and having their outer surfaces shaped to the contour of

the outer surfaces of the sections of the casing, and having their ends welded into the casing, a key barrel bushing



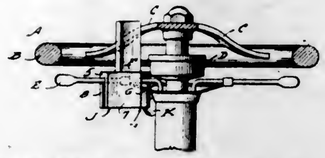
extending through the said sections, the said casing and its welded seams, welded rivets, key barrel bushing and shackle being hardened as and for the purpose described.

1,382,187. MANHOLE-FITTING. JOHN GRAY, Newcastle-upon-Tyne, England, assignor to R. & W. Hawthorn, Leslie & Company, Limited, Newcastle-upon-Tyne, England. Filed June 11, 1919. Serial No. 303,358. 1 Claim. (Cl. 220—25.)



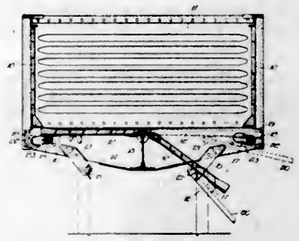
In a manhole fitting, the combination with a shell having a manhole, of a compensating plate riveted to the interior of said shell, said plate formed with a hole opposite said manhole of smaller are than said manhole, said plate having in its interior face a groove bounding said hole, and a door having an overturned marginal flange engaging said groove and forming a joint therewith, the area defined by the inner edge of said flange being no greater than the area of said manhole.

1,382,188. WORKBOX FOR DOMESTIC USE. RACHEL KELSALL, Wimbledon Park Road, England. Filed Aug. 21, 1919. Serial No. 319,022. 1 Claim. (Cl. 223—53.)



A work box having in combination a platform supported by feet, said platform supporting a chest or framework fitted with drawers slidable in or out of said chest or framework, a second platform provided with a number of spikes for supporting reels of cotton, a vertically extending board provided with spikes for supporting sewing implements, the first mentioned platform having a socket member for removably receiving said board, a body cover having loosely attached hooks to be detachably received by corresponding eye-pieces fastened to the first mentioned platform, said body cover having a top cover provided with buttons adapted to serve as supporting means for said top cover and loosely pivoted handles attached to said body cover.

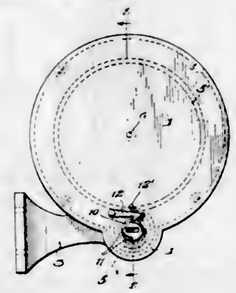
1,382,189. LOCKING DEVICE FOR MOTOR-VEHICLES. ROBERT E. HARRIS, El Paso, Tex. Filed Oct. 14, 1920. Serial No. 416,984. 10 Claims. (Cl. 70—126.)



1. In combination with a motor vehicle steering wheel including spokes and a control device for the motor including a lever and quadrant; a locking device including means for holding said lever in fixed relation to its quadrant and a projection between the spokes of said steering wheel to permit only limited circumferential movement of said wheel.

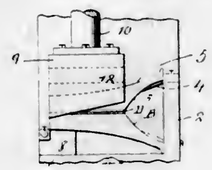
1,382,190. LOCKING DEVICE FOR MOTOR-VEHICLES. ROBERT E. HARRIS, El Paso, Tex. Filed Oct. 14, 1920. Serial No. 416,986. 6 Claims. (Cl. 70—126.)

1. A locking device for motor vehicles comprising in combination a body including an intermediate portion, a projection at one side of said intermediate portion and three fingers in grouped spaced relation extending from the other side of said intermediate portion providing two converging ways open at one end of the body, one of said fingers having a transverse notch intermediate its ends and one of said fingers confronting said last mentioned finger having a transverse aperture alined with said notch, and a padlock including a shackle adapted to be trained through said aperture and engage in said notch in its movement said shackle traversing the way between said confronting fingers.



1,382,191. GENERAL-SERVICE CAR. DAVID HINDAHL, Chicago, Ill., assignor to National Dump Car Co., Chicago, Ill., a Corporation of Maine. Filed Nov. 10, 1919. Serial No. 337,002. 12 Claims. (Cl. 105—309.)

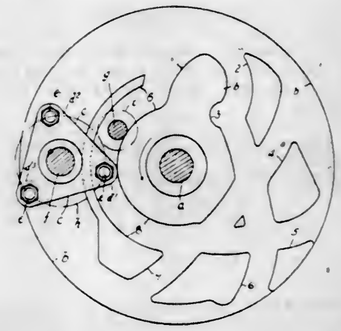
1. In a general service car having a door, a shaft, and hand operated means carried by said door for engaging said shaft for supporting the door in a given position.



1,382,192. CURTAIN-ROLLER-OPERATING DEVICE. CHRISTOPHER J. HOGAN, Newport, R. I. Filed Sept. 7, 1920. Serial No. 408,481. 1 Claim. (Cl. 156—36.)

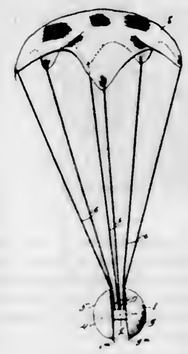
In a curtain roller operating device, a casing of cylindrical form having a radial pocket-extension formed on its periphery, said pockets formed with a small bearing in its cover and an axially alined larger bearing in the opposing wall and said casing being formed with axial shaft bearings, a shaft journaled in the latter bearings, a coiled spring mounted in the casing on the shaft for driving the same, a large gear fixed on the shaft, a second shaft journaled in the pocket and having one end portion terminating in an enlarged cylindrical part journaled in the larger pocket bearing and projecting there-

through, said projecting enlargement being of uniform diameter throughout whereby it may be inserted from within the casing through said larger bearing and having peripheral ratchet teeth and an axial socket in its end to receive an end of a shade rod, said second shaft being formed with a peripheral flange contiguous to the inner end of the said cylindrical enlargement abutting the inner wall of the pocket to prevent displacement of the shaft, a gear fixed on the second shaft in mesh with the large gear, and a pawl fixed on the casing for engaging the ratchet teeth.



1,382,193. MACHINE FOR CUTTING OFF FINS FROM ELECTRICALLY-WELDED WORK. HENRY S. HOLMES, Brooklyn, N. Y. Filed Aug. 4, 1920. Serial No. 401,165. 2 Claims. (Cl. 164—47.)

1. A shearing machine for removing fins from opposite sides of an electrically welded object, comprising a vertical support, a horizontal mandrel secured thereto at one end and adapted to enter and carry said object, a vertically movable head above said mandrel, and, on said head, two vertical shearing blades respectively disposed to receive between them said object and on descending to cut off said fins therefrom.

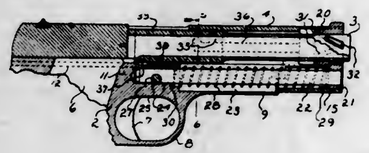


1,382,194. COMBING-MACHINE. JAMES HORRIDGE, Bolton, England, assignor of one-half to John Hetherington and Sons Limited, Manchester, England. Filed Jan. 28, 1920. Serial No. 354,675. 3 Claims. (Cl. 19—6.)

1. In a combing machine, the combination of a combing cylinder, a detaching roller, an intermediate shaft between said cylinder and roller, gearing between said shaft and roller, a member secured to said shaft for rotation therewith and having a plurality of arms, and a hollow cam member carried by said cylinder for rotation therewith and provided with cams disposed in the path of said arms

thereby to impart to said shaft a predetermined sequence of rotation in opposite directions during the rotation of the cylinder in one direction.

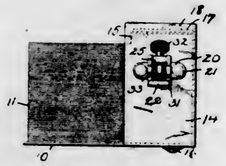
1,382,195. AERIAL TOY. EARL W. HOWE, Washington, D. C. Filed Oct. 29, 1920. Serial No. 420,303. 5 Claims. (Cl. 244—21.)



5. An aerial toy comprising a spool having a centrally reduced portion, one side of the spool being detachably connected to one end of the reduced portion, a parachute connected to the reduced portion, said parachute being adapted to be wound around the reduced portion, thereby allowing the spool with the collapsed parachute to be projected in the air, unwound and the toy as a whole be allowed to return to the ground under the control of the parachute.

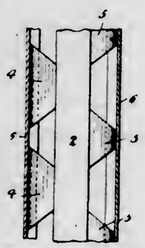
1,382,196. AZODYESTUFFS DYEING ON MORDANTS. CARL JAGERSPACHER, Basel, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Filed May 14, 1919. Serial No. 297,095. 2 Claims. (Cl. 8—1.)

1. As new products the herein described azodyestuffs dyeing on mordants, derived from aromatic orthoöxydiazocompounds and a monoalphaoxynaphthalenesulfocarboxylic acid, which combines with diazocompounds in the ortho position relatively to the hydroxyl group, without splitting off the carboxyl group, which constitute in a dry state dark powders dissolving in water and in concentrated sulfuric acid with red to violet colorations, dye



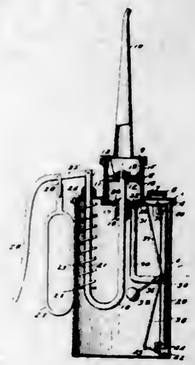
wool in an acid bath red to brown tints becoming on subsequent chroming, red to violet fast to fulling and to potting and produce, when printed on cotton with chromium mordants, red to violet tints fast to soaping, chlorin and light.

1,382,197. FIREARM. CHARLES J. JOLIDON, Hartford, Conn. Filed July 16, 1917, Serial No. 180,705. Renewed Nov. 23, 1920. Serial No. 426,107. 17 Claims. (Cl. 42—4.)



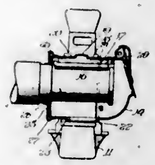
3. A firearm comprising a frame, a retractable and advanceable breech block on said frame, a barrel coöperative with the breech block, means for effecting the movement of the barrel with the breech block on retractive and advancing movements thereof, a rod detachably connected with the frame, and means associated with said rod for turning said barrel at predetermined points in said retractive and advancing movements to first release it from and then unite it with said breech block.

1,382,198. SALES-CHECK HOLDER. RICHARD J. KRAUTHEIM, Newark, N. J. Filed Mar. 6, 1920. Serial No. 363,747. 4 Claims. (Cl. 164—119.)



1. A check punch having means on one end for receiving a check to be punched, and a handle secured to the other end, said handle being box-like and adapted to be held in the hollow of the hand while the fingers thereof operate the punch, the handle having an open side at right angles to the punch.

1,382,199. METAL POLE, GIRDER, OR BEAM. MAURICE LACHMAN, New York, N. Y. Filed Apr. 22, 1920. Serial No. 375,656. 5 Claims. (Cl. 189—38.)

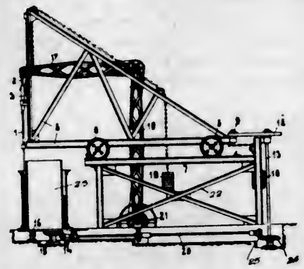


1. A metal pole or beam comprising a rolled section having flanged edges, the web of said section being divided into a plurality of portions bent alternately in opposite directions out of the normal plane of the web and members tying the projecting edges of said portions together.

1,382,200. DISPENSING-CAN. FRANK J. LACINA, Clarkson, Nebr. Filed Mar. 25, 1920. Serial No. 368,489. 9 Claims. (Cl. 221—51.)

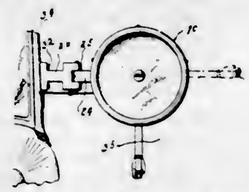
1. A device of the character described, comprising a body portion, a top upon the body portion, a cylinder in the top, a nozzle for the cylinder, a valved piston adapted to reciprocate in the cylinder, a U-shaped rod carrying the piston upon one of its arms, a pump handle pivotally connected to the other arm of the U-shaped rod, a vertically arranged pipe within the body portion, a lever pivoted approximately midway of the length of the pipe and having a weight upon one end, links connected to the opposite end of the lever and extending to the ends of the pipe, valve arms connected to the links, valves upon the valve arms adapted to be alternately seated upon the ends of the pipe, and a pipe connecting the first named pipe with the bottom of the cylinder and valved at its latter end.

1,382,201. TRUCK SIDE FRAME AND JOURNAL-BOX. JOHN A. LAMONT, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Original application filed Aug. 4, 1919, Serial No. 315,125. Divided and this application filed Aug. 21, 1920. Serial No. 405,038. 5 Claims. (Cl. 105—220.)



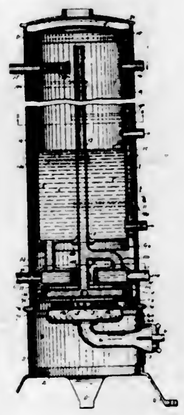
5. In combination, a truck side frame having a receiving portion for a journal box, and a journal box mounted in said receiving portion and having an annular rib and a longitudinally extending rib for positioning said box in said side frame.

1,382,202. MACHINE FOR MAKING CONCRETE PIPES OR THE LIKE. RIJKENT LAST, Enkhuizen, Netherlands. Filed Jan. 30, 1920. Serial No. 355,218. 4 Claims. (Cl. 25—37.)



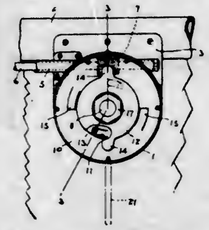
4. A machine for making concrete pipes comprising a rotatable non-circular mold, a rammer reciprocated by means of a crank and guided between blocks carried by a frame mounted upon wheels and movable horizontally, a roller on said frame at the side remote from the rammer and maintained constantly in contact with a cam of the same shape as the mold of the pipe to be rammed but smaller by half the thickness of the wall of said pipe, a

shaft carrying said cam and driven by bevel wheels from a second shaft rotated from the main shaft by a worm and worm wheel, and a bevel wheel on said second shaft



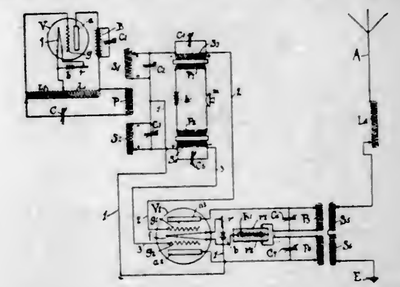
gearing with a gear wheel on the shaft of a table carrying said mold, the ratio of the gear wheels being such that said cam rotates at the same speed and in the same direction as said mold-table.

1,382,203. VEHICLE-LIGHT. NEAL LAWSON, Santa Barbara, Calif. Filed Nov. 3, 1920. Serial No. 421,563. 8 Claims. (Cl. 116—49.)



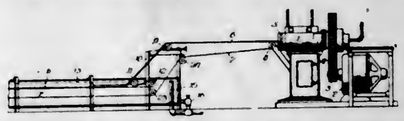
1. The combination with a support having illuminating means, of an indicator arm pivotally carried by the support in rear of the illuminating means thereon, illuminating means housed in the outer portion of said indicator arm, means for operating said indicator arm, and a shield secured to the support and extending rearwardly therefrom over the indicator arm.

1,382,204. STEAM-GENERATOR. CHARLES H. LEWIS, Syracuse, N. Y. Filed June 28, 1920. Serial No. 392,356. 9 Claims. (Cl. 122—18.)



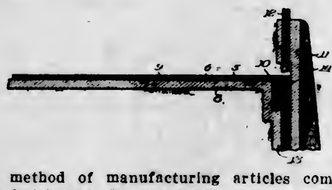
1. In a steam generator, a boiler, a drum disposed beneath and supplying water to the boiler, a steam-pipe disposed centrally in the boiler and connected with said drum, the lower end of said pipe extending below said drum and supporting a preheating member which receives water from said drum and discharges steam through said pipe into the top portion of the boiler, and an adjustable burner disposed beneath said member.

1,382,205. WINDSHIELD-CLEANER. JAMES T. LEWIS, Toronto, Ontario, Canada. Filed May 17, 1920. Serial No. 381,884. 6 Claims. (Cl. 15—59.)



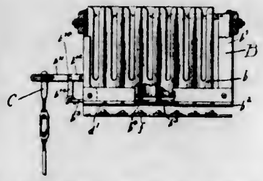
1. A windshield cleaner, comprising, a pivotal cleaning arm, mechanical means for swinging said arm on its pivot in one direction, means for disengaging said arm from said operating means, and spring means for moving the arm in the reverse direction.

1,382,206. TRANSMITTING APPARATUS. DAVID G. MCCAA, Lancaster, Pa., assignor of one-half to Cornelius D. Ebret, Mount Airy, Philadelphia, Pa. Filed Jan. 19, 1920. Serial No. 352,465. 9 Claims. (Cl. 179—171.)



1. The combination with a source of oscillations of high frequency, a primary traversed thereby, secondaries similarly inductively affected by said primary, thermionic devices comprising grid and anode circuits, said grids similarly affected by said secondaries whereby the oscillations in the anode circuits are substantially equal, means in series with said secondaries controlled by sound waves for affecting said grids in opposite senses, a transmitting conductor, and a differential coupling between said conductor and said anode circuits, whereby only when sound waves are present high frequency energy appears in said conductor.

1,382,207. RUBBER EXTRUDING, COOLING, AND CUTTING APPARATUS. LEE R. MCGUIRE, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 11, 1919. Serial No. 337,281. 10 Claims. (Cl. 18—2.)

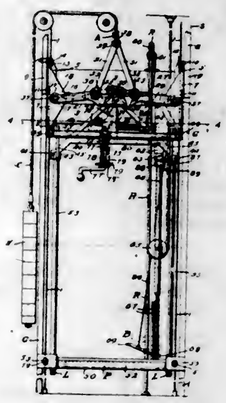


1. An apparatus for the preparation of rubber comprising a forming machine in which the rubber is formed in a strip, a tank, means for supplying the tank with water, and a conveyer for supporting and conducting the rubber strip through the tank.

1,382,208. METHOD FOR MAKING ARTICLES OF FABRIC AND RUBBER. HARVEY F. MARANVILLE, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 24, 1919. Serial No. 279,025. 7 Claims. (Cl. 154—2.)

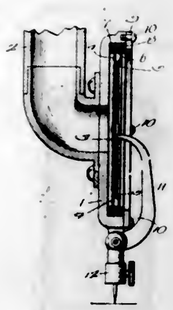
1. A method of manufacturing articles composed of strips of fabric and vulcanizable material, the fabric strips being disposed at right angles to the plane of the articles, the steps of assembling these strips and causing them to adhere by cutting into strips a fabric layer coated with a skim of rubber, and stacking the cut strips under pressure perpendicularly with respect to the original fabric layer.

1,382,209. COMBINED CAKE AND FILLER FEEDER. GUSTAVE A. MEIER, Norwood, and CLAUDE J. WICHER, Cincinnati, Ohio, assignors to The George H. Striet-mann's Sons Co., Cincinnati, Ohio, a Corporation of Ohio. Filed May 5, 1920. Serial No. 379,152. 7 Claims. (Cl. 107—1.)



1. In a cake feeding device the combination of a conveyer adapted to feed a series of rows of cakes, each carrying a deposit of filler, a series of tubes adapted to hold cakes, a fixed bottom plate having perforations in longitudinal alinement with rows of cakes upon the conveyer, means for feeding cakes from the tubes to the perforations in the bottom plate, and a pressure plate mounted adjacent to the bottom plate and having a series of perforations in longitudinal alinement with the rows of cakes and of a diameter substantially equal to that of each deposit.

1,382,210. INCLOSED SWITCH. SAMUEL A. MEYERS and CHARLES PARKER, San Francisco, Calif. Filed Nov. 20, 1917. Serial No. 202,935. 5 Claims. (Cl. 200—50.)

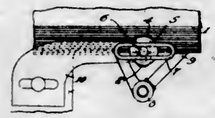


1. An inclosed switch comprising an inclosing casing, a front hinged to the casing carrying knife blades for closing the switch contacts, a spring operated member to push the front of the casing open when the current is not on, and means without the casing to lock said front in position when the current is on.

1,382,211. MANLIFT. CHARLES H. MILLER, Liberty township, Jefferson county, Iowa. Filed July 21, 1920. Serial No. 397,830. 41 Claims. (Cl. 187—15.)

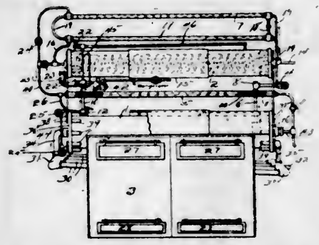
1. In a manlift, the combination with a car including a head and a carriage traveling on the shaft guides; of a weight substantially counterbalancing the car and a passenger, brake mechanism in the head coacting with said guides, connections between it and the weight for applying the brakes when the carriage has no passenger, and connections between said mechanism and the carriage whereby the weight of the passenger releases the brakes.

1,382,212. PHONOGRAPH-TRANSMITTER. GREGG K. MILLS, Chicago, Ill. Filed May 28, 1919. Serial No. 300,456. 7 Claims. (Cl. 181—32.)



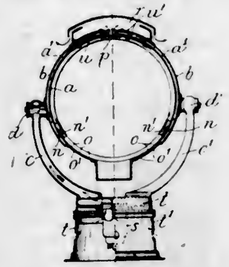
1. A transmitter for phonographs including a transmitter casing and a vibrant diaphragm carried by the casing, said diaphragm having two vibrant spaced apart rims, one of greater radial length than the other.

1,382,213. DEVICE FOR TAKING SHEETS FROM A STACK OF PAPER OR THE LIKE. WALTER EVERETT MOLINS, London, England. Filed Feb. 2, 1921. Serial No. 441,897. 3 Claims. (Cl. 271—29.)



1. An oscillating device for taking sheets of paper or the like from a stack, characterized by the fact that the pivot on which the device oscillates is connected with a support

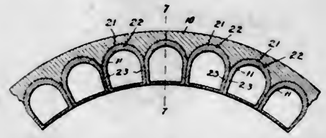
located beneath the stack of paper and is mounted in such a manner that the upper edge of the support is arranged



approximately in line with the axis of the pivot for the device, this pivot being arranged in an adjustably mounted holder.

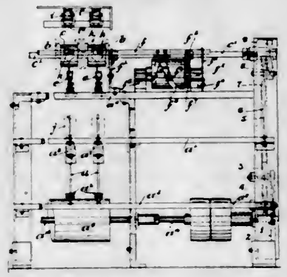
1,382,214. REFRIGERATING APPARATUS. HARRISON E. MOORE, Fort Worth, Tex., assignor to Simplex Ice Machine Company, Fort Worth, Tex., a Corporation of Arizona. Filed May 17, 1919. Serial No. 297,781. 11 Claims. (Cl. 62—118.)

1. An ice machine comprising a distillation cylinder, a storage and compression cylinder above and close to said distillation cylinder for containing a supply of ammonia, condensing apparatus including pipes having extended portions connected to said distillation cylinder at both ends for conveying vapor of ammonia to said storage cylinder and condensed water back to the distillation cylinder, and a cold water supply connected to said extended portions of said pipes.



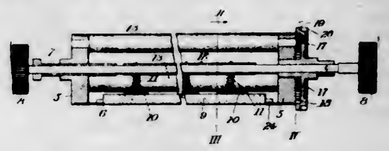
1,382,215. ELECTRICAL SEARCHLIGHT AND OTHER PROJECTOR. WILLIAM MORRIS MORDEY, Westminster, England, assignor to himself and Gwylim Anwyl Hughes, Croydon, England. Filed June 2, 1920. Serial No. 386,031. 8 Claims. (Cl. 240—41.)

8. In an electrical light projector embodying a casing, a mirror reflector and connected cooling jackets for said casing and mirror, a hollow base, a fan therein and hollow means supporting the jacket from and placing the interior of the jacket in communication with the base whereby air under pressure will be delivered into and through the jackets.



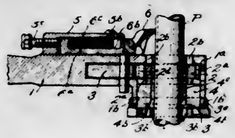
1,382,216. PNEUMATIC TIRE. AMOS F. MOREY, Oklahoma, Okla. Filed Sept. 11, 1918. Serial No. 253,504. 1 Claim. (Cl. 152—22.)

A tire construction, comprising a series of hollow members adapted to hold air under pressure and arranged in annular formation, the top portion of said members being of globular form and the bases of said members being of flat form, the side walls of said members contacting when arranged in tire form, whereby to prevent movement of the members when mounted on a vehicle wheel, and an



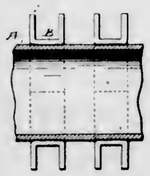
outer casing completely enveloping the top and sides of said hollow members, the inner face of said casing being provided with a plurality of depressions adapted to register with an engage the globular top portions of said hollow members, whereby to prevent accidental displacement of said members when arranged in tire formation.

1,382,217. DOUBLING, TWISTING, AND WINDING, AND LIKE FRAME. JAMES WILLIAM MORRISON and THOMAS WILLIAM HOLT, Staleybridge, England. Filed Oct. 4, 1919. Serial No. 328,481. 6 Claims. (Cl. 242—43.)



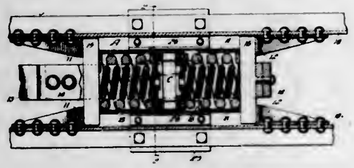
1. In a machine of the class described, a spindle mounted for rotation, a package carrier carried by said spindle for rotation therewith, a friction drum, means for traversing the yarn over said friction drum, a pivotally supported loading frame having means for removably supporting a bobbin in juxtaposition to said drum, means for swinging said frame on its pivot in one direction, and comprising a bar, a guide bracket for the bar, a loaded lever fulcrumed in said bracket, and a nose on said lever acting on said bar whereby said bar and connected frame are constantly and uniformly loaded.

1,382,218. NOISE-REDUCING TYPEWRITER-PLATEN. WILLIAM REDFORD MULOCK, Winnipeg, Manitoba, Canada. Filed Dec. 15, 1920. Serial No. 431,014. 8 Claims. (Cl. 197—147.)



1. In a typewriter platen frame, the combination with a cushioned striking or platen strip secured against rotation, of a plurality of paper-feeding rollers mounted within said platen frame and arranged at intervals around its periphery for moving a sheet of paper across said striking or platen strip, and means for simultaneously actuating said rollers.

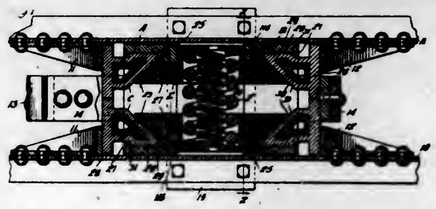
1,382,219. CUTTING-TOOL. FREDERICK MUNGER, Ellsworth, Nebr., assignor of one-half to C. Von Woehrman, Hill City, S. D. Filed June 1, 1920. Serial No. 385,649. 9 Claims. (Cl. 81—191.)



1. A machine for the purpose specified; having a handle, a cylindric head, a removable cap on one end of the head, a tool on the handle, a ring fitted in said head, and a bushing extending axially of the ring, substantially as described.

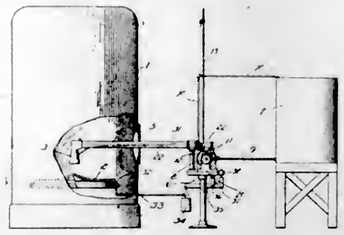
1,382,220. CIRCULATION-TUBE FOR WATER-TUBE STEAM-BOILERS. THOMAS E. MURRAY, Brooklyn, N. Y. Filed Feb. 4, 1920. Serial No. 356,347. 2 Claims. (Cl. 257—262.)

1. A circulation tube for water tube steam boilers, having on its periphery a plurality of rings; each ring having at both of its edges an outwardly turned flange formed by striking up the metal of the ring.



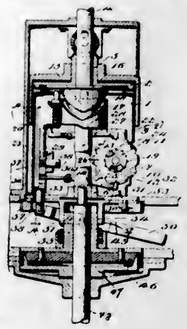
1,382,221. TANDEM DRAFT-GEAR FOR RAILWAY-CARS. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed June 11, 1919. Serial No. 303,498. Renewed May 2, 1921. Serial No. 466,219. 4 Claims. (Cl. 213—42.)

1. In a tandem shock absorbing mechanism, the combination with two alined and relatively movable casings, of tandem arranged shock absorbing units within said casings, and a pair of centrally disposed detachable followers interposed between the shock absorbing units, each of said followers being engaged by one of the casings and slidable within the other casing, each casing being slotted at its inner end to accommodate one of said followers.



1,382,222. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Apr. 26, 1920. Serial No. 376,494. Renewed May 2, 1921. Serial No. 466,220. 4 Claims. (Cl. 213—64.)

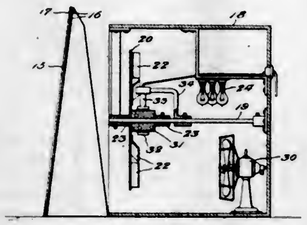
1. In a friction shock absorbing mechanism, the combination with end sets of separate wedge-shoes; of laterally movable friction shoes having end wedge surfaces cooperable with said wedge-shoes; spring means interposed between said laterally movable shoes; and a friction shell at each end of the mechanism with which said wedge-



shoes coöperate, said laterally movable friction shoes and shells having coöperating friction surfaces extending transversely of the axis of the mechanism.

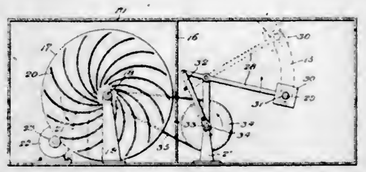
1,382,223. OIL-BURNING APPARATUS AND METHOD. WILLIAM H. PASCOE, Chicago, Ill. Filed Feb. 25, 1921. Serial No. 447,792. 21 Claims. (Cl. 158—36.)

1. A liquid fuel heating apparatus adapted to be permanently associated with a furnace and comprising means located outside of the furnace for automatically mixing liquid fuel and air, means located within the furnace for burning the fuel mixture, and a conduit of substantial length carrying the fuel mixture from the mixing means to the burner, said conduit being of sufficient length to substantially prevent the radiation or conduction of heat from the burner to the mixing means.



1,382,224. LOCKING MECHANISM FOR NUMERAL-WHEELS, &c. ARTHUR H. PITNEY, Stamford, Conn., assignor to Pitney-Bowes Postage Meter Company, Stamford, Conn., a Corporation of Delaware. Continuation of application Serial No. 335,057, filed Nov. 1, 1919. This application filed Aug. 24, 1920. Serial No. 405,634. 21 Claims. (Cl. 101—91.)

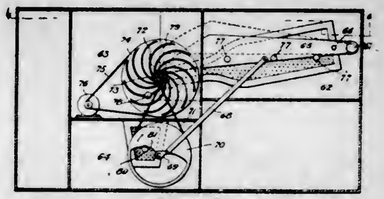
1. In registering mechanism of the character described, a plurality of numeral wheels each having a notched por-



tion; mechanism for operating the wheels; and a member having means normally and continually in contact with one or more of said wheels and arranged to successively engage the notches therein as the wheels arrive at some predetermined position, whereby said wheels are locked one at a time in such position against further operation by said operating mechanism.

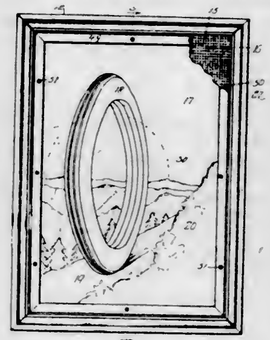
1,382,225. SIGN. GEORGE R. PYPER, Salt Lake City, Utah. Filed Nov. 21, 1919. Serial No. 339,070. 2 Claims. (Cl. 40—133.)

2. An illumined sign embodying a member having light transmitting portions, a source of light spaced from said member, a rotatable member interposed between the first mentioned member and the source of light for alternately cutting off and permitting the light's rays to reach the said first mentioned member, laterally extending radially disposed vanes carried by the rotatable member, and means for supplying a current of air to the said rotatable member to operate the same.



1,382,226. SIGN. GEORGE R. PYPER, Salt Lake City, Utah. Filed Mar. 12, 1920. Serial No. 365,357. 5 Claims. (Cl. 40—133.)

1. In a picture having an animated portion, the combination with a stationary screen plate having the subject depicted on the front thereof with an animated portion outlined by relatively small and closely spaced perforations therethrough, of a stationary source of illumination back of the plate tending to throw light simultaneously through all of said perforations, a movable screen member interposed between the stationary screen plate and the source of illumination and designed systematically to interrupt the passage of light through the perforations and thereby produce the appearance of movement in the animated portion, and means for automatically moving the screen member.



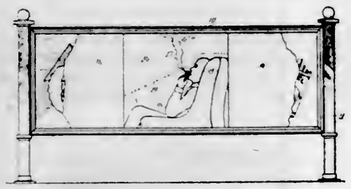
1,382,227. SIGN. GEORGE R. PYPER, Salt Lake City, Utah. Filed Mar. 12, 1920. Serial No. 365,358. 5 Claims. (Cl. 40—133.)

1. In an animated sign, the combination with a generally opaque screen plate having a receptacle outlined thereon by artificial illumination and series of relatively small, closely spaced light transmitting portions in the screen plate within the outlined receptacle and simulating when illuminated its contents, of a source of artificial illumination back of the light transmitting portions, a shutter mounted to move between the source of illumina-

tion and the light transmitting portions, and means for moving the shutter so as apparently to vary the contents of the outlined receptacle.

1,382,228. ANIMATED SIGN. GEORGE R. PYPER, Salt Lake City, Utah, assignor to Pyper Animated Sign Company, Salt Lake City, Utah, a Corporation of Utah. Filed June 30, 1920. Serial No. 392,954. 5 Claims. (Cl. 40—133.)

5. In an animated sign, the combination with a frame, of a plate supported in the front thereof and having relatively small, closely spaced perforations therein, a poster sheet securely held in front of the same, a light back of the perforated plate adapted to throw rays through all the perforations, an animating member between the light and the plate, a layer of opaque material corresponding to so much of the poster as is not to be animated interposed between it and the animating member, and means for moving the animating member.

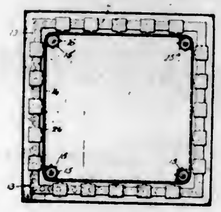


1,382,229. ANIMATED SIGN. GEORGE R. PYPER, Salt Lake City, Utah, assignor to Pyper Animated Sign Company, Salt Lake City, Utah, a Corporation of Utah. Filed June 30, 1920. Serial No. 392,955. 6 Claims. (Cl. 40—133.)

1. In an animated sign, the combination with a screen member having the animated portion thereof outlined by

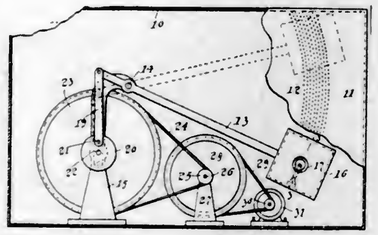
perforations therein, of a light back of the screen member, an animating member movable between the light and the screen member, said animating member containing a plurality of irregularly shaped apertures therein of different designs elongated substantially at right angles to the line of movement thereof, and means for moving the animating member steadily to produce an apparently irregular movement of the animated portion due to the irregular shape of the apertures.

1,382,230. ANIMATED SIGN. GEORGE R. PYPER, Salt Lake City, Utah, assignor to Pyper Animated Sign Company, Salt Lake City, Utah, a Corporation of Utah. Filed July 2, 1920. Serial No. 393,541. 5 Claims. (Cl. 40—133.)



1. In a sign, the combination with a screen plate perforated to outline matter to be animated, of a flexible poster sheet covering the front of the screen plate and the perforations therein and carrying any desired display matter different from the matter to be animated, said posted sheet over the perforations being translucent, a light to the rear of the screen plate, a member movable between the light and the screen plate to animate the matter outlined, and means to move the member.

1,382,231. ANIMATED SIGN. GEORGE R. PYPER, Salt Lake City, Utah, assignor to Pyper Animated Sign Company, Salt Lake City, Utah, a Corporation of Utah. Filed Sept. 10, 1920. Serial No. 409,391. 5 Claims. (Cl. 40—133.)

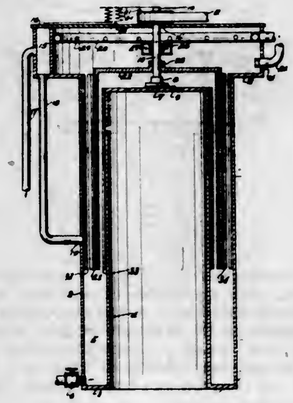


1. In a display apparatus, the combination with a screen plate having light transmitting portions to outline a design, of a source of light back of the screen plate, a plurality of shutters mounted between the screen plate and the light and capable of standing at an angle that does not interfere with the passage of the light through the light transmitting portions and also at an angle that does, and automatic means for moving the shutters at determined intervals from one angle to the other and back again.

1,382,232. ANIMATED SIGN. GEORGE R. PYPER, Salt Lake City, Utah, assignor to Pyper Animated Sign Company, Salt Lake City, Utah, a Corporation of Utah. Filed Sept. 10, 1920. Serial No. 409,392. 6 Claims. (Cl. 40—133.)

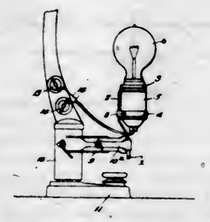
1. In an animated sign, the combination with a generally opaque plate having a portion to be animated outlined by a series of consecutive portions adapted to transmit light, of an endless member movable adjacent said consecutive portions and in a path corresponding to the outline formed by them, a source of illumination back of the screen plate, a shutter carried by the endless member between the source of illumination and the consecutive portions for the purpose described, and means for moving said endless member.

1,382,233. ANIMATED SIGN. GEORGE R. PYPER, Salt Lake City, Utah, assignor to Pyper Animated Sign Company, Salt Lake City, Utah, a Corporation of Utah. Original application filed Mar. 12, 1920, Serial No. 365,358. Divided and this application filed Sept. 27, 1920. Serial No. 413,177. 3 Claims. (Cl. 40—133.)



1. In an animated sign, the combination with a stationary screen plate having a portion thereof containing small, closely spaced perforations therein, of a stencil member mounted to move back of the perforations and having the animated object stenciled therein, means for moving the stencil member, and a light back of the stencil member so that the rays therefrom pass through the stencil and form a moving object outlined on the field of perforations through successive groups of which the outlined object is visible as it appears to move.

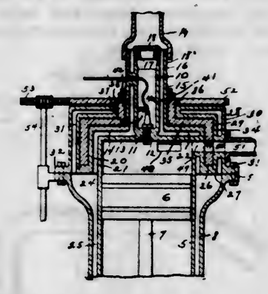
1,382,234. DEHYDRATOR FOR PETROLEUM-OILS. HENRY R. QUINBY, Maricopa, Calif., assignor to Petroleum Rectifying Company, San Francisco, Calif., a Corporation of California. Filed Feb. 25, 1920. Serial No. 361,351. 8 Claims. (Cl. 204—5.)



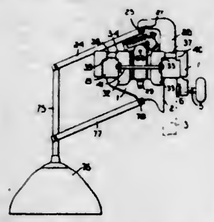
5. An apparatus for dehydrating oils, comprising an electrode formed of a pair of concentric metallic walls forming therebetween an annular space into and through

which the oil to be treated is passed; a cylindrical electrode arranged intermediately in the annular space; means

for relatively moving the electrode members; and means for maintaining a head of oil above the electrodes.



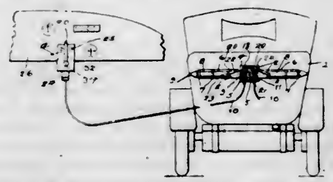
1,382,235. HOLDER FOR INCANDESCENT LIGHTS. WILLIAM ARTHUR RAYMOND, South Bend, Wash. Filed July 2, 1920. Serial No. 393,633. 1 Claim. (Cl. 240—37.)



An attachment of the character specified, comprising a bracket consisting of a plate twisted intermediate its ends to cause the wide dimension of its ends to extend at approximately right angles, one of said ends being adapted for engagement by the holding clamp of a lamp column, the other end carrying a pair of split rings spaced apart longitudinally of the said end and adapted to engage about the socket of an incandescent bulb, one of the ends of the lower ring having a tongue and the other a slot for engagement by the tongue to clamp the ring on the socket.

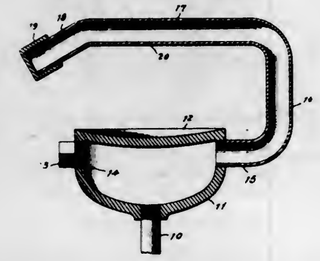
1,382,236. INTERNAL-COMBUSTION ENGINE. CLARENCE E. REES, San Diego, Calif. Filed Apr. 21, 1920. Serial No. 375,519. 1 Claim. (Cl. 123—177.)

A device of the character described comprising a cylinder having a head proper and a water jacket comprising a substantially horizontal wall overlying the top of the cylinder, a vertical wall extending downwardly along side the cylinder and an out turned ledge at the bottom of the vertical wall, a water jacket for the cylinder having an outwardly flaring upper portion, a valve casing having spaced walls the outer of which makes water tight contact with the outwardly flaring portion of the water jacket of the cylinder and the inner of which makes water tight contact with said ledge a rotative valve lying between and contacting with the valve casing and the water jacket of the cylinder head, a vertical tubular extension from the water jacket of the cylinder head, a vertical extension carried by the valve, anti-friction bearings between said vertical extensions, a driving element upon the vertical extension of the valve, a vertical tubular extension from the cylinder head which lies inside of the vertical tubular extension from the water-jacket of the cylinder head leaving an annular space between them, a closure for the top of the tubular extension of the cylinder head, a water conduit leading from the tubular extension of the water-jacket and a spark plug at the base of the tubular extension of the cylinder head which projects into the cylinder.



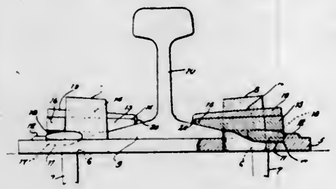
1,382,237. WATER-MOTOR. EMILE C. REUTLINGER, Boston, Mass. Filed June 11, 1919. Serial No. 303,297. 10 Claims. (Cl. 121—164.)

1. A fluid motor comprising a base having means adapted to be secured to a support and bosses integral therewith spaced apart and provided with alined cylindrical apertures, cylinders secured in said apertures, connected pistons in said cylinders, chambered heads secured to said cylinders, inlet and outlet conduits connected to said chambered heads, a valve chamber connected to said conduit, valves in said chamber for controlling communication to said cylinder heads, a bracket on one of said bosses overhanging the space between said bosses, a power transmitting arm pivotally mounted on said bracket, valve operating mechanism connected to said arm, and means connecting one of said pistons to said valve operating mechanism.



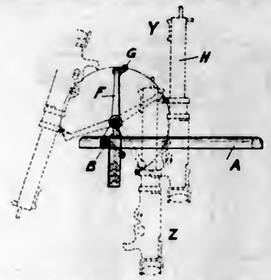
1,382,238. DIRECTION-SIGNAL. HARRY RHEAD, Trenton, N. J. Filed Jan. 22, 1921. Serial No. 439,202. 3 Claims. (Cl. 116—50.)

1. In a direction indicator, a bracket carried by the rear face of the body of an automobile, a direction indicator mounted to reciprocate in guides of said bracket and



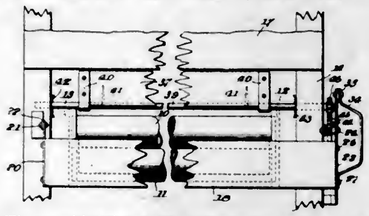
having an arrow head, operative rockable gear means mounted on said bracket and having an operative link connection with the indicator to move the indicator and extend its arrow head beyond the plane of the body of the automobile, and oscillatory means movable in a direction correspondingly with the movement of the indicator and carried by the instrument board and having a flexible rotative shaft connection with the operative rockable gear means to impart motion thereto.

1,382,239. OIL-BURNER. JOHN RHODES, Seattle, Wash., assignor of one-half to Harry H. Clark, Seattle, Wash. Filed Sept. 20, 1920. Serial No. 411,436. 1 Claim. (Cl. 158—66.)



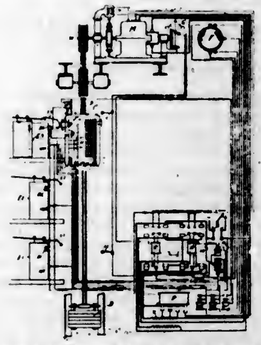
An oil burner comprising a vaporizing chamber, the said chamber having a concave recess formed in the outer top wall thereof, a fuel supply pipe communicating with the said chamber, a plug threadedly disposed in the side wall of the said chamber, a burner conduit threadedly disposed in the side wall of the said chamber diametrically opposite the said plug, the said plug and the lower end of the said burner conduit being coöperatively adapted to serve as supports for the said oil burner, the said burner conduit comprising an outwardly extending portion, an upwardly extending portion, a diametrically horizontal portion, and a downwardly disposed portion, all of the said portions being in a diametrically central vertical plane relative to the said vaporizing chamber, the said horizontal portion having a downwardly directed combustion aperture formed on the under side thereof disposed concentrically above the said concave recess and a removable cap threadedly secured to the outer end of the said burner conduit.

1,382,240. RAILROAD APPLIANCE. JOHN RICK and JOHN MOTOWSKI, Milwaukee, Wis., assignors of one-third to Edward A. Mock, Milwaukee, Wis. Filed Mar. 2, 1921. Serial No. 448,991. 6 Claims. (Cl. 238—304.)



1. In a rail fastening, a rail receiving member, and means for securing a rail to said member and including a substantially inverted U-shaped member, a fastening member adapted to be passed through said U-shaped member for engagement with the base of the rail to be secured on the receiving member, means for rigidly securing said fastening member in engagement with the rail base, and means coöperating with said securing means for preventing the accidental outward movement of the fastening member.

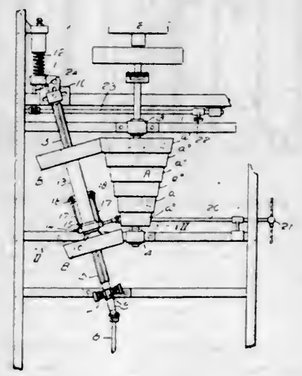
1,382,241. MOUNTING FOR GUNS. ALLIOTT VERDON ROE, Hamble, Southampton, England. Filed Dec. 1, 1917. Serial No. 204,969. 2 Claims. (Cl. 89—40.)



1. In a rotatable gun mounting, the combination of a fixed base ring with a rotatable channel ring, a pair of pivot supports on the latter, a forked gun arm with a pair of pivot members in the said pair of pivot supports, a pair of drums, one on each pivot concentric with its pivot member, a tension band associated with each drum, a crank shaft connecting the two tension bands, and a control lever rotating the said crank shaft so as to apply tension to the said tension bands, substantially as and for the purpose set forth.

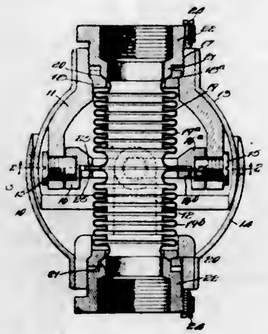
1,382,242. SAFETY-GUARD FOR CLOTHES-WRINGERS. JOHN D. ROSS, Flushing, N. Y. Filed July 15, 1920. Serial No. 396,543. 13 Claims. (Cl. 68—32.)

12. The combination with coöperating wringer rolls, of a guard member comprising a bar formed to obstruct access to the danger zone and having an upper guard edge and surface just above said danger zone, said guard member being mounted for movement into and out of guard position.



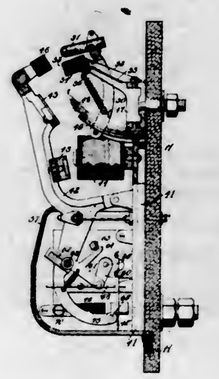
1,382,243. MOVABLE PLATFORM FOR PUSH-BUTTON ELEVATORS. ARTHUR C. ROTHENBERG, St. Louis county, Mo., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 27, 1920. Serial No. 384,519. 8 Claims. (Cl. 187—29.)

1. The combination of an electric elevator, a movable platform in the car, means to transmit the movement at any point over the entire movable platform, an electric



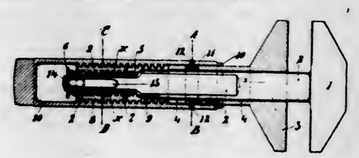
contact opened and closed by said movable platform, said contact being in parallel with the contact on the gate in the car and in series with the common feed wire of the operating circuit.

1,382,244. FRICTION-ROLL TRANSMISSION AND CHANGE-GEARING. GASTON ROUDIL, St-Ouen, and Marc Durand, Paris, France. Filed June 4, 1919. Serial No. 301,834. 6 Claims. (Cl. 74—26.)



1. A change-speed device of the friction cone type, comprising in combination a shaft mounted in relatively stationary bearings, a second shaft having a pivotally mounted bearing whereby the shaft may be moved to and from the first shaft, means acting constantly to move the second shaft toward the first shaft, a plurality of multiple conical steps secured upon one of the shafts and a plurality of conical rollers mounted on the other shaft and so disposed that each roller shall engage a group or only a portion of said steps, the rollers and steps being so related that only a single roller shall be engaged with the steps at any given time.

1,382,245. COUPLING FOR RAILWAY TRAIN-PIPES. EDWARD A. RUSSELL and EDWARD A. SCHREIPER, Chicago, Ill., assignors to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Filed June 3, 1919. Serial No. 301,439. 21 Claims. (Cl. 285—7.)

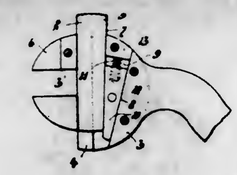


17. A flexible joint comprising a pair of members, a flexible tubular element secured at opposite ends to said members, respectively, and means for pivotally connecting the members to substantially the middle of the tubular element on axes substantially at right angles to each other.

1,382,246. ELECTROMAGNETIC SWITCH. HENRY K. SANDELL, Chicago, Ill., assignor to Herbert S. Mills, Chicago, Ill. Original application filed Sept. 11, 1916, Serial No. 119,460. Divided and this application filed Apr. 16, 1919. Serial No. 290,602. 6 Claims. (Cl. 200—97.)

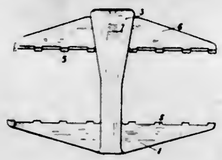
1. A circuit-breaker comprising a base carrying a contact-member, a movable contact-arm pivoted to the said base for movement toward and away from the said contact-member, electro-magnetic means for moving said arm to closed position, a brake for resisting the closing movement only of said arm, and means for automatically releasing the said brake as the arm approaches the closed position.

1,382,247. DEVICE FOR OPERATING THE JAWS OF SPANNERS AND THE LIKE. ROBERT SCHÄFER, Erfurt, Germany. Filed Apr. 28, 1920. Serial No. 377,356. 2 Claims. (Cl. 81—159.)



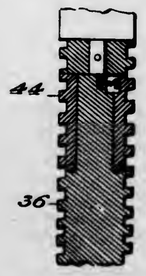
1. A device for operating the jaws of spanners and the like, comprising the combination with an internally screw-threaded sleeve connected to one jaw, of a nut having external as well as internal screw-thread fitted in said sleeve, the thread of the sleeve and the external thread of the nut being equal and interrupted so as to allow free axial relative displacement of the elements in one position and prevent such displacement in another position of relative rotary adjustment, a controlling element for the other jaw having a screw-threaded portion in engagement with the internal thread of the nut, a stop limiting the rotary displacement of the nut relative to the sleeve, and a brake-spring between said controlling element and the nut opposing the relative rotary displacement of these latter elements so that the rotary adjustment of the nut relative to the sleeve and of the controlling element relative to both can be effected by the operation of the same element, substantially as and for the purpose set forth.

1,382,248. ADJUSTABLE SPANNER. ROBERT SCHÄFER, Erfurt, Germany. Filed Jan. 3, 1921. Serial No. 435,091. 2 Claims. (Cl. 81—150.)



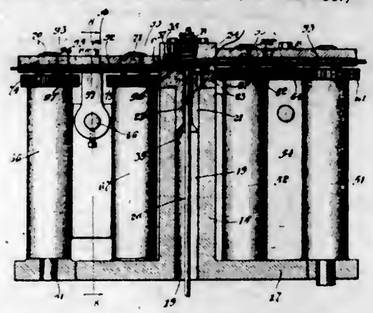
1. In an adjustable spanner, a round spanner head, a wedge-shaped bar secured to the adjustable jaw at right angles and guided in the spanner-head, the bar and head

being formed with interlocking shoulders, a locking wedge arranged in the head so as to support the bar and jam it to the shoulder of the head by the pressure on the jaw



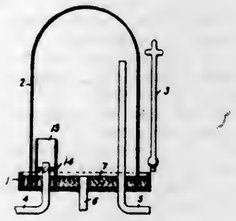
when the spanner is in use, and a spring arranged behind the locking wedge so as to hold it in locking position, substantially as set forth.

1,382,249. CLAMP FOR ANGULAR AND CROSS CONNECTIONS OF BEAMS. TAMIS CORNELIS SCHENK, Amsterdam, Netherlands. Filed Apr. 30, 1920. Serial No. 377,898. 2 Claims. (Cl. 144—297.)



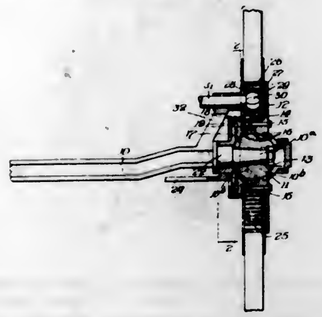
1. A clamp for members disposed at angles to each other comprising a body; a jaw at one end of the body and rigidly connected therewith, said jaw having a clamping surface for engagement with the material to be clamped; a coacting jaw fulcrumed at the other end of the body and also having a clamping surface to engage the material to be clamped, said fulcrumed jaw and body forming a toggle pivoting on the two jaws whereby a clamping action is produced when the toggle is closed and the material is confined between the jaws, the body and jaws being so shaped that the body which comprises a single relatively narrow rod fits into the corner produced by the two angularly disposed members to be clamped and in close proximity to the two members, while the jaws are in position to engage the members and clamp them together when the toggle is closed.

1,382,250. JACK FOR MOTOR-DRIVEN VEHICLES. EDWARD M. SCOTT, Oberlin, Ohio. Filed Dec. 27, 1920. Serial No. 433,253. 9 Claims. (Cl. 254—86.)



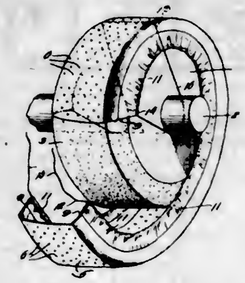
1. In a jack for motor driven vehicles, a jack member having a screwthreaded stem, with a plurality of idle rotatable sections, rotatable means mounted on said stem and engaging the screwthreads of the idle rotatable sections thereof and means for operatively connecting the drive shaft of a vehicle with said rotatable means.

1,382,251. MACHINE FOR COILING WIRE. SAMUEL P. SMURR, Chicago, Ill., assignor, by mesne assignments, to Verona V. Waldo. Filed Apr. 24, 1912. Serial No. 692,974. 29 Claims. (Cl. 153—66.)



1. In a wire coiling machine, the combination of a rotatable bed, means for rotating said bed, a coiling head secured to rotate with said bed, said coiling head being provided with a bore comprising a spirally grooved section and with recesses which open laterally into said spirally grooved section of said bore, and anti-friction rollers rotatably mounted in said recesses, substantially as described.

1,382,252. PHOTOCHEMICAL APPARATUS. WALTER O. SNELLING, Allentown, Pa. Filed Mar. 6, 1917. Serial No. 152,588. 6 Claims. (Cl. 23—24.)



1. Photochemical apparatus comprising a shallow pan or tray, a transparent dome adapted to rest thereon, fluid inlet and outlet conduits extending through the bottom of the said pan and adapted to enter the said dome, and an extension for one of the said conduits comprising a tube of larger diameter than the said conduit and in telescoped relation thereto.

1,382,253. DRIVING AND STEERING WHEEL. THOMAS SPACIE, De Kalb, Ill. Filed July 3, 1919. Serial No. 308,552. 11 Claim. (Cl. 74—101.)

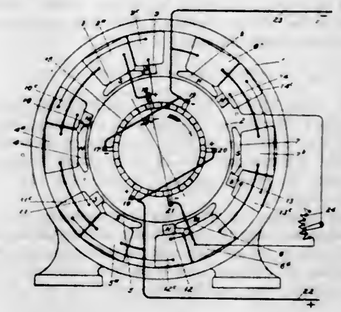
In a device of the class described, the combination of a load-carrying axle having a spherical bearing, a wheel mounted for rotation and oscillation on said bearing, a gear carried by the wheel, a driving shaft having a spherical end, the shaft being mounted vertically above the axle, and a pinion engaging said gear and provided with a spherical axial recess adapted to accommodate the spherical end of the shaft, the end and said pinion having interengaging ellipsoidal lugs, substantially as described.

1,382,254. BURNISHING-WHEEL COVER. CHRIS SPASOFF, Berkeley, Calif. Filed Oct. 9, 1920. Serial No. 415,880. 5 Claims. (Cl. 51—194.)

5. A burnishing wheel cover consisting of a band of heavy pliable material of slightly greater width than the face of the wheel, a strip of thin flexible material secured to each longitudinal edge of said band, and a gathering cord in the free edge of each of said strips.

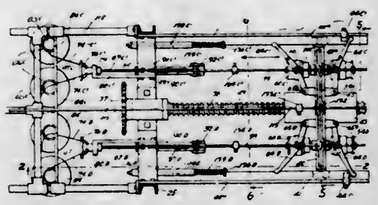
1,382,255. SEAL FOR WELL-SCREENS AND MEANS FOR SETTING SAME. ALEXANDER THOMSON and VERRIN B. DANIELS, Sour Lake, Tex. Filed Nov. 23, 1920. Serial No. 425,957. 3 Claims. (Cl. 166—10.)

1. A seal for well screens and means for setting same comprising a carrying means for the screen having a coupling at its upper end, and a sleeve member connected with the coupling, a collar slidable on said sleeve, an expansible ring between the coupling and sleeve, said slidable collar being arranged to expand the expansible ring when in place into engagement with the interior of the well casing.



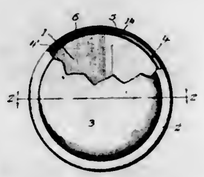
1,382,256. WATCH. LOUIS TOMCHIN, Brooklyn, N. Y. Filed Aug. 12, 1920. Serial No. 402,939. 1 Claim. (Cl. 224—4.)

In combination, a watch of the character designated, a casing therefor formed with diametrically opposed peripheral shouldered recesses and with an intermediate peripheral shouldered recess, the exterior edges of said recesses being flat and extending in planes transversely at right angles to the central axis of the watch, and detachable interchangeable auxiliary coupling devices formed with



flat bases abutting against the said flat edges on the peripheral recesses in the watch casing, and with pivotally crossed spring latch levers adapted to engage with said shouldered recesses in the watch casing, for the purpose described.

1,382,257. VARIABLE-SPEED CONSTANT-VOLTAGE GENERATOR. WILLIAM A. TURBAYNE, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Nov. 6, 1916. Serial No. 129,669. 10 Claims. (Cl. 171—223.)

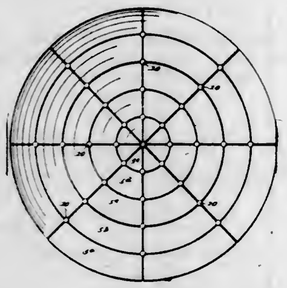


1. In a variable speed generator, means for providing field flux, an armature, main brushes coöperating with said armature, auxiliary brushes coöperating with said main brushes to supply current for energizing said means, and means responsive to the voltage across said auxiliary brushes for distorting the flux due to said first mentioned means.

1,382,258. WIRE-COILING MACHINE. EDWARD TURGEON, Minneapolis, Minn. Filed Feb. 2, 1920. Serial No. 355,694. 24 Claims. (Cl. 153—64.)

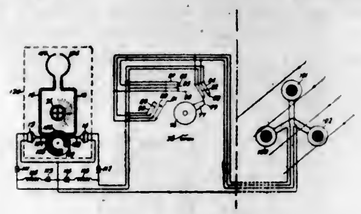
1. A wire cable forming machine comprising, in combination, a frame, a carriage mounted to travel forward and backward thereon, wire coilers mounted on said carriage and coöperating with stationary coil formers for forming a wire cable on the forward movement of the carriage, and a similar cable on the backward movement thereof.

1,382,259. LAMP. JOSEPH WALKER, Chicago, Ill., assignor to Angsten-Kox Company, Chicago, Ill., a Corporation of Illinois. Filed May 26, 1919. Serial No. 299,697. 8 Claims. (Cl. 240—111.)



1. In a lamp of the kind described and in combination, a sheet metal cup-shaped body, said body having the edge cut spirally and thence bent outwardly to provide substantially a quarter round spiral thread decreasing in size and having its inner end terminating substantially adjacent the body, a transparent plate of size to fit the open end of the body and arranged thereat, and means for securing said plate in place on the body comprising a ring shaped part constructed to overlie the edge of said plate and bent over on its outer edge to engage and coöperate with said thread on the body, a portion of the outer edge cut away to provide clearance of the body edge to permit seating or unseating the rim.

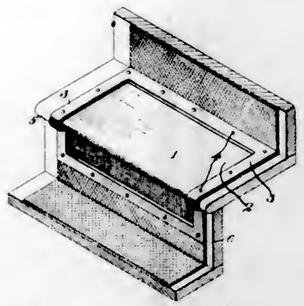
1,382,260. PROCESS OF FORMING BURSTING CHARGE. CLIFFORD A. WOODBURY, Middletown township, Delaware county, Pa., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 4, 1918. Serial No. 226,712. 13 Claims. (Cl. 52—22.)



11. The process of charging an explosive container which comprises mixing a substance whose molecule contains a picryloxy group with a material comprising molten trinitrotoluol to dissolve and hold said substance in suspension therein and pouring the mixture into the container.

1,382,261. COMPOSITE REFLECTOR AND METHOD OF MAKING THE SAME. CARL E. AKELEY, New York, N. Y. Filed Mar. 19, 1919. Serial No. 283,648. 4 Claims. (Cl. 88—1.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. The method of making a composite reflector which consists in first providing a porous templet, then building up a reflector comprising a plurality of segments on said templet, then applying a backing of cementitious material to said reflector and finally in removing said reflector and backing from said templet by the use of a liquid percolating through said templet.



1,382,262. SWITCHING SYSTEM AND INDICATING DEVICE THEREFOR. ROY M. ALLEN, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 16, 1919. Serial No. 311,204. 6 Claims. (Cl. 181—0.5.)

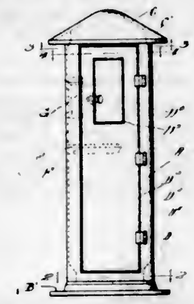
1. In a switching system, a plurality of vibration detectors, an observing station, a binaural observation set thereat, means at the observing station for selectively associating pairs of detectors with the observation set, and a plurality of indicating means adapted for selective association with the observation set under control of the detector selecting means.

4. In an indicating device for a compensator, a rotatable shaft having a longitudinal channel therein, a cam member slidably mounted in the channel, a drum carried by the shaft, a plurality of plungers in the drum opposite the channel, a plurality of normally disconnected indicating scale-carrying sleeves surrounding the drum, and means for moving the member within the channel to cause the cam to selectively engage the plungers, thereby selectively locking the sleeves to the shaft.

1,382,263. CARPET OR THE LIKE MOUNTING FOR STAIRWAYS. CHARLES D. ARMSTRONG, San Francisco, Calif. Filed Mar. 6, 1920. Serial No. 363,821. 1 Claim. (Cl. 20—79.)

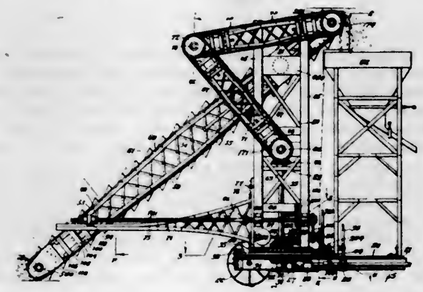
A device for renewing carpet or the like on the tread surface of steps including a thin plate made to overlie the tread of one step and the riser of an adjacent step, a depression in that portion of the plate which overlies both the tread surface of one step and the riser of an adjacent step, said depression made to receive the material to be mounted and forming a raised surface on the under side of the plate, said raised surface being accommodated by the thickness of the existing step covering, and means for mounting the plate upon a step.

1,382,264. HUSKING-MACHINE. WILLIAM SEWARD BAIRD, Decatur, Ill., assignor to Baird Corn Husker Co., Champaign, Ill., a Corporation of South Dakota. Original application filed May 26, 1916, Serial No. 99,992. Divided and this application filed Mar. 21, 1918. Serial No. 223,848. 10 Claims. (Cl. 130—5.)



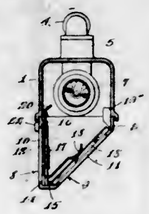
1. In combination in a husking machine, a pair of stalk engaging rollers, said rollers each having longitudinal cut-

out portions providing channels extending entirely thereacross, the raised portions of said rollers formed by said channels having cutout parts to provide on said rolls a



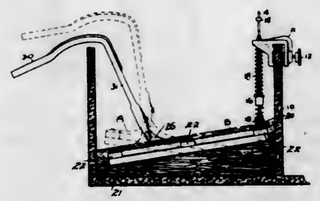
plurality of substantially rectangular shaped extensions, the rectangular shaped extension of one roll fitting in the corresponding pocket in an adjacent roll formed by said cutout portions.

1,382,265. TELEPHONE-BOOTH. FRANK F. BEEBY, Chicago, Ill., assignor to Cement-Gun Construction Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 24, 1919. Serial No. 340,316. 2 Claims. (Cl. 72—1.)



1. A sectional reinforced concrete booth, comprising a circular base, a circular bearing surface thereabout, a cylindrical body section open at top and bottom, said body thickened and reinforced at the top and bottom, the thickened bottom edge adapted to engage the circular bearing surface of the base, a circular convex roof section, a circular bearing surface within the periphery thereof, adapted to engage the thickened upper edge of the body.

1,382,266. CONVEYING APPARATUS. ARTHUR E. BENNETT, Buffalo, N. Y., assignor of one-half to Harry B. Staley, Buffalo, N. Y. Filed Aug. 13, 1919. Serial No. 317,104. 7 Claims. (Cl. 193—6.)

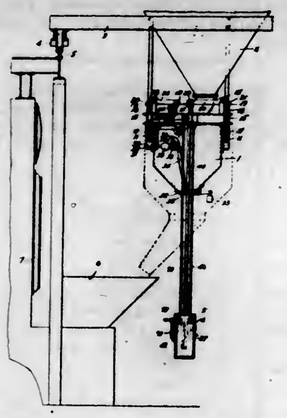


1. A conveying apparatus comprising a standard, a substantially horizontal and rigid supporting beam connected to said standard, a conveyer frame pivotally and slidably mounted on said standard and supported at its lower end slidably upon said supporting beam, adjustable means connected to the lower end of said conveyer frame and to said standard for moving the conveyer frame outwardly or inwardly on said supporting beam, a conveyer mounted on said conveyer frame, and power transmission between said conveyer and said main frame operating independently of the relative position of the different parts which support said conveyer.

1,382,267. PORCH-LIGHT. CARL H. BISSELL, Syracuse, N. Y., assignor to Crouse-Hinds Company, Syracuse, N. Y., a Corporation of New York. Filed June 21, 1918. Serial No. 241,220. 4 Claims. (Cl. 240—11.)

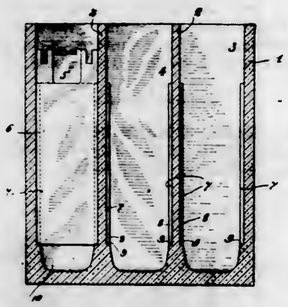
2. A porch light comprising a box including upper and lower sections, the upper section having means for connection with an electric conduit, and means for supporting an electric lamp socket, the upper section being open at its lower side and provided with shoulders at opposite ends of the open side, the lower section being open at its upper side and detachably mounted on the lower side of the upper section and having fixed shoulders for interlocking with the shoulders on either side of the upper section, and latches coacting with the shoulders on the opposite side of the upper section, substantially as and for the purpose described.

1,382,268. WASHING-MACHINE. CHARLES L. BREHIO, Worcester, Mass. Filed July 7, 1920. Serial No. 394,449. 4 Claims. (Cl. 68—19.)



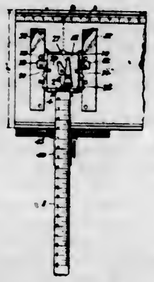
1. In a washing machine, the combination of a movable platform having two air chambers at opposite ends opening below the water, whereby when either end of the platform is raised suction will be produced to cause circulation of the water, means for yieldingly supporting one end of the platform adjacent to one of said chambers, and means at the other end of the platform adjacent to the other chamber by which said other end can be raised and lowered.

1,382,269. SCALE. WILLIAM PENNEFATHER BUCHAN, Minneapolis, Minn. Filed July 21, 1919. Serial No. 312,376. 8 Claims. (Cl. 249—1.)



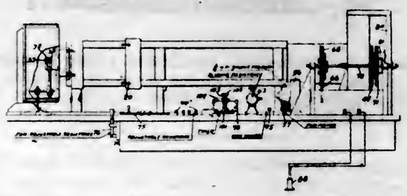
1. Weighing scales having in combination, a container to hold matter to be weighed, the container having a discharge opening, a gate normally closing the discharge opening, a feed member having an opening to feed matter to said container, a gate normally closing the feed opening, a balance lever connected to said container and adapted to assume a balanced position to indicate weight of container contents, manually operable means to open the feed

gate and the discharge gate, and means controlled by the balance lever to lock said gate-opening means against op-



eration except when the balance lever is in balanced position.

1,382,270. STORAGE BATTERY. ALVIN BUGBEE, Trenton, N. J. Filed Apr. 21, 1920. Serial No. 375,485. 4 Claims. (Cl. 204—29.)



1. A storage battery container formed of an integral piece of hard porcelain and containing a plurality of storage cell chambers.

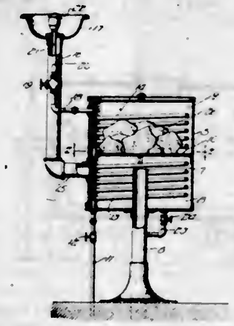
1,382,271. UNIVERSAL TEMPLET FOR STRUCTURAL STEEL WORK. EDGAR W. CUNNINGHAM, New Brunswick, N. J. Filed Aug. 18, 1920. Serial No. 404,369. 10 Claims. (Cl. 33—189.)

1. A device for marking perforations in structural steel members, comprising a scale bar, a templet head secured thereto, templet plate holders adjustably mounted in said head, and a T-head adjustably mounted on said scale bar.

1,382,272. SENSITOMETER FOR TESTING WITH ACCURACY THE SPEED, LATITUDE, AND COLOR SENSITIVITY OF PHOTOGRAPHIC PLATES AND FILMS. RAYMOND DAVIS, Washington, D. C. Filed Dec. 15, 1920. Serial No. 430,961. 3 Claims. (Cl. 95—10.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

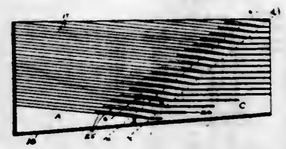
1. A sensitometer comprising a source of light and a test specimen carrier relatively adjustable toward and from one another and a light tight tunnel coöperating with the two and adjustable in length to correspond with the distance therebetween.

1,382,273. COMBINED TRANSMITTER AND RECEIVER. WILLIAM W. DEAN, Rochester, N. Y., assignor to Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed May 4, 1916. Serial No. 95,306. 13 Claims. (Cl. 179—103.)



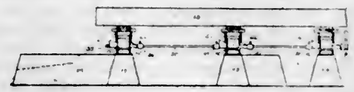
1. In a device of the class described, a relatively thin sheet metal shell for housing a telephone instrument, a handle member for said housing, said handle member comprising a thin walled metal tube, said shell having a threaded opening in one side wall which opening is substantially tangent to an adjacent wall, said tube being threaded into said opening and projecting into the shell substantially tangent to said latter wall, and a rivet passing through said latter wall and the adjacent side wall only of said tube, said rivet passing through the wall of the shell and the wall of the tube beyond the threaded opening and holding the tube against turning in the threads and also holding the end of the tube rigidly in contact with said tangent wall.

1,382,274. FOUNTAIN. FRANKLIN M. DE BEERS, Glencoe, Ill., assignor to Swenson Evaporator Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 15, 1919. Serial No. 282,923. 2 Claims. (Cl. 62—147.)



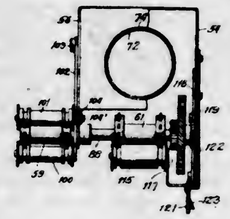
1. A device of the character described having in combination a tank; a perforate partition dividing the tank

into an upper compartment to contain ice and a lower compartment to receive waste liquid from the upper compartment; a coil in each compartment, said coils connected together, the liquid inlet of the lower coil passing through a wall of the lower compartment and the dis-



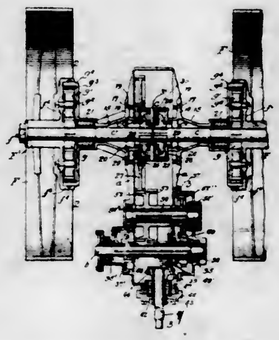
charge terminal of the upper coil passing through a wall of the upper compartment and a waste pipe connected to the lower compartment to return the waste cold liquid from the discharge terminal of the upper coil to said lower compartment to chill the liquid in the lower coil.

1,382,275. ORE-CONCENTRATOR. EMIL DEISTER, Fort Wayne, Ind., assignor to Deister Machine Company, Fort Wayne, Ind., a Corporation. Filed Dec. 26, 1919. Serial No. 347,509. 2 Claims. (Cl. 83—88.)



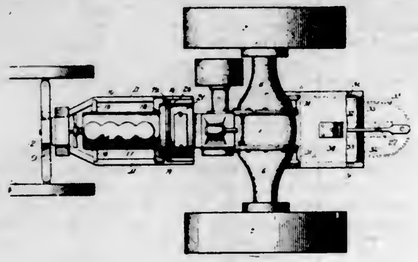
1. In a transversely inclined differentially reciprocating concentrating table the combination with a deck, of main riffles thereon extending in the direction of travel of the minerals toward the mineral discharge end of the deck and having a portion of their upper surfaces sloping downwardly toward the tailings discharge side of the deck and a flat portion substantially parallel with the surface of the deck, each of said riffles having side walls substantially at right angles to the surface of the deck, the portion of each said riffle facing the feed side of the deck being greater in height than the opposite side thereof and the width of each riffle being substantially greater than the height thereof, the forward end of each said riffle being tapered to reduce its height and cap riffles on the flat portion of the upper surface of the main riffles to increase the height of the upper vertical side walls of the riffles.

1,382,276. SUPPORTING MECHANISM FOR ORE-CONCENTRATORS. EMIL DEISTER and WILLIAM F. DEISTER, Fort Wayne, Ind., assignors to Deister Machine Company, Fort Wayne, Ind., a Corporation. Filed Nov. 17, 1919. Serial No. 338,722. 1 Claim. (Cl. 83—88.)



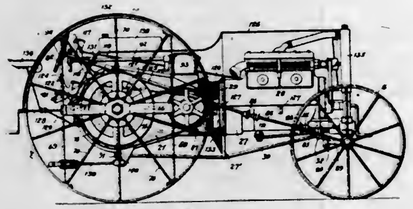
In supporting mechanism for ore concentrating tables, the combination of a plurality of bearings rigidly fixed beneath one side of the table upon which the table pivots and reciprocates, a plurality of adjustably supported bearings beneath the opposite side of the table each comprising a hollow base section, a bearing carrying section vertically movable in the base section, a reciprocable member supported in the base section and carrying three wedges adapted to engage the lower end of the bearing-carrying section at three points and means connecting all the wedge carrying members for simultaneously operating the same to control the inclination of the table.

1,382,277. MOTION-PICTURE MACHINE. HERMAN A. DE VRY, Chicago, Ill., assignor to The De Vry Corporation, Chicago, Ill., a Corporation of Illinois. Original application filed Aug. 16, 1915, Serial No. 45,633. Divided and this application filed Sept. 28, 1916. Serial No. 122,586. 8 Claims. (Cl. 88—17.)



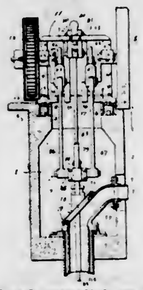
1. In film feeding mechanism, the combination of a sprocket, an idler for holding a film on the sprocket, a movable idler support, a spring latch provided with means to positively lock the support in position to hold the idlers in operative relation to the film, and means on the support whereby it may be shifted.

1,382,278. VARIABLE-SPEED-TRANSMISSION GEARING. JOHN B. FOOTE, Oak Park, Ill. Filed July 16, 1917. Serial No. 180,750. 5 Claims. (Cl. 74—58.)



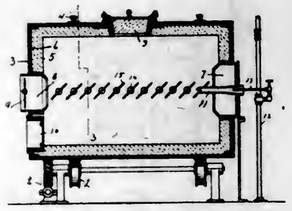
1. In transmission gearing, the combination of a case, differential gearing in the case, a transverse drive-shaft mounted in the case, a longitudinal shaft connected to drive the transverse drive-shaft, an external gear on and for driving the differential gearing, an intermediate transverse shaft mounted in the case, a gear on the intermediate shaft constantly meshing with the gear on the differential, and gearing between said shafts for driving the gear on the intermediate shaft at high, low and intermediate speeds in one direction and inclosed in the case the driving connection between said longitudinal and transverse drive-shaft and said gearing comprising a plurality of pinions, one of which is slidably mounted on the hub of said fixed gear and adapted to be driven thereby.

1,382,279. TRACTOR. JOHN B. FOOTE, Oak Park, Ill. Filed Oct. 4, 1919. Serial No. 328,577. 5 Claims. (Cl. 180—54.)



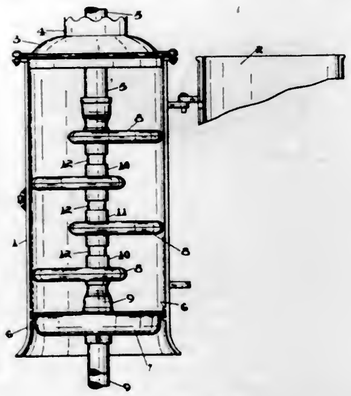
1. In a tractor, the combination of front and rear axles, a supporting structure comprising a transmission gear-case extending around and inclosing one of said axles and an open frame having one of its ends supported on the other axle and sides secured to the gear case, and a motor secured on said sides and removable therefrom while the frame-sides remain attached to the gear case.

1,382,280. MOTOR-DRIVEN VEHICLE. JOHN B. FOOTE, Oak Park, Ill. Filed Aug. 25, 1917. Serial No. 188,091. Renewed Apr. 5, 1921. Serial No. 458,760. 15 Claims. (Cl. 180—54.)



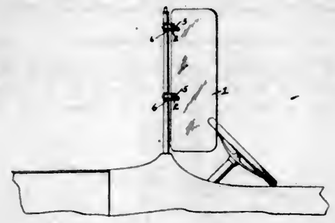
1. In a tractor, the combination of front and rear axles, one of which is driven and the other of which is tiltable, a motor, transmission gearing driven by the motor, and connected to drive the driven axle, a case for said gearing inclosing the driven axle, and a supporting structure separate from the gear-case on which the motor is supported, having one of its ends extended to and supported by the tiltable axle and its other end rigidly secured to the other end of said case, said motor being separate and removable from said structure without disconnecting the structure from the case.

1,382,281. PUMP-HEAD. SAMUEL M. FULTON, Pomona, Calif. Original application filed Jan. 14, 1920, Serial No. 351,480. Divided and this application filed Aug. 7, 1920. Serial No 401,838. 5 Claims. (Cl. 74—14.)



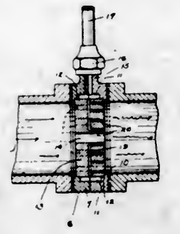
1. In a pump-head, parallel walking beams, a crank shaft having opposed crank arms, intermediate crank disks and crank pins connecting the adjacent arms and disks, and slide blocks engaging the crank pins and walking beams.

1,382,282. PROCESS FOR MAKING LITHARGE AND RED LEAD. HENRY M. GABEL, Cincinnati, Ohio. Filed Dec. 6, 1919. Serial No. 343,067. 1 Claim. (Cl. 75—19.)



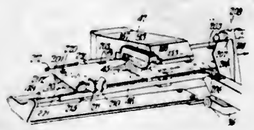
The process of making litharge which comprises comminuting metallic lead and repeatedly and successively bringing the comminuted lead into contact with an oxidizing gas and subjecting it to an abrasive action, the said oxidizing gas being heated during succeeding intervals of time to temperatures for first drossing said lead and then converting the drossed lead into litharge.

1,382,283. WATER-HEATER USING A FLUID FUEL. JOHN FRANCIS GOODWIN, Sarnia, Ontario, Canada. Filed Oct. 13, 1919. Serial No. 330,244. 2 Claims. (Cl. 122—216.)



1. A sheet metal water section for a water heater shaped in plan as the segment of a circle greater than a semi-circle and formed of two horizontal parts welded together and provided with a water connection opening in one side at the center of the circle of which the curved edge of the section is an arc, and a second water connection opening in the other side close to the curved edge and also to the straight edge of the section, a sheet metal partition starting from the straight edge of the section adjacent the outer opening and extending substantially concentric with the curved side to a point adjacent to but spaced from the said straight edge, a second partition substantially concentric with the first starting from the straight edge at the opposite side of the central opening from the starting point of the first partition and extending about said central opening to a point adjacent to, but spaced from the straight edge, the partitions being spaced and proportioned to provide a continuous waterway of approximately the same cross sectional area at all points in its length and being welded in place.

1,382,284. AUXILIARY WINDSHIELD. ROBERT L. GREER, San Diego, Calif. Filed June 5, 1919. Serial No. 302,034. 3 Claims. (Cl. 296—84.)



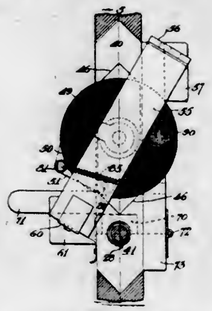
1. An auxiliary wind shield for vehicles, including a transparent wind shield member, a pair of resilient clips sprung over the edge of said transparent shield member in spaced relation with their extended ends adapted to engage the opposite sides of said transparent shield member and an arm member secured to the side of each of said spring clips and a clamp support pivotally connected to each of said arm members at their one ends and secured to the conventional bolts on the conventional wind shield at their other ends.

1,382,285. ENGINE ATTACHMENT. RALPH W. HARRIS, Newark, Ohio. Filed Sept. 3, 1920. Serial No. 408,035. 3 Claims. (Cl. 123—119.)

1. A fuel mixture homogenizer for internal combustion engines, comprising a body portion arranged to be positioned in connnection with the intake conduit of an engine, a perforated heating plate carried by said portion and situated within said conduit, said plate having openings formed therein to permit of the passage of the fuel mixture therethrough, said body portion being provided with an annular chamber disposed in communication with ports provided in said plate and establishing communication between said conduit and said chamber, and means for leading a portion of the exhaust gases of said engine into said chamber to effect the heating of said plate and the introduction of said gases into said conduit.

1,382,286. COMBINED TYPEWRITING AND COMPUTING MACHINE. FREDERICK A. HART, Newark, N. J., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Oct. 16, 1916. Serial No. 125,877. 45 Claims. (Cl. 235—60.)

4. In a computing machine, the combination with number-indexing means, of a plurality of registers, each register comprising wheels, actuating means effective to rotate said wheels in one direction only, mechanism for registering positive and negative values of an indexed number in different registers simultaneously, and means for determining whether the affected register mechanism shall record positive or negative values in said registers.

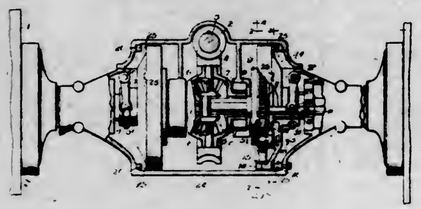


10. In a computing machine, the combination with a plurality of registers, of key-actuated indexing means including a plurality of denomination selectors, a plurality of settable tappets on each of said selectors, and means for determining the selectors to be effective and the registers with respect to which the selectors, so determined, are to be effective, including a perforated bar settable to different positions to coöperate with said tappets to effect a setting of the same and thereby determine the selectors to be effective, and the registers with respect to which said selectors are to be effective.

24. In a computing machine, the combination with computing mechanism normally set for addition, of means to set said computing mechanism for subtraction, a denomination selector, a settable tappet on said selector for actuating said setting means for automatically shifting the computing mechanism to subtraction, and an adjustable element for causing said tappet to assume an ineffective position on said selector.

1,382,287. PROCESS OF CONVERTING PROPELLENT POWDERS INTO DETONATING EXPLOSIVES. JOHN HERBERT HUNTER, U. S. Army. Filed Sept. 3, 1920. Serial No. 408,044. 4 Claims. (Cl. 52—20.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

2. The process of converting propellent powders into detonating explosives consisting in pulverizing and separating the pulverized powder according to the degree of pulverization.

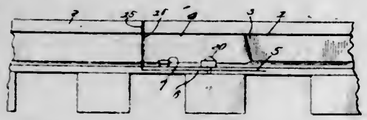


1,382,288. FILM-WINDING MACHINE. DEMETRY ISNOW, Los Angeles, Calif., assignor to Michael Leshing, Los Angeles, Calif. Filed June 10, 1918. Serial No. 239,319. Renewed Nov. 29, 1920. Serial No. 427,209. 5 Claims. (Cl. 242—55.)

1. A friction device for maintaining a uniform tension on a roll of material as it is unwound and therefore decreases in diameter comprising a carrier upon which the roll of material is carried; said carrier having a cone formed on one end thereof; a pin on which said carrier turns; a cam slide having a conical depression into which said cone fits; guides in which said cam slide is free to move along said pin; a spring slide block through which said pin passes fixed to said guides; a fixed cam secured to said spring slide block about said pin; a movable cam free to turn on said pin, said movable cam coacting with said fixed cam to force said cam slide into engagement with said carrier; a radial arm secured to said movable cam and by which said movable cam may be turned; a link pivoted at one end on said arm and at the other end on a roller pin; a roller turning on said pin and so situated as to bear on the outer surface of said roll of material;

two members pivoted at one end on said roller pin and at the other end on a pivot fixed with relation to said guides; and a spring so placed as to hold said roller in contact with said material.

1,382,289. SPEED-REDUCING MECHANISM. JOHN JANICKI, Chicago, Ill., assignor to Leonard S. Szumkowski, Chicago, Ill. Filed Dec. 4, 1919. Serial No. 342,487. 9 Claims. (Cl. 74—34.)

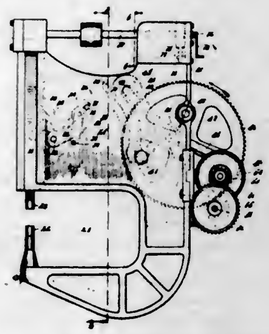


1. In combination in a motor vehicle, a propeller shaft, two traction wheels, a differential mechanism between the propeller shaft and said traction wheels and including a main worm wheel and a worm on the propeller shaft in mesh with said worm wheel, a power transmitting connection between said differential mechanism and said traction wheels, including two speed reducing mechanisms, one between each traction wheel and said differential mechanism and both located exterior of said wheels, said speed reducing mechanisms each including shiftable means whereby the traction wheels may either be driven direct from the differential mechanism or at a reduced speed through said speed reducing mechanism, and means connecting both shiftable means together whereby the same may be operated simultaneously.

1,382,290. SOFT HAT. JULIUS JOSEPHS, New York, N. Y., assignor to The Crofut & Knapp Company, New York, N. Y. Filed June 25, 1920. Serial No. 391,792. 3 Claims. (Cl. 2—108.)

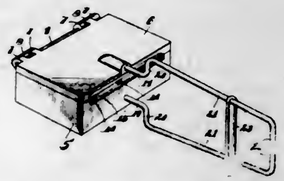
1. In a soft hat, means for retaining the shape with the top centrally depressed front to back, the top side creases suitably spaced, and the sides indented, comprising tabs secured to each side of the interior of the hat slightly above the depressed portion, and means to fasten together said tabs.

1,382,291. RAIL-JOINT. HENRY B. KAEHN, Goltry, Okla. Filed Apr. 9, 1921. Serial No. 459,872. 2 Claims. (Cl. 238—235.)



1. The combination with a pair of adjoining rail ends, one of said rail ends having its base cut away, and an elongated recess and cavity opening downward in the remaining web portion, of a web or flange projecting from the other rail end and provided with a head, to enter the cavity of the first rail end, said cavity and the head having adjoining shoulders to hold the rail ends against displacement longitudinally, and means passing transversely through the rail ends and through the last mentioned web or flange for connecting the rail end.

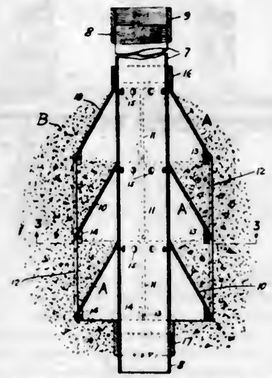
1,382,292. HOLDER FOR SAFETY-RAZOR BLADES. HARRISON D. KEMPTON, Providence, R. I. Filed Nov. 29, 1919. Serial No. 341,411. 2 Claims. (Cl. 30—25.)



1. A safety razor blade holder comprising a handle having a recess therein, a strip of metal folded upon itself forming separable side arms adapted to grip and bind a blade between them, said strip having free end portions adapted to be inserted and removably held in said handle recess, a backing plate for the blade integral with one edge of one arm and having upturned ends, and a blade guide roll journaled in said ends.

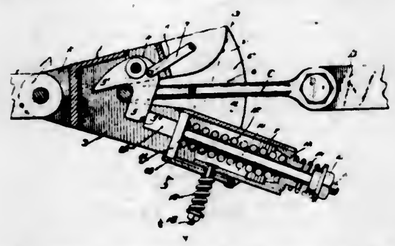
1,382,293. RIVETING-MACHINE. WILLIAM H. KENNEDY, Chicago, Ill., assignor of one-half to Lewis B. Miller, Chicago, Ill. Filed Mar. 5, 1918. Serial No. 220,466. 20 Claims. (Cl. 78—41.)

1. A machine of the class described comprising relatively stationary and movable jaws; means for actuating said movable jaw comprising a toggle engaging with said movable jaw; a pivotally mounted lever coöperating with said toggle; and a second toggle for actuating said lever, substantially as described.



1,382,294. HAND-MOLD. EDWARD J. KUKAC, Chicago, Ill. Filed Sept. 25, 1919. Serial No. 326,224. 4 Claims. (Cl. 22—156.)

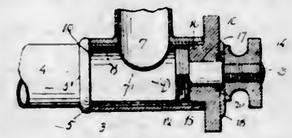
1. A hand mold comprising, a mold bearing member having passages communicating with the molds in said member and the exterior of said member; a cover hingedly



connected to said member, adapted in operative position to engage the upper surface thereof; and means, including resilient handles, for yieldingly retaining said cover in said engaging relation, substantially as described.

1,382,295. APPARATUS FOR SEPARATING AND COLLECTING FLUIDS IN WELLS. MAHLON E. LAYNE, Memphis, Tenn. Filed Sept. 28, 1917. Serial No. 193,745. 9 Claims. (Cl. 166—5.)

1. In well apparatus the combination of a substantially vertical delivery chamber, and an elongated collecting chamber exterior of the delivery chamber in which the fluid is separated from the formation and which communicates at its upper end with the delivery chamber, the outer wall of the collecting chamber extending well below the point of communication between the chambers, and the areas of the entrance of the collecting chamber and the communication between the chambers being so proportioned that the flow at the point of separation is at a rate at which suspension of the formation substantially ceases.



1,382,296. AUTOMATIC COUPLING. REINHARD F. LEITZKE, Hustisford, Wis. Filed Nov. 9, 1920. Serial No. 422,811. 2 Claims. (Cl. 213—67.)

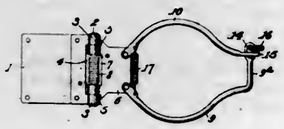
1. A coupling comprising a head provided with a flared mouth, a downwardly inclined hollow tongue extending from the head, a tooth pivotally mounted within the mouth having inner and outer prongs adapted to receive a coupling link, a spring controlled plunger mounted in the hollow tongue having a nose engageable with the tooth, the plunger being arranged to have an oscillatory bearing at its front end and a yielding supporting plate for the nose end of said plunger.

1,382,297. SOUND-REGULATOR FOR TALKING-MACHINES. WILLIAM ALBERT LOMAS, Detroit, Mich. Filed Aug. 4, 1919. Serial No. 315,195. 1 Claim. (Cl. 274—27.)

The combination with a talking machine having a tone arm provided with a cylindrical cross-piece, a goose-neck carrying a reproducer and having a cylindrical end pivotally mounted within said cross-piece, the latter and said cylindrical end being provided with alined openings establishing communication between the reproducer and the tone arm, of a sleeve rotatably fitting within said cylindrical end and having a circumferential opening normally registering with said alined openings, said circumferential opening having a reduced tapered extension adapted to register with said alined openings, an annular screw plug engaging the said cylindrical end of the goose-

neck and having an enlarged head extending radially beyond said cross piece and provided upon its outer face with stop pins, a screw plug engaging the outer end of said sleeve and having a stem rotatably mounted in the central aperture of said annular plug,, and a nut threaded upon said stem and carrying a pointer, the latter being adapted at the position of full registering adjustment of the opening of said sleeve to engage one of said stop pins, and at the position of minimum registering adjustment of the tapered extension of said opening to engage the other stop pin.

1,382,298. TRAP. ADOLPH F. LONK, Chicago, Ill. Filed May 27, 1920. Serial No. 384,661. 3 Claims. (Cl. 43—90.)

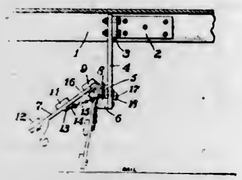


3. A trap comprising a pair of jaws provided on their inner edges with overlapping lugs, a pivot inserted through said lugs, means acting on the jaws above the pivot to yieldably hold the jaws together, a hanger suspended upon the pivot and depending into the space between the jaws, a trip carried by the hanger and constructed to obstruct the space between the jaws and engaging the inner opposed edges of the same below the pivot to hold them normally apart, and means carried by the pivot for supporting the trap in a set position.

1,382,299. CAP FOR GREASE-CUPS. GEORGE LOWTHER, Pittsburgh, Pa. Filed July 12, 1920. Serial No. 395,620. 6 Claims. (Cl. 184—105.)

6. In a cap for filling grease-cups of the character described, a cover, a depending circular flange provided with a plurality of circular steps severally threaded interiorly; a thimble rotatably mounted upon and through the cover and centrally threaded for connection with a supply tube; and a wiper secured on said thimble and within said cup.

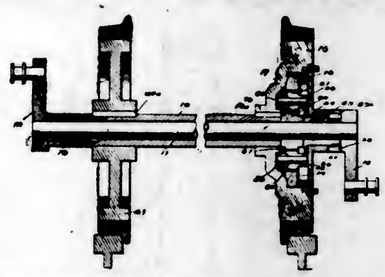
1,382,300. LOCKING DEVICE FOR AUTOMOBILES. WILLIAM LUDWIG, Bellaire, Ohio. Filed Jan. 27, 1920. Serial No. 354,417. 10 Claims. (Cl. 188—31.)



1. In a device of the character described, a bracket adapted for mounting in fixed position on an automobile adjacent to a wheel of the latter, a member articulated with said bracket and foldable with respect to the latter, a coil spring normally maintaining said member in folded relation to said bracket, a pair of complemental arms pivotally mounted on said foldable member and adapted to be disposed in embracing relation to the tire and felly of the adjacent wheel, and means for securing said arms in such relation.

1,382,301. SAFETY-RAZOR. MARY M. MCCAFFREY, Washington, D. C., assignor of one-half to Isabel Lees Bayless, Washington, D. C. Filed Aug. 30, 1920. Serial No. 406,947. 4 Claims. (Cl. 30—12.)

1. A safety razor having in combination, a handle, a flexible circular blade provided with a slot with parallel edges and a series of elliptical openings placed radially in said blades, a circular head provided with guard teeth and a special guard portion integral therewith to cover slot in blade and an elliptical raised portion integral with said head associated with said blade, a circular clamping cap piece, and means for holding said parts together as and for the purpose described.

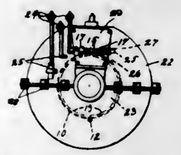


1,382,302. FENDER. FRANCIS R. MCCALLIN, Long Island City, N. Y. Filed Apr. 18, 1921. Serial No. 462,234. 2 Claims. (Cl. 293—54.)

1. A fender comprising two uprights, a cross bar connecting the same, a pivotal life guard secured to said cross bar, means for regulating the angle of the life guard and for holding the same in a desired position, spring hinges forming the pivotal connection of the life guard, the springs taking up the shock when said life guard is actuated, and means for limiting the inward pivotal movement of the life guard.

1,382,303. LOCOMOTIVE-DRIVER. JAMES FRANCIS MCCARROLL, Holden, La. Filed Feb. 9, 1921. Serial No. 443,624. 8 Claims. (Cl. 105—97.)

1. In a locomotive of the character described, a hollow axle, a crank shaft arranged in said hollow axle, cranks at the ends of said crank shaft, a gear driver having a hub fixed to said hollow axle at one end thereof and having a recess in its body portion, an internal ring gear fixed to the body portion of said driver within said recess, a driving gear fixed to the crank shaft within said recess, planetary gears meshing with said driving gear and with said internal ring gear, a frame carrying said planetary gears and consisting of an inner section comprising a ring, an outer section comprising a ring having

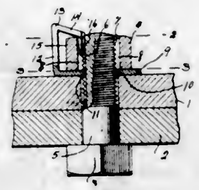


an annular hub journaled on the crank shaft and short shafts extending between said rings and carrying said planetary pinions, a cover plate for said recess secured thereto and having an annular flange journaled on the hub of said outer section and terminating short of the crank, a tie or torque rod arranged on the hub of said outer section intermediate said annular flange and keyed to said annular hub, and a driver fixed to said hollow axle at the opposite end thereof.

1,382,304. ARTIFICIAL TOOTH. ARCHIE T. MCGUINNESS, San Francisco, Calif. Filed Oct. 30, 1919. Serial No. 334,440. 3 Claims. (Cl. 32—9.)

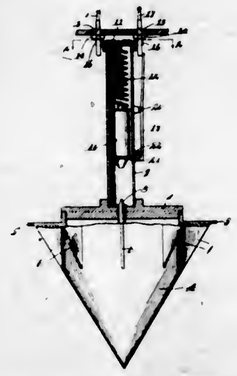
1. As an article of manufacture, an occlusal surface adapted to fit a recess in a plate, a plate formed of thin metal and recessed for said occlusal surface and adapted to be soldered to a bridge.

1,382,305. BAND FOR FORD CARS. JOSEPH MALLIGAN and CHARLES R. LYTLE, Point Marion, Pa. Filed June 25, 1920. Serial No. 391,643. 4 Claims. (Cl. 188—249.)



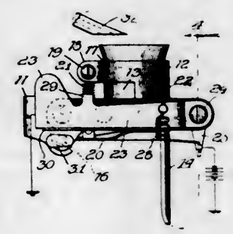
1. A friction or clutch band comprising hinged sections having a lining, and lugs pivoted to the ends of the sections diametrically opposite to said hinged connection.

1,382,306. NUT-LOCK. BLISS W. MARR, Detroit, Mich. Filed Oct. 11, 1920. Serial No. 416,110. 4 Claims. (Cl. 151—3.)



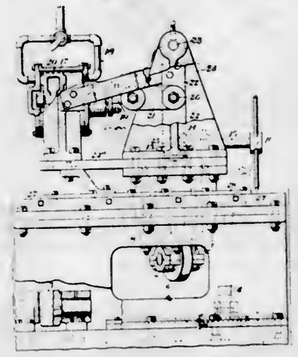
1. The combination with a bolt having a shank provided with a longitudinally extending groove, of a nut threaded on the shank having its bore provided with a plurality of diametrically opposite grooves, any one of which being registrable with the groove of the shank, a lock washer on the shank between the nut and a member

to be clamped and having means to engage the groove of the shank, said lock washer having an extension overlying



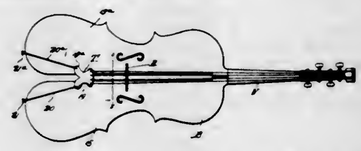
the nut and terminating in a lug engageable wedgedly with the registering grooves of the shank and the nut, thereby preventing detachment of the nut.

1,382,307. BOMB. ABI MAYERSON, Chicago, Ill., assignor of one-half to J. Stanley Conroy, Chicago, Ill. Filed June 20, 1918. Serial No. 240,938. 2 Claims. (Cl. 244—1.)



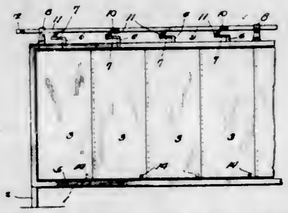
1. A bomb having a depressible exploding element; a vertically movable striker adapted to engage with and depress said exploding element; means for yieldingly holding said striker in elevated position; means for releasably locking said striker in elevated position; diametric laterally projecting lugs on the bomb; a pair of jaws adapted to releasably engage with each of said lugs to support the bomb preparatory to dropping of the same; and a wedge coöperating with each pair of jaws to hold the same in operative position, substantially as described.

1,382,308. CONTROL MECHANISM FOR COIN-OPERATED DEVICES. HERBERT S. MILLS, Chicago, Ill. Filed Mar. 27, 1920. Serial No. 369,341. 2 Claims. (Cl. 194—9.)



1. In a control mechanism for coin-operated devices, a coin guide, a pivoted plate closing said guide, an eccentric contact member attached to the pivot of said plate and movable therewith, a lever member pivotally attached to the guide and insulated therefrom, said lever member being provided with a contact surface engageable by said eccentric contact member on movement of the said plate and capable of being raised by the eccentric contact member, and a spring constantly exerting a force tending to hold said pivoted plate in its normal position, closing the guide.

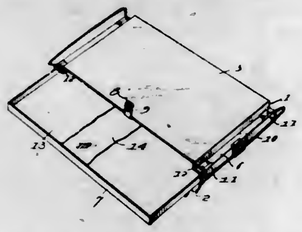
1,382,309. STRAIGHTENING-MACHINE. JAMES T. MOLTRUP, Beaver Falls, Pa. Filed Aug. 1, 1919. Serial No. 314,616. 3 Claims. (Cl. 153—48.)



1. In a straightening machine, the combination of a carriage, a straightening element mounted on said carriage for vertical movement, toggle members connected to said element, a power cylinder located at one side of and above the straightening element with its horizontal axis in the horizontal line of the center joint of the toggle members, a piston in said cylinder, and a link connecting the rod of said piston with the center joint of said toggles, substantially as described.

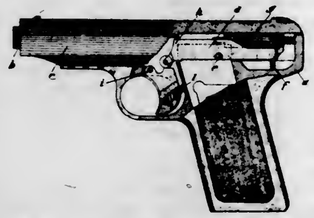
1,382,310. VIOLIN. DANIEL HOWE NEILLY, Bradford, Pa. Filed July 12, 1920. Serial No. 395,717. 7 Claims. (Cl. 84—274.)

1. A violin comprising, a body formed of two longitudinal sections connected at their ends, a neck connected to the sections, a bridge spanning the sections, and a tail piece connected to both of the sections.



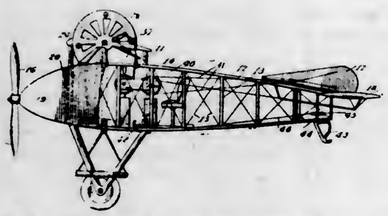
1,382,311. SIGN. AUBREY C. NOWLIN, Sherman, Tex. Filed Sept. 1, 1920. Serial No. 407,388. 4 Claims. (Cl. 40—68.)

1. A sign comprising a stationary frame, a panel mounted in the frame for turning movement in a hori-



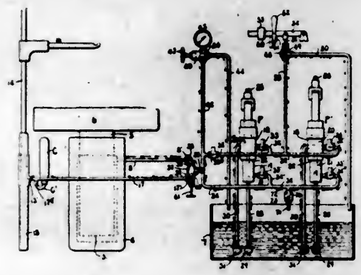
sontal plane, and a stop pivoted in the frame for free movement in a transverse vertical plane of the frame in position to be engaged by an end of the panel.

1,382,312. DUPLICATOR. EDGAR A. OPPENHEIMER, Chicago, Ill., assignor to Newton D. Baker, Secretary of War, trustee. Filed Apr. 17, 1919. Serial No. 290,794. 3 Claims. (Cl. 101—131.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



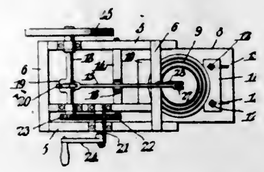
1. A duplicator comprising a support having depressed end portions to form steps, said steps having depressions, and clips attached to the steps and adapted to be received in the depressions.

1,382,313. SELF-LOADING PISTOL. HEINRICH ORTGIES, Erfurt, Germany. Filed Apr. 1, 1919. Serial No. 286,817. 1 Claim. (Cl. 42—3.)



In a firearm, the combination with the breech slide and the trigger; of a sear having a forked front end, the outer arm of which is provided with a guide opening; and a spring controlled stud slidably mounted in said opening and provided with a portion which is normally disposed in the path of the trigger to operatively couple the latter to said sear, but which is automatically displaced from said path consequent upon the rearward movement of the slide to prevent operation of the sear by the trigger when the breech is open.

1,382,314. AEROPLANE. JOSEPH W. ALPHONSE PÉPIN, St. Jerome, Quebec, Canada. Filed Dec. 9, 1920. Serial No. 429,481. 5 Claims. (Cl. 244—29.)

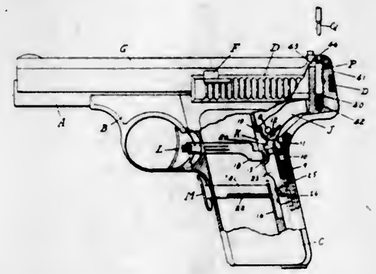


1. The combination with an aeroplane of wings, brackets carried by said wings, a groove in said brackets, a cable passing over said brackets and engaging the groove, a pulley engaging said cable, means for actuating the pulley and tilting the wings, and means for locking said pulley against movement.

1,382,315. HYDRAULIC PRESS. THEODORE F. PHILIPPI, East St. Louis, Ill. Filed July 18, 1919. Serial No. 311,855. 4 Claims. (Cl. 138—17.)

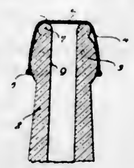
1. A hydraulic press provided with a ram, a high pressure pump and a low pressure pump whereby liquid under pressure is delivered to said ram, and means whereby said low pressure pump is rendered ineffective when the liquid pressure rises to a predetermined degree, said means comprising a pressure actuated valve communicating with the outlet of said low pressure pump, and a normally ineffective device whereby said pressure actuated relief valve is retained in its open position after it has been opened by the liquid pressure.

1,382,316. CHURN-OPERATING DEVICE. HENRY POAGE, Millpoint, W. Va. Filed July 2, 1920. Serial No. 393,532. 1 Claim. (Cl. 74—14.)



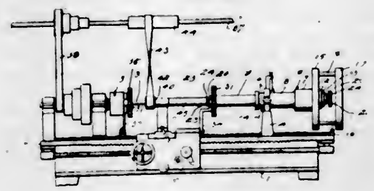
In a churn operating device, a frame including spaced parallel top rails horizontally disposed, an inner rail between said top rails in the same plane and parallel with the latter, the said inner rail being closed to one of said top rails than the other, a gear shaft supported between said inner rail and the adjacent top rail, a gear on said shaft lying between said inner and adjacent top rails, a crank shaft supported by the said inner rail and the remote side rail, a pinion on said crank shaft in the space between said inner rail and its adjacent top rail and in mesh with the said gear, a rock arm supported by said frame, a link connecting said crank shaft with one end of said rock arm, and means for connecting the other end of said rock arm with a churn dasher.

1,382,317. AUTOMATIC PISTOL. EDWARD S. POMEROY, Springfield, Mass., assignor to Smith & Wesson, Springfield, Mass., a Voluntary Trust Association. Filed Jan. 8, 1921. Serial No. 435,820. 8 Claims. (Cl. 42—3.)



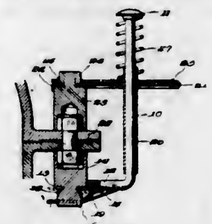
1. In an automatic pistol having in combination a movable breech block, a pivoted hammer arranged to be cocked by the breech block on its backward movement, a sear pivoted to the hammer and having a stop shoulder to rest on a fixed ledge in the frame, and a trigger adapted when pulled to engage said sear and push it off such ledge, the relative construction of hammer and sear with closely abutting shoulders adapted during the cocking movement to force the sear forward into position over such ledge,

and a spring engaging the hammer and sear acting to press forwardly against the sear and prevent rebound thereof



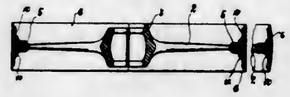
at the beginning of the return movement of the hammer and until the sear is seated on said ledge to hold the hammer cocked.

1,382,318. SANITARY BOTTLE-MOUTH GUARD. JESSE N. PRINGLE, Ortega, Fla., assignor of one-half to Will V. Strom, Jacksonville, Fla. Filed Mar. 6, 1920. Serial No. 363,635. 1 Claim. (Cl. 215—100.)



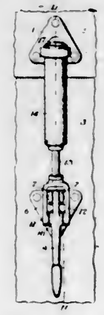
As a new and useful article of manufacture, a removable sanitary guard for the open mouth of a bottle; the said guard being formed of water proof paper and including a cylindrical wall, of comparatively large diameter at its lower end, and a thin flexible flange reaching inwardly at substantially right angles from the upper end of the cylindrical wall to be pressed and held by the lips and tongue of a drinker flat against a bottle-neck end and being of such width that its free edge will rest flush with the inner side of the orifice wall of the bottle neck, whereby said flange is enabled to prevent contact between the bottle-neck end and the tongue of a person and is also enabled to prevent passage of liquid between the bottle and guard.

1,382,319. CYLINDER-GRINDING DEVICE. GEORGE E. RHODES, Haxtum, Colo. Filed June 24, 1920. Serial No. 391,506. 8 Claims. (Cl. 51—43.)



1. In combination with a lathe having a power driven chuck and a carriage, a housing secured to the lathe, a sleeve journaled in said housing, a second sleeve eccentrically mounted in the first sleeve, a shaft eccentrically mounted in said second sleeve, a grinding element secured to said shaft, means for rotating the shaft, and means for rotating the first sleeve by the chuck.

1,382,320. BOLT AND NUT HOLDER. ELMER RILEY and CLARENCE YUNCKER, Dodge City, Kans. Filed Mar. 2, 1920. Serial No. 362,728. 6 Claims. (Cl. 81—55.)

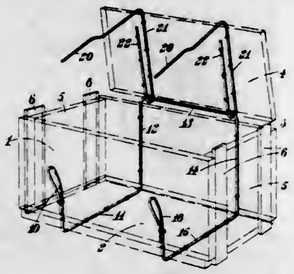


2. A device of the character described including confronting rotatable sockets, a support for the sockets and means on the support respectively operable for locking either of the sockets against rotation.

1,382,321. BELT-PULLEY AND SIMILAR DEVICE. JAMES TORSTEN SANDBERG, Gottenborg, Sweden. Filed Apr. 3, 1920. Serial No. 370,926. 4 Claims. (Cl. 64—18.)

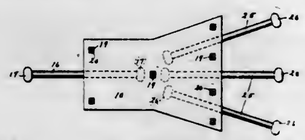
1. In a belt pulley a cast iron web portion, a sheet iron rim encircling said web portion, brackets joining said rim to said web portion and cast in the web by means of angle bent ends.

1,382,322. HOOD-FASTENER. WILLIAM A. SCHLEICHER, Cleveland, Ohio. Filed Nov. 10, 1920. Serial No. 423,160. 5 Claims. (Cl. 292—113.)



1. A fastener of the character described, comprising a barrel, a piston mounted therein, a compression spring coöperating therewith, means for closing the upper end of said barrel, a hook formed on said barrel adjacent the upper end thereof, a keeper adapted to be engaged by said hook, and operating mechanism connected to said piston for compressing said spring after said hook and said keeper are engaged, substantially as described.

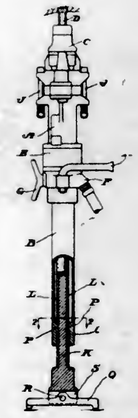
1,382,323. WIRE-BOUND BOX. MAURICE EDWARD STAGG SECKER, London, England. Filed Apr. 1, 1920. Serial No. 370,597. 8 Claims. (Cl. 217—12.)



1. A wire-bound box having applied to a side member thereof a binding-element which (a) is in the form of a

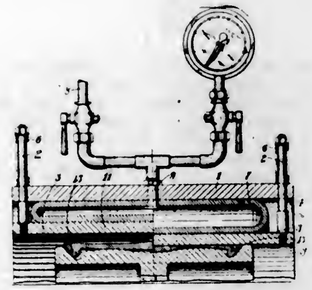
single length of material constituting two substantially parallel binders, (*b*) has a portion bridging between said binders in the form of a long longitudinal span extending clear of the box-structure and acting in the region of each of its ends as a hinge-element for another box-mem-

ber, and (*c*) has its two free ends extending clear of the box-structure and shaped to engage a binding element on an adjacent box-member, combined with a second hinge-element and a binding element at other parts of the box-structure to engage respectively with the span and the free ends aforesaid.



1,382,324. COUPLING. WILLIAM HENRY SIEFER, Wayland, Iowa. Filed May 22, 1919. Serial No. 298,870. 1 Claim. (Cl. 287—113.)

A coupling device, comprising counterpart one-piece clamping plates, each of said plates being wider at one end than the other, each of said plates being formed on its inner face with a longitudinal groove terminating in a transverse recess and opening to one end of said plate, and also with a longitudinal groove in line with and spaced from the first groove and opening to the opposite end of the plate and also formed at its inner end with a transverse recess, each of said plates also being formed at its wider end with end-opening grooves arranged on opposite sides of the longitudinal groove and at angles thereto and also terminating in transverse recesses, headed coupling pins adapted to be mounted in the grooves of said plates and project therefrom, each of said pins being formed with a head received in the recesses of said grooves, said plates also being formed with bolt holes on each side of each of said grooves, and between the recesses of the longitudinal grooves, and clamping bolts mounted through said bolt holes.

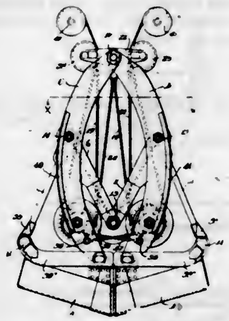


1,382,325. SUPPORT FOR ROTATING STOPE-DRILLS. FRED. M. SLATER, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 22, 1920. Serial No. 367,831. 2 Claims. (Cl. 121—9.)

1. In a fluid actuated rock drill, the combination of a drill cylinder casing provided with automatic rotation for the drill steel, a fluid operated feeding element comprising two telescopic members in slidable but relatively non-rotatable engagement, the drill cylinder casing being rigidly mounted on one member of the feeding element, and a non-rotating support transversely pivoted to the other member of the feeding element, said support comprising a transversely extending pivotal foot piece provided with beveled and sharpened rock engaging toes at each end extending rearwardly from the foot piece and outwardly at each side at opposite angles to the plane of the foot

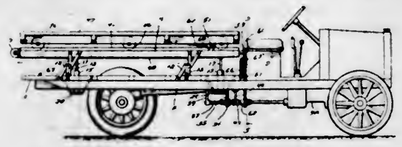
piece in directions to resist any tendency of the drill cylinder and feeding element to bodily rotate backwardly in the reverse direction to the rotation of the drill steel.

1,382,326. PRESS. THOMAS SLOPER, Devizes, England. Filed Dec. 15, 1920. Serial No. 431,001. 8 Claims. (Cl. 18—17.)



1. In a press, the combination of a sub-divided presser-plate for bearing against an article to be pressed, a thrust-plate situated on the side of the presser-plate remote from the said article for providing a purchase surface away from which the presser-plate can be advanced, an expansible chamber situated between said plates, which chamber comprises a flexible wall arranged to bear against the sub-divided plate, and means to admit fluid under pressure to said chamber, substantially as described.

1,382,327. WIDE-OPENING CLAM-SHELL BUCKET. CARL STENBOL, Sault Ste. Marie, Ontario, Canada. Filed Apr. 29, 1920. Serial No. 377,629. 9 Claims. (Cl. 37—30.)

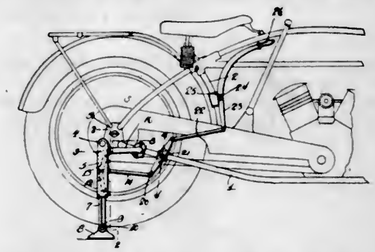


1. In a bucket of the character described and in combination, two bucket parts, supporting arms pivoted together and to the bucket parts, toggle levers pivoted to the supporting arms, links connecting the toggle arms with the bucket parts, an opening rope operatively connected to the end of the toggle levers, spools carried by the supporting arms, drums on the spools, and slings extending between the spools on opposite supporting arms

in such a way that when the spools are turned, the arms will be drawn closer together, and closing ropes oper-

atively connected to the drums and adapted when pulled to turn the drums and spools and cause the slings to draw the supporting arms together.

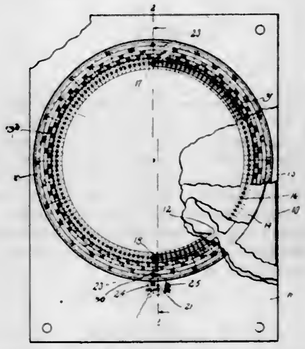
1,382,328. ADJUSTABLE AND REMOVABLE TRUCK-PLATFORM. WILLIAM LEE STONE, Kansas City, Mo., assignor to Great Western Commercial Body Company, Omaha, Nebr., a Corporation of Nebraska. Filed Aug. 11, 1920. Serial No. 402,866. 5 Claims. (Cl. 298—16.)



1. The combination with a truck chassis, of a frame provided with a plurality of supporting devices interposed between said frame and chassis, a platform removably supported on said frame, and means for individually adjusting said supporting devices for varying the height of said frame above said chassis.

1,382,329. COMPOSITION OF MATTER FOR USE IN THE FORMATION OF FIREPROOF AND INSULATING STRUCTURES. EDWARD R. STOWELL, Portland, Ind. Filed Nov. 5, 1919. Serial No. 335,811. 2 Claims. (Cl. 106—30.)

1. A composition of matter for use in the formation of fireproof and insulating structures, consisting of a mixture of cement and a filler comprising sodium silicate, powdered pumice, and wood particles, the sodium silicate constituting means for filling the pores of the wood particles and binding them together.

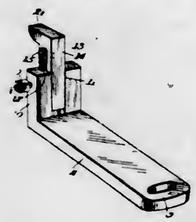


1,382,330. MOTORCYCLE-STAND. CARL J. SWENSON, Port Arthur, Tex. Filed Apr. 2, 1920. Serial No. 370,798. 2 Claims. (Cl. 208—78.)

1. A motorcycle stand comprising a sleeve fixed to the rear frame structure and having a slot extending longitudinally, a standard projected through the lower end of the sleeve, a pair of links joined together and having their opposite ends joined to the standard and upper end of the sleeve whereby the links may swing into and out of the sleeve through the said slot therein, a pull bar extended through the slot in the sleeve and connected to the connected ends of the links, and means to manually actuate the pull bar for actuating the links whereby the said standard may be drawn into the sleeve or projected beyond the end thereof, said links being arranged within the sleeve with respect to their pivotal connection with the standard and sleeve so that the connected ends of the links may be swung inwardly beyond the longitudinal

center and contact with the rear wall of the sleeve to serve as a lock for maintaining the standard in operative position until manually released.

1,382,331. COMPUTING DEVICE. JAMES THOMAS, Pittsburg, Kans., assignor to Morse Twist Drill & Machine Company, New Bedford, Mass., a Corporation of Massachusetts. Filed Nov. 22, 1919. Serial No. 340,026. 2 Claims. (Cl. 235—78.)

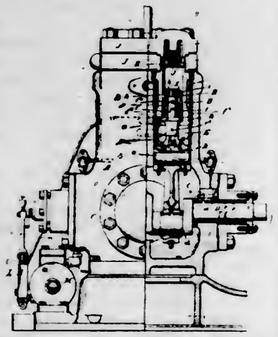


2. A computing device of the character described, comprising a back plate, a transparent face plate having a semi-circular slot formed therethrough, numbered graduations arranged in a circle of substantially the radius of said slot, a rotatable disk having openings arranged to coincide with said slot and to receive the point of an operating instrument and spaced to register with said graduations, said openings being engageable through said slot, one end of said slot constituting a setting point and a stop engageable by the instrument for limiting each computing movement of the disk, said disk further having diametrically opposite indicators thereon to coöperate with the graduations for indicating certain results, and one of which indicators is to initially register with said setting point, counter-operating fingers on said disk, a toothed rotatable counter adapted to be rotated by the passage of said fingers thereby, whereby a plurality of movements of said disk to add together two or more fractions, where the sum is equal to or greater than a digit, causes said counter to be rotated to show the whole number and the additional fractions being indicated on the graduations by one of said indicators beyond said stop.

1,382,332. JOURNAL JACK-BLOCK AND WHEEL-CLAMP. CHARLES O. VEST, Bluefield, W. Va. Filed Dec. 1, 1920. Serial No. 427,507. 3 Claims. (Cl. 254—33.)

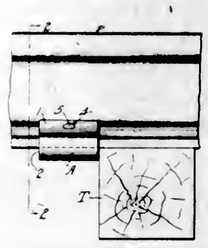
1. A journal jack-block and wheel clamp, having a base-piece to support a lifting-jack, said base-piece pro-

vided at one end with an outwardly inclined upright having a longitudinal slot and grooves adjacent to said slot, a correspondingly inclined wheel clamp having a shank provided with longitudinal side flanges, the said



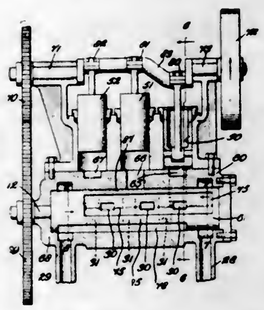
shank slidable in the slot and its flanges entering said grooves, a wheel-engaging lip projecting outwardly from the shank, and coöperating means on the upright and wheel clamp to hold the wheel clamp in adjusted position.

1,382,333. ROLLER-CAGE FOR ROLLER-BEARINGS WITH CONVEX ROLLERS. ERNST HJALMAR WALODDI WEIBULL, Gottenborg, Sweden, assignor to Nordiska Kullager Aktiebolaget, Gottenborg, Sweden. Filed Sept. 8, 1919. Serial No. 322,527. 2 Claims. (Cl. 64—62.)



1. In a roller bearing, a roller cage, convex rollers arranged in the cage and provided with opposed flattened sides, and supporting means on the cage coöperating therewith to allow the rollers to oscillate in a lateral direction relatively to a plane perpendicular to the axis of the bearing, so that the axis of rotation of the rollers may obtain a sloping position relatively to the axis of the bearing in planes passing through the center line of the axis of the bearing, when the race rings are in their normal concentric position relative to each other.

1,382,334. FLUID-COMPRESSOR. LLEWELLYN WILLIAMS, Hollis, Long Island, N. Y., assignor to York Manufacturing Company, York, Pa. Filed Apr. 23, 1920. Serial No. 376,039. 2 Claims. (Cl. 230—27.)

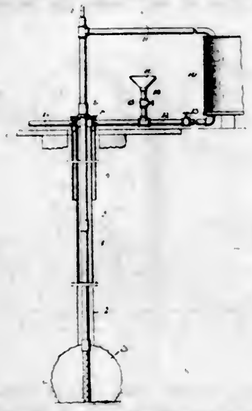


1. In a high pressure fluid compressor of inclosed type, the combination with the compressor cylinder, piston, suction and discharge valves, and gas tight crank case and crank shaft mounted therein, of a cross-head chamber of greater diameter than the compressor cylinder interposed between, and having a gas-tight connection with, said cylinder and crank case, and in free communication at all times on the one hand with the suction side of the compressor cylinder, and on the other hand with the interior of the crank case, a crosshead fitting and reciprocable in the crosshead chamber, and directly connected to the compressor piston, and driving connections between the crank shaft and the crosshead, substantially as and for the purposes hereinbefore set forth.

1,382,335. RAIL-ANCHOR. BENJAMIN WOLHAUPTER, New Rochelle, N. Y. Filed Aug. 15, 1916. Serial No. 115,030. 21 Claims. (Cl. 238—311.)

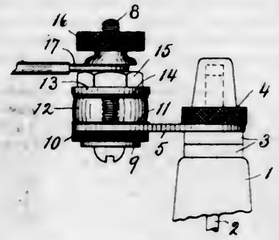
1. A rail anchor comprising in combination with the rail, an anchor element fillet welded thereto.

1,382,336. PUMP AND SIMILAR APPARATUS. HANS C. BEHR, New York, N. Y. Filed Oct. 25, 1919. Serial No. 333,202. 13 Claims. (Cl. 103—77.)



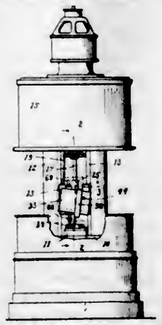
10. In an apparatus of the character described the combination of a plurality of cylinders each provided with a port; a valve casing having inlet and discharge passages; a balanced valve in said casing having a set of symmetrically and helically disposed inlet recesses and a set of symmetrically and helically disposed discharge recesses, said valve also provided with helically disposed port controlling valve faces separating said recesses; inlet means comprising an inlet chamber located in said casing with which said inlet recesses are always in communication; outlet means comprising an outlet chamber located in said casing with which said discharge recesses are always in communication; and a piston in each cylinder adapted to suck in fluid through said inlet recesses and forcibly discharge it through said outlet recesses, substantially as described.

1,382,337. METHOD OF CLEANING OIL-WELLS. GEORGE C. BELLIS, Butler, Pa., assignor of one-half to Thomas H. Brown, Butler, Pa. Filed Mar. 13, 1919. Serial No. 282,479. 4 Claims. (Cl. 166—21.)



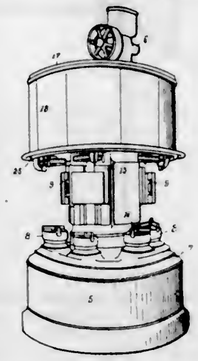
1. The method of cleaning oil wells comprising pouring a solution containing a caustic alkali free from acid into

the well, permitting it to remain as an alkali within the well for a sufficient time to loosen the oil impeding



deposits formed on the walls thereof, and then pumping the solution together with the loosened material from the well, substantially as described.

1,382,338. INTENSIFIER. CORNELIUS J. BROSNAN, Springfield, Mass. Filed July 1, 1920. Serial No. 393,248. 6 Claims. (Cl. 175—183.)



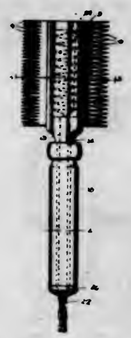
1. An intensifier comprising a metallic clip which is adapted to be attached to a spark-plug, a screw-threaded member extending through said clip and provided with attaching means for a conductor, and means to attach said member to said clip, and to insulate the same therefrom so that a spark-gap is formed between said member and said clip.

1,382,339. TOOL-SLIDE FOR MACHINE-TOOLS. EDWARD P. BULLARD, Jr., Bridgeport, Conn., assignor to The Bullard Machine Tool Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 7, 1919. Serial No. 295,325. 21 Claims. (Cl. 29—38.)

1. The combination with a movable saddle and a cross slide mounted thereon, of a reciprocatory rod, a positive locking device between the rod and saddle whereby the slide and saddle can be fed forwardly, means for causing crosswise movement of the slide, and means for releasing the locking device from the saddle to allow said before mentioned means to operate.

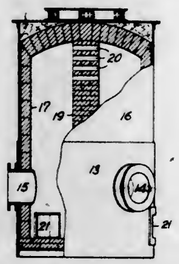
1,382,340. CONTROLLING MEANS FOR MACHINE-TOOLS. EDWARD P. BULLARD, Jr., Bridgeport, Conn., assignor to The Bullard Machine Tool Co., Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 9, 1920. Serial No. 372,634. 6 Claims. (Cl. 29—38.)

1. The combination with a machine tool including a clutch through which the same is driven, an annular support, a series of balls positioned therein, a controller ring mounted on the balls and support, and connections between the ring and clutch for operating the same.



1,382,341. SPIRAL-GUIDE FIRE-ESCAPE. ALFRED WOOD BUTTERFIELD, Portland, Oreg. Filed Sept. 30, 1920. Serial No. 413,826. 1 Claim. (Cl. 227—28.)

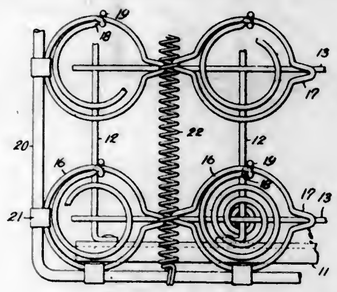
In a device of the character described a flexible cable and a hand grip, said hand grip having an outer casing consisting of a pair of semi-cylindrical members, one of said semi-cylindrical members being formed with spaced apart obliquely extending slots in its walls at each end thereof, a core having a length equal to that of the casing and being formed with an arcuate recess at each end thereof and being fashioned to provide a spiral guideway extending the length thereof and adapted to receive the flexible cable, the end walls of said recesses being respectively alined with the side walls of the corresponding slots, and a spring member intermediately secured to the inner wall of the second of said semi-cylindrical members at each end thereof and having its ends arranged to enter said slots to re-act against the walls thereof to releasably and firmly clamp said semi-cylindrical members to one



another, said spring members being positioned to abut against the end walls of said recesses to maintain said casing in adjusted position relative to said core.

1,382,342. COMB. JOSEPH PING CANEAVRI, Port Arthur, Tex. Filed Nov. 10, 1920. Serial No. 423,129. 5 Claims. (Cl. 34—26.)

1. A comb of the character described comprising a comb body or back having a row of inclined teeth along one edge and a row of oppositely inclined teeth along its other edge and provided with a central elongated cavity, a handle having a tubular shank and a pair of spring clamps adapted to embrace and engage the back and close the cavity thereof, a sleeve of insulated material arranged on the tubular shank, means for retaining the insulating sleeve on the handle, electric heating means arranged in the cavity of the back and conductors for supplying the electric heating element with current extending through the tubular shank.



1,382,343. COMBUSTION-CHAMBER FOR SULFUR-BURNERS. FRED B. CHAPPELL, Glens Falls, N. Y., assignor of one-half to Glens Falls Machine Works, Glens Falls, N. Y. Filed Apr. 20, 1920. Serial No. 375,391. 7 Claims. (Cl. 23—1.)

1. A combustion chamber for sulfur burners comprising an inclosing wall, inlet and outlet passages, and a baffle wall arranged out of normal to the inlet passage to impart a swirling motion to the incoming stream of gas.

1,382,344. SPRING-MATTRESS. RUDOLPH COOPERSMITH, Montreal, Quebec, Canada, assignor of one-half to Abraham Ruche, Philadelphia, Pa. Filed Dec. 19, 1919. Serial No. 346,032. 4 Claims. (Cl. 5—29.)

1. In a device of the class described, a rigid bottom frame comprising a grid formed of longitudinal and transverse members arranged on edge and let into one another, helical springs maintained in upright position on said frame, the members of the frame being apertured adjacent their intersection for the reception of the lower ends of the upright springs, a top frame and helical springs

stretched between opposite sides of said frame and connecting the uppermost convolutions of adjacent upright springs, said helical springs being arranged to hold the upright springs against revolution in the rigid body frame.

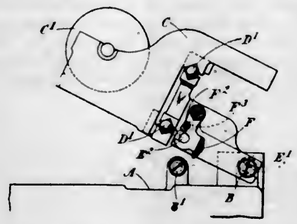
1,382,345. LINSEED-OIL SUBSTITUTE. MARC DARRIN, Wilkinsburg, Pa., assignor to Koppers Products Company, a Corporation of Pennsylvania. Filed Feb. 7, 1920. Serial No. 357,029. 12 Claims. (Cl. 134—56.)

1. A liquid mixture including a solution of heat polymerized coumarone resins in a solvent naphtha and a paint.

1,382,346. ROSIN SIZE SOLUTION. JUDSON A. DE CEW, New York, N. Y., assignor to Process Engineers, Inc., a Corporation of New York. Filed Apr. 10, 1919, Serial No. 289,126. Renewed Apr. 13, 1921. Serial No. 461,150. 6 Claims. (Cl. 134—21.)

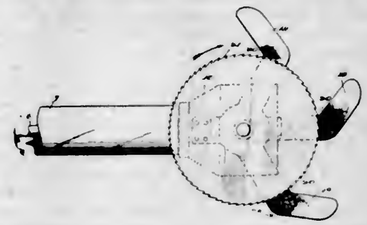
5. A sizing composition having therein a drying oil, soap made from a drying oil, rosin and rosin soap.

1,382,347. SHAVING-BRUSH. BENJAMIN H. DE HAVEN, Pittsburgh, Pa. Filed Dec. 29, 1919. Serial No. 348,064. 1 Claim. (Cl. 15—50.)



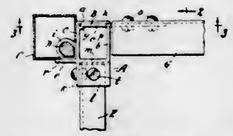
A device of the class described including a tank, a rod extending longitudinally of said tank, and provided with a bifurcated end portion, a collar integrally mounted upon said bifurcated end portion, a valve hingedly connected to said collar, said tank being provided with a bottom, a cylinder extending from said bottom running parallel with said tank, said collar provided upon said rod being adapted to slide within said cylinder, a partition provided in said cylinder, said partition having an opening, a valve hingedly mounted in said partition, and springs provided for normally holding said valves in a closed position.

1,382,348. WINDOW-FRAME. LAMMEAT ELENGA, Sterling, Nebr. Filed Mar. 14, 1919. Serial No. 282,675. 1 Claim. (Cl. 20—52.1.)



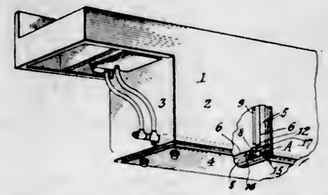
In a window construction, a frame provided with a window opening therein, a sash vertically movable in the frame, a main sill at the bottom of the frame, a drip sill at the bottom of the frame and spaced from the main sill to provide between the main and drip sills a passage for the sash when lowered out of the frame, a cap piece secured to the upper end of the sash and extending from opposite sides thereof to overlap said main and drip sills and close said passage when the sash is lowered and to provide a smooth surface over the lowered sash, and a shiftable auxiliary sill adapted to be advanced beneath the sash when raised to support the sash and close the passage between said sills, and adapted to be withdrawn from beneath the sash to admit the lowering of the same, said cap piece and said auxiliary sill having interlocking faces adapted for engagement with one another when the auxiliary sill is withdrawn to retain the sill from displacement, said auxiliary sill being adapted to close the space between the main sill and the cap piece when interpositioned between the same and when the sash is fully lowered.

1,382,349. TYPEWRITER WITH DETACHABLE PLATEN-CARRIAGE. HERBERT ETHERIDGE, Ealing, England, assignor to The Bar-Lock Typewriter Company, Limited, London, England. Filed Mar. 10, 1920. Serial No. 364,625. 6 Claims. (Cl. 197—60.)



1. In a typewriting-machine, the combination of a base, a platen-carriage holder, rear supporting-means and front supporting-means each comprising a stud, and a jaw for detachably embracing the latter, provided one on said base and the other on said holder for detachably supporting said holder on the base, the axes of the studs being disposed parallel to the axis of rotation of the platen, the jaw of the rear supporting means allowing for slight backward and forward adjustment therein of the coöperating stud, and the stud of the front supporting-means being so mounted in the part carrying it that it can be adjusted in a vertical direction, and backward and forward of the machine, for the purpose described.

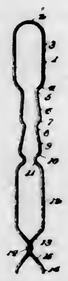
1,382,350. PRUNING-MACHINE. WILLIAM D. GLEASON, Central Point, Oreg., assignor of one-half to Edward H. Davis, Central Point, Oreg. Filed Mar. 16, 1920. Serial No. 366,252. 2 Claims. (Cl. 30—11.)



1. In a pruning machine, the combination of a rotary saw having its teeth disposed at an angle to its radius, and a non-rotatable guard mounted against one side of the saw and having fingers projecting radially beyond the edge of the saw, the extremities of said fingers being formed into hooks having concave surfaces presented to the points of the teeth of the saw.

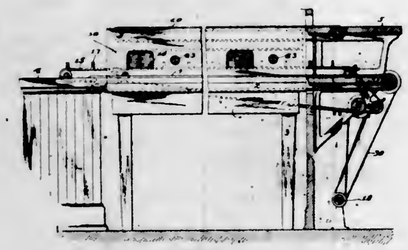
1,382,351. CORNER-FASTENING FOR METAL BEDSTEADS. RUBIN GOLDBERG, Brooklyn, N. Y. Filed Nov. 8, 1920. Serial No. 422,480. 1 Claim. (Cl. 5—55.)

In a cast metal corner fastening for metal beds a hollow rectangular body part A, having four vertical walls, an exterior vertical wing piece *c*, projecting outwardly at right angles from one side of the body part, forming an angle adapted to embrace one corner of a rectangular corner post of a bedstead, a vertical slot opening *h*, in the wall of said hollow body part at the diagonally opposite corner from said wing *c*, said slot opening extending half way down from the top of said body part, a vertical rib *g*, projecting from the interior wall of said hollow rectangular structure positioned at a point opposite said slot opening and means for readily securing the said rectangular body part to one corner of a rectangular bed post and detaching same therefrom, and means for securing said body part to the side of a bedstead, substantially as shown and described.



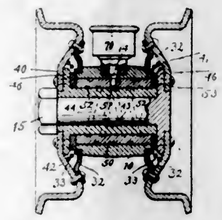
1,382,352. DRAIN FOR ICE-CREAM CABINETS. LEONARD G. GRAY, Decatur, Ill., assignor to Walrus Manufacturing Company, Decatur, Ill., a Corporation of Illinois. Filed June 4, 1920. Serial No. 386,593. 6 Claims. (Cl. 217—5.)

1. In a device of the character described, the combination with an ice-cream cabinet, of a metal channel, the side walls of which are flanged, longitudinal supports se-



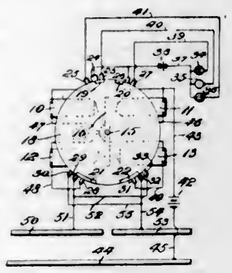
cured in the bottom of the cabinet upon which the flanges of the metal channel rest, a coat of asphaltum cement intermediate the bottom, side walls and flanges of the metal channel and the cabinet, a top for said channel formed of water-proofed wood, a metal lining in said cabinet having a plurality of openings in bottom wall, there being a plurality of openings in the top of the channel corresponding to openings in the metal lining of the cabinet, a lining of asphaltum cement which entirely covers the said metal lining, a copper lining adjacent the asphalt, having openings in the bottom which register with the openings in the channel, a cylindrical sleeve of smaller diameter than the said openings, having a circumferential flange mounted in said openings, said flange being brazed to the metal lining, an outlet plug for said openings, comprising a pipe, the length of which conforms to the height of the cabinet, a handle at the top end of said pipe, and a washer at the lower end thereof, which is fitted to the said cylindrical sleeve, there being openings in said pipe at a predetermined height.

1,382,353. HAIRPIN. ROLLIN L. GRAY, Eau Claire, Wis. Filed Mar. 6, 1920. Serial No. 363,715. 1 Claim. (Cl. 132—50.)



A hairpin comprising resilient legs having spaced parallel upper and lower portions and intermediate portions formed each with a series of bends, corresponding bends in the two intermediate portions being oppositely located, the spaces between the bends being relatively decreased in width in the direction of the free ends of the legs, and the free ends being formed into overlapping bends providing a throat having sharply divergent extremities engaging the hair for opening the throat on insertion of the pin.

1,382,354. DINING SERVICE APPARATUS. HARRY STEUBEN GREENBERG, Danville, Va. Filed Sept. 14, 1920. Serial No. 410,268. 23 Claims. (Cl. 186—1.)



1. In an apparatus of the class described, a table having service places or stations, tray serving and returning conveyers running past said stations from and to the kitchen, and means under control of the patron or patrons for stopping and starting said conveyers.

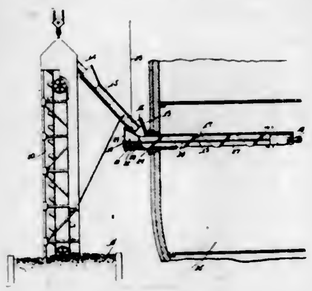
1,382,355. WHEEL AND BEARING THEREFOR. ANTON F. GREINER, Cleveland, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed July 8, 1920. Serial No. 394,712. 7 Claims. (Cl. 64—24.)

1. The combination of a sleeve having a tubular cylindrical bearing and a wheel which is made of two separably connected sections and is provided with a hub which extends between said sections and is rotatably mounted in said bearing.

1,382,356. RELAY. GEORGE R. GUILD, U. S. Army, assignor of one-half to C. T. Payton, St. Louis, Mo. Filed Sept. 26, 1919. Serial No. 326,518. 7 Claims. (Cl. 246—256.)

1. The combination with a railway track having a continuous rail and a broken or open rail, of a relay comprising four solenoids, two of which are oppositely disposed and are connected in series with one of the sections of the broken or open rail, the other two solenoids being oppositely disposed and connected in series with the other section of the broken rail, and an armature pivotally mounted between said solenoids and adapted to be attracted by either pair of connected members of said solenoids when the circuit between the continuous rail and either section of the broken rail is closed.

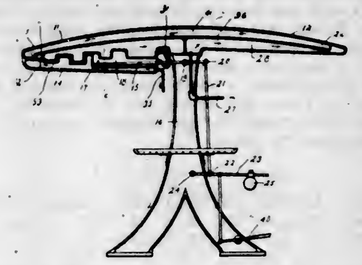
1,382,357. LATHING-SHEET. HANS CLAUSSON HANSEN, Copenhagen, Denmark. Filed June 10, 1919. Serial No. 303,115. 6 Claims. (Cl. 20—13.)



1. Lathing sheet comprising, in combination, parallel laths and a number of longitudinal wires disposed partly below and partly above the said laths so as to bind the latter together, the said upper wires forming loops in the spaces between the laths, the said loops being bent down below the said lower wires and forming hooks engaging said lower wires to hold the lath thereto in spaced relation.

1,382,358. WAIST. ANNA AMILIA HOGAN, Elmhurst, N. Y. Filed Nov. 8, 1919. Serial No. 336,539. 2 Claims. (Cl. 2—73.)

1. A waist including a central back portion and extensions projecting laterally from said back portion, each of said extensions having edge portions shaped to taper downwardly at converging angles when arranged on the body of the wearer whereby a front opening is produced converging downwardly from the neck and shoulders to a position adjacent the bust, said extensions below said opening being adapted to overlap each other; means for securing the extensions in their overlapped position below said opening, said edge portions of the extensions at a level above the bottom of said opening having draw string-engaging means thereon; and a draw string connected to said engaging means of each edge portion and extending across the bottom of said opening whereby said edge portions can be drawn toward each other to decrease the width of the bottom of said opening and to place tension upon the portion of said extensions covering the bust; substantially as described.

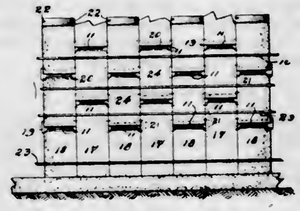


1,382,359. COAL-TRIMMING DEVICE. GEORGE B. HOLBERT, New York, N. Y. Filed Apr. 20, 1918. Serial No. 229,734. 3 Claims. (Cl. 193—13.)

1. A portable distributer comprising a unitary construction embodying a casing having an opening in its under side extending a considerable portion of its length, a hopper, a spiral conveyer extending from said hopper through said casing, and a motor connected to said conveyer in geared relation.

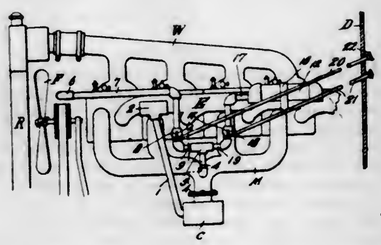
1,382,360. IRONING DEVICE. ARTHUR W. HUTCHINS, Cranston, R. I., assignor, by direct and mesne assignments, to Perry and Hutchins' Laundry Appliance Company Incorporated, Providence, R. I., a Corporation of Rhode Island. Filed Jan. 19, 1920. Serial No. 352,431. 10 Claims. (Cl. 223—17.)

1. An ironing device comprising an arm formed of two members, one member being movable relative to the other to adjust the working size of the arm, the operating surface of said members having intermeshing portions which



are flush with each other, and means for heating said members.

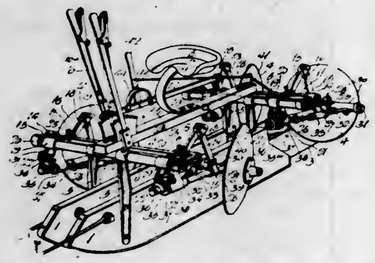
1,382,361. REFINING COPPER-NICKEL MATTE. NOAK VICTOR HYBINETTE, Christiania, Norway, and ROBERT LEE PEEK, Ottawa, Canada. Filed Feb. 25, 1920. Serial No. 361,275. 14 Claims. (Cl. 75—18.)



1. The method of purifying nickel-copper sulfate solutions from copper by cementation, which comprises bringing the solution into contact with an excess of finely divided nickel at a temperature below that of exhaustion of the nickel; substantially as described.

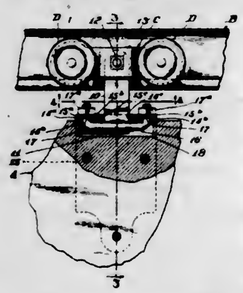
1,382,362. WALL STRUCTURE FOR CORN-CRIBS AND THE LIKE. JOHN H. IREY, West Liberty, Iowa. Filed Oct. 6, 1919. Serial No. 328,740. 2 Claims. (Cl. 72—6.)

1. A course building element for a directly ventilated wall comprising head portions and connecting air admitting vermin guard parts therebetween, said head portions having parts projected above and below said connecting portions.



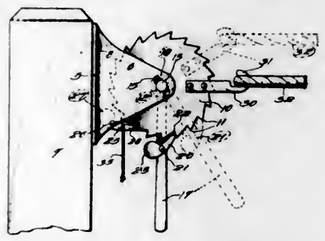
1,382,363. GAS AND AIR MIXER. GEORGE F. JACKSON, Byllesby, Va. Filed June 17, 1918, Serial No. 240,557. Renewed Apr. 7, 1921, Serial No. 459,308. 1 Claim. (Cl. 123—119.)

In an air feed for internal combustion engines, the combination with a jet nozzle directed into the inlet mani-



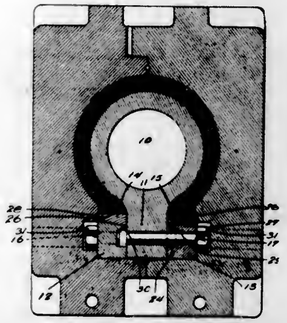
fold and a feed coupling whose shank is connected with the outer end of said nozzle, a pipe line leading from one arm of the feed coupling, an L coupling threadedly mounted upon the free end of said pipe line, a fan delivering air into said line, said coupling being turned so as to have its open end in the opposite direction from the rotation of said fan, a second pipe leading from the other arm of said coupling, a box adjacent the exhaust manifold and to which said second line is connected, independent valves in said line and manually operated means for controlling the valves.

1,382,364. LISTER-CULTIVATOR. LEWIS JACKSON, Simpson, Kans. Filed Mar. 13, 1919. Serial No. 282,270. 10 Claims. (Cl. 97—37.)



1. In a lister cultivator, a pair of wall-like runners adapted to straddle a row of sprouting plants, means for pulverizing the earth of the ridges alongside the row, throwing such earth inwardly, and piling it against the runners, whereby some of the pulverized earth may fall behind said runners around the plants; and a pair of disks adapted to be set to return the remaining pulverized earth to the ridges, said disks being reversible to throw such remaining earth farther inward around the plants when cultivating the second time.

1,382,365. DOOR-HANGER. ALBERT L. KEAN, Aurora, Ill., assignor to Richards-Wilcox Manufacturing Company, Aurora, Ill., a Corporation of Illinois. Filed Dec. 2, 1920. Serial No. 427,808. 6 Claims. (Cl. 16—90.)

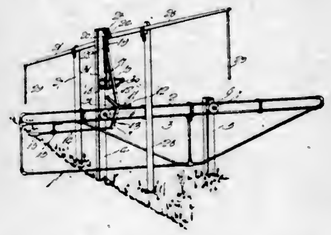


2. A door-hanger comprising in combination a wheeled carriage, a pendant connected at its upper end therewith, a cross-head connected with the lower end of said pendant and extending substantially parallel with the path of movement of the carriage and having upwardly-extending screw-threaded studs, the connection between the pendant and cross-head permitting a relative movement between them, a member adapted to be affixed to a door and extend over the upper edge thereof and above said cross-head, said member being provided with a slot for the passage of the pendant and with other slots for the reception of said studs, and a nut on each stud for locking the studs in different adjusted positions in said last-named slots.

1,382,366. ROPE-TIGHTENING DEVICE. ANNA C. KIENLEN, Aurora, Ill. Filed June 5, 1920. Serial No. 386,888. 2 Claims. (Cl. 254—164.)

1. A device of the kind described comprising a base from which are extended two ears in parallel and spaced relation, an axle pin mounted between the ears at a point remote from the base, a sleeve rotatably mounted on the axle pin and extending between the two ears, a wheel carried fast by the sleeve and spaced away from one ear, a lever having one end in the form of an eye loosely carried on the sleeve in the space between the wheel and ear and adapted to move only within a single plane, ratchet teeth arranged on the periphery of the wheel, a pawl mounted on the lever having its acting end in operative relation to the ratchet teeth, a second pawl mounted between the ears adapted to present its acting end against the ratchet teeth to insure a normal one way rotation of the wheel, and a hook secured to the wheel near its periphery and adapted to engage with a rope for tightening the same as the wheel is moved under the influence of the lever, substantially as described.

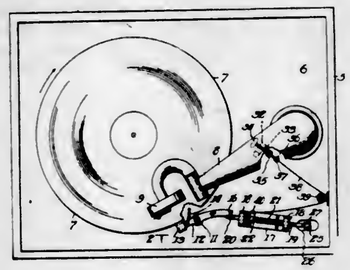
1,382,367. METHOD FOR BUILDING TIRES. KARL B. KILBORN, Akron, Ohio, assignor to The Goodyear Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed June 13, 1918, Serial No. 101,561. Divided and this application filed June 29, 1918. Serial No. 242,642. 6 Claims. (Cl. 154—14.)



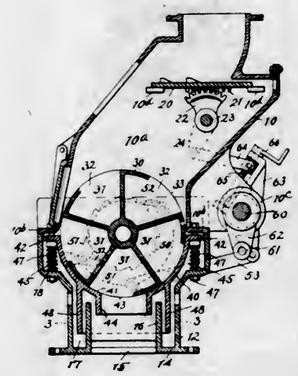
5. The method of manufacturing tire carcasses which comprises the following steps: (*a*) building up and stitching a carcass and bead portions; and (*b*) applying pressure outwardly and radially against the base face of the bead portions to stretch said base portions, and simultaneously exerting a wiping action circumferentially of the base face of the bead portions.

1,382,368. PROCESS OF MAKING FUSIBLE LINKS. LEROY M. LEWIS, Philadelphia, Pa. Filed May 6, 1920. Serial No. 379,253. 7 Claims. (Cl. 113—51.)

1. The process of making a plate for a fusible link which comprises the steps of forming a transversely extending offset in a metal blank, placing the blank in a die press and compressing said offset portion to form a flat portion angularly disposed relative to the body portion of the finished plate and connected thereto by a web of thickness substantially equal to that of said body portion.

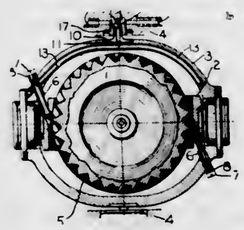


1,382,369. GATE-OPERATING MECHANISM. JOHN LIND, near Trakean, Idaho. Filed Aug. 6, 1920. Serial No. 401,639. 4 Claims. (Cl. 39—73.)



3. The combination of a gate, means including a post for supporting the gate, a bracket on said post, a toggle including a link pivoted to said bracket and a link pivoted to the gate, means for causing the first said link to swing over its bracket-connecting pivot and thereby sliding said gate toward its open position, a detent on said toggle, and a spring-pressed keeper supported by said bracket and including a detent-engaging portion approximately over said bracket-connecting pivot and being effective to engage and co-act with said detent for controlling said toggle.

1,382,370. PHONOGRAPH ATTACHMENT. OSCAR LINDHOLM, Chicago, Ill. Filed May 5, 1920. Serial No. 379,154. 4 Claims. (Cl. 161—23.)

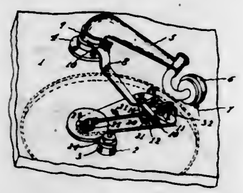


1. In a phonograph attachment of the character described, the combination with the turn-table of a phonograph, of a pivoted brake lever carrying a brake shoe cooperating with said turn-table, a spring normally acting to apply said brake shoe, a push rod adapted to engage with and swing said brake lever in a direction to retract said brake shoe from said turn-table, and an alarm clock having its hammer so located as to transmit its vibrations to said push rod and force the same into engagement with said brake lever.

1,382,371. FEED MECHANISM FOR GAS-PRODUCERS. JAY S. MCCLIMON and ROBERT WETHERILL, Jr., Cleveland, Ohio, assignors to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 24, 1919. Serial No. 278,715. 11 Claims. (Cl. 214—35.)

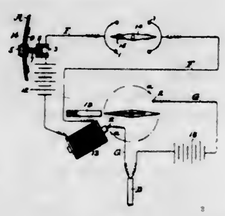
1. In fuel feeding mechanism, the combination of a fuel chute, a rotatable cylindrical pocketed fuel valve therein, a valve seat member having a substantially semi-cylindrical upper seating surface with which the lower part of said valve engages, which valve seat member has a downwardly directed discharge opening through its seating surface, springs yieldingly pressing said valve seat member up against said valve, and means to impart step by step rotary motion to said cylindrical valve.

1,382,372. GYROSCOPE. SCOTT B. MACFARLANE and LOUIS J. BARRY, Newport, R. I., assignors to the Government of the United States. Filed Apr. 30, 1918. Serial No. 231,742. 6 Claims. (Cl. 74—78.)



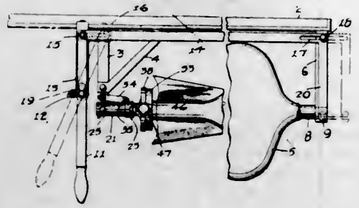
1. In gyroscope construction, in combination, inner and outer gimbal rings, a wheel mounted in one of said rings having tangential buckets in its periphery, and tangentially adjustable nozzles mounted in the outer ring adapted to direct the fluid jets into such buckets, said inner gimbal ring being notched on one side to permit free movement of said nozzles during the relative turning movement of said gimbal rings.

1,382,373. TALKING-MACHINE. WILLIAM C. MASON, Albany, N. Y. Filed Mar. 23, 1920. Serial No. 368,040. 8 Claims. (Cl. 192—116.)



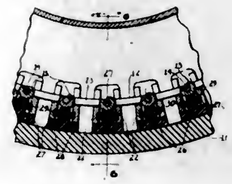
6. In a talking machine, the combination with the main driving hub of the machine, a brake shoe normally oper-

ating to stop the operation of the machine, means including a latch for anchoring said brake shoe out of machine arresting position, a friction wheel operatively connected with said driving hub, a crown gear on said friction wheel, a lead screw axially movable, a pinion on



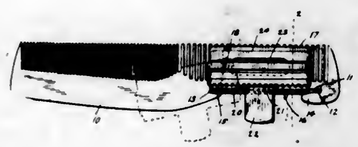
said lead screw in mesh with said crown gear, a rotary cam on said lead screw normally operating in a path of movement clear of said latch, and means for transmitting axial movement to said lead screw thereby to cause said cam to trip said latch and cause said brake shoe to arrest the operation of the machine.

1,382,374. METHOD AND MECHANISM FOR EXPLODING SUBMARINE MINES. HUDSON MAXIM, Hopatcong borough, N. J. Filed Aug. 30, 1917. Serial No. 188,933. 10 Claims. (Cl. 102—3.)



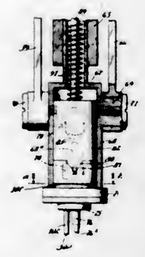
1. In a firing mechanism for an explosive, a magnetic needle, an electric circuit including an electro-magnet energized by the deflection of said needle, an armature, and another electric circuit including an exploder operable on the movement of the armature.

1,382,375. AERIAL TORPEDO AND LAUNCHING MEANS. JOSEPH MENCHEN, New York, N. Y. Filed Apr. 13, 1918. Serial No. 228,343. 25 Claims. (Cl. 244—1.)



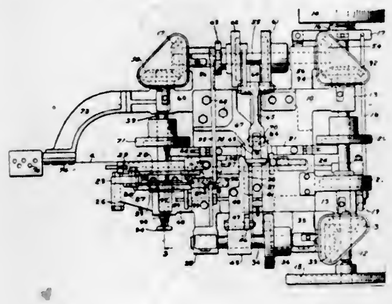
1. Launching means for aerial torpedoes comprising a hinged holder for one end of the torpedo, a withdrawal support for the opposite end, together supporting the torpedo horizontal, a shear pin uniting the torpedo and hinged holder, and means whereby downward swinging movement of the torpedo and hinged holder automatically causes the shearing of said pin.

1,382,376. RESILIENT TIRE. CLYDE S. MORSE, De Kalb, Ill., assignor of one-half to Stella S. Morse, De Kalb, Ill. Filed Sept. 20, 1920. Serial No. 411,532. 12 Claims. (Cl. 152—8.)



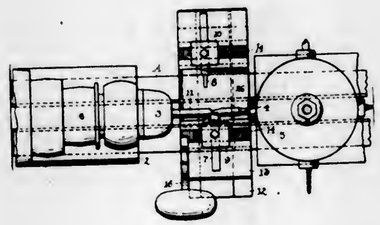
3. In a resilient tire, the combination with a circular casing, of a transversely jointed band located therein at a distance from its outer or tread portion, a segmental clamping jaw transversely mounted on the band on each side of each joint thereof providing a pair of spaced jaws at each joint, and a segmental tread member having an inwardly extended web of less width than its base interposed between the members of each pair of said jaws, the base of each of said tread members being interposed between the outer surfaces of the jaws and the said casing.

1,382,377. HAIR-CUTTER. WALTER G. MUSPRATT, San Francisco, Calif. Filed Feb. 4, 1920. Serial No. 356,189. 4 Claims. (Cl. 30—12.)



1. A hair cutting device including a cutting blade, a comb having a recessed guide and stop for the back of the clip, parallel with the ends of the teeth, and with overhanging flanges at the end of the guide, a clip consisting of opposed holding jaws and elastic compressing means and resilient pads, against which the jaws rest.

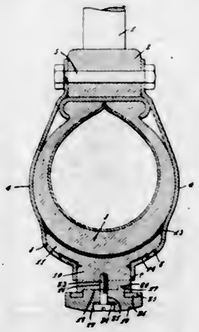
1,382,378. PERFORATING-MACHINE. DONALD NOBLE, Bridgeport, Conn., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed July 14, 1919. Serial No. 310,690. 33 Claims. (Cl. 164—88.)



1. A machine of the class described having, in combination, a reciprocable punch carrier, a punch carried thereby, and a work feeding element mounted upon said punch carrier and movable therewith.

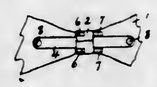
1,382,379. WIRE-FORMING MACHINE. MAURITZ OLSON, Bridgeport, Conn., assignor to The A. H. Nilson Machine Co., Bridgeport, Conn., a Corporation of Connecticut. Filed June 17, 1920. Serial No. 389,604. 9 Claims. (Cl. 140—130.)

1. The combination with wire cuttting and forming mechanism, of a wire feeding device including a reciprocatory slide, a wire gripping jaw pivoted thereon, a swinging arm also carried by the slide for operating the gripping jaw, an operating member supported independent of the slide and connected with the arm for operating the same, and means for moving the operating member bodily to and from the slide and in parallel alinement with the movement thereof.



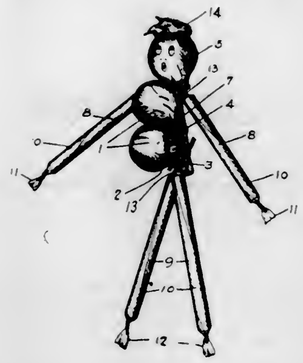
1,382,380. CROSS-SLIDE FOR LATHES. FREDERICK W. PARSONS, Cleveland, Ohio. Filed July 14, 1919. Serial No. 310,672. 4 Claims. (Cl. 82—25.)

1. In a lathe, a base plate, a reciprocable cross slide, having a central bottom recess closed at its sides, lever means adapted to reciprocate said cross slide, a stop member centrally of said base plate extending into said closed recess, separate adjustable stop screws within said cross slide extending into opposite ends of said closed recess on opposite sides of said stop member, a removable closure plate at one side of said recess, and separate tool holders mounted opposite each other upon said cross slide.



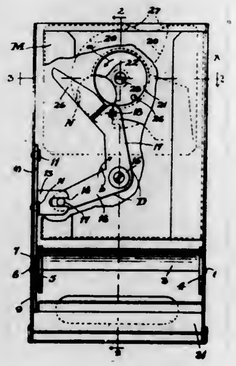
1,382,381. TIRE-ARMOR. MENDEL PIANKO, Chicago, Ill. Filed Feb. 26, 1920. Serial No. 361,465. 3 Claims. (Cl. 152—16.)

2. A device of the class described including a non-resilient housing, means for securing the housing to the rim of a wheel and around a tire mounted on the rim, radially movable tread members carried by the peripheral portion of the housing and normally pressed outwardly



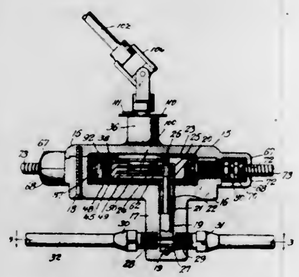
by the tire within the housing, and a flexible diaphragm connecting each of the tread members to the housing.

1,382,382. NECKTIE. THOMAS POLONUS, Youngstown, Ohio. Filed Mar. 5, 1921. Serial No. 449,998. 2 Claims. (Cl. 2—84.)



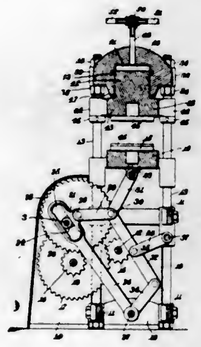
1. In a device of the class described, a slightly curved soft metallic plate, two centrally located side projections, two tongues formed at the edges of said side projections, each tongue being parallel to the soft metallic plate, a button secured at each end of said soft metallic plate, substantially as described for the purpose set forth.

1,382,383. WRAPPED CANDY DOLL. ADELAIDE M. PORTER, Greenwich, Conn., assignor to Huyler's, New York, N. Y., a Corporation of New York. Filed Nov. 13, 1920. Serial No. 423,833. 3 Claims. (Cl. 46—40.)



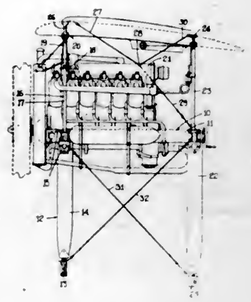
1. A wrapped candy doll comprising substantially round candies wrapped and arranged to form body and head portions, and candy sticks wrapped and secured to the body portion to form arms and legs.

1,382,384. COIN-CONTROLLED VENDING-MACHINE. EDWIN B. POTTS, Jersey City, N. J., assignor to Autosales Corporation, a Corporation of New York. Filed Apr. 11, 1918. Serial No. 227,856. 12 Claims. (Cl. 194—88.)



1. In a coin-controlled vending machine, delivery mechanism, a movable member adapted to cause operation of said mechanism when said member is moved from normal to full-operated position, a hand-operable coin-carrier for conveying the deposited coin into position to actuate said member part-way from normal to full-operated position, and means independent of said coin for actuating said member the rest of the way to full-operated position through the medium of said coin-carrier.

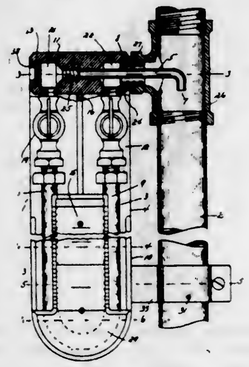
1,382,385. ELECTRIC SWITCH STRUCTURE. ERNEST W. PRIGAN, Indianapolis, Ind., assignor to H. C. Naylor and S. H. Keeney, Indianapolis, Ind. Filed Nov. 30, 1917. Serial No. 204,714. 2 Claims. (Cl. 200—42.)



1. In a device of the character described comprising a two-part casing containing a circular chamber and a plurality of radially-projecting terminal-encompassing cups, each for inclosing an electric terminal; a circuit terminal within each cup, having a contact extending into the chamber; a rotatable member within said chamber, carrying connectors to connect said terminals in pairs, when rotated; operating means extending outside of the chamber to rotate said rotatable member and a permutation lock for connecting and disconnecting said operating means to said rotatable means.

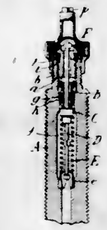
1,382,386. HYDRAULIC TOGGLE-PRESS. GEORGE W. PROUTY, Milton, Mass. Filed Feb. 28, 1920. Serial No. 362,079. 20 Claims. (Cl. 25—98.)

8. In a machine of the class described, two movable cooperating members; a die on one member; toggle mechanism for moving one of said members toward the other; and hydraulic means for subsequently moving the second member toward the first-mentioned member.



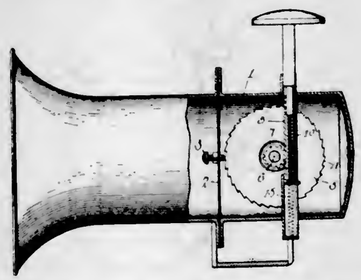
1,382,387. ENGINE-BED SUPPORT. CLAYTON L. ROLOSON, Buffalo, N. Y., assignor to Curtiss Aeroplane and Motor Corporation, Buffalo, N. Y., a Corporation of New York. Filed Jan. 30, 1919. Serial No. 274,023. 8 Claims. (Cl. 244—14.)

1. In an airplane, a wing structure including superposed supporting surfaces, an engine bed mounted between the supporting surfaces, a support for the engine bed including a V-type strut having its legs continuously upwardly divergent beyond the horizontal plane of the engine bed, the V-strut being erected upon one of the supporting surfaces, and a motor mounted on the engine bed and extended horizontally between and beyond the upwardly divergent legs of the strut.



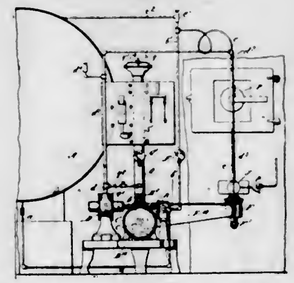
1,382,388. FLOW-INDICATOR. LLOYD D. ROYER, Highland Park, Mich., assignor to Sloan-Striker Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 2, 1919. Serial No. 269,282. 9 Claims. (Cl. 73—167.)

1. A flow indicator, comprising a body portion, a U-shaped tube lying adjacent to said body portion and having the base of the U extend therebeyond, a scale se-



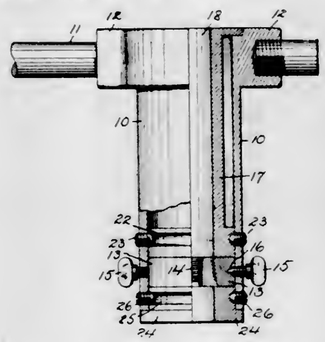
cured to said body portion adjacent to the legs of said U, and means upon said scale for protecting the base of the U.

1,382,389. PNEUMATIC VALVE. MAXIMILIAN CHARLES SCHWEINERT, West Hoboken, N. J. Filed Sept. 11, 1915. Serial No. 50,120. 5 Claims. (Cl. 152—12.)



1. A valve comprising a tubular valve casing, a screw member with a cooperating check adapted to be screwed into and out of the valve casing, said screw member having a manipulating portion extending beyond the end of the casing when in place, said projecting portion lying close to the end of the casing, whereby either a cap or a pump coupling may engage the end of the casing, combined with a screw part having a thread adapted to engage the end of the casing, and having secured therein an internal packing gasket adapted to engage both the end of the casing and said manipulating portion.

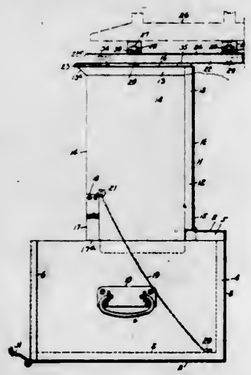
1,382,390. MECHANICALLY-ACTUATED HORN. GEORGE J. SEISS, Toledo, Ohio. Filed Mar. 11, 1918. Serial No. 221,604. 2 Claims. (Cl. 116—144.)



1. In a signal, a body having apertures in alinement in its side wall and apertures in the wall at each side of one of the first mentioned apertures, a guide in the first mentioned apertures, tongues integral with the sides of the guide inserted in the second mentioned apertures from above and embracing the body between the second mentioned apertures and the guide, the said body of the guide and the said tongues bearing against the upper surface of the body whereby the body sustains the strain due to operation, signal actuating means operating in the guide, and a sounder moved by the actuating means.

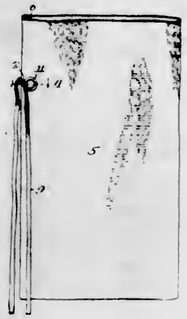
1,382,391. MEANS FOR SECURING FUEL COMBUSTION. JOHN A. SHERMAN and WILLIAM H. SHEPPARD, Worcester, Mass. Filed Sept. 9, 1919. Serial No. 322,670. 5 Claims. (Cl. 158—36.)

5. In a heating system, a fuel reservoir, a burner tank, a fuel pump located between said reservoir and said tank, a valve casing comprising a chamber, a float valve located in said chamber, fuel-carrying connections between said reservoir, said pump and said chamber, and controlled by said valve, a fuel-carrying connection between said chamber and said tank, a burner located on said tank and a compressed air system connected to said burner and the upper part of said tank and said chamber and adapted to feed said burner with fuel and atomize it, and to maintain a pressure on the upper surface of the fuel in said tank and said chamber greater than the normal pressure of said feul.



1,382,392. STOCK AND DIE. IRVING C. SHUSTER, Newark, N. J. Filed Mar. 13, 1920. Serial No. 365,388. 3 Claims. (Cl. 10—123.)

3. An improved stock and die comprising an elongated stock, a long insert inside the stock and extending for a major portion of its length, the insert having a bore and having a peripheral groove, screws passing through the walls of the stock with their ends in the grooves, a second and smaller stock having a bore alined with the bore in the first mentioned insert, the second insert having a peripheral groove, screws passing through the walls of the stock with their inner ends in the grooves, a die fitting between the ends of the inserts and having indenta-

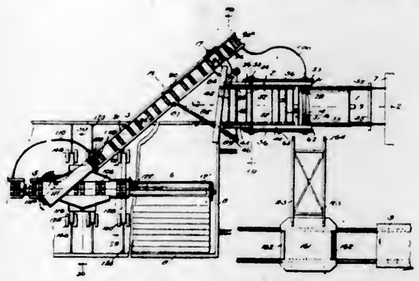


tions in its periphery, screws passing through the walls of the stock and entering the indentations, and a handle projecting laterally from the end of the stock opposite the end at which the die is placed.

1,382,393. CONVERTIBLE BOX AND STAND. ARTHUR W. SMITH, New York, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed May 24, 1918. Serial No. 236,286. 9 Claims. (Cl. 45—52.)

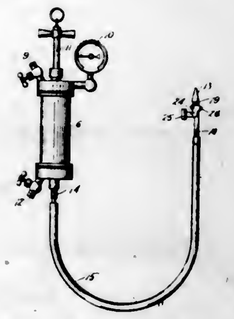
3. A combined typewriter packing box and writing support comprising two connected parts which when in closed relationship fully inclose the typewriting machine and when brought into open relationship are automatically interlocked against closing and provide a stand which at one side is open and entirely unobstructed beneath the top on which the writing machine is adapted to rest, the open side affording access to a space partly inclosed by the other three sides which provide a support for the top both at its front and back.

1,382,394. COIN-BAG. ROBERT SPURGIN, Chicago, Ill. Filed Sept. 20, 1916. Serial No. 121,132. 2 Claims. (Cl. 150—11.)



1. A coin bag of textile or similar material having a longitudinal seam at one side thereof, the free edges of the material extending inwardly from said seam, and a metal eyelet extending through said free edges and through the adjacent plies of the bag so as to provide a permanent reinforced opening adjacent to one edge of the bag adapted to receive a closing cord or tape.

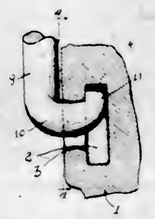
1,382,395. WELL-SHOOTING-TORPEDO APPARATUS. ALBERT G. STOOPS, Indianapolis, Ind. Filed Nov. 15, 1920. Serial No. 424,126. 10 Claims. (Cl. 102—4.)



1. A well-shooting torpedo including a hollow cylindrical shell, a bottom and a non-metallic guard arranged together face to face opposite to one end of the shell, the guard extending outward beyond the bottom, clamping means to secure the bottom and the guard together to the shell, and a top part secured to the opposite end of the shell.

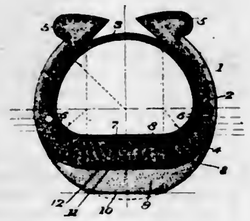
1,382,396. LUMBER-HANDLING MACHINE. JOHN RAYMOND SZYMANSKE, Somers, Mont. Filed June 26, 1917. Serial No. 177,021. 14 Claims. (Cl. 214—6.)

1. A lumber handling device, including a tie receiving table, anti-friction chain tie supports resting on said table, and means located independently of the table for sustaining portions of said chain supports, and enabling adjustment thereof.



1,382,397. APPLICATOR. JOHN N. WHITEHOUSE, New York, N. Y. Filed July 11, 1919. Serial No. 310,039. 2 Claims. (Cl. 18—3.5.)

1. In a device of the kind described comprising a casing, a piston within the casing, means for introducing

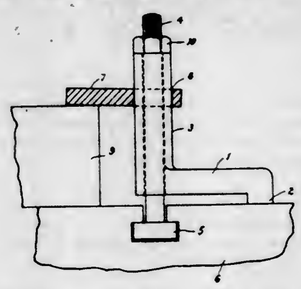


fluid under pressure into the casing at one side of the piston, means for introducing semi-liquid or plastic material into the casing at the other side of the piston, an exit opening from the casing at the last-named side of the piston, means for moving the piston in the opposite direction to that in which the fluid pressure drives the piston, a conduit connected to the exit opening aforesaid, an applicator at the end of said conduit, said applicator having a discharge opening, and a plunger valve controlling said opening.

1,382,398. MOLD CONSTRUCTION. JOEL A. WILDROUDT, Akron, Ohio. Filed Jan. 10, 1921. Serial No. 436,061. 7 Claims. (Cl. 18—1.)

1. A vulcanizing mold having an undercut recess in its outer periphery, adapted to have an interlocking rotary engagement with a lifting device.

1,382,399. RESILIENT TIRE. JOSEPH S. WILLIAMS, Riverton, N. J. Original application filed Jan. 19, 1911. Serial No. 603,552. Divided and this application filed Dec. 15, 1917. Serial No. 207,233. 4 Claims. (Cl. 152—18.)



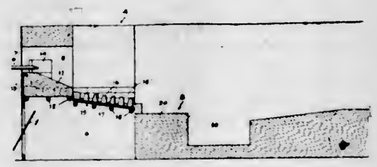
1. A tire having a tension belt in circular formation inwardly of the major transverse axis of the tire in cross section and in flattened arch formation outwardly of said axis, said tension belt having combined in its flattened arch formation annular reinforcements of tensile material to limit under working conditions of internal pressure and load within definite ranges the inward and outward movements of the flattened arch formation and the lateral movements of the side walls of the tension belt, and a tread outwardly of said tension belt.

2. A tire having a tension belt in circular formation inwardly of the major transverse axis of the tire in cross section and in flattened arch formation outwardly of such axis and in proximity to it, said tension belt having combined in its flattened arch formation annularly and transversely disposed reinforcements of flexible tensile material contributing under operative conditions of load and internal pressure to restrain circumferential and transverse elongation of such flattened arch formation, a tread outwardly of the tension belt and means within said belt to maintain it in tension when under load.

3. A tire having a tension belt in circular formation inwardly of the major transverse axis of the tire in cross section and in flattened arch formation outwardly of such axis and in proximity to it, said tension belt having combined in its flattened arch formation an annularly and transversely disposed metal member contributing under operative conditions of load and internal pressure to restrain circumferential and transverse elongation of such flattened arch formation, a tread outwardly of the tension belt, and means within said belt to maintain it in tension when under load.

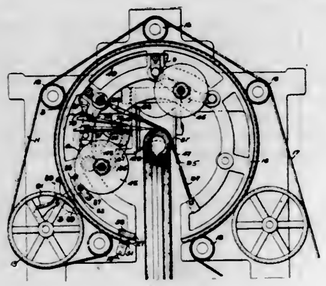
4. A tire having a tension belt in circular formation inwardly of the major transverse axis of the tire and in flattened arch formation outwardly of said axis, with flexible tension material transversely disposed in the flattened arch formation, in combination with flexible tensile material extending as an annular reinforcement in vulcanized combination with said flattened arch formation, and a tread encircling the flattened arch formation.

1,382,400. CLAMP. L D ROSS, Elyria, Ohio. Filed June 13, 1919. Serial No. 304,046. 4 Claims. (Cl. 90—59.)



1. In devices of the class described, a lever arm having a fulcrum adapted to rest on a support, a member extending from said lever arm, a second lever arm having one end loosely engaging said member and the other end resting on the article to be clamped, and means for pressing said member toward said support to bind the first mentioned arm on said member and clamp the article in position.

1,382,401. DENTAL INSTRUMENT. DANIEL ANTON ZURBRIGG, Milford, Del., assignor to The L. D. Caulk Company, Milford, Del., a Corporation of Delaware. Filed May 21, 1918, Serial No. 235,843. Renewed Sept. 17, 1920. Serial No. 410,961. 6 Claims. (Cl. 32—10.)

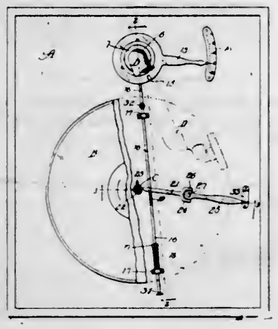


1. An instrument for packing filling material into occlusal posterior-teeth-cavities, having correlative larger and smaller trapezoidal packing faces, each of whose greater dimensions is transverse and whose dimensional ratio is 4:3.

1,382,402. OIL-FURNACE FOR BOILERS. GEORGE C. ADAMS, San Francisco, Calif. Filed May 22, 1920. Serial No. 383,350. 8 Claims. (Cl. 158—1.)

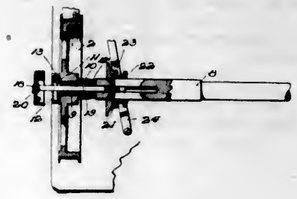
1. An oil burning furnace including a burner, a floor having a downwardly inclined surface below the burner and extending in front of the burner, and another downwardly inclined surface extending from the first surface, said latter surface having a plurality of upwardly opening air intake openings therein.

1,382,403. WRAPPING-MACHINE. EDWARD H. ANGIER, Framingham, and WILLIAM M. WHEILDON, Ashland, Mass.; said Wheildon assignor to said Angier. Filed May 19, 1917. Serial No. 169,773. 32 Claims. (Cl. 242—6.)



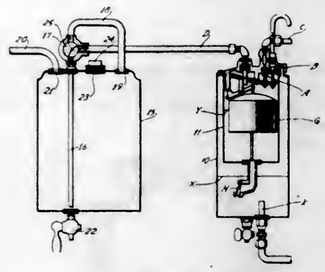
1. A machine of the class described comprising, in combination means for supporting an article, strip-serving means coöperating therewith and means utilizing the motion of said parts to sever the strip.

1,382,404. SCHOOL-DESK. JOHN D. ATKINSON, Plain, Wash. Filed June 29, 1920. Serial No. 392,618. 10 Claims. (Cl. 155—188.)



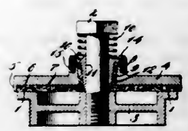
1. In a school desk, a screen wall raised from the desk surface at two adjoining sides thereof, and adapted when used with like screen walls on adjoining desks, to shut off the view of the pupil upon all sides.

1,382,405. AUTOMATIC STOP FOR PHONOGRAPHS. WALTER J. BAKER, Chicago, Ill. Filed Feb. 26, 1918. Serial No. 219,247. 4 Claims. (Cl. 192—116.)



1. In an automatic stop for phonographs, a tone-arm, a hub-part, a bearing ring therefor, a gage-ring loosely mounted on said hub-part, a friction disk bearing on said gage-ring, and a clamping collar bearing on said disk and adjustable on the tone-arm.

1,382,406. RESILIENT CLUTCH FOR PHONOGRAPHS. GEORGE W. BEADLE, New Rochelle, N. Y., assignor to Columbia Graphophone Manufacturing Company, Bridgeport, Conn., a Corporation of Delaware. Filed Apr. 20, 1918. Serial No. 229,824. 5 Claims. (Cl. 192—67.)

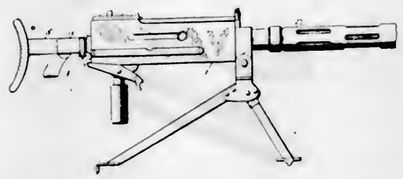


4. In a clutch, the combination with a member having teeth, of a spring-metal disk having a strip pressed out at an angle to the plane of the disk, means carried by the free end of the strip for engaging the aforesaid teeth and means backing the disk on the side remote from the aforesaid teeth.

1,382,407. AUXILIARY FUEL-TANK. CLIFFORD G. BRANIGAN, New York, N. Y. Filed Oct. 28, 1920. Serial No. 420,097. 4 Claims. (Cl. 158—46.5.)

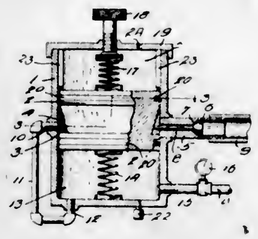
1. The combination with an automobile having a main fuel supply tank, a vacuum feed tank containing a float, and an engine, of a closed auxiliary fuel tank, a connection between the main tank and the auxiliary tank, and a connection between said vacuum tank and said auxiliary tank, including manually operated means by which the suction of said vacuum tank may be applied at will either at the top of said auxiliary tank or at a point near its bottom.

1,382,408. PUMP-VALVE. JOHN H. BULLEN, Lakewood, Ohio. Filed Aug. 19, 1920. Serial No. 404,548. 4 Claims. (Cl. 251—144.)



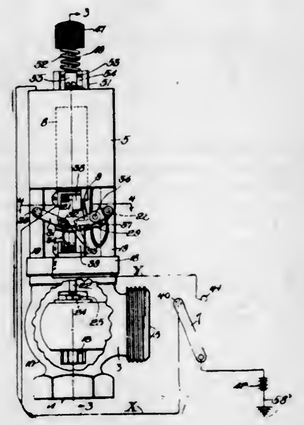
1. In a pump valve, the combination with a valve seat, of a valve casing movable toward and from said seat, said casing being provided with a peripheral flanged portion, a valve positioned in said casing and having its periphery abutting said flanged portion, a collar projecting from said valve, and means for securing said collar to said casing.

1,382,409. BIPOD REST FOR FIREARMS. JOHN S. BUTLER, U. S. Army, assignor to Newton D. Baker, Secretary of War, trustee. Filed Jan. 30, 1919. Serial No. 274,075. 7 Claims. (Cl. 42—94.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



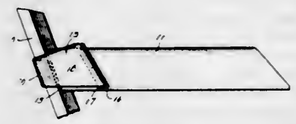
1. In combination with a machine rifle, a rest therefor having a clamp detachably engageable with the rifle barrel, an inverted U-shaped traverse bracket vertically pivoted to said clamp, a transversely hinged bracket carried by the traverse bracket, a pair of normally diverging legs longitudinally pivoted to the hinged bracket, and foldable spacing links between said legs in position to normally hold the legs in a spread relation.

1,382,410. DETACHABLE STOCK FOR FIREARMS. JOHN S. BUTLER, U. S. Army, assignor to Newton D. Baker, Secretary of War, trustee. Filed Apr. 19, 1919. Serial No. 291,367. 4 Claims. (Cl. 89—40.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. A gun stock, including a tubular shank split longitudinally for a portion of its length, a shoulder rest secured to the shank, and means encircling the shank for binding the stock in place upon the gun.

1,382,411. PRESSURE-REDUCING GAGE. GEORGE M. BYRNE and WILLIAM M. SIBLEY, Lincoln, Nebr. Filed Apr. 10, 1920. Serial No. 372,749. 6 Claims. (Cl. 50—35.)

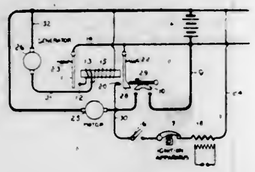


1. In a pressure reducing gage for reducing high pressure gases to a desired low pressure, the combination of a casing, a piston longitudinally reciprocable in said casing, springs bearing against opposite sides of the piston, means for adjusting the tension exerted by one of said springs, an annular beveled groove encircling the piston, an intake port disposed opposite said groove, a pressure reducing valve mounted in said port and having its stem bearing against the beveled surface of the grooved portion of the piston to enable movement of the piston to adjust the size of the valve opening, a conduit opening out of the opposite side of the casing and in communication with the annular chamber formed by the groove in the piston, said conduit extending to and opening into the chamber in the casing below the piston, and means for the outflow of gas at reduced pressure from said chamber.

1,382,412. ELECTROMAGNETIC VALVE. JAMES H. CAMPBELL, Cambridge, Mass. Filed Nov. 1, 1918. Serial No. 260,745. 18 Claims. (Cl. 137—139.)

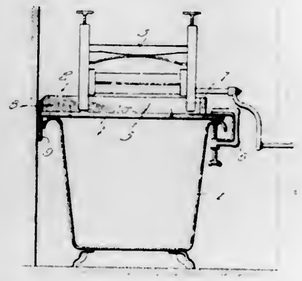
1. An electro-magnetic valve comprising a valve, an electro-magnet, and an armature, the valve and armature mounted for vertical movement in the same line, the armature movable in said line beyond its neutral position in the magnetic field in opposite directions, direct connections for opening and closing the valve by said opposite movements of the armature, and means for deënergizing the magnet as the armature reaches its neutral position when moving in either direction.

1,382,413. TOOL-HOLDER. BENJAMIN THOMAS CARSON, Rensselaer, N. Y. Filed Mar. 9, 1920. Serial No. 364,406. 9 Claims. (Cl. 29—100.)



1. In a tool holder, a shank, an angular outer end provided with a vertical groove, a yoke member adapted to be supported from said end of the shank to constitute a tool receiving socket, and means formed respectively on the yoke and the side faces of said end of the shank adapted to co-act upon relative vertical adjustments to vary the size of the tool receiving socket.

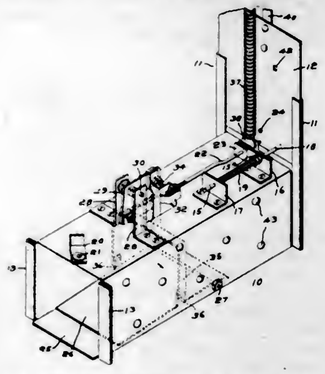
1,382,414. IGNITION SYSTEM. FARNUM F. DORSEY, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 13, 1918. Serial No. 22,098. 3 Claims. (Cl. 290—37.)



1. The combination, with an engine-starting electric motor, a storage-battery, a generator for charging the

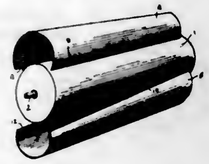
battery, and electric ignition-apparatus, of means, including a relay, for connecting the generator in charging-circuit with the battery; said relay having a winding connected with and energized by the generator, and two armatures, one controlling said charging-circuit and the second controlling the connection betweeen the ignition-apparatus and the battery; means, including a starting-

switch, for connecting the motor with the battery; and manually-operable means acting mechanically on said switch and said second relay-armature, whereby the starting-switch may be closed and said second armature moved to closed-circuit position simultaneously.



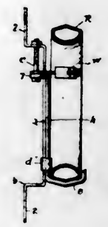
1,382,415. CLOTHES-WRINGER ATTACHMENT FOR BATHTUBS. RICHARD DOWSE, Chicago, Ill. Filed Sept. 25, 1919. Serial No. 326,138. 1 Claim. (Cl. 68—32.)

An attachment for supporting a clothes wringer on a bath tub comprising a horizontal base board adapted for transverse disposition on a tub, a centrally disposed vertical wringer board carried by the base board and having one of its ends flush with one end of the base board and its opposite end spaced from the opposite end of the base board, a transverse cleat disposed at the last named end of the wringer board, a plate composed of a thin piece of metal, said plate being perpendicularly disposed and secured to the flush ends of said boards, a portion of said plate extending above the base board and a portion extending below the bottom of said board, said last named extended portion being adapted to be disposed between a wall and the rim of the tub, and means for fastening the opposite end of the base board on the tub.



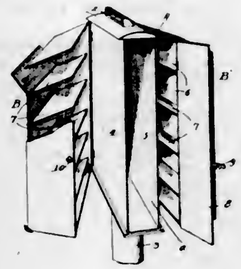
1,382,416. RAT-TRAP. FRANK G. DRESSER, Providence, R. I. Filed Sept. 14, 1920. Serial No. 410,226. 6 Claims. (Cl. 43—61.)

1. A rat trap comprising, in combination, a hollow body portion provided with open ends for the free passage of rats into, through and out of the trap, a door for automatically closing one end of the body portion, a bolt operable to lock the door in the open position to permit the rats to pass through the trap freely, latch mechanism for holding the door in its open position when the door is unlocked and the trap is set, said bolt operable independently of the latch mechanism for securing the door in either open or closed position, a manually controlled



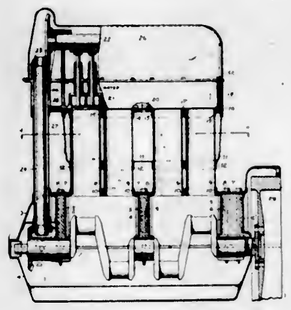
closure for closing the other end of the body portion, and means within the body portion operable by the rat to trip the latch mechanism and close the door.

1,382,417. TYPEWRITER DEVICE. MILLARD EDMUNDSON, San Francisco, Calif. Filed Feb. 26, 1920. Serial No. 361,433. 1 Claim. (Cl. 197—144.)



As an article of manufacture, a plurality of matching semi-cylindrical metallic surfaces formed to spring over the platen of a typewriter or the like, and providing a smooth, hard, cylindrical surface thereon, the surface having proximate edges on a line angular with the platen axis, whereby relative axial movement of the surfaces will vary the inclosing cylindrical diameter, as and for the purposes set forth.

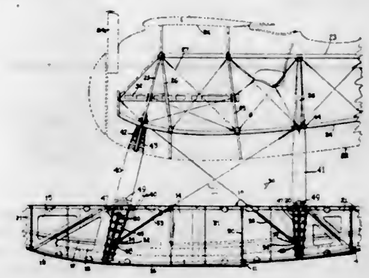
1,382,418. COMBINED BRACKET AND HANGER FOR RADIATORS. JOHN W. FARLEY, Cleveland, Ohio. Filed July 13, 1920. Serial No. 395,927. 4 Claims. (Cl. 248—30.)



2. In a combined bracket and hanger for radiators, a bracket and a hanger for the radiator adjustably secured on the face of the bracket, a clamp to secure the radiator to the bracket comprising a spring wedge adapted to enter between the folds of the radiator and a clamping screw therewith and means to secure the said hanger and the said screw to the upper end of the bracket, and a keeper engaging the lower end of the hanger and bracket slidably together.

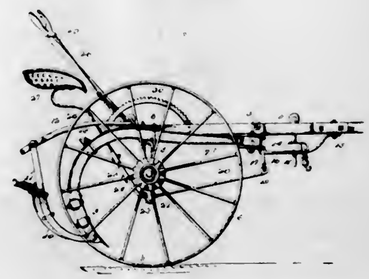
1,382,419. MAIL-BOX. ERNEST T. FRY, Baltimore, Md., assignor to Jacob M. Moses, Baltimore, Md. Filed Aug. 11, 1920. Serial No. 402,796. 3 Claims. (Cl. 232—24.)

1. A mail receiving and delivery box comprising a receiving compartment having side walls and having an open end, a delivery compartment hinged to said receiving compartment and having a plurality of lock boxes, open at their inner sides and adapted to be closed by a side-wall of the receiving compartment, a door for closing the end of the receiving compartment, and means for locking said delivery compartment and said door in closed positions.



1,382,420. INTERNAL-COMBUSTION ENGINE. GEORGE B. FULLER, Cleveland, Ohio. Filed Feb. 10, 1919. Serial No. 276,145. 16 Claims. (Cl. 123—173.)

1. An engine for air machines constructed with separate cylinders drawn from sheet metal and a single water jacket for all said cylinders drawn from sheet metal having an integral bottom with flanged openings sleeved upon and permanently secured to said cylinders about their middle lower portion, a single plate having walled openings in sleeved engagement with the upper ends of said cylinders and with said jacket and a valve receiving and water circulating head removably mounted over said cylinders.

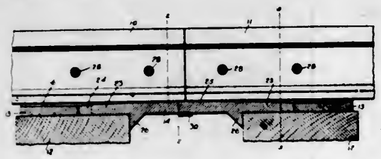


1,382,421. HYDROAIRPLANE LANDING-GEAR. WILLIAM L. GILMORE and JOSEPH F. MEADE, Roosevelt, N. Y., assignors, by mesne assignments, to Curtiss Aeroplane and Motor Corporation, Buffalo, N. Y., a Corporation of New York. Filed Oct. 10, 1918. Serial No. 257,657. 16 Claims. (Cl. 244—2.)

1. A landing gear for hydroaircraft comprising a float, a plural number of struts, the struts being arranged one aft of the other in the longitudinal vertical plane of the fore and aft axis of the float, socket fittings extended

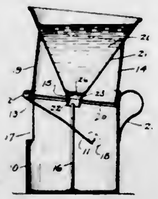
deep into the float to receive the lower strut-ends, and brace wires extended angularly out from the socket fittings to brace the float against laterally directed shocks.

1,382,422. CULTIVATOR. GROVER T. GOODWIN, Crawford, Colo. Filed July 19, 1920. Serial No. 397,160. 3 Claims. (Cl. 97—35.)



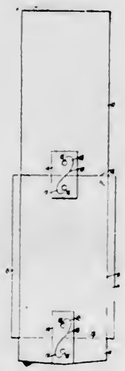
2. In an agricultural implement, the combination of a main frame comprising a draft tongue and a cross beam secured thereto, ground-treating members connected to said cross beam, an arched axle connected to the frame and said members, ground wheels mounted on said axle, means for swinging the axle whereby to raise or lower the ground-engaging members, a hanger suspended on the axle, a seat-supporting bar extending across and secured to said hanger, and a link connecting the front end of said seat-supporting bar with the main frame.

1,382,423. AMUSEMENT DEVICE. WALTER C. HADLEY, New York, N. Y., assignor to Central Talking Machine Shop, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 20, 1920. Serial No. 404,966. 5 Claims. (Cl. 46—40.)



1. An amusement device, comprising a panel adapted to rest upon the white keys of a piano, the representation of a head on said panel extending from the upper jaw to the top, the upper jaw being located at the base line of the panel and being of substantially the same width as the white key of a piano.

1,382,424. RAIL CONNECTING AND SUPPORTING MEANS. JOHN HENRY JENNINGS, Georgetown, Conn. Filed Apr. 20, 1921. Serial No. 462,896. 5 Claims. (Cl. 238—210.)

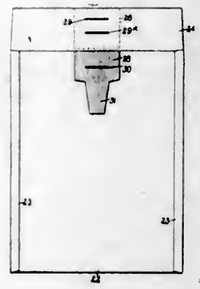


1. Means for connecting and supporting the meeting ends of a pair of rails comprising chair members adapted to be secured upon adjacent ties, a bridge member having the opposite extremities thereof interengageably associated with the chair members, and angle bars secured to the opposite sides of the rail ends and interengageably associated with the bridge plate.

1,382,425. MOUSETRAP. SAMUEL M. KASS, Philadelphia, Pa. Filed July 31, 1919. Serial No. 314,543. 8 Claims. (Cl. 43—58.)

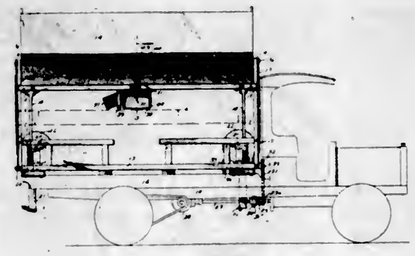
1. A trap for mice, etc., comprising a fixed container, a movable fluid holder, a catch supporting the holder, a valve in the holder and means operative by reason of the fall of the holder for opening the valve when the catch is moved and the holder falls.

1,382,426. SHIPPING-TAG ENVELOP. CHARLES P. KLEEBAUER, Brooklyn, N. Y., assignor to Cohoes Envelope Co., Inc., Cohoes, N. Y., a Corporation of New York. Filed Aug. 8, 1917, Serial No. 185,052. Renewed Aug. 31, 1920. Serial No. 407,219. 4 Claims. (Cl. 229—74.)



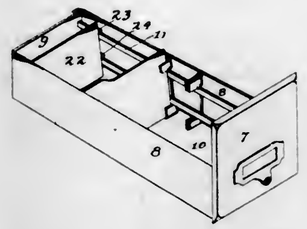
1. An envelop as characterized embodying a body portion, a back portion, a flap portion, and side seams; reinforcing patches adhered to said envelop where the back and body portion, and the flap and body portion are folded; and means for attaching a tying cord to said envelop, said means embodying perforations formed in said patches, said perforations being adapted to aline when the patches are folded with the body and flap portions of the envelop, and an S-shaped slit connecting said perforations.

3. An envelop as characterized embodying a body portion, a back portion, a flap portion, and side seams; reinforcing patches adhered to said envelop where the back and body portion, and the flap and body portion are folded; and means for attaching a tying cord to said envelop, said means embodying perforations formed in said patches, said perforations being adapted to aline when the patches are folded with the body and flap portions of the envelop; and an S-shaped slit connecting said perforations, said slit having entrance terminals forming passageways for admitting tying cord to said perforations, said entrance terminals entering said perforations at the side thereof farthest removed from the line of the fold in the patches and associated envelop structure.



4. An envelop as characterized embodying a body portion, a back portion, a flap portion, and side seams; reinforcing patches adhered to said envelop where the back and body portion, and the flap and body portion are folded; and means for attaching a tying cord to said envelop, said means embodying perforations formed in said patches, said perforations being adapted to aline when the patches are folded with the body and flap portions of the envelop, and an S-shaped slit connecting said perforations, said slit having entrance terminals forming passageways for admitting tying cord to said perforations, said slit corresponding in shape at opposite sides of the longitudinal median line of said patches, to locate the hook-shaped sections formed by said slit at opposite sides of said median line when the envelop is folded as set forth.

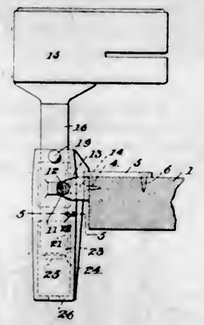
1,382,427. CLASP-ENVELOP. CHARLES P. KLEEBAUER, Brooklyn, N. Y., assignor to Cohoes Envelope Co., Inc., Cohoes, N. Y., a Corporation of New York. Filed Aug. 8, 1917, Serial No. 185,051. Renewed Oct. 14, 1920. Serial No. 417,018. 2 Claims. (Cl. 229—84.)



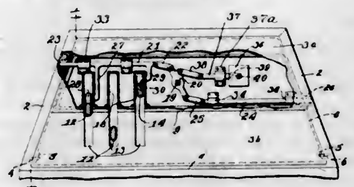
1. The combination of an envelop having back, body, and flap portions, said flap portion covering the opening in said envelop when overlaid thereon, a plurality of reinforcing patches, one of said patches being adhered to said flap portion and one to said back portion, said patches and the parts structurally connected therewith having elongated slots adapted to register when the flap is moved to its closure position, the patch attached to said flap being further provided with a second slot, and a tongue integrally connected with the patch having the single slot, said tongue being adapted for extension through all of said slots to form a closure-locking member.

1,382,428. ELEVATING COAL-TRUCK. ANTON KUKIELSKI, Jersey City, N. J. Filed Nov. 26, 1919. Serial No. 340,806. 1 Claim. (Cl. 298—7.)

A vehicle of the class described including a body, a longitudinally disposed chute beneath the body, a laterally disposed chute beneath the body adjacent to the first chute, said body having a discharge outlet at the bottom thereof, common to both of said chutes, a transversely movable gate controlling communication between the first chute and said discharge outlet, a separate and independent transversely slidable gate controlling communication between said discharge outlet and the second-mentioned chute, vertically disposed levers fulcrumed on the body at the upper ends of said lever, at the exterior, at opposite sides thereof, handles on the levers at their lower ends, laterally disposed connecting rods secured at their inner ends to said gates and extending transversely beneath the bottom of the body to the opposite sides of the body, and links outside of the body and connecting said rods at their outer ends with said levers between the ends of the levers.



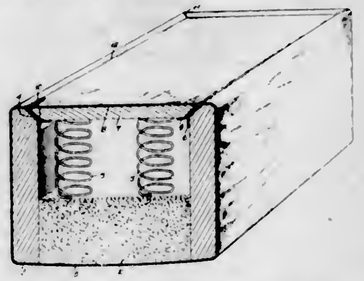
1,382,429. FILING-DRAWER AND CARD-HOLDER. FREDERICK E. KUNKEL, Washington, D. C. Filed Oct. 20, 1919. Serial No. 331,787. 7 Claims. (Cl. 129—14.)



3. In a filing drawer, a member parallel and adjacent to each side of the drawer and having a track, a member disposed beneath each of said first named members, and spaced from the bottom of the drawer, a holder for a guide card adapted for insertion between each of the members and the adjacent side of the drawer, and card supporting means on said holders.

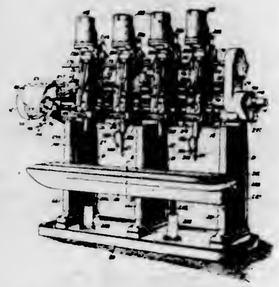
1,382,430. MOUNTING FOR MEASURING-MACHINES. GEORGE B. KYLE, St. Louis, Mo., assignor to The Measuregraph Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 14, 1919. Serial No. 317,419. 4 Claims. (Cl. 211—12.)

4. In apparatus of the class described, the combination of a fixed bracket having a socket, a portable measuring machine holder constructed to fit into the socket, said bracket having a keeper recess, and a lock permanently carried by the portable holder controlled by a removable key, and having a bolt for engaging the keeper recess to lock the holder in the socket.



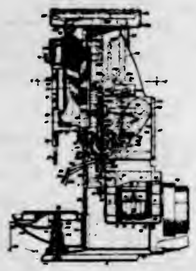
1,382,431. AUTOMOBILE-LOCKING APPARATUS. ALBERT B. LANG, St. Louis, Mo. Filed Aug. 11, 1919. Serial No. 316,721. 7 Claims. (Cl. 70—126.)

1. In an automobile locking apparatus, the combination of a floor frame and a removable floor-plate having slots, operating levers for the automobile extending through the slots, and each capable of assuming a neutral position, latching mechanism carried on the underside of the floor-plate, including a bolt for engaging the frame at one side and having means for obstructing the movement of the operating levers of the automobile while in their neutral position, said latching mechanism also including a second bolt for engaging the frame at the other side and cooperating with the first named bolt to prevent the removal of the floor-plate, a hand-operated part mounted to rotate in the floor plate on an axis substantially at right angles thereto, for simultaneously operating both of said bolts, and a lock for locking said hand-operated part against operation.



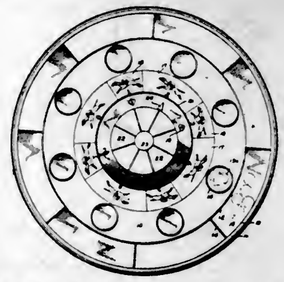
1,382,432. BOX-BED-SPRING CONSTRUCTION. BENJAMINE LEVINE, Brooklyn, N. Y. Filed Nov. 11, 1920. Serial No. 423,411. 4 Claims. (Cl. 5—13.)

2. A box bed-spring construction comprising a frame having an open bottom, outwardly facing tapered surfaces



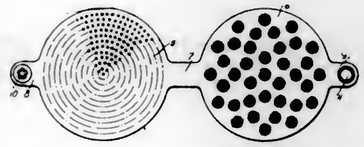
along the edges of the bottom, a closure portion provided with corresponding tapered surfaces adapted to fit into and bear against the tapered surfaces of the bottom, and a cover portion having its ends extending over the edges of the bottom and adapted to be gripped between the frame and the closure portion.

1,382,433. INDEPENDENT FEED RAIL DRILL. WILLIAM FRANCIS MCCARTY, Defiance, Ohio, assignor to Defiance Machine Works, Defiance, Ohio, a Corporation of Ohio. Filed Oct. 3, 1919. Serial No. 328,202. 8 Claims. (Cl. 77—22.)



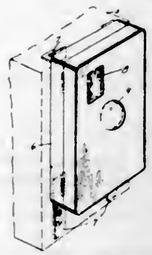
1. In a rail drill, a rail, a plurality of spindle heads adjustably mounted on the said rail, a drill spindle mounted in each spindle head, a variable speed mechanism, a variable feed mechanism, the said spindle heads being located intermediate the said speed mechanism and the said feed mechanism, speed driving connections connecting the said speed mechanism with the several drill spindles, and feed driving connections connecting the said feed mechanism with the several spindles, the said speed mechanism having a shaft common to the said speed driving connections and the said variable feed mechanism.

1,382,434. MULTIPLE-SPINDLE DRILLING-MACHINE. WILLIAM F. MCCARTY, Defiance, Ohio, assignor to Defiance Machine Works, Defiance, Ohio, a Corporation of Ohio. Filed Dec. 6, 1919. Serial No. 342,953. 14 Claims. (Cl. 77—32.)



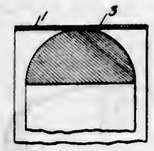
1. In a multiple drilling machine, a main support, a spindle head mounted to slide up and down on the said main support, a vertical drive shaft journaled in the said main support, a connecting gear arranged in the said spindle head and connecting the said drive shaft with the drill spindles, a vertical feed screw journaled in the said main support and screwing in the said spindle head to raise or lower the latter, a vertical food shaft journaled in the said main support, a gearing connecting the said feed shaft with the said feed screw, and a variable automatic feed mechanism connected with the said feed shaft and driven from the said drive shaft to rotate the said feed shaft first at a high speed to quickly advance the drill spindles to the work, to then rotate the feed shaft at a reduced working speed and to finally rotate the feed shaft at a high return speed to return the drill spindles quickly to starting position.

1,382,435. GAME APPARATUS. ROBERT A. G. MCCOY, New York, N. Y. Filed Dec. 9, 1920. Serial No. 429,424. 2 Claims. (Cl. 46—21.)



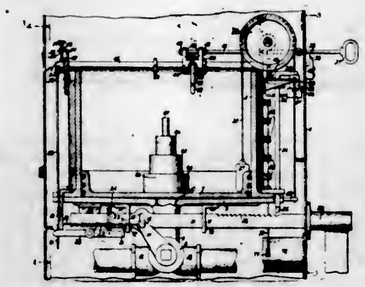
1. A game apparatus comprising; a bonrd having a series of outer compartments adapted to hold counters, an annular series of receptacles radially inward from said compartments to receive deposited counters as the game is played, an annular series of designated areas radially inward from the annular series of receptacles, and a turnable indicating device within the annular series of counting areas.

1,382,436. MASSAGE-TOOL. HENRY MALM, New York, N. Y. Filed Jan. 28, 1920. Serial No. 354,560. 1 Claim. (Cl. 128—62.)



A device of the character described comprising two substantially circular disks, an integral contracted portion connecting said disks, a projecting tab integral with each of said disks, the tab of each disk being disposed diametrically opposite its point of connection with the contracted portion, and means carried by said tabs and adapted for interengagement whereby the disks are adapted to be secured together in spaced relation to permit of the insertion of the hand of the operator.

1,382,437. CAMERA ATTACHMENT. WILLIAM CALVIN MASON, New York, N. Y. Filed Apr. 7, 1920. Serial No. 372,028. 1 Claim. (Cl. 161—26.)

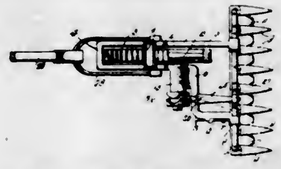


A camera attachment, including a housing formed with openings alining with one another and with the lens opening of a camera, a movable plate formed with notched portions, the body of said plate normally covering said housing openings, said plate being formed with a shoulder, a lever formed with an inturned end, said inturned end being adapted to engage said shoulder, an electromagnet, an armature controlled by said electromagnet and having its outer end secured to the opposite end of said lever, a source of energy within said housing, a spring tending to move said plate to pass said notched portions past the lens opening, a time controlled device also within said housing, and means adapted to coöperate with said time controlled device to close the circuit through said magnet whereby to permit said plate to rotate.

1,382,438. METHOD OF COATING FINGER-RINGS. BERNARD MESTECHKIN, Washington, D. C. Filed Oct. 5, 1920. Serial No. 414,798. 1 Claim. (Cl. 29—160.6.)

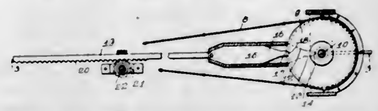
The method of coating finger rings with platinum, which consists in forming a platinum strip of a length, when bent into annular form, to encircle and bear against the periphery of the ring, then bending said strip into hoop form around the ring, then soldering the hoop and ring adjacent the contacting portions thereof, then spinning said hoop over the periphery of the ring so as closely to hug the same and conform to the curvature thereof, then soldering the edges of the platinum hoop inside of the ring, thereby firmly uniting said band to said ring and forming an integral structure.

1,382,439. FLUID-MEASURING MACHINE. SIDNEY FITZHUGH MIOTON, New Orleans, La. Filed June 15, 1917. Serial No. 174,880. 31 Claims. (Cl. 221—103.)



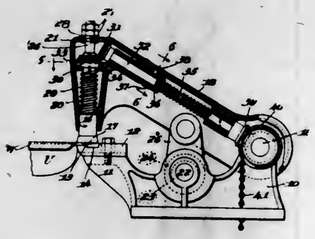
6. In a fluid measuring machine, a measuring cylinder, a manually opening and mechanically closing valve having a port communicating with the interior of the measuring cylinder, a piston in the measuring cylinder, a manually actuated, spring controlled operating bar connected with the valve for opening the latter, means to prevent the movement of the bar in one direction after it is once operated to open communication with the interior of the measuring cylinder, and means to prevent a movement of the bar in the other direction during the period that the piston is beyond a predetermined point in the measuring cylinder.

1,382,440. YIELDING TERMINAL CAP FOR DRY-BATTERY CELLS. ADOLPH C. RECKER, Oakville, Conn., assignor to The Chase Companies Inc., Waterbury, Conn., a Corporation. Original application filed Sept. 20, 1919, Serial No. 325,211. Divided and this application filed Feb. 28, 1921. Serial No. 448,690. 3 Claims. (Cl. 240—8.5.)



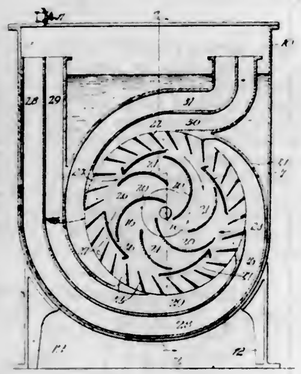
1. A yielding terminal-cap for dry-battery cells, consisting of an inverted cup formed with a yielding integral contact-arm overhanging the upper face of the cup.

1,382,441. LAWN-MOWER. HARMAN L. RICHENDIFER, Bladen, Nebr. Filed July 13, 1920. Serial No. 395,920. 3 Claims. (Cl. 56—248.)



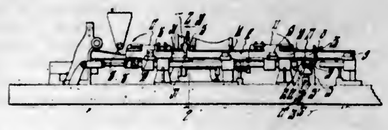
3. In a lawn mower a single traction wheel, a U-shaped yoke suspended from the wheel axle and disposed parallel to the ground, and having its intermediate portion located behind said wheel, said yoke terminating in a pair of forwardly projecting arms, a cutter supported on the forward ends of the arms, a vertically disposed inverted U-shaped straddling yoke integral with the first-mentioned yoke and straddling the wheel, a handle having a bifurcated end straddling the last-mentioned yoke and connected thereto and means supported on one of the forwardly projecting arms operatively connecting the traction wheel and the cutter.

1,392,442. RUDDER-LOCK. FREDERICK HARRISON ROGERS, Arlington, N. J. Filed Oct. 16, 1920. Serial No. 417,371. 1 Claim. (Cl. 114—172.)



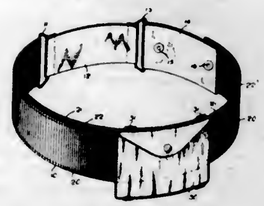
A rudder lock, including in combination with the rudder post of a vessel and drum attached thereto, of a member slidable toward said rudder post and adapted to extend into a recess formed in said drum for preventing a rotation of said rudder post, said slidable member being formed with a wedge-shaped forward end, the recess in said drum being formed with inclined side walls corresponding to said wedge shaped end, the wedge shaped portion of said slidable member being continued in a straight portion, the inclined side walls of said recess terminating at a point short of a point at which they would intersect, and being continued in the form of parallel extending side walls.

1,382,443. WELT-BEATING MACHINE. AUGUST R. SCHOENKY, Somerville, Mass., assignor to Reece Shoe Machinery Company, Boston, Mass., a Corporation of Massachusetts. Filed July 15, 1919. Serial No. 311,038. 3 Claims. (Cl. 12—67.2.)



3. A welt beating machine comprising an anvil, a beater vibratable above the anvil, a vibratable arm carrying the beater, means for vibrating the arm, and means for adjustably rotating said beater, the beater having a circular flat face interrupted by a single tapered rib extending from its center to periphery.

1,382,444. SUCTION-CREATING APPARATUS. BENJAMIN SKIDMORE, Jr., Chicago, Ill. Filed Mar. 27, 1919. Serial No. 285,488. 9 Claims. (Cl. 230—14.)



1. An apparatus of the character described embodying a casing provided with a volute chamber having an inlet and a discharge outlet for the liquid, a rotor within the chamber, said rotor embodying a series of impellers, a second series of impellers encompassing and spaced from the first recited series, a conduit having a plurality of outlets in communication with the space between the said series of impellers, a baffle arranged adjacent each of the outlets of the said conduit, the ends of each baffle terminating short of the respective proximate ends of the next adjacent baffles, and means whereby the rotor may be actuated to deliver the liquid from one set of impellers to the other set and between the ends of the baffles.

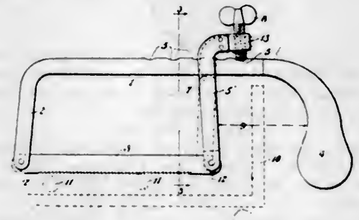
1,382,445. WRAPPING-MACHINE. ELMER L. SMITH, Springfield, Mass., assignor to Package Machinery Company, Springfield, Mass., a Corporation of Massachusetts. Filed Mar. 5, 1920. Serial No. 363,423. 9 Claims. (Cl. 93—2.)

1. In a wrapping machine in combination, a wrapping channel having a side with sharpened ridges extending longitudinally thereof, and a pusher for advancing partially wrapped articles along the said channel in contact with said ridges.

1,382,446. GARTER. LILLIAN G. WARREN, Westwood, Calif. Filed Dec. 28, 1920. Serial No. 433,620. 2 Claims. (Cl. 241—5.)

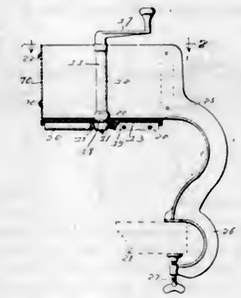
1. A garter, comprising an elastic padded leg band formed of two elastic webbings and a padding between the webbings, the padding being formed of a gathered piece of inelastic textile material, a connecting member attached at one end to the said leg band, and fastening means detachably connecting the free ends of the said leg band and connecting member with each other.

1,382,447. BORING AND THREADING TOOL. DANIEL DOOLITTLE WELLS, Burkburnett, Tex. Filed Oct. 15, 1919. Serial No. 330,842. 5 Claims. (Cl. 29—96.)



1. A tool holder having a shank, a head at one end of the shank axially alined therewith and having a lengthwise bore extending therethrough at one side of its axis and a slot for its full length extending therethrough from one side of the bore whereby to divide the same into two parts connected by a web at the opposite side of the bore, said shank being cut away at the rear of the head to the depth of the slot whereby one part of the head will be resilient with respect to the other part and the shank, and a tool adjustably mounted in the resilient part of the head.

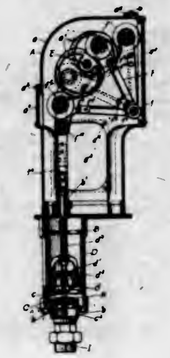
1,382,448. HACKSAW-FRAME. GEORGE H. WILKINS, Greenfield, Mass. Filed Oct. 23, 1920. Serial No. 418,880. 4 Claims. (Cl. 145—34.)



4. A hack saw frame construction, having in combination, a bar with an extension portion for attaching one end of a saw blade, an adjustable member on the bar for attaching the other end of the blade, said member having a curved surface to engage the lower side of the bar, a securing and blade tensioning device in the member and located above the bar for engaging the upper

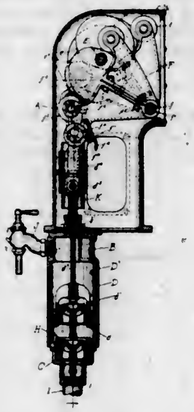
edge of the bar for moving the curved surface against the under side of the bar and rocking the member to simultaneously place the desired tension on the blade, said curved surface serving as a pivotal point about which

said member rocks when the securing and blade tensioning device is operated, said adjustable member serving to provide an open space between the same and the handle, for the purpose described.



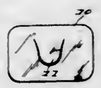
1,382,449. VEGETABLE-CRUSHER. WLADYSLAW S. ANDRYSIAK, South Bend, Ind. Filed Nov. 13, 1919. Serial No. 337,835. 1 Claim. (Cl. 146—9.)

A vegetable slicer having a central bearing sleeve and guiding wings radiating therefrom, a receptacle wall secured to and supported by the extremities of said wings, a supporting bracket connected with one of said wings, an operating spindle mounted in said sleeve and provided at its upper end with an operating handle, and a slicer disk secured to the lower end of said spindle and forming the bottom of the receptacle.



1,382,450. PUMP. LINNAEUS E. BAKER, Fort Wayne, Ind., assignor to Wayne Oil Tank & Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Nov. 7, 1917. Serial No. 200,714. 10 Claims. (Cl. 103—62.)

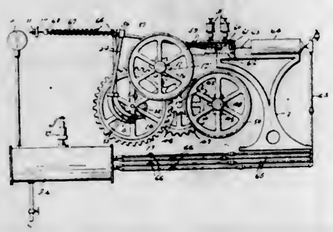
2. In a pump, the combination with two pump cylinders and reciprocating pistons therein, of two oscillating members each adapted to actuate one of said pistons, and two rotary cam members and means for rotating them at equal speeds, each of said cam members adapted to actuate one of said oscillating members and provided with separate cam tracks for discharge and return motions of the oscillating member actuated thereby, said cam tracks being so arranged and formed in relation to



each other that the pistons are actuated to deliver equal quantities of fluid pumped for all equal arcs of revolution of the cams.

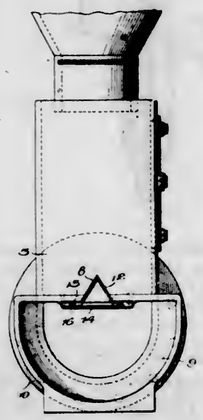
1,382,451. CONSTANT-FLOW MEASURING-PUMP. LINNAEUS E. BAKER, Fort Wayne, Ind., assignor to Wayne Oil Tank & Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed May 4, 1920. Serial No. 378,791. 5 Claims. (Cl. 103—85.)

1. In a two piston reciprocating measuring pump of the constant flow type, oscillating frames for driving the pistons, said frames provided with means for adjustably connecting the pistons thereto at varying distances from the centers of oscillation.



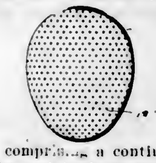
1,382,452. COLLAR-BUTTON. LAWRENCE G. BALDWIN, Eastland, Tex. Filed June 9, 1920. Serial No. 387,680. 1 Claim. (Cl. 24—101.)

A collar button consisting of a flexible plate adapted to conform itself to the shape of a collar where it is attached



to the latter, the said button having a base and an integral tongue upstruck from the base and normally lying in the plane of the latter but adapted to be terminally deflected from said plane.

1,382,453. AIR-COMPRESSING MACHINE. MICHELE BARBETTA, Paterson, N. J. Filed Feb. 17, 1917, Serial No. 149,237. Renewed Apr. 29, 1921. Serial No. 465,504. 4 Claims. (Cl. 230—32.)



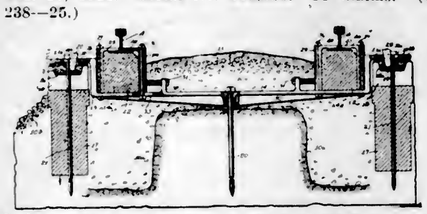
1. In an air compressing machine, the combination of an air storage tank, a plurality of air compressors communicating with said tank, a crank shaft provided with a plurality of cranks, a plurality of levers pivotally mounted intermediate their ends, each lever provided at one end with an arcuate member positioned for engagement by a crank of the crank shaft, connections between said compressors and the levers for operating the former when the latter are rocked, and means for returning the levers to normal position when the cranks of said crank shaft are disengaged from the arcuate members of the levers.

1,382,454. INTAKE-FEEDER FOR SUCTION-CONVEYERS. JOHN F. BARKLEY, Wilkinsburg, Pa. Filed June 21, 1919. Serial No. 305,737. 5 Claims. (Cl. 302—52.)

1. In a pneumatic conveyer, the combination with a suction conduit, of a feed hopper connected to one end of said conduit, said hopper having side and bottom walls, said bottom wall being cut away throughout its length from front to rear thereof, and the rear and front side walls being notched upwardly from said cut-away portion forming a continuous outlet opening, and an arched valve member controlling said outlet opening.

1,382,455. DARNING DEVICE. EDITH MACKENZIE BASS, Concord Junction, Mass. Filed Aug. 28, 1920. Serial No. 406,668. 1 Claim. (Cl. 223—14.)

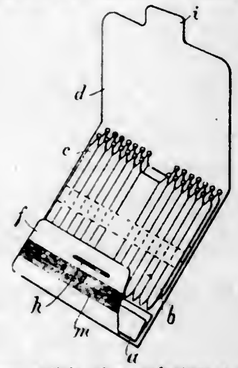
A darning egg comprising a continuous hollow metallic body substantially oval in form provided throughout its area with a plurality of equally spaced perforations and packing material within said body.



1,382,456. METHOD OF LOWERING THE VISCOSITY OF LIQUIDS. LINDON WALLACE BATES, Mount Lebanon, N. Y. Filed Nov. 28, 1919. Serial No. 341,214. 4 Claims. (Cl. 44—8.)

1. A stable liquid fuel comprising liquid hydrocarbon and dehydrated tar obtained from the cracking of oil vapors derived from the treatment of coal and oil or oil alone with steam.

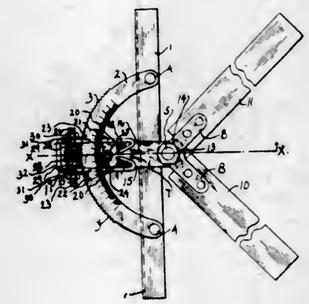
1,382,457. FUEL AND METHOD OF PRODUCING SAME. LINDON W. BATES, Mount Lebanon, N. Y. Original application filed Aug. 5, 1919, Serial No. 315,497. Divided and this application filed May 17, 1920. Serial No. 381,826. 9 Claims. (Cl. 44—8.)



1. A stable mobile fuel containing particles of solid carbonaceous substance and a plurality of incompletely miscible liquid hydrocarbons.

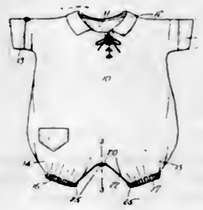
1,382,458. TRACK SUPPORTING AND FASTENING MEANS. WILLIAM O. BATTS, Wilmot, Kans. Filed Feb. 17, 1921. Serial No. 445,666. 11 Claims. (Cl. 238—25.)

9. In a railway, transverse tie bars adapted to receive rail-supporting means inward from the ends of the bars, posts in the roadbed beneath the ends of the tie bars, and anchoring means securing said ends to said posts.



1,382,459. COMBINED MATCH AND TOOTHPICK. MAURICE BERCOVICI, Botosani, Roumania. Filed Nov. 4, 1916. Serial No. 129,528. 3 Claims. (Cl. 44—44.)

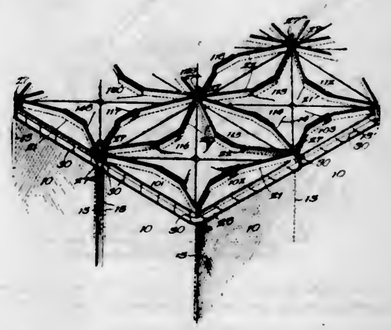
1. As a new article of manufacture a package of combined matches and toothpicks, comprising two overlying



and connected portions, each portion having a plurality of separable members, both ends of which are free, one end being pointed and the other end provided with an igniting substance.

1,382,460. MICROMETER-PROTRACTOR. KNUT BERGLOF, Buffalo, N. Y. Filed June 28, 1920. Serial No. 392,185. 5 Claims. (Cl. 33—93.)

1. A protractor comprising a bar, a circular segment fixed to said bar, a frame pivotally mounted upon said bar, positioned to turn about an axis common to the center of the said circular segment, means in engagement with said frame, positioned to slide thereon in a direction radial to the pivotal axis of said frame, an adjusting element on said means engaging said segment and releasable means for holding said element in releasable engagement with said segment.



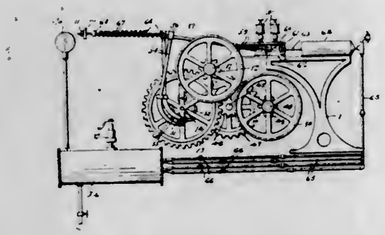
1,382,461. GARMENT. ANNE COLLINS BERRY, New York, N. Y. Filed Feb. 7, 1919 Serial No. 275,618. 1 Claim. (Cl. 2—144.)

A garment comprising a body having leg openings and a straight cut from the leg openings into the body, leaving edges at the front and the rear; finishing pieces attached to the respective edges and laid in horizontal relationship transversely of the crotch to easily enable the pieces to fall into an inverted V-shape; and complementary fastening means on the pieces.

1,382,462. SPRING-CUSHION CONSTRUCTION. ELMER S. BILLS, Chicago, Ill., assignor, by direct and mesne assignments, to Harmony Spring Cushion Co., a Corporation of Illinois. Filed Feb. 5, 1919. Serial No. 273,060. 12 Claims. (Cl. 5—13.)

1. In spring cushion construction, the combination with a single band disposed in angularly related planes that join each other along parallel lines and comprise one side of a continuous envelop for the springs of a complete cushion, of a complementary envelop side for the band comprising a strip following the band, fulled thereon at regularly spaced intervals along its longitudinal edges and sewed to the band along its edges and along transverse lines between said fulled portions to form spring pockets, and prism-shaped springs positioned one in each pocket.

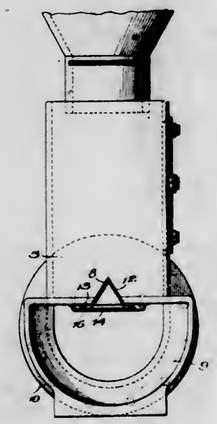
1,382,463. MACHINE FOR PRODUCING SPRING DRESS-FASTENERS. KLAS GUSTAV BLOMBERG, Södertälje, and BENGT AUGUST PETTERSSON, Lidköping, Sweden. Filed Oct. 17, 1919. Serial No. 331,515. 1 Claim. (Cl. 79—3.)



A device for cutting out the top section of a dress fastener and bending down the edges of same in a machine for producing such fasteners, consisting of three concentrically fitted plungers (1, 2, 3), three rocking levers (11, 12, 13) which latter impart a vertical reciprocating motion to the said plungers, a cut-out die pillow (5) acting in conjunction with cut-out die (4) fitted to the outside plunger (1) a drawing die pillow (8) acting in conjunction with drawing die (7) fitted to the intermediate plunger (2), a spring push-off pin (9) fitted to the center plunger (3) with the object of pushing the fastener blank (40) off the drawing die (7).

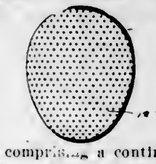
1,382,464. PUNCH-PRESS. GEORGE J. BLUM, Chicago, Ill., assignor to Armstrong-Blum Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 5, 1919. Serial No. 321,886. 28 Claims. (Cl. 164—15.)

1. A punch press comprising a pair of spaced main



to the latter, the said button having a base and an integral tongue upstruck from the base and normally lying in the plane of the latter but adapted to be terminally deflected from said plane.

1,382,453. AIR-COMPRESSING MACHINE. MICHELE BARBETTA, Paterson, N. J. Filed Feb. 17, 1917, Serial No. 149,237. Renewed Apr. 29, 1921. Serial No. 465,504. 4 Claims. (Cl. 230—32.)



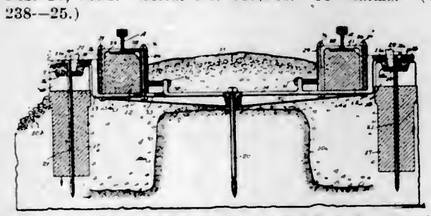
1. In an air compressing machine, the combination of an air storage tank, a plurality of air compressors communicating with said tank, a crank shaft provided with a plurality of cranks, a plurality of levers pivotally mounted intermediate their ends, each lever provided at one end with an arcuate member positioned for engagement by a crank of the crank shaft, connections between said compressors and the levers for operating the former when the latter are rocked, and means for returning the levers to normal position when the cranks of said crank shaft are disengaged from the arcuate members of the levers.

1,382,454. INTAKE-FEEDER FOR SUCTION-CONVEYERS. JOHN F. BARKLEY, Wilkinsburg, Pa. Filed June 21, 1919. Serial No. 305,737. 5 Claims. (Cl. 302—52.)

1. In a pneumatic conveyer, the combination with a suction conduit, of a feed hopper connected to one end of said conduit, said hopper having side and bottom walls, said bottom wall being cut away throughout its length from front to rear thereof, and the rear and front side walls being notched upwardly from said cut-away portion forming a continuous outlet opening, and an arched valve member controlling said outlet opening.

1,382,455. DARNING DEVICE. EDITH MACKENZIE BASS, Concord Junction, Mass. Filed Aug. 28, 1920. Serial No. 406,668. 1 Claim. (Cl. 223—14.)

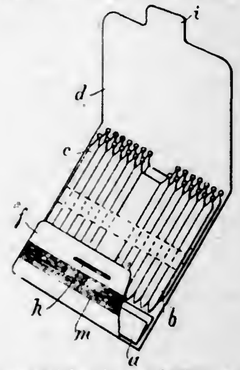
A darning egg comprising a continuous hollow metallic body substantially oval in form provided throughout its area with a plurality of equally spaced perforations and packing material within said body.



1,382,456. METHOD OF LOWERING THE VISCOSITY OF LIQUIDS. LINDON WALLACE BATES, Mount Lebanon, N. Y. Filed Nov. 28, 1919. Serial No. 341,214. 4 Claims. (Cl. 44—8.)

1. A stable liquid fuel comprising liquid hydrocarbon and dehydrated tar obtained from the cracking of oil vapors derived from the treatment of coal and oil or oil alone with steam.

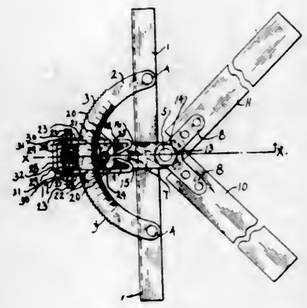
1,382,457. FUEL AND METHOD OF PRODUCING SAME. LINDON W. BATES, Mount Lebanon, N. Y. Original application filed Aug. 5, 1919, Serial No. 315,497. Divided and this application filed May 17, 1920. Serial No. 381,826. 9 Claims. (Cl. 44—8.)



1. A stable mobile fuel containing particles of solid carbonaceous substance and a plurality of incompletely miscible liquid hydrocarbons.

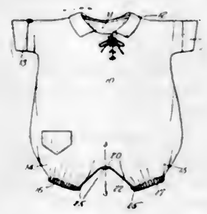
1,382,458. TRACK SUPPORTING AND FASTENING MEANS. WILLIAM O. BATTS, Wilmot, Kans. Filed Feb. 17, 1921. Serial No. 445,666. 11 Claims. (Cl. 238—25.)

9. In a railway, transverse tie bars adapted to receive rail-supporting means inward from the ends of the bars, posts in the roadbed beneath the ends of the tie bars, and anchoring means securing said ends to said posts.



1,382,459. COMBINED MATCH AND TOOTHPICK. MAURICE BERCOVICI, Botosani, Roumania. Filed Nov. 4, 1916. Serial No. 129,528. 3 Claims. (Cl. 44—44.)

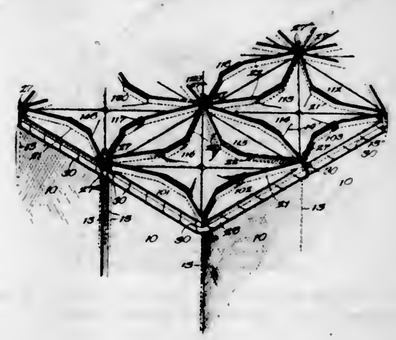
1. As a new article of manufacture a package of combined matches and toothpicks, comprising two overlying



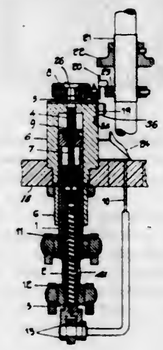
and connected portions, each portion having a plurality of separable members, both ends of which are free, one end being pointed and the other end provided with an igniting substance.

1,382,460. MICROMETER-PROTRACTOR. KNUT BERGLOF, Buffalo, N. Y. Filed June 28, 1920. Serial No. 392,185. 5 Claims. (Cl. 33—93.)

1. A protractor comprising a bar, a circular segment fixed to said bar, a frame pivotally mounted upon said bar, positioned to turn about an axis common to the center of the said circular segment, means in engagement with said frame, positioned to slide thereon in a direction radial to the pivotal axis of said frame, an adjusting element on said means engaging said segment and releasable means for holding said element in releasable engagement with said segment.



1,382,461. GARMENT. ANNE COLLINS BEARY, New York, N. Y. Filed Feb. 7, 1919 Serial No. 275,618. 1 Claim. (Cl. 2—144.)

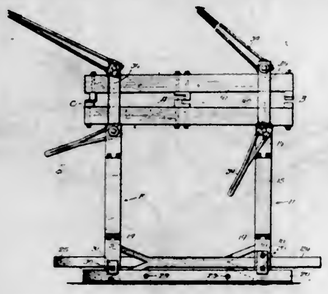


A garment comprising a body having leg openings and a straight cut from the leg openings into the body, leaving edges at the front and the rear; finishing pieces attached to the respective edges and laid in horizontal relationship transversely of the crotch to easily enable the pieces to fall into an inverted V-shape; and complementary fastening means on the pieces.

1,382,462. SPRING-CUSHION CONSTRUCTION. ELMER S. BILLS, Chicago, Ill., assignor, by direct and mesne assignments, to Harmony Spring Cushion Co., a Corporation of Illinois. Filed Feb. 5, 1919. Serial No. 275,060. 12 Claims. (Cl. 5—13.)

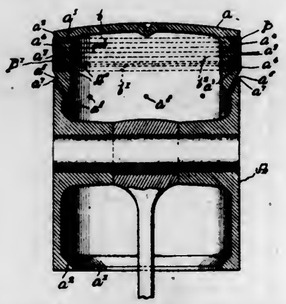
1. In spring cushion construction, the combination with a single band disposed in angularly related planes that join each other along parallel lines and comprise one side of a continuous envelop for the springs of a complete cushion, of a complementary envelop side for the band comprising a strip following the band, fulled thereon at regularly spaced intervals along its longitudinal edges and sewed to the band along its edges and along transverse lines between said fulled portions to form spring pockets, and prism-shaped springs positioned one in each pocket.

1,382,463. MACHINE FOR PRODUCING SPRING DRESS-FASTENERS. KLAS GUSTAV BLOMBERG, Södertälje, and BENGT AUGUST PETTERSSON, Lidköping, Sweden. Filed Oct. 17, 1919. Serial No. 331,515. 1 Claim. (Cl. 79—3.)



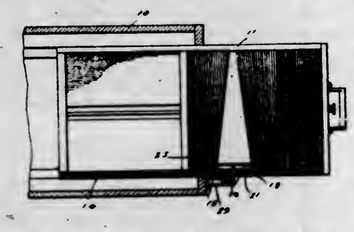
A device for cutting out the top section of a dress fastener and bending down the edges of same in a machine for producing such fasteners, consisting of three concentrically fitted plungers (1, 2, 3), three rocking levers (11, 12, 13) which latter impart a vertical reciprocating motion to the said plungers, a cut-out die pillow (5) acting in conjunction with cut-out die (4) fitted to the outside plunger (1) a drawing die pillow (8) acting in conjunction with drawing die (7) fitted to the intermediate plunger (2), a spring push-off pin (9) fitted to the center plunger (3) with the object of pushing the fastener blank (40) off the drawing die (7).

1,382,464. PUNCH-PRESS. GEORGE J. BLUM, Chicago, Ill., assignor to Armstrong-Blum Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 5, 1919. Serial No. 321,886. 28 Claims. (Cl. 164—15.)



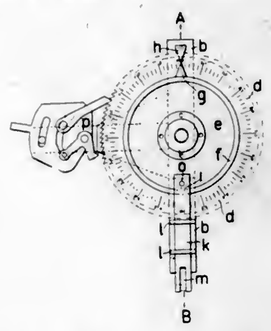
1. A punch press comprising a pair of spaced main

beams extending in approximate parallelism and a pair of mechanisms adapted to be associated with said beams



at any selected spaced points along their length to move said beams toward and away from each other.

1,382,465. METALLIC PISTON-PACKING. HARRY MORTON BRAMBERRY, Norfolk, Va. Filed Feb. 12, 1920. Serial No. 358,259. 2 Claims. (Cl. 74—109.)

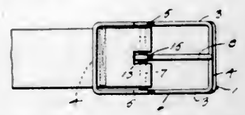


1. In a metallic piston packing, the combination with a piston provided with an annular groove in the cylindrical portion thereof, said groove having parallel side walls perpendicular to the axis of the piston, and the said piston being provided with an annular rib rectangular in cross section projecting outward from the center of the bottom of said groove, said rib separating said groove into two channels of equal depth, of a split packing ring sprung into said groove, said ring having a cylinder bearing surface and an internal groove also rectangular in cross section, with the bottom of said internal groove engaging the periphery of said rib, the side walls of said ring groove projecting into and registering with said piston channels, said side walls being of less cross sectional area than the cylinder bearing wall of said ring.

1,382,466. ATTACHMENT FOR FILING-CABINETS. OTTO H. J. BRAUER, Mahmomen, Minn. Filed Sept. 20, 1920. Serial No. 411,521. 5 Claims. (Cl. 129—16.)

1. The combination with a filing cabinet drawer, of a vertically disposed indicator carried by the drawer and capable of lateral movement and means for automatically returning the indicator to normal position during the act of closing the drawer.

1,382,467. STOP MECHANISM FOR REGISTERS. GUSTAV A. BRUHN, Harburg-on-the-Elbe, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Dec. 3, 1920. Serial No. 428,113. 3 Claims. (Cl. 235—132.)

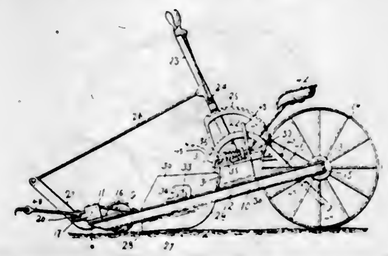


2. An apparatus of the class described comprising a disk, the face of said disk being provided with graduations, means for intermittently moving said graduated disk, a second disk coupled with said graduated disk for movement therewith but capable of being adjusted relatively thereto, said second disk being provided with a peripheral flange, said flange being cut-away at one portion thereof, a locking member slidably supported adjacent said second disk, means carried by said locking member and bearing on said peripheral flange for retaining the locking member in its inoperative position, a locking pawl carried by said locking member, the cutway portion within the peripheral flange permitting the locking member to move to its operative position to release said pawl.

1,382,468. SHOE AND LEATHER DRESSING. CECIL A. BUMPASS, Genesee, Idaho, assignor of one-half to Arthur Henry Potsch, Genesee, Idaho. Filed Nov. 16, 1920. Serial No. 424,457. 3 Claims. (Cl. 134—9.)

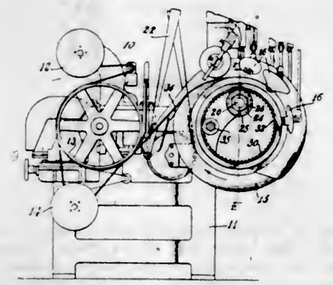
1. A dressing for leather consisting of a mixture of tallow, neat's-foot oil, beeswax, pine tar, glycerin, paraffin and a coloring agent.

1,382,469. HARNESS-BUCKLE. GEORGE V. BURRIS, Courtland, Calif. Filed Apr. 11, 1919. Serial No. 289,181. 1 Claim. (Cl. 24—164.)



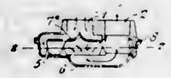
A buckle having a frame, a loop fastening bolt screw threaded at both ends to the frame, and a tongue within the frame screw threaded to the bolt to prevent movement longitudinally of the bolt to unduly wear the loop and to secondly tend to prevent accidental detachment of the bolt.

1,382,470. ROAD-SCRAPER. ALVA L. BUTLER, Ucon, Idaho. Filed July 15, 1920. Serial No. 396,459. 6 Claims. (Cl. 37—33.)



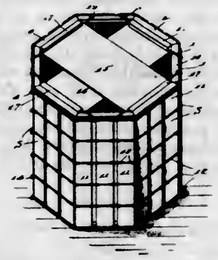
1. In a wheeled scraper, a supporting frame and carrier wheels, a support carrying a caster wheel and adjustable vertically relative to said frame, a combined scraper and scoop swingingly connected to said frame, means

under the control of the operator for adjusting said caster wheel support to elevate and depress the frame, a spring controlled catch for holding said scraper in scraping



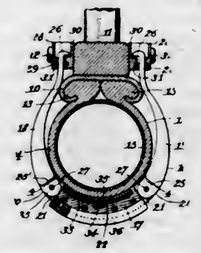
position and in load carrying position, and means for holding said scraper in various angular positions relatively to the frame.

1,382,471. TIRE-BUILDING MACHINE. JAMES L. BUTLER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed May 27, 1919. Serial No. 300,021. 8 Claims. (Cl. 154—10.)



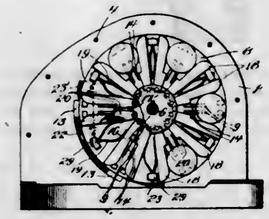
7. In a machine for making open-bellied pneumatic tire casings, the combination of a tire-forming core mounted to rotate in a vertical plane, means located in an upper position eccentric to the axis of the core for supporting and driving the core from its inner periphery, and eccentrically-mounted roller means located at an intermediate height and engaging the inner periphery of the core for resisting radial and axial thrusts thereof.

1,382,472. SILENCER FOR INTERNAL-COMBUSTION ENGINES. BJARNE CARLÉN, Nordstrand, near Christiania, Norway. Filed June 21, 1919. Serial No. 305,834. 7 Claims. (Cl. 137—160.)



1. An exhaust silencer, comprising a casing, vanes arranged in a circle in said casing and spaced from the sides of the casing to form a peripheral chamber, said vanes being straight and flared from their inner ends to their outer ends thereby forming straight tapered expansion passages from the periphery to the center of said series, an inlet for said chamber and an outlet at the center of said series of vanes.

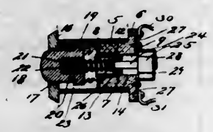
1,382,473. WIRE-BOUND PACKAGE. JEFFERSON CAYLOR, Indianapolis, Ind., assignor to Pioneer Box Company, Crawfordsville, Ind., a Corporation of Indiana. Filed Dec. 2, 1919. Serial No. 342,006. 5 Claims. (Cl. 217—49.)



1. A wirebound package comprising a circumferential series of mating cleats, a binding wire encircling said series, an end member forming a strut across the series, and wires attached to said end member and extending transversly thereof, the ends of said wires being carried across adjacent cleats of the circumferential series and secured under tension.

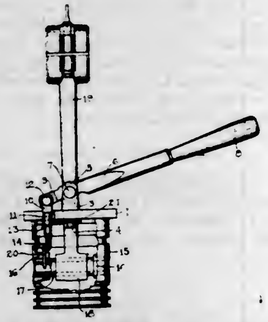
1,382,474. ARMOR FOR PNEUMATIC TIRES. GEORGE CODISH, Brooklyn, N. Y. Filed Sept. 7, 1920. Serial No. 408,500. 7 Claims. (Cl. 152—16.)

4. An armor for tires comprising a plurality of sections connected together and having relative movement and each of which comprises a plurality of jointed parts, certain of said parts having bills, securing means embodying anti-friction rollers for securing said sections in place about said tire and for permitting the same to have relative movement with respect thereto.



1,382,475. COIN-CONTROLLED OPERATING DEVICE FOR VENDING-MACHINES AND THE LIKE. ALBERT K. COLLINS, Charlotte, N. C. Filed Feb. 12, 1920. Serial No. 358,198. 11 Claims. (Cl. 194—54.)

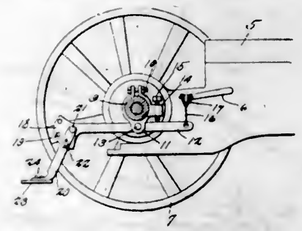
1. In a coin controlled operating device for vending machines, a casing having a coin slot therein, a shaft journaled in said casing and adapted for rotary movement,



a disk keyed upon said shaft and rotatable therewith, said disk having radial slots formed therein, locking dogs disposed upon one side of the disk and having lugs stamped therefrom and projecting through the slots in the disk, said dogs normally holding the disk against movement, and pairs of coin controlled fingers at the opposite side of said disk, the confronting edges of the fingers of each pair having heels formed thereon adapted to engage the respective lug in said locking dog to hold the latter against movement to unlocking position, said fingers being adapted to be moved away from each other to relieve the lugs of the influence of the heels upon the application of a coin to the machine whereby the disk will be relieved of the influence of the locking dogs so that the shaft may be actuated to operate the machine associated with the device.

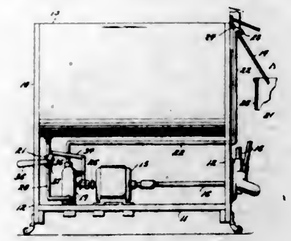
1,382,476. ELECTRIC-CIRCUIT CLOSER. WILLIAM J. COOK, Charlotte, N. C. Filed Oct. 10, 1919. Serial No. 329,714. 3 Claims. (Cl. 200—159.)

1. A circuit closer of the class specified, comprising an inclosing casing, an insulating plug held within the casing, conducting strips secured to the rear end of the plug for attachment of the circuit wires, the conducting strips having their free extremities inwardly bent at an angle and overlapped and normally out of engagement, and a spring actuated plunger mounted in and movable through the plug and having an outer threaded end with a head thereon which serves as an actuating means for the plunger and is directly rotatable relatively to the plunger to adjust the latter without disorganizing the parts of the closer, the rear end of the plunger having a head to effect an engagement of the said angular contacts.



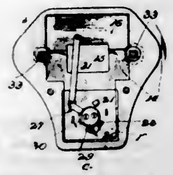
1,382,477. COTTER-PIN EXTRACTOR. FRANK COOPER and GEORGE CLIFFORD HILL, Seattle, Wash. Filed Feb. 28, 1920. Serial No. 361,942. 8 Claims. (Cl. 29—86.1.)

1. A tool of the class described including a base, a pivot post carried by the base, a lever pivotally mounted upon said post, a socket connected to the lever at one end and a hook member detachably connected with said socket.



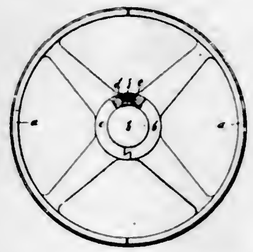
1,382,478. CLUTCH-RELEASING MECHANISM FOR TRACTORS. DALMAR L. COX, Greenville, N. C. Filed May 29, 1920. Serial No. 385,375. 1 Claim. (Cl. 180—82.)

In a clutch releasing mechanism for tractors, a clip adapted to be anchored to a tractor axle, a lever pivotally connected to the clip, an apertured lug, a screw threaded therein engaging the lever for holding the lever at different positions of adjustment, means for connecting the lever at one end to a clutch operating mechanism, a quadrant



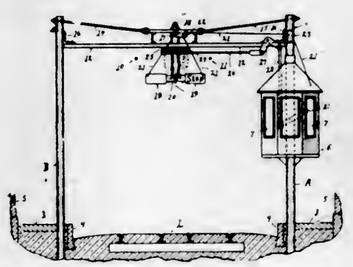
at the opposite end of the lever, the said quadrant having apertures therein, an arm pivotally connected to the lever, a member extending through the arm and an aperture of the quadrant for holding the arm at different positions of adjustment.

1,382,479. WASHING-MACHINE AND PUMP MECHANISM THEREFOR. JOHN A. CRAWFORD, Philadelphia, Pa. Filed Sept. 3, 1919. Serial No. 321,375. 1 Claim. (Cl. 68—37.)



A washing machine comprising a frame, a receptacle supported in the upper part of the frame, a motor supported by the lower part of the frame, a pump on the frame adjacent the motor, an outlet pipe leading from the bottom of the receptacle to the pump, a valve in the pipe, a handle for actuating the valve, said handle having an extension thereon extending beyond its connection with the valve, an outlet pipe for the pump, a clutch for connecting the pump with the motor, a bracket on the pump, a clutch lever pivoted to the bracket and engaging with the clutch and a link having one end connected to the clutch lever and its other end connected with the extension on the handle for releasing the clutch when the handle is moved to close the valve and for engaging the clutch when the handle is moved to open the valve.

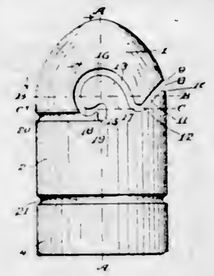
1,382,480. LOCKING-VALVE FOR INTERNAL-COMBUSTION ENGINES. AUSTIN A. CROSSLEY, Luther, Okla. Filed Feb. 18, 1920. Serial No. 359,713. 7 Claims. (Cl. 251—6.)



2. A device of the character described including a valve casing, rotatable means for securing the valve casing in active position, and a valve within the casing movable to closed position locking said means against rotation.

1,382,481. SPLIT COLLAR AND PULLEY. THOMAS CROSSLEY, Manchester, England. Filed July 6, 1920. Serial No. 394,094. 1 Claim. (Cl. 64—18.)

A device of the character described having a hole for engaging with a shaft, said device being formed of two similar sections having dovetailed joints which connect them together, said sections having also a screw-threaded hole extending through one of their joints and arranged radially of the center of the shaft hole, and a screw inserted in the said hole and operating to lock the sections together.

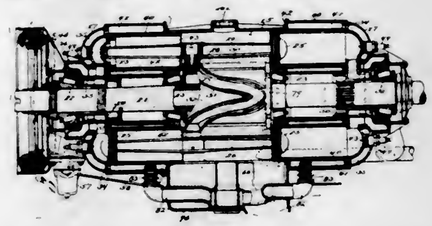


1,382,482. TRAFFIC-DIRECTING APPARATUS. JOHN W. CURRY, Cincinnati, Ohio. Filed Oct. 21, 1918. Serial No. 259,101. 2 Claims. (Cl. 116—63.)

1. A traffic directing apparatus comprising a substantially vertical rigid support located at one side of a street, an elevated rigid laterally projecting bar supported upon and at the upper end of said vertical member and overhanging the street, a vertically disposed signal shaft rotatably journaled in a bearing rigidly mounted upon said laterally projecting bar at substantially the center of the street, means carried by said laterally projecting bar to engage a member carried by said signal shaft to limit the rotary movement of said shaft, signal arms carried by said signal shaft, an observer's support carried at an intermediate position upon and by said vertical support, and elevated above the street to afford the observer an unobstructed view over pedestrians and vehicles, and means operable from said observer's support to rotatably actuate said signal shaft.

1,382,483. ELECTRIC-LINE-WIRE INSULATOR. JOHN G. DECKER, Stroudsburg, Pa. Filed May 24, 1918. Serial No. 236,343. 1 Claim. (Cl. 173—313.)

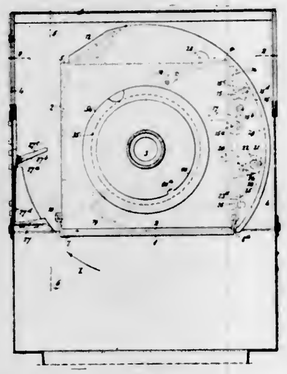
A device of the type described comprising an insulator of the electric line-wire type, the body portion of said insulator having a wire-receiving passage extending transversely therthrough and of continuous serpentine-like outline, starting with a mouth in the side of the head of said body-portion, the upper lip overhanging the lower lip of said mouth and including a downward extension reversely upwardly curved and again reversely curved upwardly and finally extending vertically downward, forming a seat for the line-wire.



1,382,484. CLASP. JOSEPH F. DELCOURT, New Bedford, Mass. Filed Jan. 20, 1921. Serial No. 438,684. 5 Claims. (Cl. 24—250.)

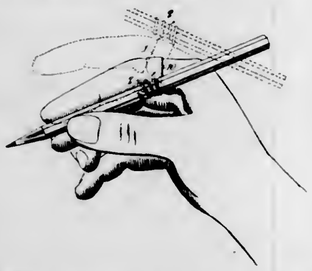
1. A clasp comprising a jaw, an overhanging arm carried thereby, a second jaw between the first jaw and arm thereof, a rib carried by the second jaw, and an actuating lever having a head and side arms extending upon opposite sides of said rib, the arms having connection with the rib and the rib having a latching stud extending from one side for fitting into a socket formed in one of the side arms of said lever and the lever head extending beyond the jaws and having its end portion notched to provide a finger nail securing seat.

1,382,485. INTERNAL-COMBUSTION ENGINE. CHARLES DE LUKACSEVICS, New York, N. Y. Filed May 3, 1919. Serial No. 294,567. 22 Claims. (Cl. 123—58.)



1. In an internal combustion engine, the combination with a body comprising a center block, a pair of cylinder blocks disposed respectively at opposite sides of said center block and each constituting a set of cylinders, and means for securing said blocks together, of pistons in said cylinders, said pistons having piston rods, a shaft journaled in said body, a drum on said shaft having a cam groove formed therein, means including rollers carried by said piston rods for operatively engaging said cam groove, and means including guide bars for guiding said rollers, said cylinder blocks having notches in which the ends of said guide bars are received and retained when said blocks are assembled.

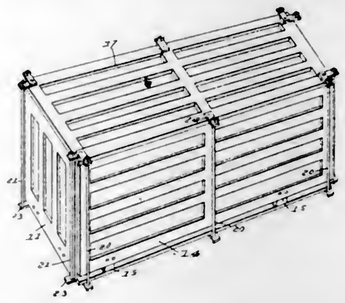
13. In an internal combustion engine, the combination of a hollow cylindrical body composed of a phenol conden-



sation product, a metallic cylinder head for said body, a metallic liner molded into said body, and a piston adapted to reciprocate in said liner.

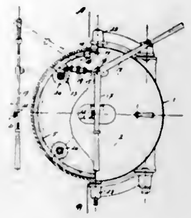
1,382,486. PHOTOGRAPHIC APPARATUS. GEORGES DE RAM, Paris, France. Filed May 6, 1918. Serial No. 232,840. 7 Claims. (Cl. 88—19.1.)

1. In a photographic camera, the combination of a light tight chamber, a receptacle for photographic plates disposed within the said chamber, the said receptacle being adapted to rotate about a horizontal shaft and to be connected to a driving shaft whose direction of rotation is invariable, and having admission and delivery apertures at the ends thereof, retaining means disposed upon the said ends and adapted to retain the plates in the receptacle against the action of gravity, actuating means for opening and closing the said retaining means at determined points on the rotation of the receptacle, supporting means secured within the said light tight chamber for receiving the plates at a point where they issue out of the said delivery aperture by the simple action of gravity, and extensions provided upon said receptacle whereby the plates disposed upon the said supporting means are disengaged therefrom and allowed to slide into the said receptacle by their own weight.



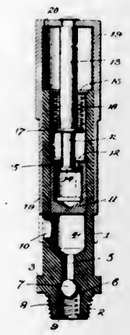
1,382,487. PEN OR PENCIL HOLDING DEVICE. THOMAS J. DIXON, Madison, Wis. Filed Mar. 10, 1921. Serial No. 451,407. 3 Claims. (Cl. 120—102.)

1. A device of the character stated comprising a ring band, provided with a strip extending in the direction of its length adapted for being shaped into a coil and projected laterally of the band for receiving and sustaining a pen or pencil.



1,382,488. FOLDING SHIPPING-CRATE. WILLIAM J. DONNELLY, Stockton, Calif. Filed May 27, 1920. Serial No. 384,568. 2 Claims. (Cl. 217—47.)

1. A crate having hingedly connected bottom, side end and top walls of which the top and bottom walls are provided with pivotal ears for extension beyond the side and end edges thereof, and tie bolts terminally engaging

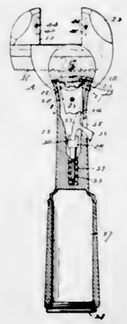


said ears for holding the crate members in their operative positions.

1,382,489. LOCKING DEVICE FOR AUTOCLAVES. KLAAS ENSINK, Hilversum, Netherlands. Filed Apr. 7, 1921. Serial No. 459,471. 4 Claims. (Cl. 18—17.)

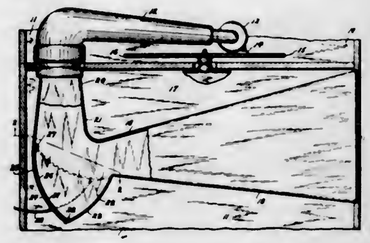
1. A locking device for autoclaves comprising inward circular flanges provided on the shell and the door of the autoclave, a circular elastic packing ring resting against both flanges, an adjustable elastic metal ring, having a groove wherein fit said flanges and packing ring, and means to reduce the diameter of said elastic metal ring from the outside of the apparatus in order to bring the door in its opening position.

1,382,490. LUBRICATOR. JOHN ERICKSON, Madison, Wis., assignor to Madison Kipp Corporation, Madison, Wis., a Corporation of Wisconsin. Filed Dec. 16, 1919. Serial No. 345,203. 5 Claims. (Cl. 184—45.)



1. In a lubricator, the combination of a cylinder having a feed and a discharge port; a piston mounted therein; a closure member for the feed port mounted on the body; and a piston rod attached to and movable with said closure member, said rod likewise having a lost motion connection with the piston, whereby the closure member may first move lengthwise of the cylinder to close the feed port and the rod at the same time likewise moved without actuating the piston.

1,382,491. VALVE-TOOL. WILLIAM A. ESKIL, Corona, N. Y. Filed Mar. 26, 1920. Serial No. 368,978. 1 Claim. (Cl. 29—86.3.)

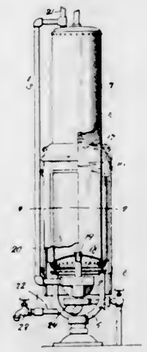


A tool for the purpose specified comprising a body portion having a longitudinal slot opening at one end, lugs depending from opposite sides of the tool and a plate secured to one end of the tool and having an opening disposed in alinement with said slot.

1,382,492. WRENCH. LAFAYETTE EVANS, Portsmouth, Ohio. Filed Dec. 10, 1920. Serial No. 429,753. 3 Claims. (Cl. 81—63.)

3. In a ratchet wrench, a head having a channel therein, one wall of the said channel having a groove, a rigid jaw on the said head, a movable jaw having a flange slidable in the channel of the head and having a rib slidable in the groove in the side wall of the channel, means for adjusting the movable jaw with relation to the stationary jaw, a boss having peripheral teeth, a handle mounted for rotation on the boss, a dog in the handle, means for pivotally mounting the dog whereby it engages the ratchet teeth and whereby its edge remote from the ratchet teeth engages the interior wall of the handle, the said dog having a recess in its edge, a rock arm having one end seated in the recess of the dog, a head having a recess in which the rock arm is oscillatably mounted, and means for urging the head toward the dog.

1,382,493. MODULATOR. FRED H. FERRIS, Wilmington, Del. Filed Dec. 20, 1918. Serial No. 267,690. 1 Claim. (Cl. 181—27.)

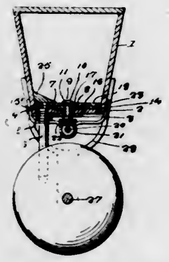


A talking machine horn of right angular shape having its sides prolonged beyond the outer wall of the angle or elbow and having the outer wall of the elbow formed open, an arcuate plate pivoted at one edge of the opening, a curved wall extending outwardly from the horn at the opposite pivot point, said prolongations of the sides and said curved wall coöperating with said plate to form a pocket, and means for moving said plate whereby to vary the size of said pocket.

1,382,494. PURIFICATION OF ZINC SOLUTIONS. SAMUEL FIELD, London, England, assignor to The Metals Extraction Corporation Limited, London, England, a Corporation of Guernsey. Filed Dec. 17, 1920. Serial No. 431,482. 8 Claims. (Cl. 204—18.)

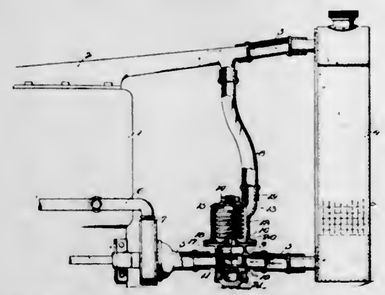
1. The herein described process for the purification of a zinc salt solution from foreign metals, which comprises treating the solution with a sub-divided metal more electro-positive than the impurities to be removed, in presence of a salt of mercury.

1,382,495. WATER-HEATER. ALFRED T. FOWLES, Dallas, Tex. Filed June 13, 1919. Serial No. 304,041. 3 Claims. (Cl. 122—19.)



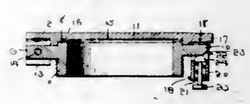
1. In an attachment for boilers comprising a removable sectional jacket seated about the lower section of a hot water boiler, a series of vertical, equally spaced V-shaped baffle plates arranged internally of the jacket and maintaining the latter in spaced relation to the wall of the boiler and providing a plurality of vertical passages for directing the air currents within said jacket, a flue extending vertically within the jacket having inlet ports in the lower portion thereof for receiving the products of combustion within the jacket and an outlet opening in the upper portion of said flue arranged exteriorly of the jacket, said flue being disposed in spaced relation to the baffle plates.

1,382,406. ATTACHING-RING. ALFRED T. FOWLES, Dallas, Tex. Filed June 13, 1919. Serial No. 304,044. 1 Claim. (Cl. 126—317.)



A two part clamping ring formed of separable sections and with an internal, annular groove adapted to receive packing between the ring and the exterior surface of a boiler, and a downward, flaring flange depending from the ring and considerably below the groove, and alined apertured ears integral with the ring receiving bolts, securing the separable ring sections.

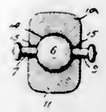
1,382,497. GRAIN-DRILL. WILLIAM B. FRANKS, Tolu, Ky., assignor of one-half to G. W. Winders, Tolu, Ky. Filed Aug. 26, 1919. Serial No. 319,971. 1 Claim. (Cl. 221—122.)



A grain drill embodying a grain box, grain spouts leading from the bottom thereof, a false bottom secured within the grain box and having a plurality of spaced openings therein to provide seats, wear disks located within the seats and having openings arranged above the grain spouts, seed disks also located within the seats above the wear disks, a shaft arranged externally of the box, means connecting the shaft and seed disks, said means extending through the wear plates and bottom and seed disks and means for operating the shaft to actuate the seed disks.

1,382,498. COOLING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. JEAN V. GIESLER, Knoxville, Tenn., assignor to The Fulton Company, Knoxville, Tenn., a Corporation of Maine. Filed May 12, 1917. Serial No. 168,238. 19 Claims. (Cl. 123—178.)

1. In a cooling system for internal combustion engines, the combination of an engine jacket, a radiator, connections therebetween, valve mechanism for regulating the circulation of cooling medium through said radiator, thermosensitive means for controlling said valve mechanism, an always-open by-pass around said radiator, said thermosensitive means being subjected to the cooling medium flowing through said by-pass, and means whereby the quantity of cooling medium flowing through said by-pass is increased and decreased as the quantity of cooling medium flowing through said radiator is respectively decreased and increased.



1,382,499. RADIATOR-CAP. CLAYTON E. GIFFORD, Marion, Ohio. Filed July 7, 1920. Serial No. 394,444. 10 Claims. (Cl. 220—55.)

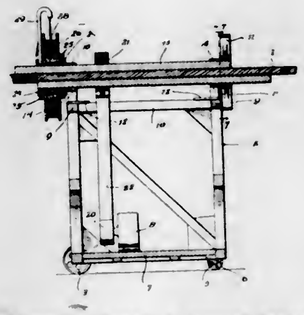
1. The combination with an automobile radiator including a flanged inlet thereto, of a cap overlying the flanged inlet and pivoted at one side thereof, a latch lug extending radially of the flanged outlet, a projection extending radially from said cap immediately above and in line with said latch lug, a latch housing having its upper end bifurcated to span the projection of said cap and pivoted thereto, and a latch member carried in said housing and adapted for engagement with the under face of said latch lug, when said latch housing is swung to operative position.

6. In combination, a supporting member, a cap hingedly secured thereto, an extension pivotally secured to the cap and movable to inoperative position relative thereto, a housing having a bifurcated extremity pivotally secured to said extension, a lug carried by the supporting member adapted to be received between the bifurcations of the housing when the latter is moved to operative position, and a spring actuated plunger mounted in the housing, said lug having a cam face adapted to coact with the plunger to compress the latter as the housing is moved to operative position.

1,382,500. SPLICING-TOOL. GILBERT W. GOODRIDGE, Bridgeport, Conn., assignor to The Bead Chain Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 12, 1919. Serial No. 289,666. 2 Claims. (Cl. 81—15.)

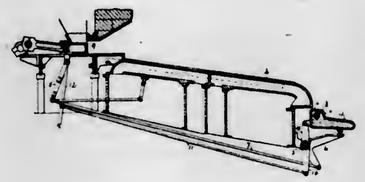
1. A splicing tool comprising a pair of jaws cupped in register on their meeting faces to form a recess, said recess extending to points adjacent the opposite edges of the jaws, in combination with shallow channels of like width opening from said cups to form passage ways to accommodate the shanks of dumb-bell links engaged by and extending in opposite directions from the sides of a chain ball seated in said recess.

1,382,501. CAN. CHARLES W. GRAHAM, Crestwood, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 5, 1916. Serial No. 76,341. 1 Claim. (Cl. 220—61.)



In a can, the combination of a can body having an outstanding seam flange, a can cover having a longer outstanding seam flange the extreme outer part of which is bent downward to form a short downward extension the

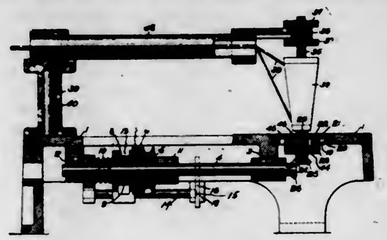
edge of which is downwardly presented so that the side of said extension is opposite to the edge of the body flange, a gasket arranged between the body flange and



the under side of the cover flange, and a sealing strip compressing vertically together said cover flange and body flange and interposed gasket.

1,382,502. SERVING-MACHINE. WILLIAM GREEN, Portland, Oreg. Filed May 15, 1920. Serial No. 381,767. 3 Claims. (Cl. 28—6.)

1. In a serving machine, a wheeled frame, a hollow motor driven shaft thereon, a spool of cord supported on the shaft, a tautly supported cable passing through the bore of the shaft, means for feeding a strand of cord from the spool to the cable to permit of the cord being wound around the cable as the shaft is rotated, means carried by the shaft and overlying the wound cord on the cable for preventing the bunching of the cord on the cable, and means actuated by the cord in the winding thereof on the cable for moving the frame longitudinally of the cable.

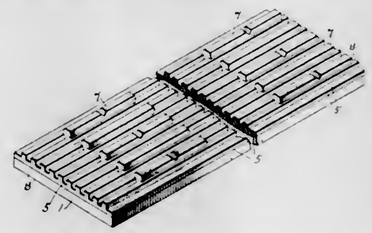


1,382,503. FURNACE. GEORGE J. HAGAN, Pittsburgh, Pa. Filed Nov. 1, 1918. Serial No. 260,681. 5 Claims. (Cl. 110—32.)

2. In a furnace the combination of a fuel supporting member, a hollow ash supporting member having perforations in the wall above the normal level of water therein and means for maintaining a supply of water at such normal level in the ash supporting member.

1,382,504. LEATHER-BURNISHING MECHANISM. BICKNELL HALL, Taunton, Mass. Filed Apr. 27, 1912. Serial No. 693,657. Renewed Sept. 29, 1919. Serial No. 327,269. 35 Claims. (Cl. 69—1.)

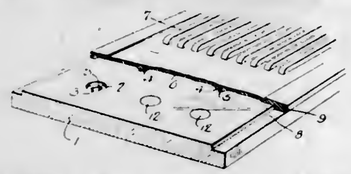
1. Leather burnishing mechanism comprising, in combination, a work guiding plate, a burnishing wheel, means for supporting said wheel adjacent said plate and in such position that the work will be guided by the plate to the



periphery of the wheel, means for rotating the wheel, and electrical means for heating the wheel.

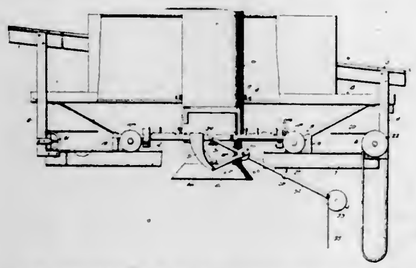
1,382,505. PLUMBER'S TABLE AND VISE SUPPORT. GEORGE L. HARGEY, Pottsville, Pa. Filed Oct. 11, 1920. Serial No. 416,273. 8 Claims. (Cl. 81—41.)

5. In a device of the character specified, two tubular members, a third member coupling the tubular members in axially alined relation and operable to move said tubular members in reverse directions, a table, and coöperating means carried by said table and one of said tubular members for supporting said table, with respect to said tubular members, in a horizontal position, irrespective of whether said tubular members are disposed in a vertical or horizontal position, and anchoring means carried by each of said tubular members at one end thereof.



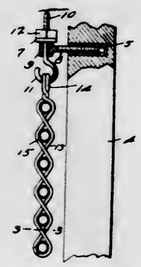
1,382,506. - RUNNING-BOARD FOR AUTOMOBILES. JOHN T. HAYNE, Detroit, Mich. Filed Apr. 26, 1919. Serial No. 292,823. 1 Claim. (Cl. 280—169.)

A running board for automobiles, including a base board and a resilient pliable mat having its upper or tread sur-



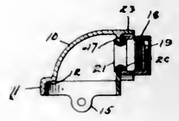
face provided with upper and lower sets of tread-ribs, the upper set of ribs having their shank-portions received intermediately of the lower set of ribs and their upper tread-surfaces partially overlying the upper surfaces of said lower set of ribs, said baseboard and mat being provided with means adapted to effect an interlocking connection therebetween.

1,382,507. RUNNING-BOARD FOR AUTOMOBILES. JOHN T. HAYNE, Detroit, Mich. Filed May 3, 1920. Serial No. 378,690. 2 Claims. (Cl. 280—163.)



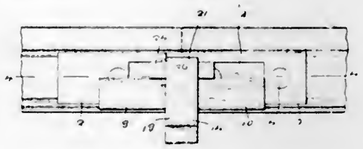
1. A running board for automobiles, including a main member having a plurality of countersunk stud-receiving orifices whose walls are provided with longitudinal grooves, studs received by said countersunk orifices, each stud having a screw-threaded socket, an end flange and lateral longitudinal cleats, a tread-mat member, and securing means between said studs and the running board threaded into the sockets of said studs, said grooves receiving said longitudinal cleats, the end flanges of said studs being received by the countersinks of said orifices.

1,382,508. SMOKESTACK. WILLIAM HAWKER, Edmonton, Alberta, Canada. Filed Dec. 3, 1920. Serial No. 428,141. 13 Claims. (Cl. 104—52.)



1. The combination with a supplementary smoke stack including fixed and movable sections; of friction controlled lever and link means for moving said movable section vertically without jamming.

1,382,509. HANGER. LEONARD A. M. HOOYMAN, Passaic, N. J. Filed Aug. 26, 1920. Serial No. 406,074. 1 Claim. (Cl. 248—34.)



A pipe hanger including a shank engaged with an object and provided with a head remote from the latter, a bolt extending through said head and having its lower end formed to provide a hook, a plurality of pipes and wire strands each of which is provided with a convolution to engage said hook and having the ends thereof alternately arranged on opposite sides of the pipes substantially as described.

1,382,510. WIRING-CONDUIT CAP. FREDERICK I. JOHNSON, Warren, R. I., assignor to Mary W. Johnson, Warren, R. I. Filed July 18, 1919. Serial No. 311,746. 2 Claims. (Cl. 247—6.)

2. A wiring conduit cap comprising a substantially elbow-shaped body having an annular out-turned flange for inclosing and providing a seat for a removable insulating end piece, the opposite end of said body having an inwardly projecting flange, a coupling member rotatably connected to said flange, a weather shielding flange on said body extending over the joint between said coupling and its seat, and said weather shielding flange being provided with a drain opening.

1,382,511. RAIL-JOINT. JOSEPH KATCHER, Madera, Pa. Filed Mar. 21, 1921. Serial No. 454,140. 4 Claims. (Cl. 238—263.)

1. In combination with the confronting ends of rails having bolt openings through their webs, of fish plates on the sides of the rails, lugs on the fish plates passing through the openings in the rails, a wedge rib on the outer face of each plate, a yoke having jaw portions one of which is arranged over the wedge rib of one plate, a wedge key arranged over the rib of the second plate and received in the second jaw of the yoke.

1,382,512. COLLAR FASTENER OR CLASP. ORSON N. KELLY, Dallas, Tex. Filed Aug. 9, 1920. Serial No. 402,458. 3 Claims. (Cl. 24—81.)

1. A fastener or clasp comprising a body portion, a pair of oppositely disposed gripping members supported by said body portion and coöperating with the ends of said body portion to form clamps, and a single rotating cam lock coacting with intermediate portions of both said gripping members to apply a clamping pressure at the ends thereof.

1,382,513. COLLAR FASTENER OR CLASP. ORSON N. KELLY, Dallas, Tex. Filed Aug. 9, 1920. Serial No. 402,459. 3 Claims. (Cl. 24—81.)

1. A collar fastener comprising a neck or stem portion, and two pairs of oppositely projecting members adapted to straddle the flaps of a collar, and a sliding element on one of each of said pairs of members coöperating with the

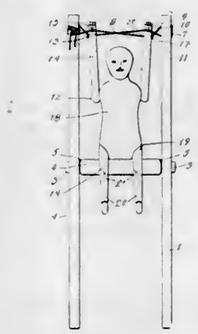
companion member of the pair to cause a gripping or clamping of the collar flaps between said sliding element and said companion member.

1,382,514. COLLAR FASTENER OR CLASP. ORSON N. KELLY, Dallas, Tex. Filed Aug. 9, 1920. Serial No. 402,462. 7 Claims. (Cl. 24—81.)

1. A collar fastener comprising a body portion, converging supporting members projecting therefrom, gripping arms mounted upon said supporting members and coöperating with the ends of the body portion, and means for spreading said converging supporting members to apply gripping contact between the gripping arms and the body portion.

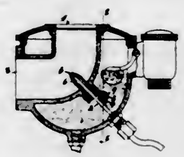
1,382,515. COLLAR FASTENER OR CLASP. ORSON N. KELLY, Dallas, Tex. Filed Aug. 9, 1920. Serial No. 402,463. 3 Claims. (Cl. 24—81.)

1. A collar fastener comprising an oblong body portion, a lug upon the face thereof having a bearing aperture therein, said aperture lying in a line parallel with the longitudinal axis of said body portion, and a clamping member substantially paralleling said body portion, pivoted in said bearing lug and having an offset clamping end coöperating with the end of said body portion to clamp a collar flap.



1,382,516. METHOD OF WEAVING PILE FABRICS. GEORG KOCH, Darmstadt, Germany, assignor to Dr. Ernest Cadgene and Olav Berg, Paterson, N. J. Filed July 26, 1920. Serial No. 399,207. 1 Claim. (Cl. 139—71.)

The herein described method of weaving a pile fabric which consists in at intervals crossing through a tight warp, around filling at one side thereof and then back through the tight warp one of two other and less tight warps, and, between each two such intervals and at the other side of the tight warp, crossing said less tight warps three or more times with respect to each other and also one of them through a false warp having free ends, around filling and back through said false warp, all while simultaneously advancing the tight and less tight warps relatively to the false warp in the direction in which the free ends of the latter project.

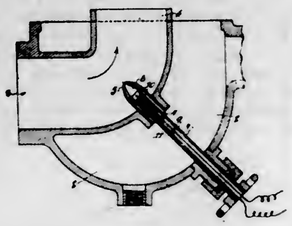


1,382,517. TOY ACROBAT. JUZEF KOWALSKI, Detroit, Mich. Filed Nov. 15, 1920. Serial No. 424,202. 1 Claim. (Cl. 46—40.)

In a device of the class described, a frame comprising side bars having a plurality of transverse openings adjacent to one end thereof and having rectangular openings near the center thereof, a transverse bar having its ends reduced to provide tongues which pass through the last mentioned openings, and the shoulders between the tongues and the transverse bar having their corners rounded, a figure comprising pivotally connected members including a body, legs and arms, the body being weightier than the legs and arms, the arms having their hand portions concaved and provided with eyes and having transverse openings inward of the eyes, a cord threaded through two of the openings in one of the sides of the frame, its strands arranged angularly to pass through the eye

and through the opening in the arm of the figure next to the said side of the frame, and strands of the cord between the arms being crossed directed through the eye and through the opening in the second arm of the figure, and being again crossed and directed through the two of the openings in the second side member of the frame, and from thence passed through the remaining opening in the said side member of the frame from opposite directions and having their ends tied, and the combined length of the body and arms of the figure being such as to permit of the figure normally resting on the cross bar of the frame.

1,382,518. ELECTRIC HEATER FOR LIQUID FUEL. ALFRED W. LE PAGE, Vancouver, British Columbia, Canada. Filed Feb. 12, 1920. Serial No. 358,245. 2 Claims. (Cl. 219—38.)



1. A means for heating liquid fuel for an internal combustion engine, said means comprising in combination with a carbureter, a fuel reservoir, a tube secured in the walls of the carbureter to extend through the fuel reservoir across the same below the level of the liquid therein, a naked heating element within the tube, insulating plugs in the ends of the tube through which connection with a source of electric energy is made to the heating element, substantially as shown and described.

1,382,519. MEANS FOR HEATING LIQUID FUEL. ALFRED W. LE PAGE, Vancouver, British Columbia, Canada. Filed Feb. 13, 1920. Serial No. 358,546. 3 Claims. (Cl. 219—38.)

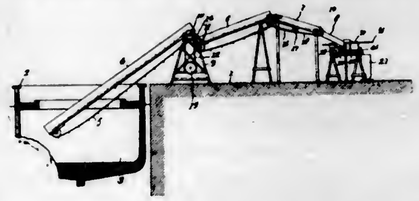
1. A means for heating liquid fuel, said means comprising the combination with the bowl of a carbureter and the valve controlling passage of the liquid fuel therefrom

to the intake manifold of the engine, an axially hollow stem on the valve and a naked coil of electrical high resistance wire within the stem through which coil a suit-

able current may be passed and an insulating jacket within the stem constituting a chamber in which said coil is located and from the walls of which said coil is spaced.

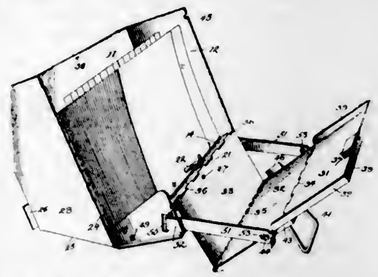
1,382,520. HOG-CATCHER. OTTO M. LUNDENE, Flint, Mich. Filed Jan. 31, 1921. Serial No. 441,116. 4 Claims. (Cl. 119—153.)

1. In a hog-holding device, a main handle having a passage through it and having a latching pawl entirely housed within it, a tube attached to one end of the handle, a rotatable notched rod passing through the handle and the tube and having a flexible member connecting its forward end to the end of the tube to thereby form a contractible loop, and another handle-member connected to the rear end of the notched rod.



1,382,521. CLOTHES-DRAINING BASKET. GEORGE G. MCCORMICK, Collinsville, Ill. Filed Sept. 4, 1917. Serial No. 189,555. 1 Claim. (Cl. 68—30.)

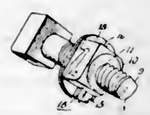
A draining basket comprised of open weave material having inverted U-shaped lifting handles swingingly secured adjacent each end at the bottom of the basket, the depending ends of each of said handles bearing an inwardly formed hook-shaped portion which is adapted to extend into the confines of the side wall of the basket between the upper and lower portions thereof when the handles are moved in approximately vertical positions against the outside of the basket.



1,382,522. MACHINE FOR UNLOADING AND COUNTING COCOANUTS OR THE LIKE ARTICLES. ROBERT C. MCKEAND, Tampa, Fla. Filed Aug. 4, 1919, Serial No. 315,249. Renewed Nov. 26, 1920. Serial No. 426,608. 8 Claims. (Cl. 193—1.)

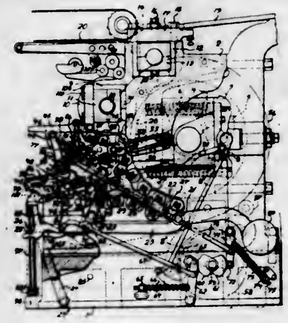
1. A counting mechanism including a depressible platform, a toothed counting disk, a flat spring having its free end adapted to engage with the teeth of said counting disk and actuated by said platform to advance the disk, a cam acting on said spring when the platform is de-

pressed to force the spring into contact with said teeth, and means for delivering the articles from said platform to receptacles, substantially as described.



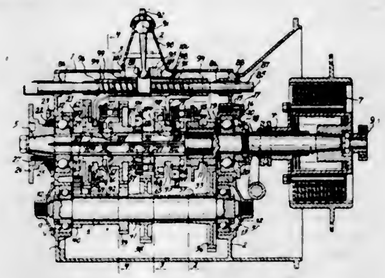
1,382,523. FILING DEVICE. JOHN L. MCMILLAN, Syracuse, N. Y. Filed July 17, 1919. Serial No. 311,394. 12 Claims. (Cl. 129—1.)

1. In a filing device, the combination of a box; leaf-engaging means mounted in said box; a lid for said box hinged thereto and including a plurality of sections hinged together, and adapted through such hinging to be adjusted to form an inclined tray when the lid is open; a brace serving to maintain a section of the lid in a fixed angular relation to said box, when the lid is open; hinged supporting brackets mounted on said box and lid; and means for fastening said lid closed.



10. The combination of a box; a lid therefor; a leaf-retaining pin; a plurality of sockets for retaining said pin in position parallel to leaves contained in said box; and engaging means on said box and lid for retaining said pin in impaling relation to said leaves.

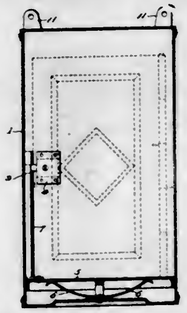
1,382,524. NUT-LOCK. ALLAN MACKINTOSH, Bowsman River, and FRED THOMPSON, Sydney Mines, Canada. Filed Aug. 9, 1920. Serial No. 402,498. 2 Claims. (Cl. 151—13.)



1. In combination with a bolt having its side flattened, of a washer having an opening corresponding to the outer circumference of said bolt, engaging means carried by said washer in such a position that the free ends of said engaging means may have their inner sides bent outwardly, a nut having notches cut in the inner side of same and adapted to be threaded onto said bolt and said notches adapted to receive the inner outwardly bent sides of said engaging members, said washer having an upper plain surface and both ends of said engaging means being turned up.

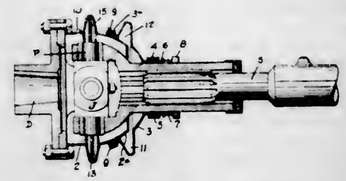
1,382,525. INKING MECHANISM FOR PRINTING-PRESSES. ROBERT MIEHLE, Chicago, Ill. Filed Sept. 25, 1918. Serial No. 255,551. 49 Claims. (Cl. 101—144.)

1. A printing press including an ink distributing mechanism; a cylinder in operable relation with said ink distributing mechanism and movable out of and into operable relation with said ink distributing mechanism; a second ink distributing mechanism; charging means for said ink distributing mechanisms; and mechanism for controlling said second ink distributing mechanism and said charging means and having connection with said cylinder and movable therewith and adapted to render said second ink distributing mechanism and said charging means inoperative when said cylinder is positioned out of operable relation with said first mentioned ink distributing mechanism.



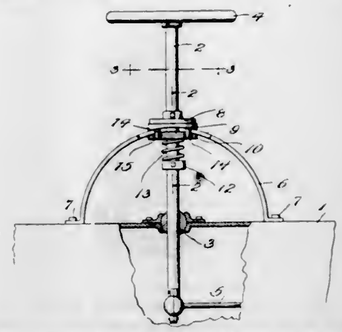
1,382,526. CHANGE-SPEED TRANSMISSION MECHANISM. ROBERT FRANK MIEHLE, Jr., Chicago, Ill. Filed Mar. 14, 1919. Serial No. 282,555. 19 Claims. (Cl. 74—59.)

1. A device of the character described including independently rotatable driving and driven members provided with interengageable teeth to form a driving connection therebetween and relatively movable to and away from each other to engage and disengage said teeth, and means for preventing movement of said members into tooth engaging position and adapted to be set to be operated to permit movement of said members into tooth engaging position by the relative rotation of said members first in one direction and then in the other direction prior to the engagement of said teeth.



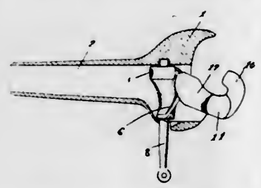
1,382,527. SAFETY-CABINET. ABEL MILLER and PHILLIP MILLER, Harrisonburg, Va. Filed Mar. 13, 1920. Serial No. 365,539. 2 Claims. (Cl. 232—41.)

1. A device of the class described comprising a casing having an entrance opening, a door for said opening, spring means for normally holding the door in closed position, a key operated spring lock for said door, a member for preventing the bolt of the lock from engaging its



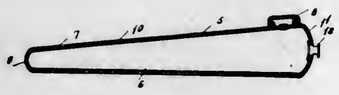
keeper and a spring supported receiving shelf in the casing connected with said bar and moving the same away from the keeper when an article is placed on the shelf.

1,382,528. UNIVERSAL-JOINT OIL-BOX. GEORGE EDWARD MILLER, Oakland, Calif. Filed Oct. 14, 1920. Serial No. 417,001. 13 Claims. (Cl. 64—102.)



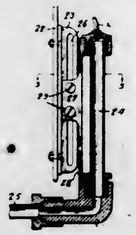
13. A universal-joint dust guard and oil box having cooperative sections each provided with a spherical working face, and an outwardly projecting channel forming means extending beyond the spherical portions of the sections so as to collect and retain lubricant and prevent its flowing to the running joint between the sections while the box is rotating, these sections having packing means at their meeting portions.

1,382,529. LEVER-LOCK. SAMUEL S. MORTON, Harrisburg, Pa. Filed May 20, 1920. Serial No. 382,856. 3 Claims. (Cl. 74—39.)



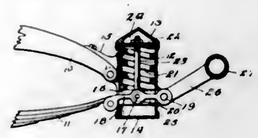
1. The combination with a shaft mounted for both rotary and pivotal movement; of a curved track extending transversely of said shaft, a friction brake movable along said track during the pivotal movement of said lever, a collar movable with said shaft when the latter is rotated, and spring means for engaging said collar with said friction brake and for holding the latter in frictional contact with said track.

1,382,530. CAR-COUPLING. LAWRENCE A. MURPHY, St. John, New Brunswick, Canada. Filed Aug. 9, 1920. Serial No. 402,475. 2 Claims. (Cl. 213—10.)



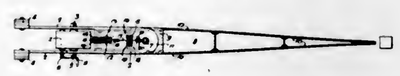
1. A car coupler comprising a body portion having a fixed jaw, a member rotatably mounted in the body portion having an arcuate lateral wall and a portion of the periphery cut away and a cam race formed on the said member, an arm pivotally mounted to the body portion and having an inwardly extending end having cam surface coacting with the cam race on the rotatable member, the outer end of the arm being bent to form a jaw as and for the purpose specified.

1,382,531. MATTRESS. JOHN C. NEWBORN, Hagerman, N. Mex. Filed Jan. 10, 1919. Serial No. 270,491. 1 Claim. (Cl. 5—1.)



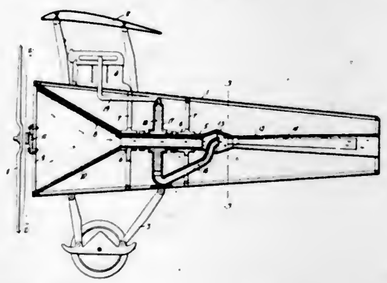
A mattress comprising an elongated body constructed from air retaining material and having one of its end walls of a less height than the other end wall so that the top wall will be disposed on an incline when said body rests on a flat support, a fabric cover for said body, means whereby said body may be inflated and deflated, an elongated strip extending transversely of the body adjacent one end and having its end and side edges secured to said body to form a pillow, said body having an opening to permit air to enter said pillow from said body.

1,382,532. LIQUID-GAGE. RICHARD T. NEWTON, New York, N. Y. Filed Jan. 11, 1919. Serial No. 270,668. 1 Claim. (Cl. 73—54.)



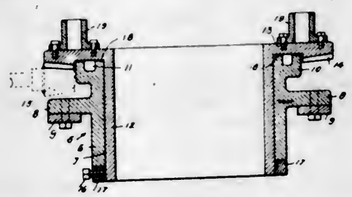
In an automobile, a dash-board gage device comprising a bracket secured to the dash, a gage glass vertically adjustable on said bracket, a liquid tank, piping connecting the lower portion of the gage glass with the tank below the liquid level therein, and constantly open, and piping connecting the tank above the liquid level therein with the upper portion of the gage glass to equalize the pressures in the glass and tank, in combination with valve means in the liquid piping to halt the flow through said piping when the car is on predetermined grade.

1,382,533. VEHICLE. RICHARD T. NEWTON, Nutley, N. J. Filed May 18, 1914. Serial No. 839,471. 17 Claims. (Cl. 267—29.)



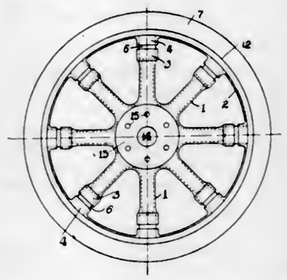
17. A shock eliminator adapted to be operatively interposed between the running gear and body of the vehicle, said device comprising a shock eliminator spring housing, means for securing the same to one of said members, a lever pivotally connected to the other of said members and to a lateral extension of the housing, a spring within said housing and an operative connection between said lever and spring to freely resist relative vertical displacement of said running gear and vehicle body.

1,382,534. SAFETY-GATE FOR RAILROAD-CROSSINGS. JOHN W. OELENSCHLAGER and VICTOR B. ARKLESS, Norristown, Pa. Filed Apr. 26, 1920. Serial No. 376,657. 2 Claims. (Cl. 39—92.)



1. The combination in a safety gate for railway crossings of a standard; a body portion of a gate pivoted to the standard; means for operating the gate; a vertical pivot pin on the body portion; a pivoted section consisting of a hub and extensions mounted on the pivot pin; a centrally located spring on the body portion; a rod extending through the spring and having a head bearing against the spring; a rope attached to the rod and connected to the hub; and guides for the rope, said spring tending to hold the pivoted section yieldingly in line with the body portion of the gate so that it will yield in either direction under pressure.

1,382,535. AEROPLANE. GEORGE CYRUS OFFEN, Moose Jaw, Saskatchewan, Canada. Filed Aug. 21, 1920. Serial No. 405,146. Renewed Apr. 28, 1921. Serial No. 465,244. 6 Claims. (Cl. 244—25.)

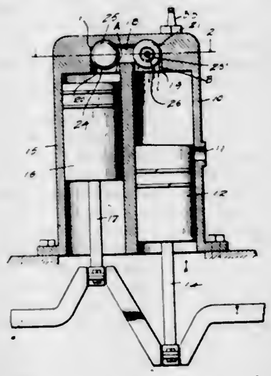


5. The combination with an airship, of a tubular shaft, a bell mouth at the inlet end of said shaft, a propeller secured to said bell mouth, an exhaust pipe communicating with the rear end of the tubular shaft, a fluid motor on the tubular shaft, a motor or generator, a fluid directing pipe connecting the generator with the fluid motor, and an exhaust pipe connecting the fluid motor with the first mentioned exhaust pipe whereby the movement of air through the shaft and exhaust pipe operates to create a suction through the fluid motor and utilize the power thereby created.

1,382,536. ROTARY TABLE. JAMES H. OKELL, Los Angeles, Calif., assignor to Okell Well Machinery Company, Los Angeles, Calif., a Copartnership consisting of Cora M. Lane and George E. Okell. Filed Mar. 20, 1920. Serial No. 367,330. 1 Claim. (Cl. 64—56.)

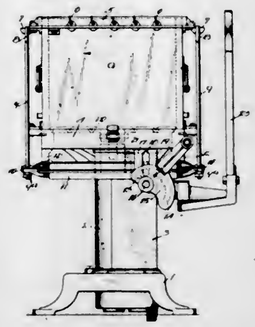
A rotary table, comprising a bearing sleeve provided on its upper end with an annular groove and a plurality of radial grooves formed on the upper end of said sleeve and intersecting said annular groove, a boring sleeve provided with a flange adapted to rest on the upper end of said bearing sleeve, and detachable means secured to the lower end of said boring sleeve for maintaining the flange of the boring sleeve in contact with the upper end of the bearing sleeve.

1,382,537. RESILIENT WHEEL. NELS L. OLSON, Highland Park, Mich. Filed Mar. 24, 1919. Serial No. 284,656. 1 Claim. (Cl. 152—28.)



A wheel comprising a body, resilient members in the periphery of said body and protruding therefrom, an apertured rim about said body and having the apertures thereof equally spaced, and cylindrical open end pockets integral with said apertured rim at the apertures thereof and through which said resilient members protrude so that said members may have the outer ends thereof compressed, and a pressed on tire rim about the apertured rim compressing the resilient members and permitting of said resilient members being mounted in the periphery of the wheel body without removing the apertured rim.

1,382,538. SIZER AND GRADER. ARTHUR M. O'QUINN, Miami, Fla. Filed July 30, 1920. Serial No. 400,058. 3 Claims. (Cl. 130—32.)



1. In a sizer and grader, a track comprising a plurality of members movable for adjustment; a sizing device including a part supported by said members; and means for adjusting said members simultaneously.

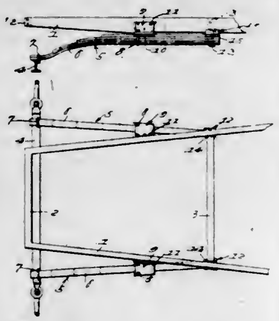
1,382,539. TWO-CYCLE MOTOR. EDWARD C. PANNING and FERDINAND A. ISERN, Ellinwood, Kans. Filed May 20, 1919. Serial No. 298,379. 2 Claims. (Cl. 123—70.)

1. A two-cycle motor comprising a block having combustion and charge forming cylinders, a head for said cylinders having combustion and charge forming chambers, one of the ends of said chambers communicating with the combustion and charge forming cylinders respectively and their other ends opening outwardly through the head, bases threaded in said chambers closing the last named ends thereof, check valves carried by said bases for controlling the passage of fuel through the chambers, said chambers communicating with each other between the valves, said charge forming chamber having an intake port, and working and charge forming pistons in the combustion and charge forming cylinders respectively.

1,382,540. BUTTER-CUTTER. WILLIAM E. PENN, Watertown, Wis., assignor to The Creamery Package Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Original application filed June 12, 1914, Serial No. 844,618. Divided and this application filed Oct. 11, 1918. Serial No. 257,694. 11 Claims. (Cl. 31—65.)

1. In a butter-cutter, in combination, a support for a butter box, a cutter frame adapted to rest upon the top of the box, a frame pivoted to said support, rods arranged to connect opposite sides of the cutter frame to opposite sides of said pivoted frame, and means for moving said pivoted frame to exert traction upon the rods.

3. In a butter-cutter, a frame upon which the lower end of a box may be placed, a cutter frame adapted to fit upon the upper end of the box, an element pivotally supported below the first mentioned frame, a plurality of rods engaged by said element and adapted to engage the cutter



frame, and means for pivotally moving said element, whereby said cutter frame is securely held in position.

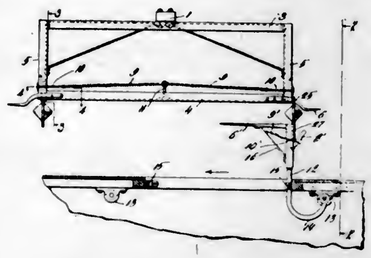
6. In a butter-cutter having a movable platen, means for raising and lowering said platen comprising, in combination, a single manipulative control element, means whereby actuation of said element through a predetermined displacement in either direction will raise said platen, means normally operative to prevent lowering said platen and means whereby displacement of said element beyond the normal displacement in either direction will release said preventing means, said raising and lowering means operating by liquid displacement whereby the lowering of said platen is strongly damped.

10. In a butter-cutter having a movable platen, means for raising and lowering said platen comprising, in combination, a manually actuated transmission having a locking action without backlash for raising said platen, manually controlled means for allowing said platen to move downwardly with a strongly damped motion, and a single manipulative element receiving power for the operation of said raising means and controlling said lowering means, said raising means and said lowering means having certain elements in common.

11. In a butter cutter having a movable platen, manual means for raising said platen, manually controlled means for releasing said platen to allow it to descend, and means beyond the control of the operator for damping the descent to limit the speed of the same.

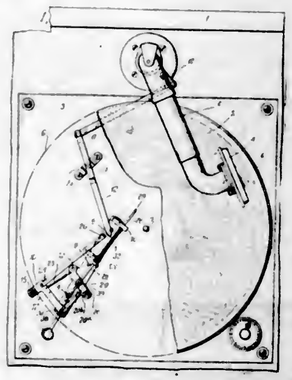
1,382,541. CANTALIVER FRONT SPRING. STEPHEN P. PESZNECKER, Estacada, Oreg., assignor of one-half to Dr. H. V. Adix, Estacada, Oreg. Filed Apr. 3, 1919. Serial No. 287,146. 1 Claim. (Cl. 267—41.)

The combination with the forward axle and chassis frame of an automobile, of leaf springs arched at their forward ends and connected with the axle, a bearing brace for the rear ends of the springs, the said bearing brace consisting of plate-like bodies with spaced parallel flanges straddling the side rails of the chassis to which the plate like bodies are secured the said members being further formed with depending spaced parallel flanges disposed at an angle to the first named flanges and receiving between them the rear ends of the springs, and intermediate bearing brackets secured to the side rails of the chassis and provided with spaced depending flanges straddling the springs at intermediate points in the manner and for the purpose specified.



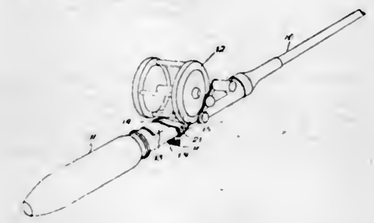
1,382,542. MEANS FOR REMOVING COTTON DROPPINGS FROM FLOORS. SAMUEL E. PHALOR, Columbus, Ohio, assignor of one-half to Riley H. Bean, Columbus, Ohio. Filed Sept. 16, 1920. Serial No. 410,730. 6 Claims. (Cl. 19—7.)

4. Means for feeding material along a horizontal surface and up an inclined one comprising, in combination, a slide open fore and aft at its lower side, a material-feeding blade hinged to the front of the slide, a second feeding blade in advance of the first mentioned blade hinged to the slide movable on its hinge independently of movement of the first mentioned blade, means for reciprocating the



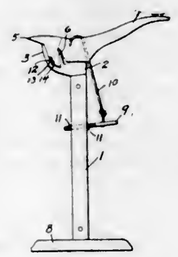
slide and operating the first mentioned blade, and means supporting the second mentioned blade in elevated position upon the non-feeding stroke of the slide.

1,382,543. MAIL DELIVERING AND CATCHING DEVICE. HENRY S. PRETE, Devils Lake, N. D. Filed June 22, 1920. Serial No. 390,755. 4 Claims. (Cl. 258—26.)



1. In a device of the class described the combination of a support, an arm extending from said support and formed of U-shaped angle iron, a block pivotally carried at the extremity of the arm, means for normally holding said block in a closed position, and a mail pouch attachment comprising a shank adapted to be received in the groove of the arm and to be held therein by the block.

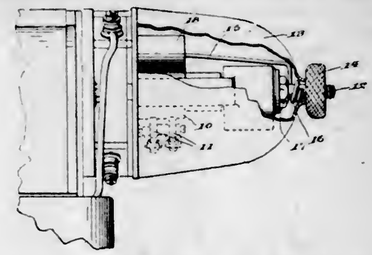
1,382,544. AUTOMATIC STOP FOR PHONOGRAPHS. RICHARD JAMES PRETTIE, Jamaica, N. Y., assignor to The Aeolian Company, a Corporation of Connecticut. Filed Mar. 24, 1915. Serial No. 16,673. 21 Claims. (Cl. 192—116.)



1. In combination, a rotatable record support, a sound-box mounted to move across a record on said support, a member carrying a brake normally tending to move into braking engagement with said record support, a latch to coöperate with said member and to hold said brake off, a pair of opposed members, one having a variable frictional connection to said latch and the other connected to the brake-carrying member, and a finger operatively connected to the movable sound-box and pivoted to swing to-and-fro in a plane beneath the record supporting means, said finger acting during its movement in one direction to trip the latch and cause the brake to engage the record supporting means and acting during its movement in the opposite direction to set the brake in its off position.

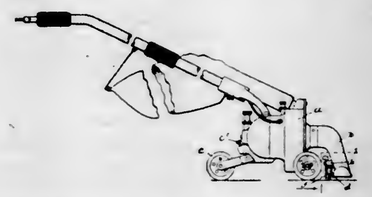
1,382,545. FISHING-REEL CLAMP. MITCHELL D. PRICE, Miami, Fla. Filed Oct. 22, 1920. Serial No. 418,829. 6 Claims. (Cl. 43—22.)

1. A clamp comprising a main member, a second member provided with studs projecting from the free ends thereof for pivotally and removably securing said second member to said main member and means for adjustably securing the free ends of said main member.



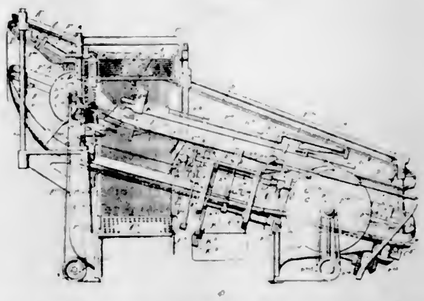
1,382,546. SHOE-REPAIRING STAND. THOMAS RENDLE, Ottawa, Ill. Filed Aug. 19, 1920. Serial No. 404,674. 2 Claims. (Cl. 12—123.)

1. The combination in a shoe repairing stand, of a standard having a rigidly fixed cleat at the rear, said cleat having a groove at each side, and a perforation, a heel-part having a slot with an arm at each side to coöperate with the grooves of the cleat and indentures at the rear, said indentures to coöperate with the perforation, and a pin in said cleat, whereby the said heel-part is securely held, a spindle on said standard having a set of V shaped grooves, and a last member having a circular socket and a V shaped ridge at each side to coöperate with the V shaped grooves, whereby the last may be held in different positions with regard to said heel-part, substantially as described.



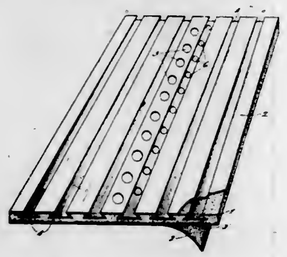
1,382,547. COMMUTATOR-CLEANER. MATTHEW W. ROBERTS, Lumberton, Miss. Filed Mar. 28, 1921. Serial No. 456,367. 1 Claim. (Cl. 171—321.)

The combination with threaded stem of an electric motor which holds the protective casing of the commutator, and the nut thereof, of a commutator cleaner comprising a wire shank disposed horizontally and longitudinally over the commutator and having on its outer end an angularly turned eye engaged on the said threaded stem, and a roll of soft material carried by the other end of the shank and bearing against the face of the commutator, the shank



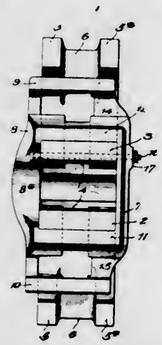
being possessed of flexibility to maintain the soft material in contact with the commutator.

1,382,548. SUCTION CLEANING APPARATUS. FRANK E. ROBERTSON, Cleveland, Ohio, assignor to The P. A. Geier Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 22, 1916. Serial No. 110,689. 11 Claims. (Cl. 15—60.)



1. The combination with an air-current cleaning nozzle, of a spring tensioned to resist the pressure normally induced by the air, a brushing member normally protruded thereby into positions of coöperation with said nozzle exteriorly of its rear edge, and exteriorly accessible means for actuating said member to hold it in inoperative position, substantially as set forth.

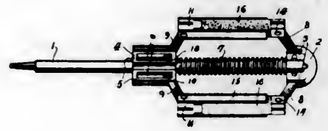
1,382,549. TYPOGRAPHICAL MACHINE. JOHN RAPHAEL ROGERS, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed July 26, 1918. Serial No. 246,805. 118 Claims. (Cl. 199—13.)



10. In an organized typographical composing and casting machine comprising matrices, the combination with means for composing the matrices in line, and means for casting a line of type therefrom, of means whereby the succeeding type lines may be cast either in the form of integral bars or slugs, or of separate and independent sections, and means for ejecting the type lines from the mold.

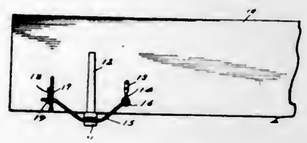
1,382,550. PLASTER-BOARD. ORVILLE L. ROUTT and GROVER C. MCCONNELL, Los Angeles, Calif., assignors to Plastoid Products, Inc., Los Angeles, Calif., a Corporation of California. Filed Nov. 19, 1917. Serial No. 203,040. 1 Claim. (Cl. 72—124.)

An article of manufacture comprising a plaster board formed of plastic material with a series of continuous channels therein, said channels having overhanging side walls forming restricted longitudinal and uninterrupted openings into said channels, and a continuous paper covering conforming to the inner surfaces of the channels, said paper covering extending over the board between the channels and into the channels and wholly covering the bottom and overhanging side walls thereof, the paper covering adhering to the board as a part thereof and serving to reinforce the same at its channel portions, said reinforced channels constituting means for holding plaster on the outer face of the board, substantially as described.



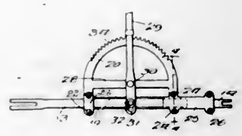
1,382,551. BRAKE. CHARLES V. ROTE, Lancaster, Pa., assignor of one-half to E. W. Brown, Lancaster, Pa. Filed Apr. 26, 1920. Serial No. 376,581. 10 Claims. (Cl. 188—245.)

1. A brake comprising a head provided with means for attachment to a beam and having on its forward face a plurality of spaced, forwardly extending projections, abutments positioned between said projections adjacent one side of the head, a shoe provided with spaced projections on its rear face adapted to enter the spaces between the projections on the face of the head and to permit the shoe to be bodily moved laterally to and from engagement with the head, such lateral engaging movement being limited by said abutments, and a removable key extending through the projections on the head and shoe and normally preventing separation thereof.



1,382,552. LAPPING-TOOL. CLARENCE SCHERER, Center, N. D. Filed June 29, 1920. Serial No. 392,630. 1 Claim. (Cl. 51—191.)

A lapping tool comprising a shank having its outer end rounded and forming a head, equidistantly spaced pairs of ears carried by the head and extending inwardly, the same being arranged in parallelism with respect to the shank, radially disposed links pivotally secured to said pairs of ears, a sleeve slidably mounted on the shank, equidistantly spaced radially disposed ears carried by the sleeve having elongated slots therethrough, a light helical

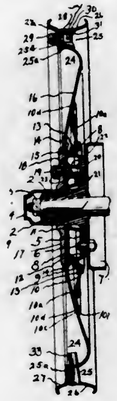


spring between the head and sleeve, radially disposed links slidably mounted in the slots of said sleeve, weighted jaw members pivotally connected to the opposed links of the sleeve and head, and an abrasive element clamped to the outer face of the jaw members, substantially as described.

1,382,553. WAGON ATTACHMENT. WALTER SCHLESENER, Hope, Kans. Filed June 15, 1920. Serial No. 389,133. 1 Claim. (Cl. 296—35.)

The combination with a wagon body and a bolster therefor, of a longitudinally curved rod having one end terminating to provide a loop whereby said rod is pivotally mounted upon the wagon body in advance of the bolster, said rod being adapted to pass over the bolster and terminating to provide a straight portion, and a hook-like element vertically disposed upon the wagon and pivoted at its upper end for swinging movement, whereby said hook can be slipped over the adjacent end of the rod when the latter is positioned for use.

1,382,554. ADJUSTABLE DRAFT CONNECTION. GERALD SCHMID, JOSEPH SCHMID, ANTON E. BRICHACEK, and HUGH TULLY, Schuyler, Nebr. Filed Mar. 8, 1919. Serial No. 281,566. 2 Claims. (Cl. 287—58.)



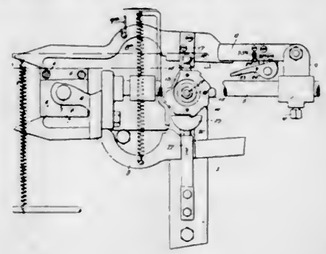
1. In combination, parallel bar sections arranged side by side, a flanged guide interposed between the bar sections and slidably receiving one section, a rack segment having offset ends embracing the other bar section, means rigidly connecting said offset ends, second mentioned bar section and guide, plates secured to the offset ends of the segment engaging the flanges of the guide and confining the first mentioned bar section therein, a brace rod carried by the segment, and a lever pivotally secured to the brace rod and engaged with one of the slidable bar sections for actuating the latter.

1,382,555. CALF-WEANER. HENRY J. SCHMOLL, Racine, Wis. Filed Dec. 28, 1920. Serial No. 433,600. 3 Claims. (Cl. 119—132.)

1. A device of the character described comprising a nose engaging member including a pair of slidably engaged separable sections formed with mating openings, and a plate carrying a hook engageable through said openings.

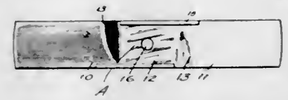
1,382,556. DISK WHEEL. FRED. C. SCHOENTHAL, Buffalo, N. Y. Filed Nov. 7, 1919. Serial No. 336,337. 8 Claims. (Cl. 301—63.)

8. A disk wheel made up of a plurality of disks comprising a main disk, an auxiliary disk bearing at its periphery against said main disk and a backing disk bearing at its periphery against said auxiliary disk.



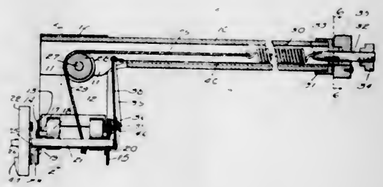
1,382,557. PORTABLE TRUCK. ARTHUR G. SCHPATZ, Milwaukee, Wis. Filed Feb. 28, 1919. Serial No. 279,686. 6 Claims. (Cl. 193—3.)

1. In a device of the class described, the combination with a supporting base member and a conveyer frame member tiltably carried thereby, of means at all times normally yieldingly urging said conveyer frame member to a substantially horizontal position.



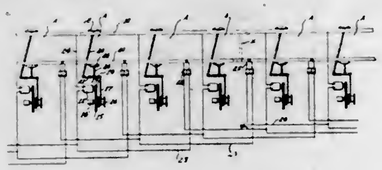
1,382,558. JACQUARD MECHANISM. ADAM F. SCHULER, Philadelphia, Pa. Filed Apr. 9, 1918. Serial No. 227,528. 4 Claims. (Cl. 139—16.)

1. In jacquard mechanism for looms, the combination of a reciprocating cylinder; a clawker; a cam for raising the clawker into an inoperative position; a ratchet for said cam mounted with the latter in position to directly



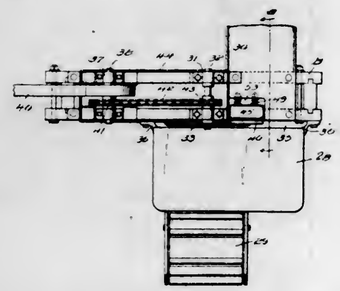
operate on the clawker; and a pawl for intermittently turning the ratchet and cam to cause the clawker to operate on the cylinder on alternate strokes only.

1,382,559. FLYING TOY. FERDINAND H. SCHULTZ, Treynor, Iowa. Filed Oct. 9, 1920. Serial No. 415,730. 4 Claims. (Cl. 244—19.)



1. A flying toy comprising a resilient strip, having a flat central portion and having blades projecting in opposite directions therefrom, said central portion having reinforcing parts at its side edges, one reinforcing portion being arranged to overlap a part of one edge of one blade, and the other reinforcing portion being arranged to overlap a part of one edge of the other blade.

1,382,560. FLYING-TOY GUN. FERDINAND H. SCHULTZ, Treynor, Iowa. Filed Oct. 9, 1920. Serial No. 415,731. 10 Claims. (Cl. 244—2.)

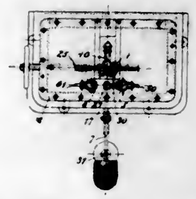


10. In a device of the class described, a tubular member, laterally extending supports thereon, a shaft rotatably and slidably mounted on said supports, roller bearing devices for said shaft, a block on said shaft, coacting engaging means on said block and said supports, means on said block and one of said supports for coacting engagement, engaging members for a flying toy on said block, a guide supported on said tubular member, a flexible device secured to said spring and extended over said guide and secured to said shaft, a cap on said tubular member, a rod mounted in said cap and secured to said spring, a movable trigger device adapted when moved to one position for normally holding the trigger device inoperative, and means for moving said trigger device to operative position, said means including a flexible member extended through said tubular member and a member slidably mounted on said rod and secured to said last flexible member.

1,382,561. TRAIN CONTROL. CHARLIE SHARP, Dizney, Ky. Filed Jan. 17, 1921. Serial No. 437,978. 2 Claims. (Cl. 246—183.)

1. In an automatic train stopping apparatus, the combination with the lines of rails of the trackway divided into blocks, and of mechanism located in each block and comprising a motor, a drum, driving connections between said motor and drum, shoes capable of vertical movement, a lever pivoted at a point between its ends, connecting rods associating the shoes with said lever, a connection between said lever and drum, and an electric circuit including said motor and a source of energy and adapted to be closed by the wheels and axles of a train in another block.

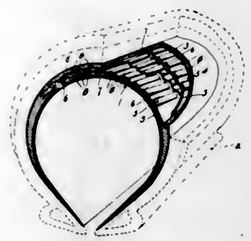
1,382,562. SHEAF-CUTTING MACHINE. HENRY SIEBERT, Ulm, Ark. Filed Mar. 2, 1920. Serial No. 362,779. 2 Claims. (Cl. 146—29.)



1. In a machine of the class described in combination with an open frame, power operating means and a rotatable shaft carried by said frame, a rotatable cutter carried by said shaft, a raised platform and an inclined discharge chute connected to said frame, said cutter operating between the platform and the inclined chute, said chute having a cut out corner portion for receiving an adjustable ledge blade, and means for adjusting said blade in a plurality of positions with respect to said cutter.

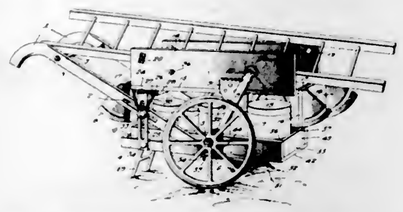
1,382,563. EXPLOSIVE. WALTER O. SNELLING, Allentown, Pa., assignor to Trojan Powder Company, New York, N. Y., a Corporation of New York. Filed Nov. 3, 1920. Serial No. 421,475. 16 Claims. (Cl. 52—4.)

8. A booster composition comprising nitrostarch desensitized by means of a hydrocarbon body, and consolidated by means of a waxy material.



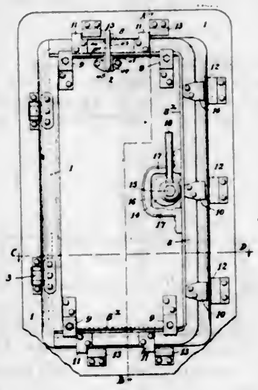
1,382,564. PULLING-OVER MACHINE FOR BOOTS AND SHOES. MARIUS METHILTUS SÖRENSEN, Valleröd, near Rungsted, Denmark. Filed July 12, 1919. Serial No. 310,444. 2 Claims. (Cl. 12—9.)

1. A pulling-over machine consisting of a support for the last, members for gripping the side parts of the upper members for gripping the toe-part of the upper, arms on the first-named gripping members having hook-shaped engaging elements, means for actuating these arms, first, closing the gripping members and then moving them in the direction of the pulling-over by actuating said engaging elements, an arm on the gripping members for said toe-part having a straight prolongation, means for actu-



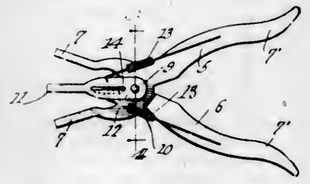
ating this arm to close the gripping members and for holding them closed by following said straight prolongation, and a common moving member for said means.

1,382,565. ARMORED LINER FOR TIRES. HANS C. STOCKEL, Chicago, Ill. Filed Sept. 17, 1920. Serial No. 410,892. 3 Claims. (Cl. 152—18.)



1. An armor for pneumatic tires comprising a plurality of elongated narrow plates of elastic metal, and narrow tongues connecting the plates in strip formation with their longitudinal sides in relatively spaced relation and adapted to hold said plates in spaced relation when the armor is curved transversely.

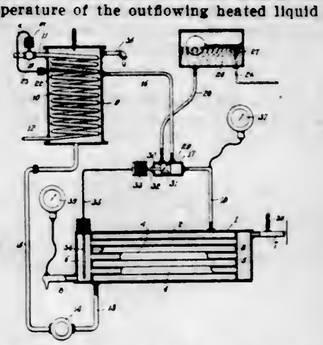
1,382,566. CONVERTIBLE WHEELED VEHICLE. DAVID STRAUCH, Crestline, Ohio. Filed Nov. 8, 1920. Serial No. 422,603. 11 Claims. (Cl. 280—30.)



11. In a convertible vehicle, the combination of a frame including straps having inwardly reaching rear arms, axles carried by the frame, ground wheels on the axle, handles connected with the frame at points adjacent to the axle, a platform detachably connected at its rear end with the inwardly reaching arms of the said straps, a body connected with the frame and equipped with means to support its forward portion from the axles, and a collapsible supplemental frame arranged on and detachably connected to the platform and having recesses in the outer sides of its side bars to receive the inner portions of the axles, whereby the collapsible frame is supported directly by the axles; the said body and the said platform each having a swinging prop at its underside, and a keeper to detachably retain said prop in idle position.

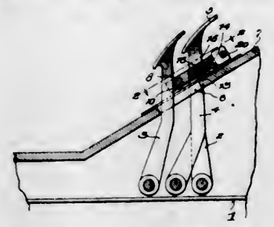
1,382,567. CLOSURE-FASTENER. ORSINI STUART, Liverpool, England. Filed Oct. 16, 1919. Serial No. 331,097. 4 Claims. (Cl. 292—150.)

1. The combination of a door frame, a door hinged thereto, a shiftable locking frame and coacting keeper, one mounted on the door frame and the other on the door; a releasable interlock device operatively related to said locking frame to retain the same in disengaged position; and means operated by the movement of the door near the limit of its closing movement serving to release said interlock and permit movement of said frame.



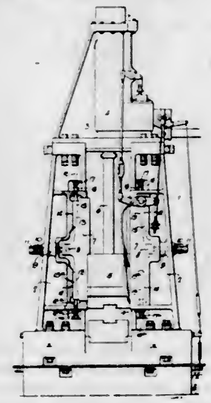
1,382,568. COMB. JUDGE SWAN, Hamilton, Ontario, Canada. Filed Apr. 24, 1920. Serial No. 376,414. 3 Claims. (Cl. 132—37.)

1. In a device of the character described, opposed sections pivotally connected together, each of said sections including a handle, and a jaw, a central jaw pivotally connected to one of the opposed sections, resilient means connecting the handles and central jaw for normally holding the jaw sections in spaced relation with each other.



1,382,569. TEMPERATURE-CONTROLLER. GODFREY M. S. TAIT, Washington, D. C., assignor to American Pasteurizer Company, Inc., Washington, D. C., a Corporation of Virginia. Substitute for application Serial No. 148,642, filed Feb. 14, 1917. This application filed Nov. 20, 1920. Serial No. 425,369. 2 Claims. (Cl. 236—12.)

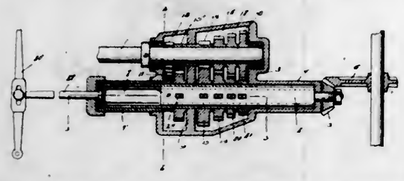
1. Apparatus such as described comprising a heat exchanger adapted to exchange heat between a heating fluid and a fluid to be heated, means for the supply of heating fluid to such exchanger comprising a primary heater, means for regulating the temperature of the outflow therefrom, a source of cold fluid, a mixing device adapted to mingle the warm fluid from the primary heater and the said cold fluid and arranged to discharge the mixed fluid into a heating space of said heat exchanger, said mixing device comprising also regulating valve means whereby the proportion of heated fluid to cold fluid may be varied, and automatic means, controlled by the temperature of the outflowing heated liquid of the



heat exchanger, for regulating the said valve means of the mixing device.

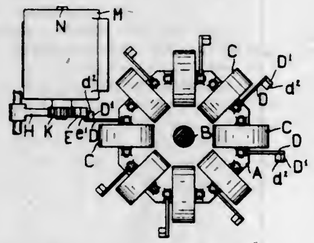
1,382,570. AUTOMOBILE-LOCK. ELMER A. TANNER, Delta, Iowa. Filed Jan. 14, 1920. Serial No. 351,443. 1 Claim. (Cl. 70—126.)

A locking device for transmission controlling levers having a body portion, the forward end of which is tapered, the apex of the body being cut away to provide a relatively large socket adapted to receive and engage one of the controlling levers, the opposite side of the body having spaced sockets therein with inclined walls, said body also having a projection extending from the central part thereof, and a yoke coöperating with said projection, and having pockets therein receiving with the inclined sockets the other controlling levers.



1,382,571. STEAM-HAMMER GUIDE. HOWARD TERHUNE, Cleveland, Ohio. Filed July 7, 1920. Serial No. 394,499. 3 Claims. (Cl. 78—37.)

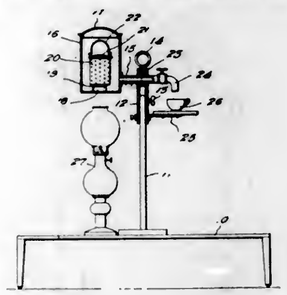
3. The combination in a steam hammer, of two standards spaced apart, each standard having a longitudinal



recess; a hammer head; pivoted guides for the head located in the recesses in the standard; a longitudinal wedge between each end of each guide; a bearing face in the recess; and means for adjusting the wedges.

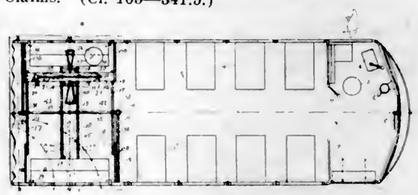
1,382,572. TRANSMISSION-GEARING. FRANK G. THOMAS, Astoria, Oreg. Filed Apr. 5, 1920. Serial No. 371,284. 1 Claim. (Cl. 74—59.)

Transmission means of the class described comprising a casing having a partition therein, a drive shaft extending into said casing, gears keyed to said part of the shaft within the casing, a sleeve mounted on said shaft and extending through the partition, a gear formed at each end of said sleeve, a stub shaft mounted in the casing, reversing gears carried thereby, one of which engages one of the gears on the sleeve, a driven shaft in the casing, extensions on the casing inclosing the ends of said driven shaft, a sleeve having sliding movement on the driven shaft and located within the casing and its extensions, said sleeve having a slot therein having beveled ends and the driven shaft having recesses therein, spring pressed keys in said recesses and adapted to project from the slot in the sleeve when said sleeve is moved to bring the slot into register with said key, gears rotatably mounted on the sleeve and meshing with the gears on the drive shaft and with one of the reversing gears and a hand lever for moving the sleeve on the driven shaft.



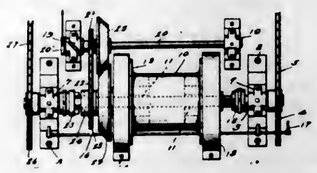
1,382,573. STAMP-DELIVERY MACHINE. HERMANN THUN, Essen-Ruhr, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Dec. 3, 1920. Serial No. 428,089. 4 Claims. (Cl. 235—91.)

3. A stamp delivery machine having a plurality of stamp rolls, in combination with a counter, said counter comprising a drum provided with figures for indicating the value of the stamps delivered, rods mounted adjacent said stamp rolls, shoulders formed on said rods, said shoulders being formed at graduated points from the ends of said rods, a pinion carried by said drum, a rack for operating said pinion, the shoulders on said rods cooperating with said rack to limit the rotation imparted to said drum, corresponding to the value of the stamp delivered.



1,382,574. COFFEE-COOKING DEVICE. ANTONNIO TORTORICE, Lutcher, La. Filed Feb. 27, 1920. Serial No. 361,761. Renewed Feb. 8, 1921. Serial No. 443,495. 1 Claim. (Cl. 53—3.)

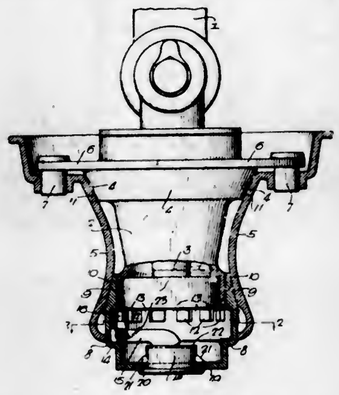
A device of the character described comprising a support, a standard rising therefrom, a vertically adjustable bracket mounted upon said support, a drip receiving tray carried by the bracket, a handle on the bracket, an arm extending from one side of the bracket and carrying a cylindrical casing, said arm being hollow and communi-



cating with the interior of the casing and with a passage extending through the bracket, a faucet carried by the bracket and communicating with said passage, a perforated container within said casing adapted to contain coffee, and means for applying heat to said casing.

1,382,575. TURNSTILE. CONRAD D. TRUBENBACH, Mount Vernon, and Diedrich Baldwin Sanneman, Brooklyn, N. Y., assignors to Perey Manufacturing Company, a Corporation of New York. Original application filed Dec. 26, 1918, Serial No. 268,275, now Patent No. 1,339,076, dated May 4, 1920. Divided and this application filed Apr. 7, 1920. Serial No. 371,813. 17 Claims. (Cl. 105—341.5.)

1. The combination with a turnstile, of a platform, a track laid upon said platform, wheels on the turnstile registering with the said track and permitting the turnstile to be moved from its normal operative position to a second operative position.

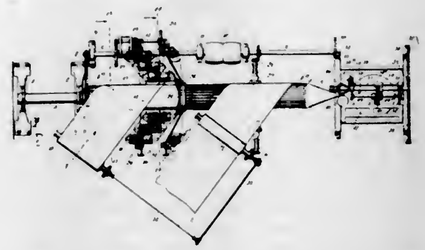


1,382,576. HOISTING-MACHINE. CLYDE UHL, Bartlesville, Okla. Filed Sept. 7, 1918. Serial No. 253,053. 1 Claim. (Cl. 254—166.)

In a hoisting apparatus, a wheeled truck having a platform and also having a driving element, a hoisting organization mounted on the said platform and including a main drive shaft, a drum loose on said shaft, a driving connection intermediate the said driving element of the truck and the shaft, a driving connection intermediate of one of the ground wheels of the truck and said shaft, a clutch to connect the drum directly to the shaft, a bevel-face friction gear fixed to the drum, a counter shaft, a bevel-face friction gear fixed on the counter shaft and

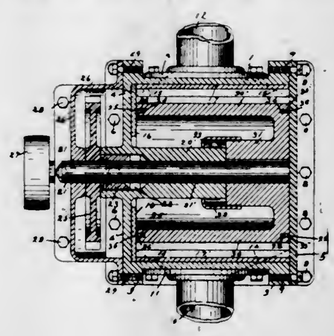
contacting with the first-named bevel-face friction gear, a clutch member loose on the first-named shaft and connected with the counter shaft, and a clutch member feathered on the first-named shaft and movable into and out of engagement with said loose clutch member.

1,382,577. FASTENER FOR WHEEL-HUB CAPS. JACQUES L. VAUCLAIN, Haverford, and ANDREW C. VAUCLAIN, Philadelphia, Pa. Filed Jan. 6, 1921. Serial No. 435,384. 6 Claims. (Cl. 301—108.)



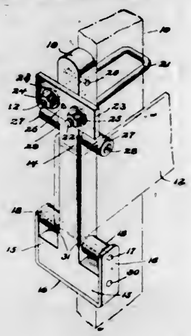
1. The combination of a hub; a wheel hub mounted thereon; a cap and means for holding the cap to the hub, said cap acting to retain the wheel hub on the hub; an internal locking device carried by the cap and arranged to engage one of the fixed parts, said cap having an opening and a lock casing arranged to project into the opening and engage the locking device; and means for securing the lock casing to the cap.

1,382,578. FRAME AND SASH CONSTRUCTION. THOMAS E. WALKER, Detroit, Mich., assignor to Crittall Casement Window Co., Detroit, Mich., a Corporation of Michigan. Filed Aug. 1, 1919. Serial No. 314,606. 9 Claims. (Cl. 189—69.)



1. In a window construction, a channel frame having inner and outer legs provided with beveled faces, outwardly opening sashes in said frame, means transversely of said frame hingedly supporting said sashes at points removed from the sides of said frame, each sash having channel rails with inner and outer legs providing beveled faces adapted to engage the beveled faces of said frame, the legs of said frame and sashes coöperating in providing spaces in said frame, and means in the spaces of said frame coöperating with the first mentioned means for supporting said sashes for adjustment relative to said frame.

1,382,579. REINFORCED TUBE AND BAG MAKING MACHINE. KURT WANDEL, New York, N. Y., assignor to Safepack Mills, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 13, 1918. Serial No. 266,545. 19 Claims. (Cl. 93—80.)

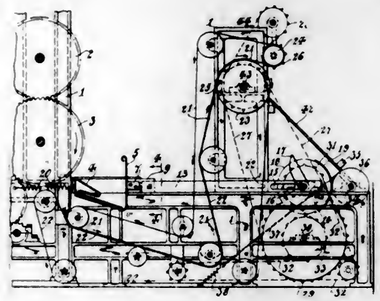


1. A machine for making non-self-sustaining tubes, comprising a mandrel mounted for rotation, and having means associated therewith for winding a web spirally thereon to form a continuous tube, means for flattening the tube and means for packing the flattened tube.

1,382,580. ROTARY PUMP. JOHN L. WEBB, Salt Lake City, Utah, assignor to Webb Pump Company, Salt Lake City, Utah, a Corporation of Utah. Filed May 26, 1919. Serial No. 299,801. 3 Claims. (Cl. 103—44.)

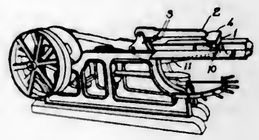
1. In a rotary pump having a casing projecting from a back wall and a hub projecting from the said wall, inwardly of the said casing, the projection of the said hub being less than the projection of the said casing, the combination of a shaft journaled in the said hub, a rotor hub rigidly mounted on the said shaft, the said rotor hub extending from the end of the said back wall hub to the end of the casing, a rotor body suitably carried by the said rotor hub, a wearing plate placed between the inner surface of the said back wall and the adjacent face of the said rotor body, bushings fitted inside the said casing and partially surrounding the said rotor body, lips projecting from the said bushings, the said lips seated in notches formed in the said casing, and a closure for said casing, the said closure at the same time serving to hold the rotor body and the bushing, in suitable operative position.

1,382,581. LUG-STRAP SUPPORT. RICHARD E. WELSH, New Bedford, Mass. Filed July 24, 1919. Serial No. 313,018. 2 Claims. (Cl. 139—48.)



2. A lug strap support comprising a T-shaped wooden member adapted to fit longitudinally against the edge of a picker stick with the end cross arms projecting laterally, a flat metal strip fitting the bottoms and ends of the arms secured thereto and its ends projecting above said arms, spindles mounted at one end in said upwardly extending ends and at the other end in said longitudinal wooden section, rollers mounted on said spindles, and additional rollers on opposite sides spaced from and parallel to said first mentioned rollers, the said longitudinal portion between said sets of rollers being adapted to receive the lug strap and being rounded in cross section at the corners.

1,382,582. GLASS-GAGE PROTECTOR. WILLIAM J. WHITESIDE, Keewatin, Minn. Filed July 12, 1919. Serial No. 310,367. 1 Claim. (Cl. 73—54.)

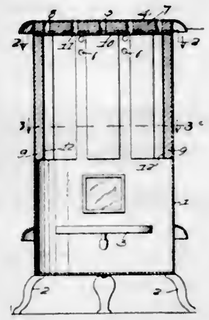


In a device of the class described, head members provided at their adjacent ends with polygonal extensions, projecting members extending between the head members and each comprising a section secured at one end to one face of the polygonal extension of one of the head members, and a section secured at one end to the corresponding polygonal face of the other head member, the sections overlapping and one of the sections being provided with marginal flanges to engage the lateral edges of the other section, one of the said sections being slotted longitudinally, a threaded stud carried by the other section and projecting through the slot, and a nut threaded upon the stud to bear against the slotted section.

1,382,583. DELIVERY MECHANISM FOR MACHINES FOR OPERATING ON PAPER. HOWARD G. WIDMER, Brooklyn, N. Y., assignor to Arkell Safety Bag Company, New York, N. Y., a Corporation of New York. Original application filed May 11, 1917, Serial No. 167,855. Divided and this application filed May 4, 1918. Serial No. 232,607. 5 Claims. (Cl. 271—63.)

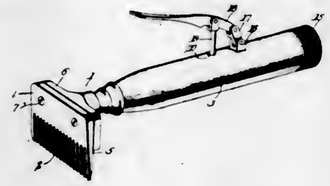
2. In paper delivery mechanism, the combination of a roll from which the paper is delivered in separate units; carrier tapes; and a reciprocating pan adapted to receive the paper units from the roll and deliver them to said tapes, said pan acting to move back from said roll after it has received the forward portion of a unit whereby the rear portion of the unit coming from said roll overhangs the front of the pan and is engaged first by said tapes.

1,382,584. LEATHER-WORKING MACHINE. CHARLES ARTHUR WILLIAMS, Torquay, England, assignor to Clark Son & Morland, Ltd., Glastonbury, England. Filed Sept. 24, 1918. Serial No. 255,493. 5 Claims. (Cl. 149—17.)



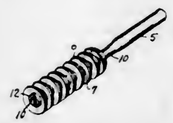
1. A staking machine of the Slocomb type comprising an upper arm, a lower arm, a table, means for reciprocating said arms over said table, a cutting tool mounted on said upper arm, a rolling out member mounted behind said tool adapted to roll out the inequalities in the skin being operated upon before the latter comes under the cutting tool, a large roll mounted on said lower arm adapted to coöperate with said rolling out member to hold the skin in an elastic grip and to co-act with said cutting tool, and secondary means on said lower arm for rolling out the skin in front of said large roll.

1,382,585. HEAT-STORING ATTACHMENT FOR STOVES. JOHN H. WILSON, Baltimore, Md. Filed Aug. 8, 1918. Serial No. 248,941. 1 Claim. (Cl. 126—85.)



The combination with a stove having a hollow body, of a burner disposed within the stove near the bottom thereof, a perforated top closing the body at the upper end, a soapstone disk provided with perforations alining with the perforations in the top, the said disk lying against the latter and being disposed therebeneath, a copper disk lying against the soapstone disk and formed with perforations registering with the perforations in the soapstone disk, and a plurality of soapstone bars vertically positioned and

disposed around the interior surface of the body adjacent to the top and covered with copper, whereby the heat

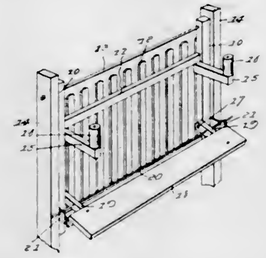


from the burner is communicated to the soapstone disk and bars to be gradually dispensed by the latter, as herein shown and specified.

1,382,586. COMB. JOHN WALTER WILSON, Indianapolis, Ind. Filed Jan. 18, 1921. Serial No. 438,213. 4 Claims. (Cl. 132—13.)

2. In a hair dying comb, a comb proper having a fabric sheet on the body portion thereof, the end of which being arranged over the teeth, a plate secured to the comb and compressing the edges and ends of the fabric against the body of said comb, a handle removably secured to the plate, a dye containing sack in the hollow handle having a reduced neck portion passing therethrough and disposed in contacting engagement with the fabric sheet, and means on the handle for compressing the sack to eject fluid therefrom onto the fabric.

1,382,587. TOOTHBRUSH. ROBERT MORSE WITHYCOMBE, Penshurst, near Sydney, New South Wales, Australia. Filed Mar. 15, 1920. Serial No. 365,835. 4 Claims. (Cl. 15—39.)

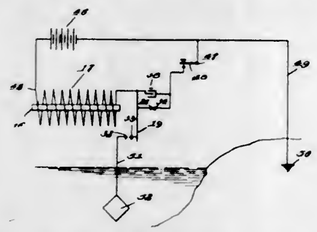


1. A device for cleaning the teeth and massaging the gums comprising a plurality of elastic disks having apertures formed therein, a shank of larger dimension than said apertures for passing through the latter whereby said disks when in assembled position are warped to a concaved formation on one side and means engaging the inner portions of said disks for preventing the longitudinal displacement thereof and permitting flexible movement of the teeth and gum engaging portions of the disks.

1,382,588. DETONATING TOY. WILLIAM P. WOERNER, Lancaster, Pa. Filed Nov. 20, 1920. Serial No. 425,440. 2 Claims. (Cl. 46—46.)

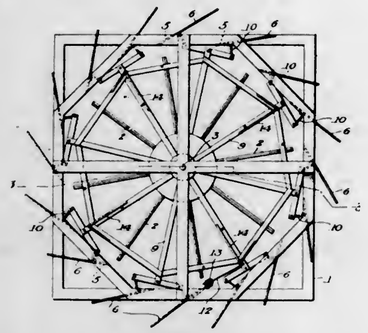
1. A detonating toy comprising a substantially cylindrical member split longitudinally to provide separate sections, said sections being hollow to provide a central bore when the sections are assembled, a firing chamber located intermediate the ends of the bore, an anvil located at one end of the firing chamber, said anvil forming a part of one section and extending into the other section and aiding to hold the sections assembled, means extending transversely through the sections for holding them together, a headed firing pin opening within the firing chamber and extending through one end of the bore and a rod secured within the opposite end of the bore.

1,382,589. FLOOD-GATE. JOHN ZIEGLER, Perryville, Mo. Filed May 13, 1920. Serial No. 381,226. 1 Claim. (Cl. 39—4.)



The combination with a pair of spaced supporting posts, of a flood gate embodying side bars, a transverse bar spanning the posts adjacent their upper extremities and having pivotal connection with the side bars of the gate, counterbalancing arms disposed on the down stream side of the gate, notched catches disposed on the posts, a transverse apron, arms pivotally mounted on the side bars and supporting the apron, and a latch rod extending through the arms and engageable with the notched catches in the manner and for the purpose specified.

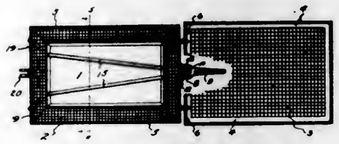
1,382,590. SUBMARINE WIRELESS SYSTEM. WILLIAM G. ZEIGLER, Chicago, Ill. Filed Jan. 3, 1920. Serial No. 349,166. 5 Claims. (Cl. 250—5.)



1. In a wireless apparatus for the transmission of messages, a source of current, an electro-magnet connected therewith and having a vibratory armature, a circuit closing device connected with said source and with said electro-magnet and further connected with the ground, a sec-

ondary vibrator association with said vibratory armature and operated thereby for making and breaking the flow of current caused by self-induction at the make and break

of the circuit through the electro-magnet, and a metallic plate connected with said secondary vibratory and submerged within a body of water.

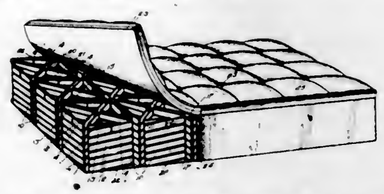


1,382,591. MOTOR. WILLIAM F. D. ACKERMANN, Kaylor, S. D. Filed Sept. 22, 1919. Serial No. 325,319. 1 Claim. (Cl. 170—17.)

A wind motor comprising a stationary supporting frame, a rotor mounted within the frame, a plurality of vertically extending stationary plates carried by the frame and constituting stationary deflectors for leading wind onto the rotor, a plurality of deflecting plates hinged upon the edges of said stationary plates and movable whereby to partially or entirely inclose the rotor, a relatively movable frame capable of having arcuate movement within the frame irrespective of the movement of the rotor, said movable frame including radial arms terminating in cross bars, links pivotally connected with the ends of each cross bar and with the adjacent hinged deflecting plate, a cable connected with one of said arms, trained over a guide and carrying a weight normally holding said movable frame in such position that the hinged plates will be in open position, and vanes mounted upon the top of said movable frame and impinged against by the wind for counterbalancing the weight and effecting movement of the movable frame to swing the hinged plates to closed position when the wind becomes excessive.

1,382,592. CORN-POPPER. GEORGE P. AMES, Derry, N. H. Filed May 8, 1920. Serial No. 379,838. 1 Claim. (Cl. 53—4.)

A corn popper comprising a reticulated body, a metallic frame for the outer edge thereof, a screw for supporting a handle, said screw being connected to one end of the frame and having its said connecting end provided with spaced arms and a lug connecting the arms, a flanged pan providing a bottom for the body, and a wire member for securing the pan to the body, said wire being centrally bent upon itself to provide contacting portions which are received between the arms and over the lug of the screw, the strands of wire from the said contacting portions being arranged against one of the ends of the body and being gradually spaced away from each other and further bent at a substantially right angle to the last mentioned portion and extended through the end of the body, the end of the pan and over the top of the pan, said last

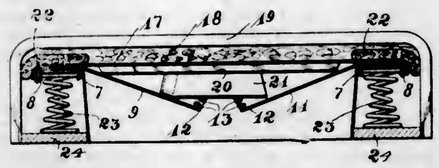


mentioned strands being also gradually spaced away from each other whereby the outer ends thereof pass through the other end of the pan adjacent to the corners thereof, the stranda being bent upwardly over the other end of the body and having their ends passed through the other end of the frame and from thence bent inwardly and downwardly against the inner face of the said end of the frame and the inner face of the other end of the body.

1,382,593. CUSHIONED BEDPAN. BERTHA A. ARATA and THEODORA L. MATTIE, Los Angeles, Calif. Filed Sept. 14, 1920. Serial No. 410,091. 1 Claim. (Cl. 4—19.)

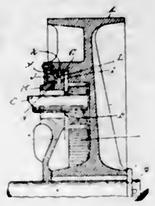
A bed pan comprising a bottom wall generally tapered toward its forward end, a U-shaped cushion superimposed upon the rear portion and side portions of the bottom wall and having its arms tapered forwardly, an arched wall interposed between the forward end portions of the cushion and joined to the bottom wall, and a front wall joined to the bottom wall and said arched wall and having a discharge aperture; the said arched wall and front wall serving in conjunction with the bottom wall to form a receptacle in communication with said aperture and the rear end of the said receptacle being entirely open to the inclosure within the cushion.

1,382,594. SPRING-CUSHION CONSTRUCTION. WALTER BABENDERERDE, Chicago, Ill., assignor, by mesne assignments, to Harmony Spring Cushion Co., a Corporation of Illinois. Filed July 29, 1918. Serial No. 247,316. 8 Claims. (Cl. 5—13.)



1. A spring unit for cushions, comprising a plurality of prism shaped helixes grouped together to form in end contour a regular polygon.

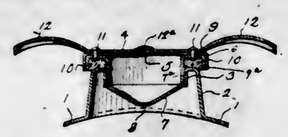
1,382,595. SHEET-FLOORING AND METHOD OF PRODUCING SAME. ALBERT C. BIERNATZKI, Aurora, Ill. Filed Jan. 17, 1920. Serial No. 352,053. 11 Claims. (Cl. 154—49.)



1. As a new article of manufacture, sheet flooring comprising a fibrous base having a wearing body or tread surface of material thickness formed of mineral mastic as described imposed upon the base.

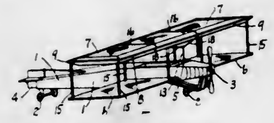
1,382,596. AUTOMOBILE-SEAT CUSHION. LOUIS DOLL, Los Angeles, Calif. Filed Jan. 24, 1921. Serial No. 439,573. 3 Claims. (Cl. 155—179.)

1. In a seat, a frame, flaps extending from the frame centrally having means along the innermost edges for interconnecting the several flaps adjustably, a cover over the top of the frame and over the flaps, and air containers between the cover and the flaps for maintaining a desired top by supporting the air containers by the flaps.



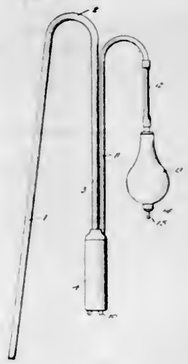
1,382,597. TRACTOR-WHEEL. ERNEST GOLDBERGER, Detroit, Mich. Filed Jan. 30, 1920. Serial No. 355,205. 3 Claims. (Cl. 286—7.)

1. The combination with housing members revoluble in relation to each other, of a packing between said members comprising a split resilient ring, and a non-metallic ring having a wedging engagement with each other, and means for maintaining said resilient ring under tension, whereby said non-metallic ring will be maintained in contact with the relatively revoluble part.



1,382,598. CAP FOR TANK FILLER-OPENINGS. OLIVER S. KELLY, New York, N. Y., assignor to The National Gauge and Equipment Company, La Crosse, Wis., a Corporation of Wisconsin. Filed Feb. 19, 1918. Serial No. 218,062. 5 Claims. (Cl. 220—39.)

1. A cap comprising a cap member having an annular right angle flange, and a baffle member having an outturned flange fitting within the flange of the cap member and secured thereto in nested relation therewith, said baffle member having a configuration to form a chamber,



and being exteriorly screwthreaded, said baffle member having a dish-like configuration below the threaded portion.

1,382,599. SAFETY ATTACHMENT FOR FLYING-MACHINES. GEORGE H. RICKE, Cincinnati, Ohio, assignor to Aaron McNeill, Norwood, Ohio. Filed Aug. 18, 1919. Serial No. 318,299. 1 Claim. (Cl. 244—21.)

An attachment for flying machines of the class described, comprising a buoyancy chamber, said buoyancy chamber rigidly attached to the flying machine and being a component part thereof, and formed of spaced walls, terminating in pointed edges and means for strengthening the same, an auxiliary gas bag on the inside of the buoyancy chamber hugging the edge thereof, and a door in said chamber, and means for opening and closing said door.

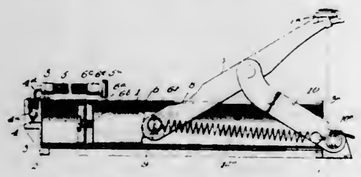
1,382,600. SIPHON. ARTHUR W. SCHREINER, Brooklyn, N. Y., assignor to Standard Scientific Company, New York, N. Y. Filed June 21, 1919. Serial No. 305,903. 2 Claims. (Cl. 137—20.)

1. In a siphoning device, a siphon tube having a flared intake end, a starting chamber, housing and adapted to be immersed with the said intake end; an inwardly projecting nozzle mounted in the said starting chamber and having its innermost end formed to coact with the flared end of the intake tube, to form an injecting port adapted to receive liquid from the said chamber, and means to force the liquid against the baffling walls of the said injecting port, substantially as described.

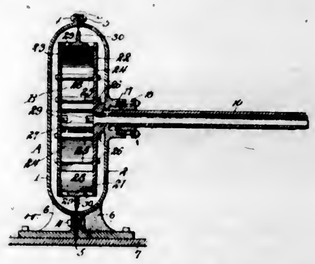
1,382,601. CONFECTION. JOHN A. CRESSEY, Dallas, Tex. Filed July 28, 1919. Serial No. 313,920. 3 Claims. (Cl. 99—16.)

1. As a new article of manufacture, an edible spherically shaped casing formed in a plurality of sections secured

together, said casing comprising baked dough, said casing having markings upon its outer surface to simulate stitching, the entire casing simulating an ordinary base-ball, and an edible filling for the casing.

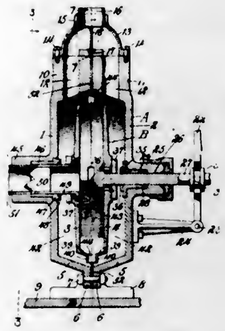


1,382,602. MULTIPLE SUCKER-ROD SOCKET. ALBERT H. NEILSON, Tulsa, Okla. Filed June 29, 1920. Serial No. 392,701. 8 Claims. (Cl. 294—102.)



1. The combination in a socket, of a barrel with a downwardly tapering bore, slips in said bore, and means loosely holding said slips together enabling a greater separation thereof at the top than elsewhere, when moved upwardly in said bore.

1,382,603. FOOT-PUMP. LEON H. WHEELER, Ellensburg, Wash.; C. E. Wheeler, administrator of said Leon H. Wheeler, deceased, assignor, by direct and mesne assignments, of one-third to Ray McCoy, New York, N. Y., and one-third to Joseph F. O'Brien, West New York, N. J. Filed July 30, 1917. Serial No. 183,414. 6 Claims. (Cl. 230—27.)

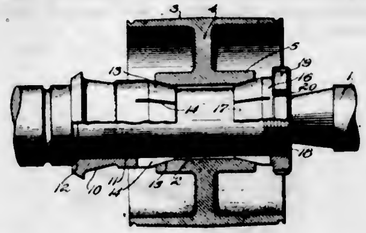


1. A foot pump embodying in combination a pump-barrel having air-egress means; means for supporting said barrel in a horizontal position; a piston reciprocable within said barrel; toggle-lever mechanism adapted to extend within the barrel for moving the piston in one direction, said pump being provided with means for permitting the said toggle joint to be moved to a position below the top of the barrel whereby additional effective movement of said levers will be provided and spring means for moving the piston in the opposite direction.

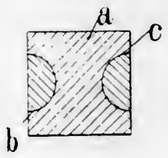
1,382,604. CENTRIFUGAL PUMP. ROBERT HUGH CARSON, Danville, Ill., assignor to Glen W. Reed, Danville, Ill. Filed Aug. 19, 1919. Serial No. 318,502. 6 Claims. (Cl. 253—200.)

1. A centrifugal pump comprising a stator and a rotor within the latter, the rotor being of substantially cylindrical form and inclosed in the stator and providing a cylindrical annular water course between them, the rotor having an exterior smooth peripheral radial rib intermediate of its width and traveling in the annular water course to serve as a guide or rudder, and said rotor having an axial inlet port and constricted outlet ports through the rotor periphery on opposite sides of the rib, and also having its interior segmentally divided between the inlet and outlet ports.

1,382,605. CENTRIFUGAL PUMP. ROBERT HUGH CARSON, Danville, Ill., assignor, by direct and mesne assignments, of one-sixth to Glen W. Reed, one-sixth to Melvin L. Coutant, one-sixth to Thomas J. Hawkins, one-sixth to Harvey C. Adams, and one-sixth to George G. Carsol, Danville, Ill. Filed June 30, 1920. Serial No. 393,089. 11 Claims. (Cl. 253—200.)



1. A centrifugal pump comprising a stator and a rotor inclosed thereby, the pump having an annular fluid course between the stator and rotor and the rotor being provided with an axial inlet, a peripheral series of outlet ports and a single interior abutment vane or blade reaching from the axis of the rotor to the periphery thereof.

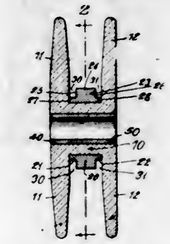


1,382,606. MOUNTING FOR GRINDING-MACHINE SPINDLES. CHARLES H. NORTON, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed June 3, 1919. Serial No. 301,548. 3 Claims. (Cl. 287—52.)

1. In combination, a grinding machine spindle, a pulley having a hole mounted on and spaced from the spindle, a wedge shaped part projecting between one end of the hole and the spindle, a collar adjustably mounted on the spindle and provided with inwardly projecting, separated, wedge

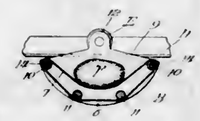
shaped fingers adapted to extend between the spindle and the opposite end of the hole and means for moving the adjustable collar to force said fingers between the pulley and the spindle whereby the pulley may be fixedly mounted and centered on the spindle for a driving connection.

1,382,607. MANUFACTURE OF MODELS. RICHARD LLEWELYN BENSON RATHBONE, London, and CAVENDISH MORTON, Thornton Heath, England. Filed Oct. 8, 1920. Serial No. 415,565. 4 Claims. (Cl. 113—110.)



1. An article of manufacture comprising a flexible rod having at least one recess containing solder integral with the rod.

1,382,608. MACHINERY FOR ROLLING GLASS. ARNO SHUMAN, Philadelphia, Pa., assignor to Pennsylvania Wire Glass Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Feb. 18, 1920. Serial No. 359,721. 2 Claims. (Cl. 49—34.)

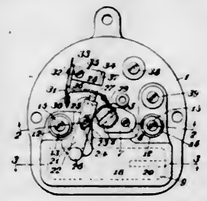


1. A table for rolling glass provided through its body with water channels circular in cross-section and having inlet and outlet water connections, and rods of less circular cross-section than the channels arranged for rolling therein, to provide crescent shaped water spaces near the top surface of the table whichever of its working surfaces is uppermost.

1,382,609. INSULATING COLLECTOR-SPOOL. LOUIS STEINBERGER, Brooklyn, N. Y. Filed Mar. 6, 1920. Serial No. 363,692. 4 Claims. (Cl. 171—322.)

1. A spool insulator provided with circumferential radially extending insulating flanges, and a metal ring secured to the central portion of the spool and extending along thereof between the flanges, said ring provided with a centrally arranged raised portion forming grooves with metallic bottom surfaces between the central metallic raised portion and insulating flanges.

1,382,610. BUCKET FOR PROOFING APPARATUS. FRANK STREICH, Joliet, Ill., assignor to Union Machinery Company, Joliet, Ill., a Corporation of Illinois. Filed Dec. 13, 1919. Serial No. 344,594. 10 Claims. (Cl. 193—28.)



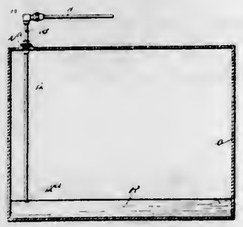
2. A dough carrying bucket for proofing apparatus, comprising sides, transversely extending connecting members therebetween and a flexible bottom extending over said transverse members and loosely supported thereby.

REISSUES.

15,127. COMPOUNDS OF CINCHONA ALKALOIDS AND 2-PHENYL-QUINOLIN-4-CARBOXYLIC ACID. ALEX B. DAVIS, Cincinnati, Ohio, assignor to The Eli Lilly and Company, Indianapolis, Ind., a Corporation of Indiana. Filed May 5, 1921. Serial No. 468,142. Original No. 1,213,464, dated Jan. 23, 1917, Serial No. 102,310, filed June 7, 1916. 2 Claims. (Cl. 23—24.)

1. A compound of a cinchona alkaloid and 2-phenyl-quinolin-4-carboxylic acid.

15,128. CONTACT DEVICE. ARTHUR ATWATER KENT, Ardmore, Pa. Filed Mar. 30, 1920. Serial No. 370,017. Original No. 1,289,036, dated Dec. 24, 1918, Serial No. 121,807, filed Sept. 23, 1916. 33 Claims. (Cl. 200—30.)



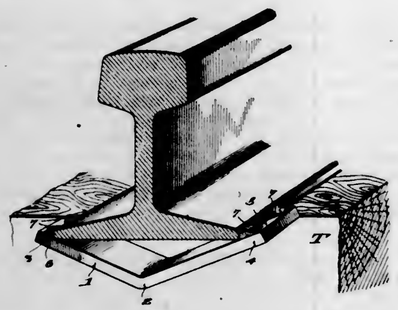
1. In a closed circuit contact device the combination of a movable contact point, a relatively stationary contact point, means to yieldingly hold said contact points normally in engagement with each other to close a circuit, and means to slightly transversely slide said movable contact point on said stationary contact point and to then separate said movable contact point from said stationary contact point, said yielding means being operative to move said movable contact point into engagement with said stationary contact point the instant they are separated.

15,129. RESERVE-PROVIDER FOR FUEL-TANKS. JOHN J. RICHARDS, Brookline, Mass. Filed Feb. 12, 1921. Serial No. 444,569. Original No. 1,323,649, dated Dec. 2, 1919, Serial No. 303,361, filed June 11, 1919. 6 Claims. (Cl. 158—46.5.)

6. The combination with a vertical tank of a delivery conduit leading therefrom comprising a pipe extending

from the top of the tank downward with an inlet end near the bottom thereof, the top portion of said pipe having a slidable fitting in the tank top and equipped with spaced apart grooves, said tank top having means

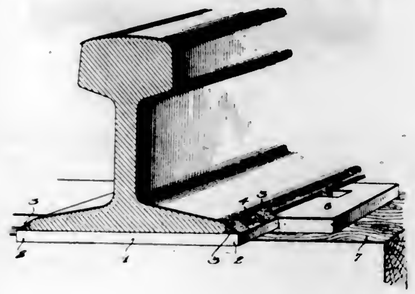
for yieldably engaging said grooves to hold the pipe with its lower end a predetermined distance above the bottom of the tank permitting manual sliding adjustment of said pipe so that said inlet will be located approximately at the bottom of the tank at will.



15,130. POISONOUS COMPOUND FOR RATS, &c. HERMAN SCHROEDER, Quincy, Ill. Filed Apr. 30, 1921. Serial No. 465,828. Original No. 1,372,092, dated Mar. 22, 1921, Serial No. 342,980, filed Dec. 6, 1919. 3 Claims. (Cl. 167—6.)

1. A poisonous food for vermin consisting of grain soaked in a solution formed by combining arsenic trioxid, strychnin alkaloid, glacial acetic acid, fluid extract gelsemium, and fluid extract digitalis.

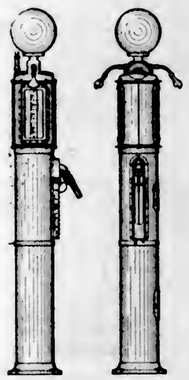
2. An animal poison, consisting of grain soaked in a solution formed by first dissolving strychnin alkaloid in a requisite amount of hot water together with acetic acid and fluid extract gelsemium including hot water and a solution formed by combining arsenic trioxid, fluid extract digitalis in hot water, in the proportions as specified.



3. An animal poison, consisting of a solution of strychnin alkaloid, a requisite amount of hot water together with acetic acid, a fluid extract of gelsemium including hot water, a solution comprising arsenic trioxid, fluid extract digitalis and hot water, and grain soaked in the combined solutions.

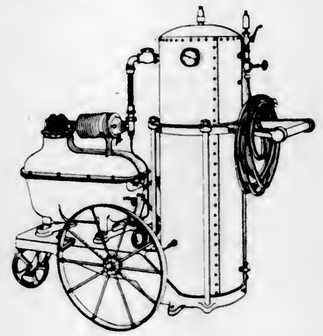
15,131. WELDED RAIL-ANCHOR. BENJAMIN WOLHAUPTER, New Rochelle, N. Y. Filed May 3, 1921. Serial No. 466,595. Original No. 1,359,854, dated Nov. 23, 1920, Serial No. 404,427, filed Aug. 18, 1920. 13 Claims. (Cl. 238—321.)

10. A rail anchor consisting of a body part extending across the rail base and welded to both flanges.



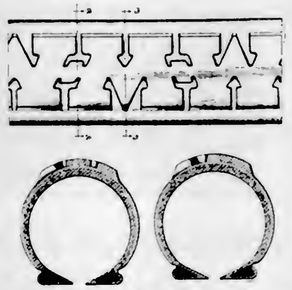
15,132. WELDED RAIL-ANCHOR. BENJAMIN WOLHAUPTER, New Rochelle, N. Y. Filed May 3, 1921. Serial No. 466,596. Original No. 1,369,208, dated Feb. 22, 1921, Serial No. 430,821, filed Dec. 15, 1920. 14 Claims. (Cl. 238—321.)

1. A rail anchor consisting of a bent bar extending across the rail base and welded to the edges of the rail flanges.



DESIGNS.

58,176. LIQUID-DISPENSING APPARATUS. LINNAEUS E. BAKER, Fort Wayne, Ind., assignor to Wayne Oil Tank and Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Oct. 27, 1919. Serial No. 333,851. Term of patent 14 years.



The ornamental design for a liquid dispensing apparatus as shown.

58,177. COMBINATION MOTOR AND AIR-PUMP CASING. SAMUEL DUNCAN BLACK and ALONZO G. DECKER, Towson, Md., assignors, by mesne assignments, to Second National Bank of Baltimore, trustee, Baltimore, Md. Filed June 14, 1920. Serial No. 389,028. Term of patent 14 years.

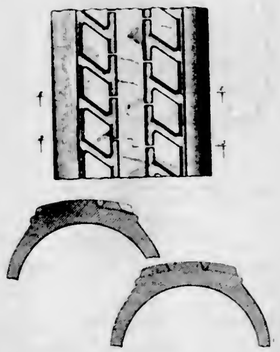
The ornamental design for a combination motor and air pump casing, substantially as shown and described.

58,178. VEHICLE TIRE OR CASING. EDWARD L. CAMPBELL, Winona, Minn., assignor to The J. R. Watkins Company, Winona, Minn., a Corporation of Minnesota. Filed Nov. 9, 1920. Serial No. 422,964. Term of patent 14 years.

The ornamental design for a vehicle tire or casing, substantially as shown.

58,179. [WITHDRAWN.]

58,180. PNEUMATIC TIRE. WILLIAM FRANKLIN COLLINS, Centerville, Iowa, assignor of one-half to John J. Schweinefuss, Centerville, Iowa. Filed May 14, 1920. Serial No. 381,476. Term of patent 14 years.



The ornamental design for a pneumatic tire, as shown.

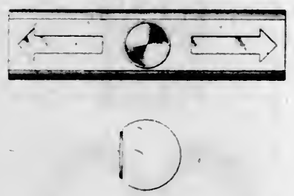
58,181. TIRE-CASING. FREDRICK S. DICKINSON, New York, N. Y., assignor to Perfection Tire & Rubber Company, a Corporation of Delaware. Filed Dec. 30, 1919. Serial No. 348,482. Term of patent 14 years.

The ornamental design for a tire casing, substantially as shown and described.

58,182. TIRE-CASING. FREDRICK S. DICKINSON, New York, N. Y. Filed Jan. 23, 1920. Serial No. 353,578. Term of patent 14 years.

The ornamental design for a tire casing, substantially as shown.

58,183. FISH-BAIT. HENRY S. DILLS, Garrett, Ind. Filed Apr. 14, 1920. Serial No. 373,975. Term of patent 14 years.



The ornamental design for a fish-bait, as shown.

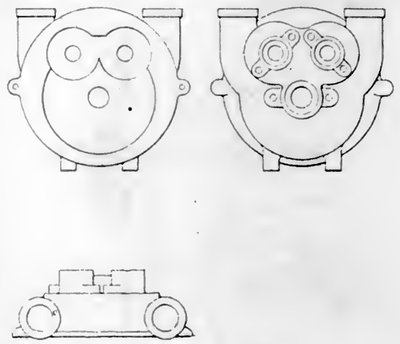
58,184. FISH-BAIT. HENRY S. DILLS, Garrett, Ind. Filed Dec. 11, 1920. Serial No. 430,064. Term of patent 14 years.

The ornamental design for a fish-bait as shown.

58,185. AUTOMOBILE SIGNAL-LAMP. EUGENE M. DOWNEY and CHARLES P. HEPP, Waukesha, Wis., assignors of one-third to Leslie F. Cole, Waukesha, Wis. Filed Dec. 21, 1920. Serial No. 432,366. Term of patent 14 years.

The ornamental design for an automobile signal lamp, as shown.

58,186. TRAY OR SIMILAR ARTICLE. HUGO A. HEIZMANN, Boston, Mass. Filed Nov. 22, 1920. Serial No. 425,924. Term of patent 3½ years.

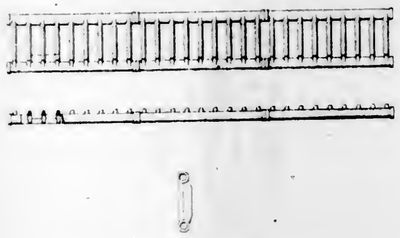


The ornamental design for a tray or similar article, substantially as shown.

58,187. TIRE. IRA V. HUMPHREY, Highland Park, Pa. Filed May 31, 1919. Serial No. 301,088. Term of patent 14 years.

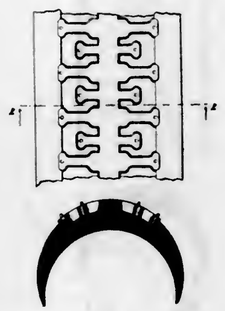
The ornamental design for a tire, substantially as shown.

58,188. ROTARY-PUMP CASING. JULIAN B. JENSEN, Alameda, Calif. Filed Feb. 24, 1920. Serial No. 361,000. Term of patent 7 years.



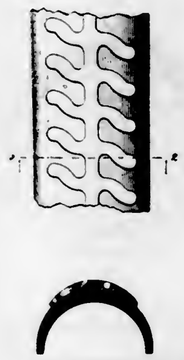
The ornamental design for a rotary pump casing, substantially as shown.

58,189. RADIATOR. AUGUST KEHM, Chicago, Ill. Filed Mar. 12, 1917. Serial No. 154,413. Term of patent 3½ years.



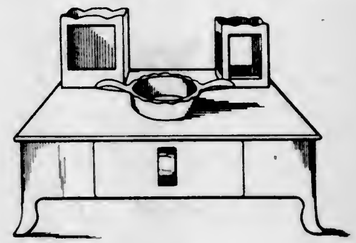
The ornamental design for a radiator as shown.

58,190. REFRIGERATING-RADIATOR. AUGUST KEHM, Chicago, Ill. Filed Jan. 25, 1919. Serial No. 273,161. Term of Patent 3½ years.



The ornamental design for a refrigerating radiator, as shown.

58,191. NON-SKID TREAD FOR TIRES. CLARENCE B. KLOPFENSTINE, Des Moines, Iowa, assignor to Iowa Cord Tire Company, Des Moines, Iowa, a Corporation of Iowa. Filed Oct. 30, 1920. Serial No. 420,824. Term of patent 14 years.

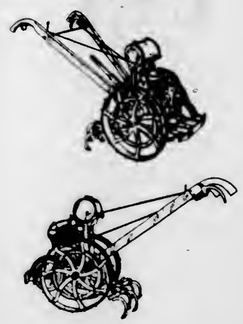


The ornamental design for a non-skid tread for tires, as shown.

58,192. NON-SKID TREAD FOR TIRES. CLARENCE B. KLOPFENSTINE, Des Moines, Iowa, assignor to Iowa Cord Tire Company, Des Moines, Iowa, a Corporation of Iowa. Filed Oct. 30, 1920. Serial No. 420,825. Term of patent 14 years.

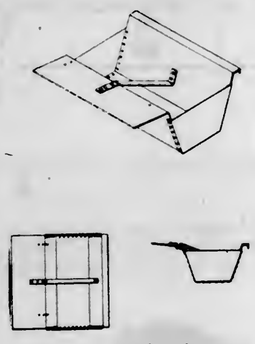
The ornamental design for a non-skid tread for tires, as shown.

58,193. SMOKING SET. STANISLAUS LESMIESKI, Rochester, N. Y. Filed Sept. 11, 1920. Serial No. 409,709. Term of patent 3½ years.



The ornamental design for a smoking set as shown.

58,194. SOLE-TRIMMING MACHINE. PAUL LEVASSEUR and ALFRED P. DUMAS, Fall River, Mass. Filed Nov. 15, 1919. Serial No. 338,382. Term of patent 7 years.

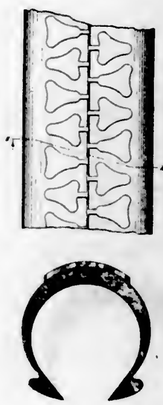


The ornamental design for a sole trimming machine, as shown.

58,195. CULTIVATOR. CHARLES S. MCCARTHY, Jr., Sandusky, Ohio. Filed Jan. 28, 1920. Serial No. 354,740. Term of patent 14 years.

The ornamental design for a cultivator as shown.

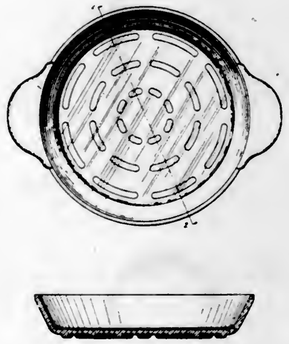
58,196. DRINKING-PAN FOR STOCK-FOUNTAINS. WILLIAM A. MCCOLLOUGH, Webster City, Iowa, assignor to W. A. McCollough & Sons, Inc., Webster City, Iowa, a Corporation of Iowa. Filed Sept. 23, 1920. Serial No. 412,400. Term of patent 3½ years.



The ornamental design for a drinking pan for stock fountains, as shown.

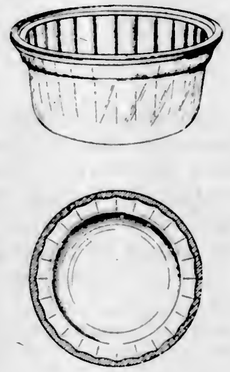
58,197. GOBLET OR SIMILAR ARTICLE. STEFAN MUNICH, Flushing, N. Y. Filed Aug. 13, 1920. Serial No. 403,405. Term of patent 3½ years.

The ornamental design for a goblet or similar article, as shown and described.



58,198. TIRE. HARRY RAFLOVICH, Buffalo, N. Y. Filed Dec. 18, 1920. Serial No. 431,779. Term of patent 7 years.

The ornamental design for a tire, as shown.



58,199. [WITHDRAWN.]

58,200. TRANSPARENT GLASS DISH. GEORGE D. SAILER, Jeannette, Pa., assignor to McKee Glass Company, Jeannette, Pa., a Corporation of Pennsylvania. Filed Nov. 8, 1920. Serial No. 422,741. Term of patent 14 years.

The ornamental design for a transparent glass-dish as shown.

58,201. TRANSPARENT GLASS DISH. GEORGE D. SAILER, Jeannette, Pa., assignor to McKee Glass Company, Jeannette, Pa., a Corporation of Pennsylvania. Filed Nov. 8, 1920. Serial No. 422,742. Term of patent 14 years.

The ornamental design for a transparent glass dish as shown.

58,202. ASH-TRAY STAND. LEO VALENZIA, Baltimore, Md., assignor to The Maryland Toy Manufacturing Company, Incorporated. Filed Oct. 13, 1920. Serial No. 416,766. Term of patent 3½ years.

The ornamental design for an ash tray stand, as shown.

TRADE-MARKS

OFFICIAL GAZETTE, JUNE 21, 1921.

[PUBLISHED JULY 1, 1921.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 108,426. (CLASS 2. RECEPTACLES.) DURO PAPER PRODUCTS CO., Chicago, Ill. Filed Jan. 12, 1918.

DURO

Particular description of goods.—Boxes and Cartons Made Wholly or in Part of Paper.
Claims use since Nov. 7, 1916.

Ser. No. 110,865. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) MARSHALL-WELLS COMPANY, Jersey City, N. J., and Duluth, Minn. Filed May 13, 1918.

BLUE STREAK

Particular description of goods.—Coasting-Sleds and Coasting-Wagons.
Claims use since on or about Mar. 1, 1918.

Ser. No. 112,502. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) NATIONAL CLOAK & SUIT CO., New York, N. Y. Filed Aug. 3, 1918. Under ten-year proviso.

National

Particular description of goods.—Plumes, Ostrich-Plumes and Willow Ostrich-Wreath for Trimming; Switches, Human Hair Made Up for Wear; Corset-Steels, Woven-Wire Boning for Corsets; Safety-Pins, Assorted Sizes; Combs other Than Precious Metal, and Pugree Ostrich-Bands for Ladies' Hat-Trimmings.
Claims use since 1888.

Ser. No. 118,308. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) THE GRATON & KNIGHT MANUFACTURING COMPANY, Worcester, Mass. Filed May 9, 1919.

ROYAL WORCESTER 1851 G&K

Particular description of goods.—Lace-Leather and Cut Laces of Leather.
Claims use since 1900.

Ser. No. 120,908. (CLASS 2. RECEPTACLES.) BARBEE WIRE & IRON WORKS, La Fayette, Ind., and Chicago, Ill. Filed July 25, 1919.

BAR BEE

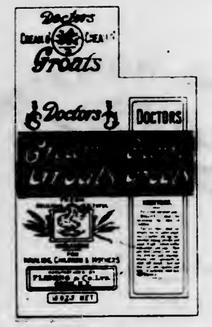
Particular description of goods.—Wire Baskets.
Claims use since Jan. 2, 1918.

Ser. No. 122,080½. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BOLLING LYNN ROBERTSON, Manassas, Va. Filed Aug. 28, 1919.

C. O. B.

Particular description of goods.—Stock Feeds.
Claims use since Jan. 1, 1917.

Ser. No. 122,602. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) JACK MAGENHEIM, Binghamton, N. Y. Filed Sept. 12, 1919.



No claim is made to the word "Evershine" apart from the other features of the mark as shown on the drawing.

Particular description of goods.—Polishes and Dressings for Leather Boots and Shoes.

Claims use since May 1, 1919.

Ser. No. 124,262. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) FLEMING & COMPANY LTD., Gore, Southland, New Zealand. Filed Oct. 28, 1919.

No claim is made to the following words, which appear upon the drawing, apart from the mark shown in the drawing: "Doctors," "Cream o'," "Registered Trade-Mark," "Cream o'," "Groats." "Fresh, Delicious, Healthful, Wholesome, for Invalids, Children & Mothers," "Manufactured by Fleming & Co. Ltd., Gore, N. Z.," "15 ozs. net," "Directions," "For gruel see other side," "Biscuits, Ideal for developing the teeth of children," "Two oz. flour, three oz. groats, two oz. castor sugar, two oz. butter, one egg, teaspoonful baking powder and pinch of salt. Cream butter and sugar, add egg. Then mix flour, groats, salt, baking powder well together, adding other ingredients to make soft dough. Roll out thin, cut into squares, and bake in moderate oven to a light brown."

Particular description of goods.—Prepared Oat-Flour or Prepared Oatmeal with and without the Addition of other Food Substances, Such as Sugar of Milk or Dried Milk.

Claims use since Nov. 1, 1917.

Ser. No. 125,308. (CLASS 2. RECEPTACLES.) NATHAN SCHOENFELD, New York, N. Y. Filed Nov. 25, 1919.

ESTRELLA

Consists of the word "Estrella."

Particular description of goods.—Combined Packing and Display Receptacles for Neckties.

Claims use since Aug. 1, 1898.

Ser. No. 125,600. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CURTISS CANDY CO., Chicago, Ill. Filed Dec. 5, 1919.

Curtiss

Particular description of goods.—Candy.

Claims use since Oct. 26, 1919.

Ser. No. 125,759. (CLASS 3. BAGGAGE, HORSE EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) THE PICHEL COMPANY, New York, N. Y. Filed Dec. 9, 1919.

TRINITY

Particular description of goods.—Frames for Ladies' Handbags.

Claims use since Oct. 1, 1919.

Ser. No. 126,359. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HOMER W. FAULKNER, Mount Vernon, Ill. Filed Dec. 23, 1919.

The picture being fanciful and no claim being made to the exclusive use of the words "Suckers, Assorted Flavors" apart from the mark as shown.

Particular description of goods. — Candy — Namely, Candy Suckers.

Claims use since Nov. 1, 1918.

Ser. No. 127,078. (CLASS 39. CLOTHING.) BRUMMEL & MENDELSOHN, New York, N. Y. Filed Jan. 13, 1920.

In the drawing the elliptical border and the circular border merging therewith, the disclosed rear surface of the scroll below the circular border, and the four substantially triangular areas within the circular border are lined for gold, indicating a gold coloration, while the background within the circular border is lined for red, indicating a red coloration. No claim is made to the word "Hose" aside from the mark as shown by the drawing.

Particular description of goods.—Ladies', Men's, and Children's Hose; Ladies' and Children's Vests; Ladies' Pants; Ladies', Men's, and Boys' Knitted Union-Suits; Men's and Boys' Knitted Shirts, Men's and Boys' Knitted Drawers, and Bathing-Suits.

Claims use since January, 1895.

Ser. No. 127,079. (CLASS 39. CLOTHING.) BRUMMEL & MENDELSOHN, New York, N. Y. Filed Jan. 13, 1920.

In the drawing the square border, the circular border therein, the four substantially triangular areas within the circular border, and the letters of the word "Hose" are lined for gold, indicating a gold coloration, while the background within the circular border is lined for red, indicating a red coloration. No claim is made to the word "Hose" apart from the mark as shown by the drawing.

Particular description of goods.—Ladies', Men's, and Children's Hose; Ladies' and Children's Vests; Ladies,' Men's, and Boys' Knitted Union-Suits; Men's and Boys' Knitted Shirts, Men's and Boys' Knitted Drawers, and Bathing-Suits.

Claims use since January, 1895.

Ser. No. 127,109. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DAVID BERG & Co., Chicago, Ill. Filed Jan. 14, 1920.

Lakeside

Particular description of goods.—Sausages and other Meat Products, Which are Meat-Loaf, Veal-Loaf, Peppered Beef, Pickled Beef-Briskets, Cooked Corned Beef, Pickled Tongues, Smoked Tongues, Cooked Pickled Tongues, and Cooked Smoked Tongues.

Claims use since Mar. 15, 1919.

Ser. No. 128,500. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) THE B. F. GOODRICH COMPANY, New York, N. Y. Filed Feb. 17, 1920.

WHITE KING -

Particular description of goods.—Hose Made of Rubber Reinforced with Fabric.

Claims use since about Feb. 1, 1913.

Ser. No. 128,933. (CLASS 8. SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.) CHARLES EMILE PFEIFFER, Paris, France. Filed Feb. 26, 1920.

XL

Particular description of goods.—Cigarette-Papers and Tubes for Cigarettes.

Claims use since Oct. 31, 1919.

Ser. No. 128,934. (CLASS 8. SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.) CHARLES E. PFEIFFER, Paris, France. Filed Feb. 26, 1920.

PEP PAPER

No claim is made to the word "Paper" apart from the mark as shown in the drawing.

Particular description of goods.—Ready-Cut Cigarette-Papers and Tubes for Cigarettes.

Claims use since Dec. 16, 1919.

Ser. No. 128,935. (CLASS 8. SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.) CHARLES E. PFEIFFER, Paris, France. Filed Feb. 26, 1920.

MARN PAPER

No claim is made to the word "Paper" apart from the mark as shown in the drawing.

Particular description of goods.—Cigarette-Papers and Tubes for Cigarettes.

Claims use since Dec. 16, 1919.

Ser. No. 128,936. (CLASS 8. SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.) CHARLES E. PFEIFFER, Paris, France. Filed Feb. 26, 1920.

LE 75

Particular description of goods.—Cigarette-Papers and Tubes for Cigarettes.

Claims use since Dec. 16, 1919.

Ser. No. 129,875. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) CRESCENT BOTTLING CO., INC., Newark, N. J. Filed Mar. 18, 1920.

Particular description of goods.—Soft Drinks Drawn from the Fountain or Sealed in Bottles.

Claims use since Mar. 8, 1920.

Ser. No. 129,947. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL DRUG STORES CORPORATION, New York, N. Y. Filed Mar. 19, 1920.

NATIONAL

Particular description of goods.—Aromatic Castor-Oil; Laxative Tablets, (Little Liver-Tablets;) Nux and Iron Peptone Tablets, Cascara Sagrada Tablets, Aspirin Tablets, Seller's Tablets, Rhubarb and Soda Compound, Cough Mixture, Blaud's Tablets; Liniments for the Relief of Sprains, Bruises, Scalds, and Inflammation; Quinin Tablets, Carbolated Witch-Hazel and Arnica Ointment, Children's Cough-Syrup; Compound Syrup Hypophos, Cloudy; Brown-Mixture Tablets, White-Pine Compound Syrup, Catarrh-Jelly Tubes, Dr. Henkle Tablets, Lady Webster Dinner-Tablets, Rhubarb Compound Tablets, Compound Cathartic Tablets, Peptonized Iron and Manganese, Antiseptone, Bronchial Lozenges, Syrup of Fig and Senna, Rhinitis Tablets, Digestive Tablets, Gargle for Use as a Remedy for Tonsillitis and Inflammatory Conditions, Milk of Magnesia; Elixir Iron, Quinin, and Strychnin; Emulsion Cod-Liver Oil, Eye-Wash, Larkspur Lotion, Headache-Powder, Toothache Remedy; Salts, Effervescent Soda Phosphate; Salts, Magnesium Citrate; Salts, Kissingen; Salts, Vichy; Soda-Mint Tablets, Chlorid-of-Potash Tablets, Boric-Acid Powder, Drop-Chalk, Precipitated Chalk, Chalk and Orris, Cream of Tartar, Flaxseed, Senna-Leaves, Orris-Root Powder, Essence of Peppermint; Fluid Cascara, Aromatic; Fluid Extract Cascara, Formaldehyde, Glycerin, Glycerin and Rose-Water, Chloroform Liniment, Tincture Benzoin Compound, Tincture Green Soap, Tincture of Iodin, Tincture of Myrrh, Witch-Hazel, Preparation for the Extermination of Insects, Castor-Oil; Castor-Oil, Aromatic, Colored; Stearate of Sprinkler; Powder, Insect; Mustard; Naphthalene Balls, Moth; Naphthalene Flakes, Moth; Camomile-Flowers, Compound Larkspur Lotion; Oil of Almond, Sweet; Spirits Camphor, Spirits Niter, Stokes's Expectorant, Tincture Arnica, Tincture Benzoin, Blue-Ointment, Boric-Acid Ointment, Carbolic Salve, Sulphur Salve, Zinc Ointment, Paregoric, Sodium Silicate, Dobell's Solution; Salts, Rochelle; Sunflower-Seed, Plaster Mother; Licorice Powder, Compound; Talcum Powder, Epsom Salts, Seditz-Powder, Oxalic Acid, Camphorated Chalk, Antiseptic Powder; Powder, Chalk and Wintergreen; Powder, Rhubarb Compound; Carlsbad Artificial Salts, Alum Powder.

Claims use since Nov. 22, 1919.

Ser. No. 130,438. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SAMOSET CHOCOLATES COMPANY, Boston, Mass. Filed Mar. 31, 1920.

UNIVERSAL

Particular description of goods.—Candy.

Claims use since October, 1911.

Ser. No. 130,471. (CLASS 7. CORDAGE.) GRAIN GROWERS GRAIN COMPANY, Minneapolis, Minn. Filed Apr. 1, 1920.

BUG PROOFED BUG

No claim being made to the words "Bug Proofed" except in the distinctive form shown as associated with the other features of the mark.

Particular description of goods.—Binder-Twine.

Claims use since about Mar. 23, 1921.

Ser. No. 130,769. (CLASS 12. CONSTRUCTION MATERIALS.) THE NATIONAL PRESSED STEEL COMPANY, Massillon, Ohio. Filed Apr. 7, 1920.

NATIONAL STEEL LUMBER

No claim being made to the words "Steel Lumber" or the representation of the goods apart from the mark shown.

Particular description of goods.—Steel Lumber—viz., Rolled-Steel I-Joists, and Rolled-Steel Studs.

Claims use since about July 30, 1919.

Ser. No. 130,964. (CLASS 39. CLOTHING.) THE KROHN-FECHHEIMER CO., Cincinnati, Ohio. Filed Apr. 10, 1920.

TWINFIT

Particular description of goods.—Ladies' and Misses' Leather Shoes.

Claims use since Apr. 4, 1902.

Ser. No. 131,200. (CLASS 39. CLOTHING.) ARTCRAFT CLOTHES INC., Baltimore, Md. Filed Apr. 16, 1920.

Artcraft

Particular description of goods.—Coats, Pants, Vests, and Overcoats.

Claims use since Mar. 12, 1920.

Ser. No. 131,556. (CLASS 39. CLOTHING.) BOBE, INC., New York, N. Y. Filed Apr. 24, 1920.

Bobé

ENCHASED JOINT

Particular description of goods.—Pliers.
Claims use since April, 1915.

144,147. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) STANDARD SHORTWRITER SALES COMPANY, Chicago, Ill. Filed Mar. 22, 1920. Serial No. 130,072.

Shortwriter

Particular description of goods.—Typewriting-Machines.
Claims use since Oct. 18, 1915.

144,148. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SWEET CANDY CO., Salt Lake City, Utah. Filed Mar. 9, 1921. Serial No. 144,545.

Brilliant Gloss

Particular description of goods.—Candy.
Claims use since Jan. 2, 1920.

144,149. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE TIMKEN ROLLER BEARING COMPANY, Canton, Ohio. Filed Dec. 27, 1920. Serial No. 141,541.

TIMKEN

Particular description of goods.—Roller-Bearings and Parts Thereof.
Claims use since 1899.

144,150. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) UNIVERSAL TIDE POWER COMPANY, Boston, Mass. Filed Feb. 5, 1921. Serial No. 143,228.

HYDRAULIC AIR MOTOR

Particular description of goods.—Motors Actuated by the Power of the Tide.
Claims use since Sept. 1, 1918.

144,151. (CLASS 37. PAPER AND STATIONERY.) FRED. WEBSTER PAPER COMPANY, Holyoke, Mass. Filed Mar. 7, 1921. Serial No. 144,441.

OUR BUSINESS

Particular description of goods.—Writing-Paper Tablets, Composition-Books, Note-Books and Memorandum-Books, Stenographers' Note-Books, Block-Pads, Typewriter-Paper, Papeteries, Writing-Paper, Mailing-Envelops, and Correspondence-Cards.
Claims use since Dec. 24, 1919.

144,152. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) WESTERN BOTTLE MANUFACTURING COMPANY, Chicago, Ill. Filed Oct. 28, 1920. Serial No. 138,935.

"Justrite"

Particular description of goods.—Combs.
Claims use since Jan. 1, 1905.

144,153. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) WESTERN VULCANIZER MANUFACTURING COMPANY, Chicago, Ill. Filed Sept. 10, 1920. Serial No. 137,058.

NEVER·STICK·

Particular description of goods.—A Preparation to Prevent Tires from Sticking to Molds When Curing, Said Preparation for Use in Retreaders, Molds, and Tube-Plates.
Claims use since Aug. 15, 1919.

144,154. (CLASS 39. CLOTHING.) THE WOLFSON COMPANY, Chicago, Ill. Filed Sept. 21, 1920. Serial No. 137,438.

PEERLESS

Particular description of goods.—Belts for Supporting Wearing-Apparel, Suspenders, and Garters.
Claims use since 1912.

144,156. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) CHARLES S. HENSHAW, Boston, Mass. Filed Oct. 6, 1919. Serial No. 123,484.

Rental Purchase Plan

Particular description of goods.—Motor-Vehicles Comprising Passenger-Automobiles—Namely, Roadsters, Touring-Cars, Limousines, Coupés, Sedans, Landaulets—and Also Motor-Trucks for the Hauling of Goods.
Claims use since about Apr. 15, 1915.

TRADE-MARK REGISTRATIONS RENEWED.

17,970. EXTRACTS OF BEEF, SPICED AND SEASONED. ARMOUR & CO., Chicago, Ill.: Armour and Company, a Corporation of Illinois, assignee.
Registered June 3, 1890. Renewed June 3, 1920.

LABELS

REGISTERED JUNE 21, 1921.

23,021.—*Title:* "ALDRICH'S A No. 1 A BACK-TO-THE-OLD-TIMES GOOD CIGAR." (For Boxes Containing Cigars.) CHASE DAVIS ALDRICH, Blandinsville, Ill. Filed May 8, 1920.

23,022.—*Title:* "ROYAL METAL POLISH." (For Cans Containing "Royal" Metal-Polish.) B. HELLER & Co., Chicago, Ill. Filed February 21, 1921.

23,023.—*Title:* "OZO TOILET CLEANER." (For Receptacles Containing "Ozo" Toilet Cleaner, a Preparation for Cleaning Closet-Bowls.) B. HELLER & Co., Chicago, Ill. Filed February 21, 1921.

23,024.—*Title:* "MRS. RANDALL'S CREAM SALAD DRESSING." (For Receptacles Containing Salad-Dressing.) Mrs. MAUDE O. RANDALL, Cottonwood, Idaho. Filed February 17, 1921.

PRINTS

REGISTERED JUNE 21, 1921.

5,651.—*Title:* "THE FINEST REPRODUCING PHONOGRAPH IN THE WORLD." (For Advertising Purposes for Phonographs.) STEGER & SONS PIANO MANUFACTURING COMPANY, Steger, Ill. Filed February 12, 1920.

5,652.—*Title:* "THE MOST VALUABLE PIANO IN THE WORLD." (For Advertising Purposes for Pianos.) STEGER & SONS PIANO MANUFACTURING COMPANY, Steger, Ill. Filed February 27, 1920.

5,653.—*Title:* "NEW MEXICO SHELLED PIÑON NUTS." (For Advertising Purposes for Piñon-Nuts.) FANNIE S. SPITZ, Albuquerque, N. Mex. Filed October 23, 1919.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

HAYES *v.* DAVISON.

Decided April 4, 1921.

PATENTS—INTERFERENCE NOT SUSPENDED TO INVESTIGATE PUBLIC USE.

The sole purpose of an interference being to determine the question of priority, it will not be suspended after testimony has been taken for the purpose of considering public use or intervening rights.

Mr. Dyer Smith for Hayes.

Mr. Frank Toohey for Davison.

SMYTH, *C. J.:*

Hayes appeals from the decision of the Acting Commissioner of Patents awarding Davison priority in an interference relating to an invention expressed in the following count:

> The combination, with the transmission and drive shafts of a motor vehicle, of mechanism adapted to lengthen the wheel base of said vehicle, comprising means to extend the rear wheels, supporting axle, and transmisssion shaft operatively connected therewith, from the motor drive shaft rearwardly, means carried by the side frames to support and maintain the transmission shaft at substantially the same angle with the rear axle, in said moved position, as in the former position, and means to connect the motor drive shaft with said transmission shaft in its new position.

Hayes filed June 28, 1915, and Davison May 4, 1916. The application of the latter was for a reissue of patent dated December 14, 1915, and issued on an application filed April 14, 1915. Davison is, therefore, the senior party by virtue of the filing date of his original application.

At first there were four parties to the interference—Howard, Beauchamin, Hayes, and Davison. Hayes moved to dissolve on the ground that neither Davison nor Howard had a right to make the claim, for reasons stated. The motion was denied by the Law Examiner.

Hayes and Davison only took testimony. The Examiner of Interferences, the Examiners-in-Chief and the Acting Commissioner united in awarding priority to Davison. Hayes says that Davison should not prevail, because of the bar of public use and of intervening rights. But it has been held many times, as shown by the opinion of the Examiners-in-Chief, that an interference, being for the sole purpose of determining priority, will not be suspended after testimony has been taken for the purpose of considering public use or intervening rights. These questions can not properly be considered in an interference. (*Burson* v. *Vogel*, C. D., 1907, 669; 131 O. G., 942; 29 App. D. C., 388; *Norling* v. *Hayes*, C. D., 1911, 347; 166 O. G., 1282; 37 App. D. C., 170.)

It is further contended that Davison has no right to make the claims because the invention is not disclosed in his application. The Acting Commissioner, approving the decision of the Law Examiner on this point, correctly held that the invention of the issue was disclosed in the application of both parties.

With respect to the argument that Davison's reissue application is not for the same invention as that disclosed in his original application, the Acting Commissioner, in line with the lower tribunals, held that it was directed to the same generic end as the narrower claims of the first application, and therefore refused to yield to the argument. No reason appears for even doubting the correctness of this conclusion. A careful consideration of the other points raised by Hayes fails to reveal any reason for disturbing the decision of the Acting Commissioner, which is in harmony with that of each of the lower tribunals upon every point considered, and therefore it is affirmed.

Affirmed.

Mr. Justice HITZ, of the Supreme Court of the District, sat in the place of Mr. Justice ROBB.

Court of Appeals of the District of Columbia.

JOHN SEXTON AND COMPANY *v.* SCHOENHOFEN COMPANY, (No. 1,390.) SAME *v.* SAME, (No. 1,391.)

Decided April 4, 1921.

1. TRADE-MARKS—DESCRIPTIVE PROPERTIES OF GOODS—GRAPE-JUICE AND BEER.

Grape-juice and beer are not goods of the same descriptive properties. (*Schoenhofen Brewing Co.* v. *John Sexton & Co.*, C. D., 1914, 152; 2000 O. G., 1117; 41 App. D. C., 510.)

2. SAME—USE OF "EDELWEISS" ON ROOT-BEER COMPOUND—RIGHT TO EXTEND TO BEVERAGE.

Use of the mark "Edelweiss" on a compound from which root-beer is made cannot be used as a basis for establishing prior use on the beverage.

3. SAME—EXTENSION OF MARK FROM ALCOHOLIC TO NON-ALCOHOLIC BEVERAGES.

The user of a trade-mark on beer should be protected in the extension of its use to other cereal beverages, particularly in view of the eighteenth amendment to the Constitution, which has compelled transition to the production of non-alcoholic beverages.

Mr. W. F. Murray for Sexton & Co.

Mr. Wm. O. Belt for Schoenhofen Co.

VAN ORSDEL, *J.*:

These are trade-mark oppositions, in which appellant Sexton and Company, in Case No. 1,390, opposes the registration of the word "Edelweiss" as a trade-mark for root-beer, and in Case No. 1,391, the registration of the same word as a trade-mark for ginger-ale.

It appears that appellant company has never used the mark on ginger-ale, and the only use has been on a compound from which root-beer is made. It has never used the mark on root-beer as a beverage. Its position, therefore, is confined to its use of the mark on grape-juice. In the case of *Schoenhofen Brewing Co. v. John Sexton & Co.* (C. D., 1914, 152; 2000 O. G., 1117; 41 App. D. C., 510) we held that grape-juice and beer were not goods of the same descriptive properties. This distinction is not alone based upon the theory that one is an alcoholic and the other a non-alcoholic beverage, but that one is a cereal and the other a fruit beverage. The same distinction applies in the present case, and is determinative of the issue before us.

The alleged trade-mark use by appellant of "Edelweiss" on a root-beer compound cannot be used as a basis for establishing prior use on the beverage. Besides, the prior use by appellee of the mark on beer would protect it in the extension of its use to other cereal beverages which would fall within the natural expansion of its business. The eighteenth amendment to the Constitution and the laws for its enforcement, relating to the subject of prohibition, have compelled transition from the production and sale of alcoholic beverages to non-alcoholic beverages, which calls for liberal protection of trade-mark rights affected by this enforced change.

The decisions are affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

ANGLADA *v.* MOYER, CARROLL, AND BRYANT, (No. 1,409.) BRYANT *v.* CARROLL, ANGLADA, AND MOYER, (No. 1,410.)

Decided May 2, 1921.

PATENTS—PRIORITY—CONCURRING DECISIONS OF PATENT OFFICE.

Decision of the Commissioner of Patents, not being clearly wrong and the case turning upon a question of fact, on which all tribunals of the Patent Office concurred, affirmed.

Mr. A. W. Nelson for Anglada.

Mr. James A. Watson and *Mr. Bert M. Kent* for Moyer *et al.*

MEMORANDUM OPINION BY CHIEF JUSTICE SMYTH.

These appeals are from a decision of the Patent Office in an interference case relating to a locking device for a demountable tire-rim for automobiles. There are four interferants. Moyer was successful before each of the three tribunals of the Office. Anglada and Bryant appeal; Anglada against Moyer, Carroll and Bryant, and Bryant against Carroll, Anglada and Moyer.

The question involved is one of fact, and a careful study of the record fails to reveal palpable error on the part of the Commissioner. Therefore, following the rule announced in *Valerius et al. v. Pfouts*, this day decided, his decision in awarding priority to Moyer is affirmed.

Affirmed.

Mr. Justice HITZ, of the Supreme Court of the District, sat in the place of Mr. Justice ROBB.

Court of Appeals of the District of Columbia.

VALERIUS AND LARSEN *v.* PFOUTS.

Decided May 2, 1921.

PATENTS—PRIORITY—CONCURRING DECISIONS OF PATENT OFFICE.

Decision of the Commissioner of Patents, not being clearly wrong and the case turning upon a question of fact, on which all tribunals of the Patent Office concurred, affirmed.

Mr. Geo. E. Tew for Valerius and Larsen.

Mr. E. R. Alexander and *Mr. Geo. B. Pitts* for Pfouts.

MEMORANDUM OPINION BY CHIEF JUSTICE SMYTH.

Valerius and Larsen appeal from a decision of the Commissioner of Patents in an interference proceeding relating to an improvement in ice-cream freezers whereby flavoring material may be admitted into the freezing-cylinder at any stage in the freezing process without interfering with the introduction of the next batch of cream mixture into the feed-tank. The case turned upon a question of fact, and the three tribunals of the Office concurred in awarding priority to Pfouts.

We cannot find that this ruling is clearly wrong, and hence, according to the well-established practice, (*Dunham v. Dyson et al.*, and cases there cited,) we affirm the decision of the Commissioner of Patents. All costs on the writ of certiorari issued at the instance of Pfouts are taxed against him.

Affirmed.

Mr. Justice HITZ, of the Supreme Court of the District, sat in the place of Mr. Justice ROBB.

Changes in Classification.

(ORDER No. 2,662.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 3, 1921.

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 16, Builders' Hardware, (Division XX,) change the title of the class to read *Class 16, Miscellaneous Hardware*, abolish the existing subclasses, and establish in lieu thereof the following subclasses and definitions:

16.—MISCELLANEOUS HARDWARE.
1. **Miscellaneous.**
2. **Bushings or lining-thimbles—**
3. Wooden receptacle.
4. **Carpet-fasteners—**
5. Combined fasteners and stretchers,
6. Hook,
7. Moldings,
8. Rug,
9. Sliding,
10. Stair—
11. Risers,
12. Rods—
13. Catches—
14. Sliding,
15. Swinging,
16. Strips,
17. Swinging.
18. **Casters—**
19. Adjustable,
20. Antifrictionally swiveled—
21. Ball,
22. Cylinder—
23. Pivoted,
24. Ball—
25. Antifrictionally mounted—
26. Ball,
27. Cylinder,
28. Pivoted,
29. Bracket-supports,
30. Detachable,
31. Frame,
32. Leg-elevators—
33. Sliding,
34. Swinging,
35. Locked,
36. Lubricators,
37. Pintles,
38. Pintle-retainers—
39. Frame,
40. Rigid wheel-supports,
41. Scrapers,
42. Sliding,
43. Sockets,
44. Spring-supported,
45. Wheels—
46. Antifrictionally mounted,
47. Multiple—
48. Antifrictionally swiveled.
49. **Checks and closers—**
50. Hinge,
51. Liquid—
52. Concentric spring-chamber—
53. Cam,
54. Hinge—
55. Pivot,
56. Multiple piston,
57. Oscillating cylinder,
58. Oscillating piston,
59. Side spring-chamber—
60. Cam,
61. Spring and flexible link,
62. Spring and gear,
63. Spring and flexible link,
64. Spring and gear,
65. Spring and lever,
66. Pneumatic—
67. Flexible link,
68. Hinge,
69. Spring and gear,
70. Spring and lever.

16.—MISCELLANEOUS HARDWARE— Continued.
71. **Closers—**
72. Spring—
73. Bow,
74. Rubber,
75. Torsional—
76. Coil,
77. Volute,
78. Spring and flexible link,
79. Spring and gear,
80. Spring and lever,
81. Weight.
82. **Closure-checks—**
83. Inertia,
84. Pneumatic,
85. Spring—
86. Rubber.
87. **Door-hangers—**
88. Ball,
89. Cylinder,
90. Guide-brackets,
91. Guide-rollers,
92. Link and lever,
93. Sliding shoe,
94. Track and bracket,
95. Track and hood,
96. Tracks,
97. Wheel-mounts—
98. Antifrictionally-mounted wheels,
99. Door-elevating,
100. Floor,
101. Reciprocating track,
102. Traveling wheel,
103. Swinging,
104. Swiveling,
105. Vertically adjustable,
106. Wheel and guide-roller,
107. Wheels.
108. **Ferrules, rings, and thimbles—**
109. Ring-ferrules.
110. **Handles—**
111. Bar—
112. Swinging,
113. Braces,
114. Detachable,
115. Extensible,
116. Insulated—
117. Hand-wheels,
118. Knob,
119. Loop,
120. Wire,
121. Knob—
122. Flexible suspending means,
123. Swinging,
124. Lifts,
125. Loop—
126. Swinging,
127. Ring.
128. **Hinges—**
129. Adjustable—
130. Longitudinal,
131. Transverse,
132. Vertical—
133. Leaf,
134. Pintle,
135. Angular leaf-arm,
136. Antifriction,
137. Attachments,
138. Brace,
139. Catches—
140. Friction—
141. Sliding,
142. Spring-arm,
143. Rigid,
144. Sliding,
145. Spring-arm,

16.—MISCELLANEOUS HARDWARE— Continued.
Hinges—
Catches—
146. Swinging,
147. Combined latch,
148. Cover-plate,
149. Detachable leaf,
150. Flexible leaf,
151. Floor,
152. Gravitating—
153. Cam,
154. Cam and roller,
155. Lift-rod,
156. Multiple pintle,
157. Laminated,
158. Leaf-clamp,
159. Leaf-prongs,
160. Lifters,
161. Lubricating,
162. Multiple leaves,
163. Multiple pintle—
164. Concealed,
165. Flush,
166. Pin and slot,
167. Multiple-wing leaf,
168. Pintles—
169. Retainer,
170. Reversible,
171. Separable—
172. Hook,
173. Multiple pintle,
174. Rigid catch,
175. Sliding catch,
176. Sliding pintle,
177. Swinging catch,
178. Sliding segment,
179. Sliding and swinging,
180. Spring—
181. Detachable leaf,
182. Double-acting,
183. Multiple pintle,
184. Flat,
185. Floor,
186. Gravitating,
187. Leaf-clamp,
188. Multiple coil,
189. Pintle-coil,
190. Right angle,
191. Stop,
192. Wire.
193. **Sash-balances—**
194. Cord and counterweight,
195. Rack and pinion,
196. Sash and cord,
197. Spring—
198. Drum and cord,
199. Friction-roller,
200. Lever,
201. Rack and pinion.
202. **Sash-cord fasteners—**
203. Bendable,
204. Chain,
205. Clamps,
206. Hooks,
207. Knot,
208. Slack-cord holders,
209. Weight.
210. **Sash-cord guides—**
211. Casings—
212. Sheet metal, single piece,
213. Multiple wheel,
214. Sliding,
215. Wheel and casing.
216. **Sash-weights—**
217. Composite,
218. Sectional,
219. Weight and wheel.
220. **Window-head fasteners.**

THOMAS E. ROBERTSON, *Commissioner.*

Changes in Classification.

(ORDER No. 2,667.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 9, 1921.

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 20, Wooden Buildings, (Division XLVI,) abolish the following subclass, with its definition:

Doors—
17. Oppositely hinged.

The patents formerly contained in this subclass have been placed for the most part in class 20, Wooden Buildings, subclass 16, Doors, Miscellaneous, and class 16, Miscellaneous Hardware.

THOMAS E. ROBERTSON,
Commissioner.

Patents Nos. 1,382,611 to 1,383,273.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 287—No. 4. TUESDAY, JUNE 28, 1921. Price—$5 per year.

[PUBLISHED JULY 12, 1921.]

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Nolan Act—Reciprocity of British Laws—Order No. 2,656, of May 10, 1921, Modified.

(Order No. 2,675.)

Department of the Interior,
United States Patent Office,
Washington, D. C., July 7, 1921.

In view of further information respecting the laws and practice of the United Kingdom of Great Britain and Ireland, Order No. 2,656, recognizing its laws as substantially reciprocal to the Nolan Act of March 3, 1921, (41 Stat. L., 1313,) is hereby modified by requiring from British applicants asking for extensions of time under sections 1 and 2 of the act a letter or statement by the applicant or his agent that he was prevented from doing the act in the prescribed time by reason of circumstances arising from the state of the World War.

THOMAS E. ROBERTSON,
Commissioner.

Interference Notice.

Department of the Interior,
United States Patent Office,
Washington, D. C., June 27, 1921.

Fred Hollender & Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Hinckley & Schmitt, 420 West Ontario street, Chicago, Ill., for registration of a trade-mark and trade-mark registered August 29, 1905, No. 45,804, to Fred Hollender & Co., 115–119 Elm street, New York, N. Y., and a notice of such declaration sent by registered mail to said Fred Hollender & Co. at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Fred Hollender & Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Adverse Decisions in Interference.

Patent No. 1,257,283.

On June 4, 1921, a decision was rendered that Alfred H. Dyson was not the first inventor of the subject-matter covered by claims 83, 84, and 85 of his Patent No. 1,257,283, subject, "Automatic telephone system," and no appeal having been taken within the time allowed such decision has become final.

ADJUDICATED PATENTS.

(U. S. C. C. A. N. Y.) The Hagan and Cooper patent, No. 962,213, claims 5 and 9, for an improvement in cuff-pressing machines. *Held* not infringed. *American Laundry Machinery Co.* v. *United States Hoffman Co.*, 271 Fed. Rep., 856.

(U. S. C. C. A. N. Y.) The Johnson design patent, No. 45,092, for a design for a tire, consisting of a raised ridge extending around the tire and having extensions forming crosses and diamonds or squares. *Held* invalid as an effort to secure a monopoly of the mechanical excellences thought to inhere in the peculiar arrangement of ridges and hollows or to prevent the making of tires like those patented in another country by mechanical patent. *North British Rubber Co., Limited*, v. *Racine Rubber Tire Co. of New York*, 271 Fed. Rep., 936.

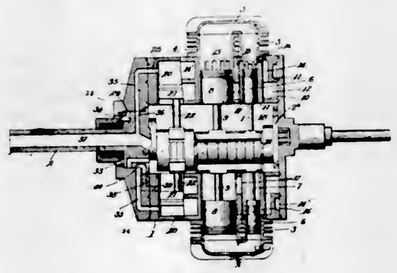
Correspondence by Mail.

Notice is hereby given to attorneys and others transacting business with the Patent Office that all mail-matter arriving at the Washington post-office up to the hour of closing business at the Patent Office each day will be entered as received on that day.

Communications to the Patent Office.

Rule 8. A separate letter should in every case be written in relation to each distinct subject of inquiry or application. Assignments for record, final fees, and orders for copies or abstracts must be sent to the Office in separate letters.

APPLICATIONS UNDER EXAMINATION.



Condition at Close of Business June 18, 1921.

Room No.	Divisions and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action.		No. of applications awaiting action.
		New.	Amended.	
314	1. Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders	Feb. 1	Jan. 26	683
128	2. Bee Culture; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco; Trees, Plants and Flowers.	Sept. 18	Dec. 4	1,508
175	3. Electric Heating and Rheostats; Electrochemistry; Heating; Metal-Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Nov. 8	Oct. 8	763
234	4. Conveyers; Conveyers, Fluid-Current; Elevators; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	July 24	Mar. 16	1,508
167	5. Book-Making; Books, Strips and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Sept. 11	Nov. 20	710
318	6. Bleaching and Dyeing; Chemicals; Explosive, Pyrotechnic and Match Compositions; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Jan. 19	Mar. 23	855
312	7. Games and Toys; Optics; Photography; Velocipedes	Jan. 17	Mar. 2	1,478
131	8. Beds; Chairs and Seats; Flexible-Sheet Securing Devices; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	Mar. 16	May 2	611
221	9. Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid-Current; Pumps.	Sept. 13	Apr. 20	761
235	10. Land-Vehicles; Land Vehicles, Animal Draft Appliances; Land-Vehicles—Bodies and Tops; Land-Vehicles—Dumping; Land-Vehicles, Wheel Substitutes; Motor Vehicles.	Jan. 3	Apr. 20	1,150
154	11. Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus.	Mar. 17	Mar. 29	421
222	12. Machine Elements	Nov. 9	Mar. 17	1,046
329	13. Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	Aug. 25	Mar. 17	1,584
323	14. Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal-Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire-Working.	Sept. 10	Apr. 25	896
308	15. Bread, Pastry, and Confection Making; Glass; Laminated Fabrics and Analogous Manufactures; Paper-Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	July 10	Nov. 1	1,586
111	16. Radiant Energy; Telegraphy; Telephony	Aug. 17	Dec 3	1,459
307	17. Coating, Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	Dec. 16	Mar. 7	804
229	18. Liquid Heaters and Vaporizers; Motors, Expansible Chamber Type; Power Plants; Speed Responsive Devices; Steam and Vacuum Pumps.	Sept. 7	Dec. 15	1,531
236	19. Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	Oct. 1	Jan. 3	866
179	20. Artificial Body Members; Builders' Hardware; Closure-Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	Feb. 10	Feb 9	1,140
212	21. Brakes and Gins; Carding; Cloth-Finishing; Continuous-Strip Feeding; Cordage; Felt and Fur; Knitting and Netting; Silk; Spinning; Weaving; Winding and Reeling.	Oct. 29	Mar. 28	504
249	22. Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices	Mar. 10	Apr. 26	389
217	23. Acoustics; Coin-Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Oct. 23	Nov. 13	744
144	24. Apparel; Apparel Apparatus; Garment Supporters; Sewing-Machines	Dec. 13	Mar. 25	886
315	25. Agitating; Butchering; Centrifugal Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	Apr. 25	Apr. 7	253
105	26. Electricity, Generation; Motive Power; Prime Mover Dynamo Plants	Nov. 24	Jan. 15	774
214	27. Abrading; Brushing and Scrubbing; Laundry; Washing Apparatus	Feb. 1	Mar. 26	1,084
225	28. Internal-Combustion Engines	Dec. 1	Feb. 18	1,222
147	29. Boring and Drilling; Button Making; Chucks or Sockets; Coopering; Tool Handle Fastenings; Wheelwright-Machines; Wood-Sawing; Wood-Turning; Woodworking; Woodworking-Tools.	Nov. 19	Apr. 1	684
152	30. Illuminating-Burners; Illumination; Liquid and Gaseous Fuel Burners; Type-Writing Machines	Jan. 27	May 2	1,004
172	31. Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Fuel and Igniting Devices; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	July 24	Oct. 14	2,001
278	32. Gas and Liquid Contact Apparatus; Heat Exchange; Refrigeration	Sept. 7	Mar. 1	1,101
70	33. Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Dec. 21	Mar. 8	752
304	34. Electricity-Transmission to Vehicles; Pneumatic Despatch; Railways; Railway Rolling-Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Store Service; Track-Sanders: Vehicle-Fenders.	Apr. 29	May 14	281
57	35. Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet	May 2	May 7	513
204	36. Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring	Jan. 26	Jan. 7	1,512
107	37. Electricity, Circuit Makers and Breakers; Electricity, General Applications	Dec. 18	Dec. 18	1,847
378	38. Animal Husbandry; Earth Boring; Fishing, Trapping and Vermin Destroying; Mining, Quarrying, and Ice-Harvesting; Stationery; Stone-Working; Wells.	Feb. 3	Jan. 26	998
220	39. Fluid Pressure Regulators; Joint Packings; Multiple Valves; Packed Shaft or Rod Joints; Pipe Joints or Couplings; Rod Joints or Couplings; Valved Pipe Joints or Couplings; Valves; Water Distribution.	July 19	Sept. 17	1,674
273	40. Baggage; Bottles and Jars; Check-Controlled Apparatus; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Dec. 3	Jan. 21	1,888
125	41. Land Vehicles, Wheels and Axles; Resilient Tires and Wheels	Nov. 15	Feb. 26	848
114	42. Electricity, Conductors; Electrical Conduits and Housings; Electric Signaling	Oct. 4	Oct. 23	2,005
382	43. Baths and Closets; Dispensing; Dispensing Beverages; Electricity, Medical and Surgical; Fire-Extinguishers; Sewerage; Surgery; Water Separation or Purification.	Sept. 3	Nov. 11	1,316
253	44. Air-Guns, Catapults, and Targets; Ammunition and Explosive Charge Making; Boats and Buoys; Filling and Closing Portable Receptacles; Marine Propulsion; Railway Draft Appliances; Ships.	Oct. 20	Apr. 18	540
379	45. Journal-Boxes, Pulleys, and Shafting; Lubrication; Motors; Spring Devices	Nov. 12	Apr. 6	1,013
332	46. Curtains, Shades and Screens; Educational Appliances; Fire-Escapes; Ladders; Fluid Sprinkling, Spraying, and Diffusing; Paper Files and Binders; Wooden Buildings; Scaffolds.	Dec. 22	Feb. 19	852
264	47. Brakes; Clutches; Elevator; Fluid Pressure Brake and Analogous Systems	Oct. 27	Jan. 12	1,039
	Oldest new case, July 10; oldest amended, Sept. 17.			
	Total number of applications awaiting action			49,084
103	TRADE-MARKS, DESIGNS, LABELS AND PRINTS:			
	Trade-Marks	Oct. 21	Apr. 11	4,828
	Designs	Oct. 11	Dec. 10	2,182

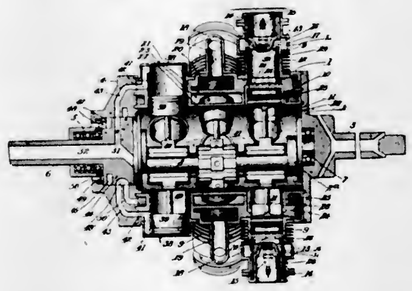
PATENTS

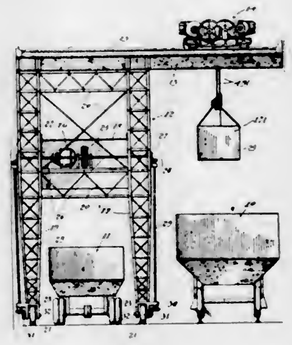


GRANTED JUNE 28, 1921.

1,382,611. ROTARY GAS-ENGINE. BENJAMIN F. AUGUSTINE, Buffalo, N. Y. Filed Aug. 15, 1917. Serial No. 186,415. 13 Claims. (Cl. 123—44.)

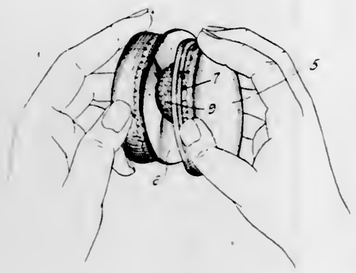
2. A rotary gas engine including in combination an inclosed casing, a plurality of cylinders carried thereby, a piston for each cylinder, means for forming an air supply chamber centrally of the casing, said cylinders having air intake ports and passages communicating with said air supply chamber, an independent fuel supply chamber, means for supplying the fuel chamber with fuel, said cylinders having fuel intake ports and passages connecting the same with the fuel supply chamber, said air intake ports and said fuel intake ports being disposed in the same region and controlled by the pistons, said cylinders having exhaust ports located at a distance from said air intake ports, and means for controlling said exhaust ports, said air intake ports being disposed between the fuel intake ports and proportioned so as to admit air before the admission of fuel gases and also during the admission of the fuel gases.

1,382,612. ROTARY GAS-ENGINE. BENJAMIN F. AUGUSTINE, Buffalo, N. Y. Filed Aug. 15, 1917. Serial No. 186,416. 15 Claims. (Cl. 123—44.)



15. A rotary gas engine including in combination a fixed shaft having a crank, a casing mounted to rotate about said shaft, said casing having spaced cylindrical partitions forming an air chamber surrounding the crank, a fuel supply chamber surrounding said air chamber, and an exhaust chamber surrounding said fuel supply chamber, a plurality of radially disposed cylinders carried by the casing and extending through the cylindrical partitions to the air chamber, each cylinder having air intake ports at the inner end thereof, and passages connecting with said air chamber, said cylinder having fuel intake ports at the inner end thereof, and passages connecting said fuel intake ports with the fuel supply chamber, said cylinder having exhaust ports at the outer end thereof, a casing surrounding each cylinder and exhaust ports, a pipe connecting the last named casing with the exhaust chamber whereby the exhaust gases are led from the cylinders to the exhaust chamber, and means for supplying air to the crank casing and for supplying fuel to said fuel supply chamber.

1,382,613. METHOD OF MAKING PRINTING-PLATES. ARTHUR C. AUSTIN, Chicago, Ill., assignor of one-half to Magill-Weinsheimer Co., Chicago, Ill., a Corporation of Illinois. Filed May 3, 1920. Serial No. 378,629. 12 Claims. (Cl. 41—46.)



1. The method of making printing plates which consists in first preparing a plate with the design thereon raised and in relief; then filling the interstices in said plate with a filler; transferring said filler to a reproducing body; and utilizing said reproducing body to produce a printing plate, substantially as described.

1,382,614. HOISTING AND CONVEYING MACHINERY. CHRISTIAAN W. AVELING, Elgin, Ill. Filed May 24, 1918. Serial No. 236,302. 1 Claim. (Cl. 214—89.)

A traveling crane comprising a motor-driven carriage, an overhead bridge carried by said carriage, and extending transversely to the normal line of travel of said carriage, a hoist-trolley traveling on said bridge, a grab-bucket supported by said hoist-trolley and raised and lowered thereby, and moved along the bridge thereby and an endless-belt conveyer carried by said carriage, and mounted to swing about a vertical axis, to which said grab-bucket delivers the material.

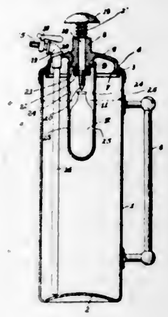
1,382,615. PAINTING GOLF-BALLS. ALFRED J. BATE, Yonkers, N. Y. Filed Oct. 18, 1920. Serial No. 417,560. 3 Claims. (Cl. 91—60.)

1. Apparatus for painting golf balls and the like comprising a pair of frames of larger diameter than a golf ball, and covers of relatively flexible porous material stretched over the open mouths of the frames.

1,382,616. WEARING-APPAREL. ABRAHAM BLATTNER, Pittsburgh, Pa. Filed Nov. 1, 1920. Serial No. 420,938. 2 Claims. (Cl. 2—41.)

1. In a shirt including a continuous rear flap or skirt and a sectional front flap or skirt, the combination with said skirts, of means for separably connecting said skirts, said means comprising a front strap section rigidly secured at one end to the lower inner edge of each of said front sections, and a rear strap section adapted for detachable connection at their front ends to the free ends of the front strap sections, the said rear strap sections terminating in divergent tabs rigidly secured to the lower end of the rear flap or skirt of the shirt, and complementary separable fasteners carried by the mating ends of said strap sections respectively, whereby they may be readily connected and disconnected.

1,382,617. DRY MIXTURE FOR FIRE AND WATER PROOF PAINT. GUIDO BLENIO, New York, N. Y., assignor to Blenio Products Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 7, 1919. Serial No. 270,026. Renewed Nov. 16, 1920. Serial No. 424,759. 5 Claims. (Cl. 134—46.)



5. In a dry mixture for paints, a filler composed of calcined magnesite 15 parts, calcium carbonate 25 parts, china clay 30 parts, calcium hydrate 7 parts and a binder composed of casein 14 parts, neutral soap 3 parts, and waterproofing compound 6 parts.

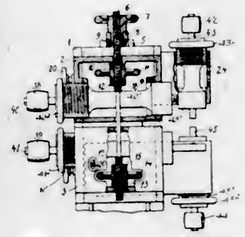
1,382,618. FIREPROOFING SOLUTION. GUIDO BLENIO, New York, N. Y., assignor to Blenio Products Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 11, 1919, Serial No. 270,716. Renewed Nov. 18, 1920. Serial No. 425,031. 4 Claims. (Cl. 23—5.)

4. A solution for fireproofing resulting from a mixture of the following ingredients in substantially the following proportions.

Sulfuric acid	5 gallons.
Boracic acid crystals	15 pounds.
Phosphoric acid	10 gallons.
Water	100 gallons.
Ammonia: Just sufficient to render the solution neutral.	

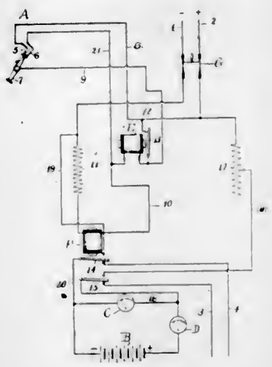
1,382,619. FIRE-EXTINGUISHER. GUIDO BLENIO, New York, N. Y., assignor to Blenio Products Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 27, 1919, Serial No. 273,412. Renewed Nov. 18, 1920. Serial No. 425,032. 1 Claim. (Cl. 169—31.)

In a pressure operated fire extinguisher the combination of a container and a head adapted to be secured in the upper end of the container, having a central exterior boss and a central interior boss, a capsule receptacle, removably carried by the interior boss, a rod extending through the bosses having a head on its outer end and having its inner end screwthreaded and pointed, a spring between the headed end of the rod and the outer boss, a washer on the inner end of the rod adapted to seat against the inner face of the interior boss, and a nut on the rod for adjusting the position of the washer.



1,382,620. WIRE-CLAMP. WILLIAM JAMES CARLEY, Culpeper, Va., assignor to Marie Bessiers, Culpeper, Va. Filed Jan. 31, 1920. Serial No. 355,384. 4 Claims. (Cl. 191—43.)

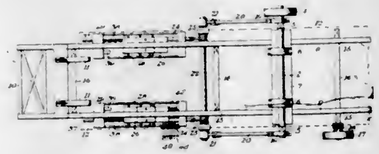
1. A clamp for a trolley wire comprising, in combination, a member adapted for engagement with a hanger stud, two clamping members engaged with the member and capable of rotation therearound, each of said clamping members being provided with an external ledge, and a tubular member threaded upon the first named member and adapted to engage the ledges of the clamping members to force the clamping members one toward the other, the faces of the second named members opposed to the clamping members each being provided with a recess,



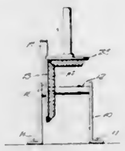
said clamping members being provided with upstanding flanges extending within said recesses, the recess of said second member constituting an enlargement of the bore of said second member.

1,382,621. TENONING-MACHINE. LARS BRUUN, Skien, Norway. Filed Jan. 6, 1920. Serial No. 349,744. 3 Claims. (Cl. 144—198.)

1. In a tenoning machine, the combination of a frame provided with a guide; a slide adjustably engaged with said guide and having an opening, a portion of which is threaded; a cylindrical sleeve projecting through said opening and adapted to move bodily with the slide, said sleeve having an externally threaded portion which is engaged with the threaded portion of the opening; means connected to said sleeve to effect its rotation and consequent endwise movement through said opening; a cutter spindle rotatably mounted in the sleeve to move endwise therewith; means carried by said spindle for effecting its rotation; and means independent of the sleeve-adjusting means for effecting adjustment of the slide.



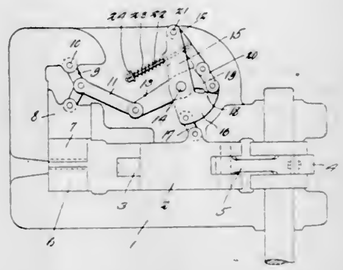
1,382,622. PROGRAM BATTERY-CHARGING DEVICE. JAMES W. BRYCE, Binghamton, N. Y., assignor to The International Time Recording Company of New York, a Corporation of New York. Filed Oct. 29, 1918. Serial No. 260,109. 4 Claims. (Cl. 171—314.)



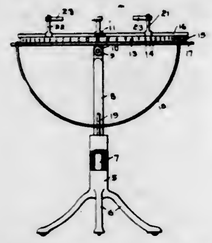
2. In a system of the kind described, the combination with a source of charging current, a storage battery, a charging circuit, time controlled relays, and a clock line adapted to be connected by said relays to the battery, the clock line being at all times insulated from the charging circuit.

1,382,623. FEED-SPACER. CHRISTOPHER BYRNE, Pittsburgh, Pa. Filed Apr. 8, 1920. Serial No. 372,149. 22 Claims. (Cl. 164—117.)

1. A feed spacer, comprising a metal working machine, means for operating the same, a feed table, means for securing the work thereon, feeding means for moving the table in one direction, and independent means for producing a return movement of said feeding means, substantially as described.

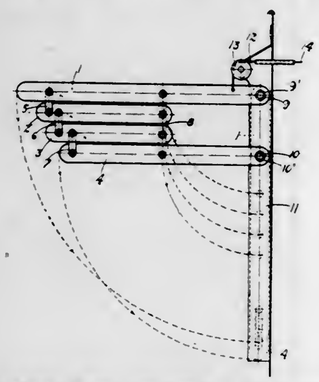


1,382,624. GEARING FOR VEHICLE-SIGNALS. HARRY C. CARSON, Cheviot, Ohio. Filed June 24, 1920. Serial No. 391,313. 1 Claim. (Cl. 74—7.)



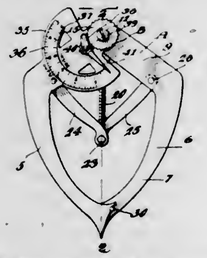
In a device of the character described adapted to actuate a signal, a bracket disposed adjacent the foot of the operator and including spaced uprights, a shaft journaled in said uprights, a driving disk rotatably mounted on said shaft and having a beveled gear on one face and having its opposite face smooth, a foot pedal secured to the smooth face of the driving disk eccentric thereof, a spacing sleeve arranged on said shaft and spacing the driving disk from one of the uprights, and motion transmission means including a beveled gear engaging the beveled gear of the driving disk to receive the motion therefrom and coacting with the spacing sleeve for maintaining the driving disk in position on the shaft.

1,382,625. AUTOMATIC RELEASE MECHANISM FOR HEADING AND FORGING MACHINES. WILLIAM L. CLOUSE, Tiffin, Ohio, assignor to The National Machinery Co., Tiffin, Ohio. Filed July 12, 1920. Serial No. 395,574. 2 Claims. (Cl. 10—23.)



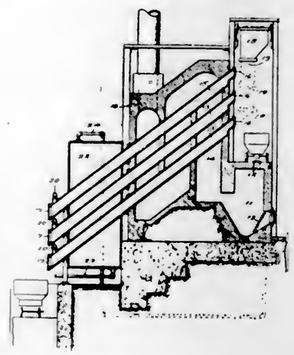
1. In a heading machine the combination with a heading slide and a gripping slide, and a toggle for actuating the gripping slide, of crossed members mounted upon a fixed pivot coöperating abutments upon said members, a link connection between one of the members and the heading slide, a link connection between the other member and the toggle, a supplemental toggle connected to the crossed members, and yielding means connected to said supplemental toggle for holding it normally extended with the abutments of the members in contact, said toggle being adapted to break against the action of the spring when the crossed members are subjected to excessive resistance to their rotation in one direction about the fixed pivot.

1,382,626. TABLE FOR AUTOMOBILE-RADIATORS. JOHN A. CONTOS, Grand Island, Nebr., assignor of one-half to Nick Jamson, Grand Island, Nebr. Filed July 29, 1920. Serial No. 399,771. 2 Claims. (Cl. 29—89.)



1. A work supporting table including a base, said base having a pin extending upwardly therefrom, a standard having an opening formed in one end thereof, to accommodate the pin, cross arms having pivotal connection with the standard, a circular member having openings formed therein, means carried by one of the cross arms and adapted to be positioned in one of the openings to secure the cross arms in various positions of adjustment, and adjustable clamping members carried by the cross arms.

1,382,627. VEHICLE DIRECTION-SIGNAL. EARL L. CUTHBERTSON, Alton, Ill. Filed Feb. 2, 1920. Serial No. 355,552. 4 Claims. (Cl. 116—53.)

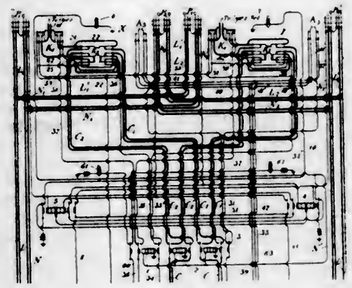


1. A signal device comprising a standard, a pair of fingers pivotally connected to said standard, a series of fingers positioned between said pair of fingers and pivotally connected thereto, and means for raising and lowering said fingers.

1,382,628. MEASURING INSTRUMENT. ARTHUR L. DANIELS, Burlington, Vt. Filed Oct. 19, 1920. Serial No. 417,992. 6 Claims. (Cl. 33—148.)

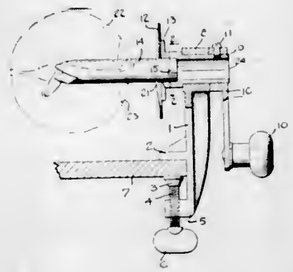
1. An inside and outside caliper comprising a pair of legs pivotally connected together having measuring points formed thereon, a supporting bracket carried by the pivot of said legs, and adjusting screw slidably carried by the bracket, a pair of adjusting arms pivotally secured to the legs, means pivotally connecting the ends of the legs together, means pivotally connecting the lower end of the adjusting screw to the meeting terminals of the adjusting arms, and a thumb nut fitted on said screw for non-sliding movement in relation to the legs.

1,382,629. PROCESS FOR PREPARING LIGNITE FOR FUEL. SAMUEL M. DARLING, Washington, D. C. Filed Dec. 1, 1919. Serial No. 341,768. 3 Claims. (Cl. 44—23.)



1. The herein described process for preparing lignite for use as fuel consisting of mixing the lignite with pitch in the proportions of 8 to 10 parts of pitch to 80 to 82 parts of lignite, briqueting the mixture, heating the briquets to distil off volatile matter therein in the form of gases and cooling the briquets in the presence of said gases.

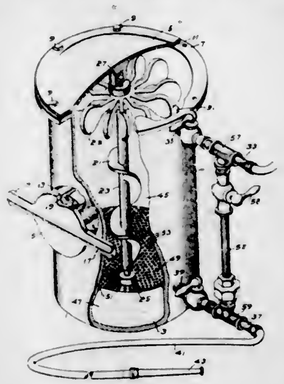
1,382,630. RESILIENT TIRE. LAURENCE R. DAVIS, Providence, R. I., assignor to Revere Rubber Company, a Corporation of Rhode Island. Filed July 17, 1920. Serial No. 397,111. 2 Claims. (Cl. 152—1.)



2. A one-piece cushion tire of solid rubber having its tread formed with a central peripheral groove and with notches communicating with said central groove, each of said notches extending laterally from the groove a distance less than half the total width of the tire, and continuous unbroken tread surfaces flanking the notches.

1,382,631. REPEATER-CIRCUITS. CHARLES S. DEMAREST, Brooklyn, and SAMUEL P. SHACKLETON, New York, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed May 17, 1919. Serial No. 297,902. 6 Claims. (Cl. 179—170.)

1. In a signaling system, a repeater, a plurality of lines, a plurality of sets of switching apparatus for associating the repeater with a line, parallel transmission connections extending from said repeater to each set of switching apparatus, keys associated with each set of switching apparatus for controlling the functioning of the repeater, and means whereby when the repeater is associated with a line by one set of switching apparatus the repeater will be rendered independent of the controlling keys of another set of switching apparatus without disturbing said parallel transmission connections.



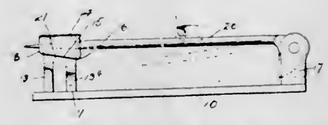
1,382,632. CORING-MACHINE. MICHELE G. DE SIMONE, Staten Island, N. Y., assignor to Victor Lambert, Brooklyn, N. Y. Filed Mar. 12, 1920. Serial No. 365,161. 3 Claims. (Cl. 146—6.)

1. A coring machine comprising a hollow shaft, means for supporting said shaft, a hollow coring member, means for removably securing said hollow coring member to said hollow shaft, the interior of said hollow coring member communicating with the interior of said hollow shaft for the discharge of the core therethrough, a stop plate carried by said hollow shaft and paring means secured to said stop plate.

1,382,633. CLEANING DEVICE. JOHN A. DE VITO, West Medford, Mass. Filed Nov. 5, 1919. Serial No. 335,906. 3 Claims. (Cl. 299—84.)

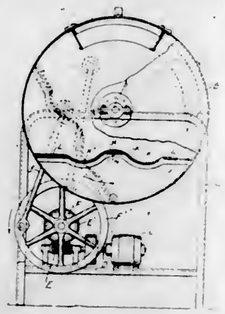
1. A device of the character described, comprising a casing having a chamber therein provided with an apertured bottom, an upright shaft mounted in said chamber, a turbine mounted on said shaft in said chamber, means to direct water against the turbine to rotate the same and agitate the water in the chamber, a screw on said shaft in said chamber for elevating materials from the bottom of the chamber toward the turbine, that the materials may meet the water agitated by the turbine, and

means to deliver the water and materials mixed therewith from said chamber.



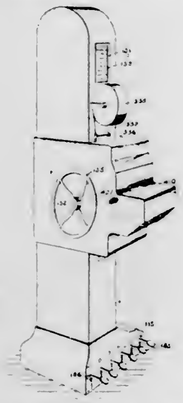
1,382,634. TWO-IN-ONE GARBAGE-CAN. VICTOR G. FERNANDEZ, New York, N. Y. Filed Oct. 21, 1920. Serial No. 418,529. 6 Claims. (Cl. 220—22.)

1. The combination with a rigid flat partition for receptacles, of spring arms attached to said partition and projecting from the edges thereof and adapted to be bowed for frictional engagement with the inner faces of the walls of the receptacle to retain the partition therein.



5. The combination with a removable partition for receptacles, of a spring strip detachably secured to the partition permitting it to be shipped in knockdown condition, the end portion of said strip projecting a considerable distance beyond the edge of the partition when attached thereto and adapted to be bowed for frictionally engaging the inner face of the walls of the receptacle to retain the partition therein.

1,382,635. SAFETY-CATCH. JOHN FIELDING, Providence, R. I., assignor of one-half to Joseph P. Whitaker, Apponaug, R. I. Filed Nov. 24, 1920. Serial No. 426,887. 3 Claims. (Cl. 24—156.)

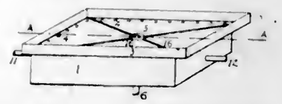


1. A catch member for pin tongues comprising a broad-faced hook-shaped hood, a lower guard and guide lip extending forwardly beyond the front edge of said hood, and oppositely projecting extending portions on said hook and lower lip out of vertical alinement with each other guarding the mouth of the catch and so arranged that the body portion of the pin tongue must be sprung inwardly out of its normal alinement to permit its end portion to pass said extensions in either entering or leaving said catch.

1,382,636. WASHING-MACHINE. OSCAR F. FISCHEDICK and ALVIN W. KRAHN, Milwaukee, Wis. Filed Oct. 15, 1917. Serial No. 196,589. 5 Claims. (Cl. 68—21.)

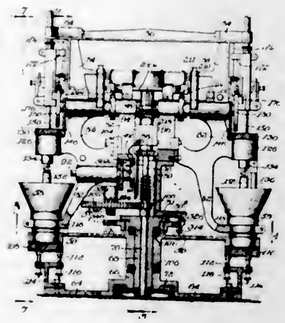
1. A cylindrical washing drum supported to oscillate about the horizontal axis of the drum, and having an interior clothes supporting partition below its axis, the central portion of which is arched and imperforate and continuous with the marginal side portions from one end of the drum to the other, and the side portions of which are provided with a multitude of small openings of such number and capacity as to permit a substantially free flow of water underneath the partition from one side to the other, along the interior surface of the peripheral wall of the drum, while preventing articles of clothing from passing to the space beneath the partition.

1,382,637. MACHINE FOR PRINTING AND ISSUING RAILWAY-TICKETS. FREDERICK L. FULLER, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio. Filed Oct. 27, 1916. Serial No. 128,093. 60 Claims. (Cl. 235—31.)



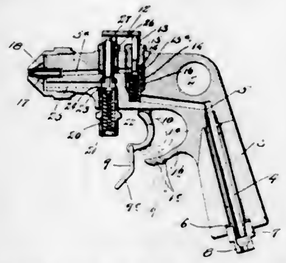
1. In a machine of the class described, the combination of type carriers for printing values on tickets, a plurality of destination devices, each provided with means for printing class designations on tickets, a plurality of means carried by the destination devices, each means representing the value of a ticket of the appropriate class and adapted to control said type carriers, and means for moving the desired destination device into position to print a designation of the desired class on a ticket, the type carriers being controlled by the corresponding controlling means on the desired device to print the value on the ticket.

16. In a machine of the class described, the combination of a consecutive counter, differential mechanism for turning the counter to zero and then actuating the counter to set up the next consecutive number, means for actuating the differential mechanism to add one thereon after the differential mechanism is adjusted under the control of the consecutive counter, and means for engaging and disengaging the counter and differential mechanism so that they are in engagement when the counter is actuated by the differential mechanism and out of engagement when the differential mechanism is actuated by the adding means.



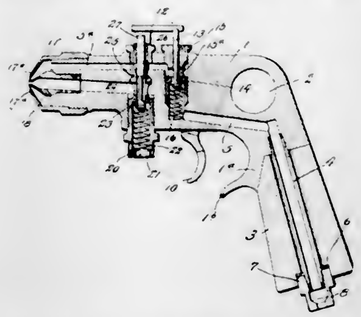
45. In a machine of the class described, the combination of a consecutive counter, differentially movable members provided with ratchet teeth, mechanism for actuating the members to turn the counter to zero and then set up the next consecutive number on the counter, a pawl cooperating with the ratchet teeth on the differentially movable members to add one thereon while the members are in the positions to which they are adjusted under the control of the consecutive counter, and means for engaging and disengaging the counter and the members so that they are in engagement when the counter is actuated by the members and out of engagement when the members are actuated by the pawl.

1,382,638. DEVICE FOR COOLING LIQUIDS. JOHN H. GOSS, Chicago, Ill. Filed Apr. 28, 1917, Serial No. 165,096. Renewed Dec. 2, 1920. Serial No. 427,799. 1 Claim. (Cl. 62—42.)



A device for cooling liquids comprising a container having shoulders, a top supported on said shoulders and removably fastened thereto with bolts, and adapted to hold ice, a drain pipe extending through the container and connected with said top, grooves in said top leading to said pipe and pipes connected with said container to allow the liquid to enter and leave, substantially as described.

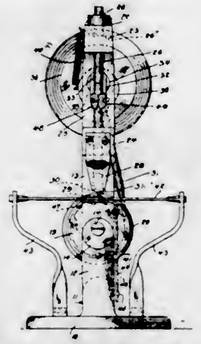
1,382,639. BATTERY-CORE-MAKING MACHINE. JOHN GRAVES, Madison, Wis., assignor to French Battery & Carbon Co., Madison, Wis., a Corporation of Wisconsin. Filed July 5, 1918. Serial No. 243,503. 31 Claims. (Cl. 18—5.)



1. In a device of the class described, a tamping machine adapted to insert powdered material in a mold and tamp it by a plurality of successive taps, a carbon injecting machine adapted to insert a carbon pencil in a mold containing previously tamped powdered material, an ejecting mechanism adapted to eject from a mold a finished core containing a carbon therein produced by the first two machines, means for progressively supplying a plurality of molds to said three machines, and automatic means for operating all of the parts named in proper sequence to produce the product.

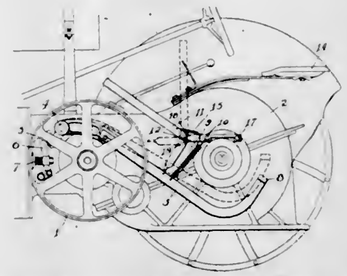
1,382,640. SPRAY-GUN. WALTER A. HEINRICH, St. Louis, Mo., assignor to W. N. Matthews and Brother, Inc., St. Louis, Mo., a Corporation of New Mexico. Filed June 1, 1920. Serial No. 385,652. 5 Claims. (Cl. 91—45.)

1. In a device of the character described, the combination of a casting formed with passages for air or gas and liquid or powder to be sprayed, valves in control of said passages, a trigger for operating said valves, a trigger guard on a downward extension formed on said casting, the rear face of said trigger guard being flattened, a hollow handle having a flattened tapered portion for engaging the flattened face of a casting, a tube screwed into the casting and establishing communication between one of the passages in the casting and a nipple at the lower end of the handle, a nut integral with the nipple and adapted to impinge against the lower end of the handle to hold said handle to its seat.



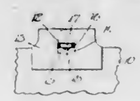
1,382,641. SPRAY-GUN. WALTER A. HEINRICH, St. Louis, Mo., assignor to W. N. Matthews and Brother, Inc., St. Louis, Mo., a Corporation of New Mexico. Filed June 1, 1920. Serial No. 385,653. 1 Claim. (Cl. 91—45.)

A spray gun comprising the combination of a casting formed with conduits or passages for compressed air or gas and a liquid or powder, valves in control of said passages, means for operating said valves, a nipple for supplying a central flow of liquid or powder, and an adjustable nozzle around said nipple for projecting a blast of air or gas around the forward end or mouth of said nipple, said nozzle being formed with diametrically opposite and angularly disposed straight openings in its conical forward end leading from the interior of the nozzle for directing angularly disposed blasts of air against two sides of the central blasts from the nozzle and immediately in front of said nipple.



1,382,642. HEEL-TRIMMER. THOMAS B. HUESTIS, Bristol, R. I., assignor to National India Rubber Company, a Corporation of Rhode Island. Filed Dec. 18, 1919. Serial No. 345,787. 1 Claim. (Cl. 164—49.)

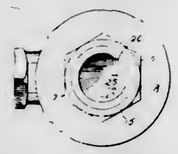
In a shearing machine, in combination, a rotatable feeding ledger and work-supporting member, a reciprocable cutting member in coöperating working relation therewith, a main shaft, a secondary shaft parallel to the main shaft and supporting the feeding ledger and work supporting member, a ratchet on said secondary shaft, means for



operating the cutter and feeding ledger and work supporting members from the main shaft including eccentric elements on the main shaft, and a pawl functioning eccentric rod for intermittently actuating a ratchet on the secondary shaft.

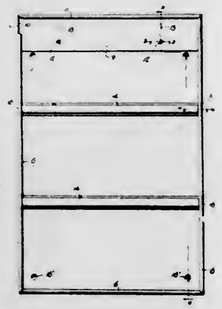
1,382,643. HOLDING MEANS FOR CLUTCH-LEVERS. ALLEN H. HUGHES and HAROLD S. CURREN, Rochester, N. Y. Filed Mar. 27, 1920. Serial No. 369,185. 5 Claims. (Cl. 74—39.)

1. In combination with a clutch lever normally movable to clutching position, a detaining member pivotally mounted above the clutch lever to swing one side of a dead center in order to hold said detaining member in detaining position, and a spring acting on said detaining member to move it to the other side of the dead center in order to free the clutch lever upon a depression of such clutch lever while it is held by the detaining member.



1,382,644. INDEX-CARD. DAVID E. HUNTER, Muskegon, Mich., assignor to Shaw-Walker Company, Muskegon, Mich., a Corporation of Michigan. Filed Feb. 1, 1919. Serial No. 274,436. 1 Claim. (Cl. 129—16.8.)

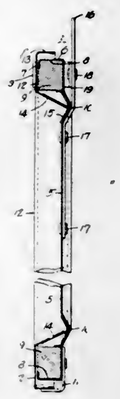
An index card having a portion near an edge thereof cut out to leave a recess, transparent material folded around the card edge and secured to the faces thereof and closing the sides of said recess to form a pocket, said material at one side of said card and at a distance below said pocket being cut away to expose part of the card and to form an entrance slot for the insertion of an index



tablet into the pocket, said exposed card section below said slot being notched for the accommodation of an implement for withdrawing the tablet from the pocket.

1,382,645. STEAM-TRAP. FRANK L. HUTCHINSON, Milwaukee, Wis., assignor to Sterling Engineering Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 5, 1919. Serial No. 301,967. 5 Claims. (Cl. 236—58.)

1. The combination with a thermostatic outlet valve casing provided with fluid supply and outlet ports, of an apertured cap piece having a recess in its upper surface in communication with the aperture, a removable member seated in said recess and adapted to form a fluid tight closure covering and concealing said aperture, and means for clamping said member in position.



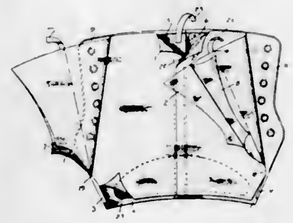
1,382,646. FRAME FOR ADVERTISING-CARDS. RICHARD A. JOHNSTON, New York, N. Y., assignor to Barron G. Collier, Incorporated, New York, N. Y., a Corporation of New York. Filed June 11, 1920. Serial No. 388,355. 1 Claim. (Cl. 40—64.)

A street car advertising frame comprising a rectangular sheet having its bottom end and side edges rolled inwardly to form a border and also to provide side grooves, the top extremities of said rolled side edges being beveled, said frame being provided with spaced elongated vertical slots, a closure member comprising a flat rectangular member slidable within said side grooves and corresponding in width to the width of the frame member but of relatively less length, said closure member formed with punched out portions and having its top edge rolled inwardly to simulate the beading on said sheet and its corners beveled to fit flush with the beveled corners of said side edges, said punched out portions adapted to engage in said slots for limiting the outward movement of said closure member, said side grooves adapted to slidably receive advertising cards when said closure member has been moved to its outward limit.

1,382,647. BILLBOARD. RICHARD A. JOHNSTON, New York, N. Y., assignor to Barron G. Collier, Incorporated, New York, N. Y., a Corporation of New York. Filed June 11, 1920. Serial No. 388,356. 3 Claims. (Cl. 40—125.)

1. In a device of the character described, a board provided with a beading, said board having a continuous groove or depression in its inner face contiguous to said beading, a frame pivoted to said board having a continuous pocket adapted to receive said beading and means on said frame adapted to seat in said groove when said frame is in closed position.

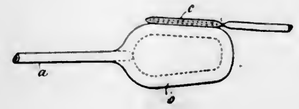
1,382,648. FOOTWEAR. FRANK A. JOSEPH, Naugatuck, Conn., assignor to L. Candee & Company, a Corporation of Connecticut. Filed Nov. 26, 1919. Serial No. 340,939. 4 Claims. (Cl. 36—4.)



1. Rubber footwear having quarters, a gusset, and a pair of fabric sections each forming a one-piece lining for substantially all of a quarter and part of the gusset whereby the interior of the article is rendered smooth, comfortable and neat in appearance.

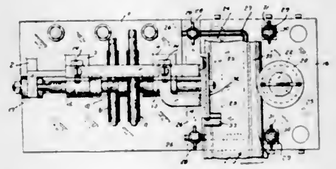
2. A boot with an expansible folded portion in its upper and having an exterior of waterproof material and the interior of its upper lined with textile throughout the vertical extent of the expansible folded portion and continuous and unbroken from its front to its rear median lines.

3. An article of footwear having an upper whose total girth at the top at least exceeds the size leg which it is adapted to encircle and is provided with two well-defined and downwardly convergent fold lines permitting the upper to be snugly fitted, said upper having a lining continuous and unbroken at and adjacent the fold lines throughout their extent.



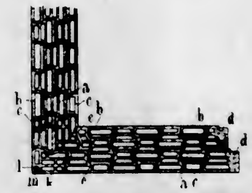
4. An article of footwear having an upper whose total girth exceeds the size leg which it is adapted to encircle and has at least two well-defined fold lines converging downwardly and disappearing intermediate the top and bottom of the upper thereby to permit neat folding of the upper about the leg, said upper having a lining continuous and unbroken at the region where the fold lines disappear.

1,382,649. METHOD OF MAKING FOOTWEAR. FRANK A. JOSEPH, Naugatuck, Conn., assignor to L. Candee & Company, a Corporation of Connecticut. Original application filed Nov. 26, 1919, Serial No. 340,939. Divided and this application filed May 7, 1920. Serial No. 379,456. 5 Claims. (Cl. 12—142.)



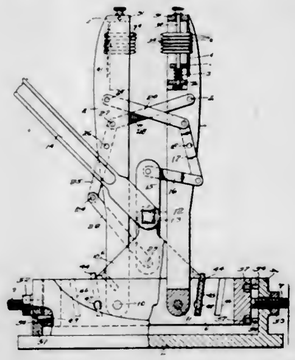
1. In the manufacture of rubber footwear having foldable portions, assembling the upper forming parts including the foldable portions off the last, mounting the upper thus assembled on a last, completing the assemblage of the parts of the article on the last, temporarily securing the folded portions in their final position, subsequently vulcanizing the articles, and thereafter freeing the foldable portions of the upper.

1,382,650. PRODUCTION OF BORES IN GLASS. JOSEPH KENT, Maldon, England. Filed Apr. 1, 1920. Serial No. 370,545. 6 Claims. (Cl. 49—79.)



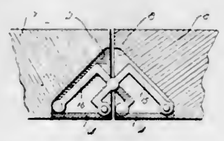
1. The method of manufacturing glass tubing, which consists in incorporating with a mass of glass a sealed length of glass tubing, and thereafter drawing out the piece thus constituted until it is reduced to the required cross-sectional dimensions, substantially as set forth.

1,382,651. MACHINE FOR TRIMMING FLASHED EDGES ON BINDING. WILLIAM J. KENT, New York, N. Y., assignor to The Mechanical Rubber Company, a Corporation of New Jersey. Filed Mar. 3, 1920. Serial No. 362,958. 24 Claims. (Cl. 164—61.)



1. In a machine for trimming the flashed edges of a forked rubber binding, an edge trimming means, and guide means disposed wholly at one side thereof and coacting with the binding in advance and in rear of the trimming means to properly position for trimming the edges of either the closed or open side thereof.

1,382,652. BRICK OR BUILDING-BLOCK. JEAN E. KIEFER, Lausanne, Switzerland, assignor to Kiefer, Pasquier & Bizot, Lausanne, Switzerland. Filed Nov. 19, 1917. Serial No. 202,697. 3 Claims. (Cl. 72—41.)



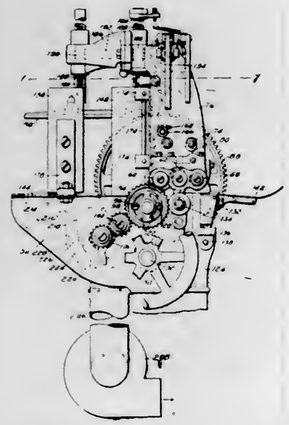
1. Hollow half bricks or building blocks having sides of equal length and so shaped that when the equal sides are placed together they form a brick or block having at least one face or side shaped as an S with equal limbs.

1,382,653. DEVICE FOR FACILITATING THE LUBRICATION OF VEHICLE-SPRINGS. GOTTLIEB L. E. KLINGBEIL, Omaha, Nebr. Filed Jan. 6, 1921. Serial No. 435,559. 17 Claims. (Cl. 81—3.)

17. A device of the character described, comprising a pair of pivoted standards, means for forcing the upper ends of said standards toward each other, a vertical rod carried by each of said standards, a plurality of wedges mounted adjacent the upper end of each of said standards and having elongated slots formed therein through which said rods pass, springs carried by said standards, elements carried by said wedges against which said springs bear and a base upon which the lower ends of said standards are pivoted.

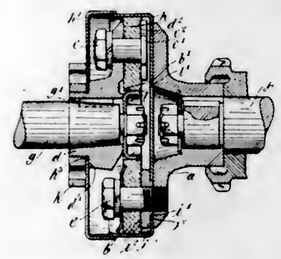
1,382,654. DOOR-HINGE. FRED J. KORB, Toledo, Ohio. Filed Sept. 4, 1920. Serial No. 408,257. 3 Claims. (Cl. 16—105.)

2. A door hinge including casings mounted in the adjacent margins of the door and door-jamb, a pair of links, one of which has one of its ends pivoted in the inner terminal of the door-jamb casing and its opposite end pivotally mounted in the outer end of the door casing, the other end of said link being arranged subjacent the first link and pivotally mounted in said casings in a manner converse to the manner of mounting the first said



link, said links being arranged in superposed relation but not connected, and co-acting means on said links to prevent shearing thereof.

1,382,655. LIQUID-FUEL BURNER. AUGUST C. KREITZER, Humboldt, Kans. Filed Apr. 14, 1920. Serial No. 373,862. 3 Claims. (Cl. 158—75.)



1. In a liquid-fuel burner, a tubular member, a fuel pipe in said member and spaced from the interior wall thereof, a steam supply connection to the tubular member, a fuel connection to the fuel pipe, a mixing chamber at the outlet end of the tubular member and the fuel pipe, a hollow member connecting the tubular member and the mixing chamber, the interior of said hollow member being flared toward the mixing chamber, said hollow member having side ports establishing communication with its interior and the tubular member, and the fuel pipe discharging centrally into the hollow member, the side ports being oblique to discharge in an oblique direction across the interior of the hollow member, a hollow deflector member seating in the outlet end of the mixing chamber and having a forward flare, said deflector member also having a central port and oblique side ports establishing communication between the interior of the mixing chamber and the interior of the deflector member, said side ports being out of alinement with respect to the first-mentioned side ports, and a nozzle tip having a connection with the interior of the deflector member.

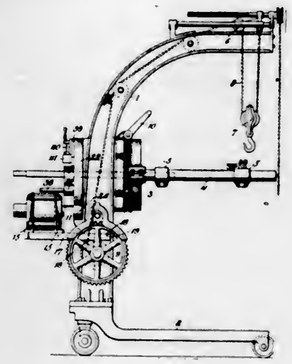
1,382,656. SHOE-BLANK-SKIVING MACHINE. ELMER E. LANE, South Berwick, Me., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 18, 1917, Serial No. 181,445. Renewed July 30, 1919. Serial No. 314,270. 34 Claims. (Cl. 12—17.)

1. A shoe blank skiving machine, having, in combination, a skiving knife, a die roll, a pressure roll, a matrix rotatably mounted on the die roll, means for rotating the rolls, and independent mechanism for rotating the matrix at the same speed as the die roll.

1,382,657. COUPLING. FRED L. LIPCOTT, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed June 3, 1919. Serial No. 301,404. 3 Claims. (Cl. 64—96.)

3. In combination with two shafts, a coupling member secured to each shaft, a flexible coupling member to which each of said first named coupling members is secured whereby universal movement between said rings is afforded, a sectional housing inclosing said flexible coupling member and including a telescoping cover section, bolts for connecting the flexible coupling member with one of said first named coupling members and passing through one of the sections of the housing, washers interposed between the flexible coupling member and the inner wall of the last named section of the housing, and a lock nut on the hub of the other of said coupling members to maintain the cover section of the housing in proper relation to the other section of the housing.

1,382,658. SOLE. AUGUSTINE FRANK LITTLEFIELD, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 18, 1919. Serial No. 291,101. 10 Claims. (Cl. 36—22.)

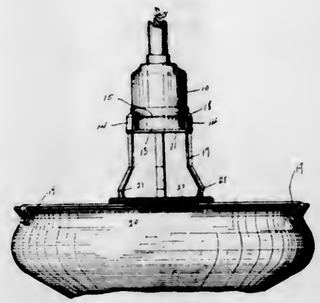


7. A sole for shoes comprising a body portion and a strip of reinforcing fabric secured to the marginal portion of the sole having a cord incorporated therein lip-distant from the edge of the strip.

1,382,659. RUNNING, STARTING, AND BURNING-IN ATTACHMENT FOR MOTOR-HANDLING MACHINES. CHARLES D. MCCONNELL and JOHN MARTIN BRYSON, Oskaloosa, Iowa. Filed Jan. 31, 1920. Serial No. 355,423. 10 Claims. (Cl. 29—1.)

1. A running, starting and burning-in attachment for automobile-engines handling machines comprising a suitable frame, an electric motor attached to the frame, a rotatable member carried by the frame for connection to the crank shaft of an automobile engine, gearing between the electric motor and the rotatable member, and readily

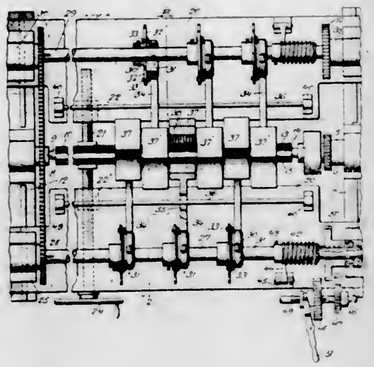
removable connections between the frame and engine handling machine, whereby the attachment may be used



with the engine handling machine or separate therefrom at will.

1,382,660. MEASURING VESSEL. JOHN C. MCKALLIP, Houston, Tex. Original application filed Apr. 16, 1918, Serial No. 228,889. Divided and this application filed Feb. 13, 1919. Serial No. 276,782. 4 Claims. (Cl. 220—82.)

1. A measuring vessel of the character described including cap and base heads, slats extending between and supporting said heads in spaced relation, panels disposed between the slats and coöperating therewith to form the body wall of the vessel, connecting means between the slats and said heads extending freely through the heads and engaged with the ends of the slats for loosely connecting the slats with the heads, and means acting to circumferentially contract said wall for binding the slats and panels together.

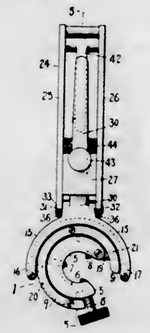


1,382,661. SHADE-HOLDER FOR LIGHTING-FIXTURES. EARLE C. MCKINNIE, Chicago, Ill., assignor to National X-Ray Reflector Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 21, 1919. Serial No. 318,850. 2 Claims. (Cl. 240—115.)

1. A bowl holder for lighting fixtures comprising in combination a collar adapted to fit over the socket receiving shell, and channels in the collar; a plurality of arms depending from, and loosely secured within the channels in the collar, said arms extending downwardly in a substantially vertical plane and thence outwardly to the edge of the bowl and terminating in hooks to receive the bowl, an outwardly projecting shoulder formed in each arm above the point where it flares outwardly; a ring to encircle the substantially vertical portions of the arms and

designed to be forced downwardly over the outwardly projecting shoulders, substantially as shown and described.

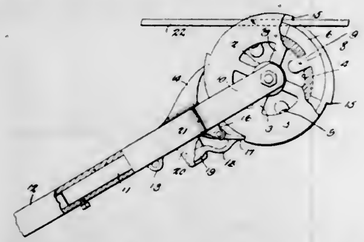
1,382,662. METHOD OF AND MEANS FOR CUTTING SCREW-THREADS. CLIFFORD P. MARYE, Chicago, Ill. Filed Dec. 17, 1917. Serial No. 207,397. 6 Claims. (Cl. 10—1.)



1. The method of producing screw threads in or on an object to be threaded which consists in providing a milling tool rotatable on a stationary axis; rotating said tool at a relatively high speed and coincidentally moving a plurality of objects to be threaded about the axis of the tool in contact therewith and relatively moving the tool and objects in an axial direction.

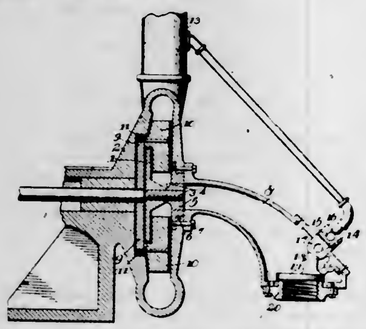
3. A machine for coincidentally milling threads in or on a plurality of objects to be threaded, having independent means for holding the objects; milling means for cutting the threads; independent means for relatively moving the milling means and objects laterally toward and from each other; means to rotate the milling means; means to independently move the objects about the axis of the milling means; and means to relatively move the objects and milling means axially to generate the threads in or on the objects.

1,382,663. EXTENSOMETER. FERDINAND F. METZGER, Philadelphia, Pa. Filed June 25, 1917. Serial No. 176,678. 12 Claims. (Cl. 33—147.)



1. A device of the character described comprising, two gimbal joints comprising clamping means, a member car-

rying the gimbal joints in which the latter are yieldingly mounted in relation to each other, and means actuated

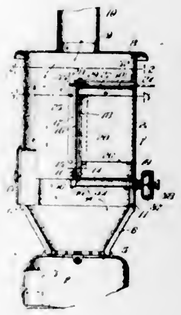


by the gimbal joints for indicating the variation in the distance between the gimbal joints.

1,382,664. TROLLEY-WHEEL. OTTO MOORE, Frankfort, Ind. Filed Mar. 26, 1919. Serial No. 285,264. 2 Claims. (Cl. 191—59.)

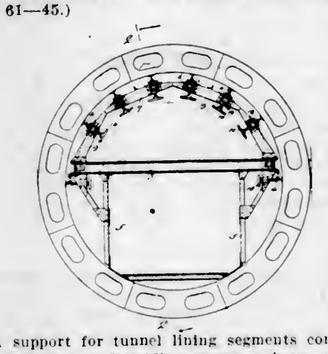
1. In a device of the class described, a harp; a trolley wheel journaled thereon and comprising separately removable tread sections; and a pawl and ratchet connection between the harp and the wheel and operating to hold the wheel against rotation in one direction, thereby to present the tread sections one at a time fixed for sliding engagement with a trolley wire, the pawl and ratchet mechanism permitting a rotation of the wheel in an opposite direction, thereby to present different tread sections for fixed sliding engagement with the wire.

1,382,665. CENTRIFUGAL PUMP. LAWRENCE A. MYERS, Visalia, Calif. Filed Oct. 7, 1918. Serial No. 257,204. 4 Claims. (Cl. 253—194.)



1. A centrifugal pump, comprising a pump case having a water inlet with a counterbore, a runner operating in the pump case and mounted on a shaft located co-axially of said inlet, said runner comprising a runner plate, a plurality of impeller blades with inside bosses offsetting the blades and leaving a channel adjacent to the runner plate; and means including a baffle plate supported over the water inlet occupying said channel and isolating the runner from the reduced pressure at the inlet, means spanning the water inlet for rigidly supporting the baffle plate; the support of said baffle plate comprising a portion occupying and secured in the counterbore.

1,382,666. WINDOW-FASTENER FOR AUTO-CURTAINS. FRANK B. NIHART, Bay Minette, Ala. Filed May 7, 1918. Serial No. 233,060. 1 Claim. (Cl. 296—145.)

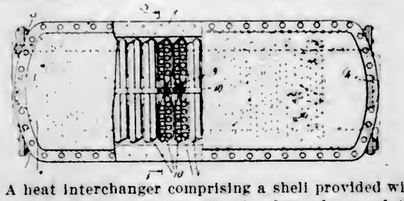


The herein described frame for securing a flexible window within an opening in a curtain, the same comprising a metal strip folded longitudinally and having one side flat, the other side formed into a strip lying adjacent the first side, an outstanding shoulder forming a rabbet with said strip, and a bowed portion beyond the shoulder whose free edge constitutes a gripping jaw, means for drawing this edge toward the flat side to grip the curtain, an arched strip disposed in said rabbet and adapted to overlie the window, and a fastening screw passing through this strip and the window, through the strip beneath, and engaging the flat side.

1,382,667. HEATING-STOVE. MICHAEL NORTH, Chicago, Ill. Filed Nov. 8, 1918. Serial No. 261,600. 5 Claims. (Cl. 126—77.)

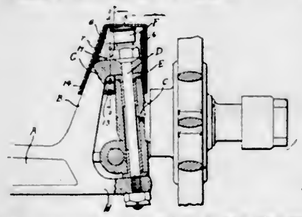
5. In a stove, the combination of a casing having a fire box at the lower end and a draft outlet at the upper end, supporting means extending inwardly from the wall of the casing above the fire box, and a horizontal partition with vertical partitions thereabove supported by the said means for dividing the casing above the fire box into a plurality of vertical passageways, and adjustable means for affording circulation directly from the fire box to the draft opening or consecutively through said passageways.

1,382,668. MEANS FOR SUPPORTING TUNNEL-LINING SEGMENTS. JOHN F. O'ROURKE, New York, N. Y. Filed Nov. 8, 1919. Serial No. 336,729. 15 Claims. (Cl. 61—45.)



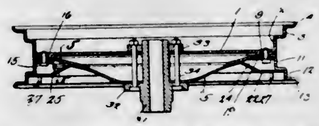
1. A support for tunnel lining segments comprising a frame having spaced guiding means, a beam movable in said guiding means, and means carried by said frame to retain said beam set against said segments.

1,382,669. PROCESS OF DEVULCANIZING RUBBER. WILLIAM BEACH PRATT, Wellesley, Mass., assignor to Rondout Rubber Company, East Dedham, Mass., a Corporation of New York. Filed Oct. 23, 1914, Serial No. 868,205. Renewed Dec. 1, 1920. Serial No. 427,656. 13 Claims. (Cl. 18—52.)



1. The herein described process of treating vulcanized rubber, which consists in subjecting such rubber to the action of oxalic acid.

1,382,670. HEAT-INTERCHANGER. JOSEPH PRICE, New York, N. Y., assignor to The Griscom Russell Company, a Corporation of Delaware. Filed Feb. 8, 1919. Serial No. 275,746. 7 Claims. (Cl. 257—235.)

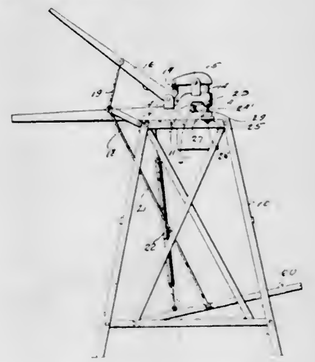


2. A heat interchanger comprising a shell provided with inlet and outlet connections for the flow of one of the heat interchange fluids, and a plurality of flat coils in two coil units arranged within the shell each coil being in staggered relation to the other coil of the same unit and the adjacent coil of the next unit in the direction of the flow of liquid therethrough said coils being provided with inlet and outlet connections for the flow of the other heat interchange fluid.

1,382,671. DUST AND DIRT CAP FOR FRONT-AXLE ENDS. CHESTER JOE PUGH, Ida, La. Filed May 17, 1920. Serial No. 382,060. 5 Claims. (Cl. 280—96.1.)

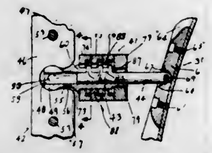
1. A dust protector arranged to house the upper end of the spindle bolt and the upper end of the forked terminal of the front steering knuckle of motor vehicles, comprising a housing, and a releasable catch arranged to detachably hold the housing in position against accidental displacement.

1,382,672. DISK WHEEL FOR VEHICLES. ROSCOE CONKLIN RACER, Richmond, Va. Filed Mar. 30, 1921. Serial No. 456,990. 4 Claims. (Cl. 301—63.)



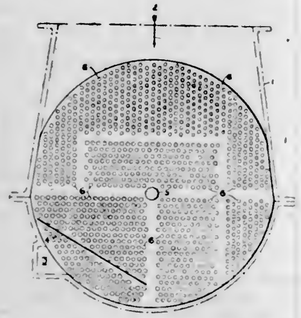
1. The combination with a disk having an annular stepped flange at its periphery, of a concavo-convex disk spaced at its center from the other disk, the two disks being welded together adjacent their peripheries, a ring removably mounted on the peripheral portion of the concavo-convex disk and having an annular stepped flange cooperating with the stepped flange on the disk to form an annular tire receiving channel, a locking ring carried by the flanged ring, means on the concavo-convex disk and cooperating with the locking ring for holding the flanged ring in position, means for securing the locking ring in position against relative movement, and a covering ring detachably connected to the concavo-convex disk for concealing the locking ring and that portion of the flanged ring engaged thereby.

1,382,673. PROCESS FOR THE PRODUCTION OF MEAT POWDER. WILLIAM FREDRICK REMUS, Rangatana, and ALEXANDER EDMUND MACREDIE and CHARLES FREDERICK CORK, Auckland, New Zealand. Filed Sept. 10, 1919. Serial No. 322,996. 1 Claim. (Cl. 99—5.)



A process for the production of meat powder consisting in the subjection of raw cold meat in blocks to the drying action of a chamber in which a temperature of approximately 135° Fah. is maintained for a period of from 36 to 40 hours, subsequently subjecting such meat to a smoking action for a period of about eight hours and finally pulverizing the resultant product, substantially as specified.

1,382,674. PUNCHING-MACHINE. VERN RICH, Mount Vernon, S. D. Filed Dec. 18, 1919. Serial No. 345,817. 3 Claims. (Cl. 164—96.)



1. A punching machine comprising a stand having punching dies thereon, a laterally extending and longitudinally slotted arm carried by one of the dies, an angle plate adjustable longitudinally with respect to the slotted arm toward and away from the die and having one of its arms slotted, and a block having a vertical pin and slidably adjustable on the slotted arm of the angle plate.

1,382,675. SAFETY-LOCK. JOSEPH ROSZMANN, Covington, Ky. Filed July 19, 1920. Serial No. 397,282. 3 Claims. (Cl. 70—132.)

1. In a locking mechanism of the character described, the combination of a pair of elements in the form of a brake-lever and a release-lever, a tube-member and a stem-member pivoted to said respective elements and extending toward each other between said elements, said stem-member movable axially in said tube-member, said stem-member provided with locking parts, and said tube-member provided with a slot in which said locking parts move, and rotatable members between said elements about said tube-member and said stem-member, said rotatable members provided with locking portions coacting with said first-named locking parts.

1,382,676. CONDENSER. ARTHUR EDWIN LEIGH SCANES, Ashton-on-Mersey, England, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 10, 1920. Serial No. 372,942. 3 Claims. (Cl. 257—24.)

1. A condenser of the surface type having inlet means, outlet means and water tubes, a group of said tubes being arranged in lines parallel to the flow of steam through the inlet and at the sides thereof and other group or groups of tubes arranged in parallel lines perpendicular to the lines of the first group.

1,382,677. CULINARY IMPLEMENT. FRITZ SCHMITZ, Brooklyn, N. Y., assignor to Jaburg Brothers, New York, N. Y., a Firm of New York. Filed Dec. 1, 1920. Serial No. 427,513. 4 Claims. (Cl. 107—51.)

1. A culinary article of the kind described comprising a roller consisting of a series of laterally spaced cutting disks and spaced longitudinally extending bars associated with said disks in radial relation to the axis of the roller and having their outer longitudinal edges disposed in the plane of the peripheral faces of the disks, and die members arranged between the longitudinal bars and supported by said disks.

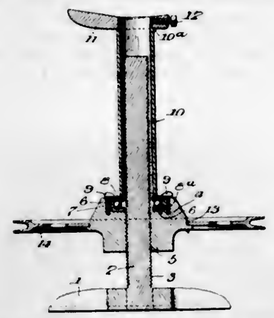
1,382,678. FELT PAD. WILLIAM M. SCHOLL, Chicago, Ill. Filed Aug. 28, 1916. Serial No. 117,210. 1 Claim. (Cl. 128—153.

A pad for foot treatment, comprising a body of felt without seams or interruptions, of ovate shape in plan and smooth curvatures on its crown surface, said body having a recess in its under surface and an opening from said recess to the crown surface, there being a tapering minor recess intervening between the inner edges of said opening and the major recess.

1,382,679. WATER-BOTTLE STOPPER. MAXIMILIAN CHARLES SCHWEINERT, West Hoboken, N. J. Filed Aug. 27, 1915. Serial No. 47,606. 1 Claim. (Cl. 150—8.)

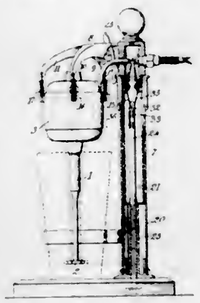
A metal stopper having a rubber gasket adherent to it and of such firmness as to be free from substantial deformation in use.

1,382,680. RELOADING MECHANISM FOR MAGAZINE-FIREARMS. ELBERT H. SEARLE, Bridgeport, Conn. Original application filed July 22, 1918, Serial No. 245,981. Divided and this application filed May 31, 1919. Serial No. 301,036. 10 Claims. (Cl. 42—3.)



1. In a fire-arm having a reciprocating breech-closure, an extractor carried by said breech-closure, a rod extending rearwardly from said extractor and drawing rearwardly thereon, and a longitudinally reacting spring on the breech-closure pressing rearwardly upon said rod and thereby holding the extractor to its duty.

1,382,681. TOOTHBRUSH. SAMUEL SEGAL, New York, N. Y. Filed May 15, 1920. Serial No. 381,654. 2 Claims. (Cl. 15—39.)



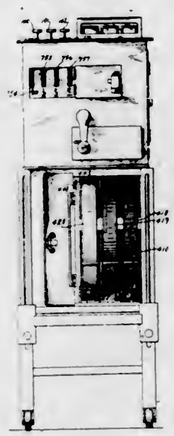
1. A tooth brush having a head with separated masses of long flexible bristles fastened to the head thereof and masses of shorter and appreciably more rigid bristles intermediate the masses of long bristles and also fastened to the head thereof, said long bristles being adapted to perform a cleansing operation on the teeth when ordinary pressure is applied to the brush and being also adapted to be bent over when greater pressure is applied to the brush to permit the short and rigid bristles to scrape the teeth.

1,382,682. JACK. JONATHAN C. SEYMOUR and ANGUS MCKELLAR, Salt Lake City, Utah. Filed May 7, 1920. Serial No. 379,503. 11 Claims. (Cl. 254—98.)

1. A jack comprising a base, a primary supporting stand thereon, a movable member adjustably mounted on said standard and having an annular raceway, antifriction units for said raceway, power applying means adapted to coöperate with said movable member, and a supplemental standard mounted for coöperation with said antifriction units and freely rotatable thereon and extending directly therefrom as a rigid spacing member to engage work.

1,382,683. DRINK-MIXER. WILLIAM GENTRY SHELTON, New York, N. Y. Filed Feb. 3, 1921. Serial No. 442,106. 11 Claims. (Cl. 259—135.)

1. A drink-mixer, comprising an elongated stirrer, and a relatively free suspension for said stirrer, adapted to easily yield under the reactions to the rotation of said stirrer in a liquid mixture, in such manner and that the axis of said rotary stirrer may revolve, and thereby generate the surface of a cone or cylinder.

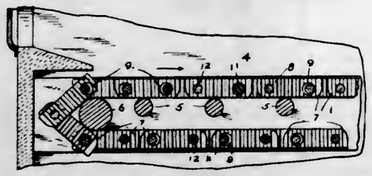


1,382,684. NOZZLE. EDMUND W. SHIMPER, Irvington, N. J. Filed Aug. 15, 1918. Serial No. 249,928. 2 Claims. (Cl. 299—140.)

1. A mixing nozzle of the character and for the purposes stated comprising a pair of separably connected tubular elements, one of said elements being provided with a discharge-end, and the other element being provided with means for its attachment to a hose or the like for admitting a fluid, into and through said connected tubular elements, an internally and longitudinally disposed tube within and concentric with one of said tubular elements, said tube being open at both ends, one of said open ends located directly at the discharge-end of said tubular element, said tube having its other end-portion extending into and terminating in the other tubular element, said tube being adapted to receive some of the fluid admitted into the connected tubular elements, said last-

mentioned tubular element being provided in its side with an opening, an inlet-tube mounted in said opening, said inlet-tube having a bent portion extending into and terminating in said internally disposed tube at a point substantially back of the discharge opening thereof for carrying another fluid into said internally disposed tube, substantially as and for the purposes set forth.

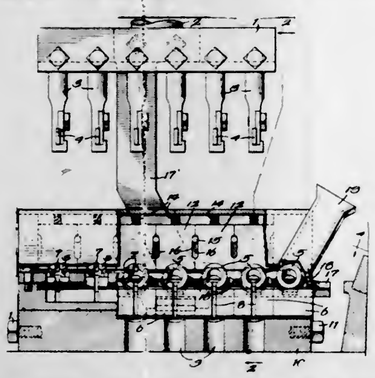
1,382,685. TICKET-PRINTING MACHINE. FRANCESCO SKERL, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio. Filed May 15, 1916. Serial No. 97,584. 29 Claims. (Cl. 235—3.)



6. In a machine of the class described, the combination of a totalizer element, a plurality of totalizer actuators common thereto having an invariable extent of movement, means for independently adjusting the actuators to vary their effective lengths, means for retaining the actuators in adjusted position during successive operations, and means for establishing operative relationship between the totalizer element and any desired actuator.

16. In a machine of the class described, the combination of a driving mechanism, a totalizer, a totalizer actuator, means for connecting the totalizer with the actuator, an operating device for said means adjustable to effect connection of the totalizer and actuator at different points in the movement of the driving mechanism, and means invariably disconnecting the totalizer from the actuator at the same point in the movement of the driving mechanism.

29. In a machine of the class described, a totalizer, actuators therefor adjustable in position for varying the characteristic amount thereof, driving means for said actuators, a control member for said driving means acting at a plurality of places to limit the transmission of said driving means comprising a member positioned to

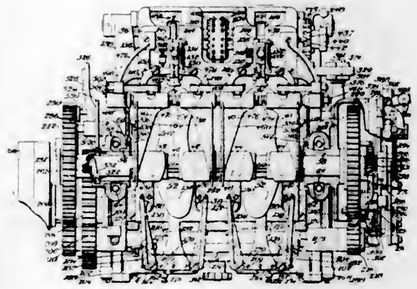


move about the center of the actuator, manipulative devices and connections between said control member and the same, a power transmitting member on said control member, and means moving said control member to position said power transmitting member whereby power is transmitted to said actuator.

1,382,686. CHAIN GRATE. SOLOMON S. SLAUGHAN, Homestead Park, Pa. Filed Apr. 20, 1920. Serial No. 375,256. 2 Claims. (Cl. 110—40.)

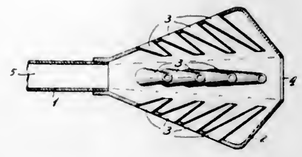
1. An endless chain grate comprising rows of links, each link of a row provided near one end with laterally projecting tapered trunnions larger in diameter at their outer than at their inner ends and near its other end with a transverse perforation gradually decreasing in diameter from its center toward each end thereof, the trunnions of one link extending into the perforations of a pair of links of adjacent rows of links for connecting the links together.

1,382,687. PUNCHING-MACHINE. ARTHUR SPEAR, Chicago, Ill. Filed Sept. 16, 1918. Serial No. 254,289. 18 Claims. (Cl. 10—72.)



1. A punching machine including a plurality of punches and two object engaging members for holding a plurality of objects therebetween, one member serving to maintain the objects in position while being operated upon by the punches and one member being formed of relatively movable sections movable toward and from the other member.

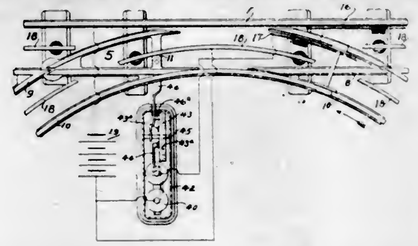
1,382,688. TUNING-SLIDE FOR TRUMPETS AND THE LIKE. EDWARD BENJAMIN STEINDORFF, Stillwater, Minn. Filed Dec. 6, 1920. Serial No. 428,503. 2 Claims. (Cl. 84—394.)



1. A wind instrument having a tuning slide and guide tubes in which the tuning slide works, a rod fixed to the tuning slide and paralleling a portion thereof in one of the guide tubes, a bearing stud projecting from the said guide tube, a tubular stop member freely slidable through the said bearing stud and having a threaded bore receiving the threaded adjusting rod, and members at opposite ends of the said tubular stop, coöperating with the bearing stud to limit the movements of the tuning slide as described.

1,382,689. SKIVING-MACHINE. WILLIAM C. STEWART, Swampscott, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 11, 1917. Serial No. 174,027. 70 Claims. (Cl. 12—17.)

1. A shoe blank skiving machine having, in combination, a skiving knife, a pressure roll, a die roll having a matrix, means to rotate said rolls to feed a blank against the skiving knife, and means to relatively move the blank and matrix in the direction of feed during the skiving operation.

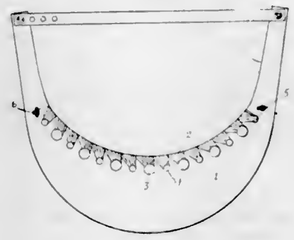


1,382,690. APPARATUS FOR SILENCING AND EXHAUSTING GASES AND METHOD THEREFOR. CHARLES LAWRENCE STOKES, New York, N. Y. Filed Oct. 27, 1917. Serial No. 198,802. 12 Claims. (Cl. 137—160.)

3. The combination as claimed in claim 1, wherein the said casing is of conical form and said pipe communicates with the smaller end of the casing, the air inlet tubes extending into said casing from all parts of the conical wall thereof, the wall of the casing remote from said pipe being conical and provided with an aperture which is of at least the same size as the interior diameter of said pipe.

1,382,691. ELECTRIC TOY. NICHOLAS THEOFILOS, Chicago, Ill. Filed Apr. 19, 1920. Serial No. 375,041. 2 Claims. (Cl. 104—149.)

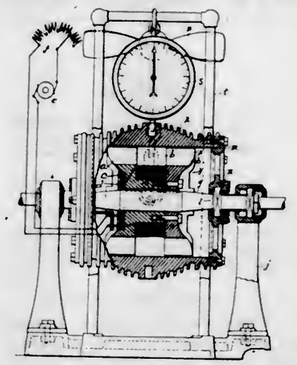
1. In a toy, three track loops arranged within each other, a switch at the junction of the two inner loops, a pair of electromagnets, a rotatable cam mechanism operatively connected to throw said switch alternately back



and forth, and elements on the armature of said magnets for rotating said cam mechanism.

1,382,692. PHONOGRAPH. WALTER W. THORPE, Pelham, N. Y., assignor to Electric Phonograph Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 12, 1920. Serial No. 423,069. 2 Claims. (Cl. 274—23.)

1. In a phonograph, a sound reproducing device, an amplifying horn, a connection between said parts comprising a rotatable hollow knuckle depending from said horn, and a tubular connection leading from said reproducer to said knuckle and including a hinged joint to permit the reproducer to be lifted up and down and a rotatable connection between said hinged joint and said knuckle.



1,382,693. EYE-SHADE. GEORGE H. TILESTON, Kansas City, Mo. Filed Apr. 13, 1920. Serial No. 373,574. 2 Claims. (Cl. 2—149.)

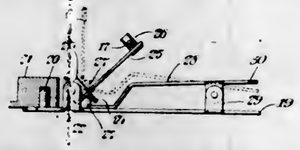
1. The combination with an eye-shade having ventilation holes, of a strip of flexible material passing alternately through said holes and over the edge of the shade which fits adjacent the forehead, and means for securing the ends of the said strip to the shade.

1,382,694. DYNAMOMETER. GEORGE S. TOWAR, Detroit, Mich. Filed July 13, 1917. Serial No. 180,304. 4 Claims. (Cl. 265—24.)

1. The combination constituting a dynamometer of a hollow integral cylinder of magnetic metal adapted to turn about its axis and provided with means for measuring the torque exerted thereon and a field magnet concentric with said armature and adapted to rotate in the same, and means for connecting said field magnet with a source of power to rotate said field magnet, said armature

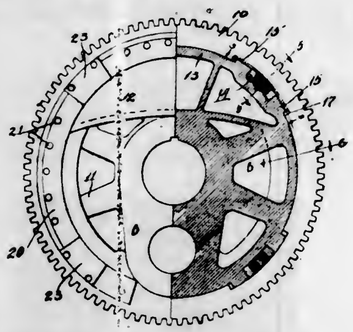
being provided with cooling ribs, substantially as and for the purpose described.

1,382,695. GAME APPARATUS. CHARLES W. VAN VLEET, Kingston, N. Y., assignor of one-third to Robert C. Riddick, Kingston, N. Y., and one-third to Charlotte A. Maxwell, Saugerties, N. Y. Filed Jan. 5, 1920. Serial No. 349,409. 3 Claims. (Cl. 46—56.)



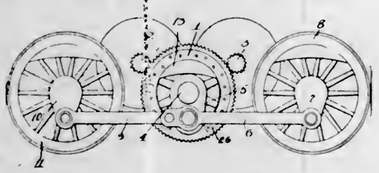
1. A game apparatus comprising a board having a course indicated on its surface by a succession of spots of various designations, said course leading deviously from a starting point to a goal, a position indicating device, a series of game-pieces severally movable along said course and upon certain spots as determined by the manipulation of the indicating device, and a projectile shooting device pivotally mounted adjacent one side of said board and adapted to be manipulated to shoot a projectile toward a game-piece located on said course.

1,382,696. PROJECTILE-THROWING DEVICE FOR GAME APPARATUS. CHARLES W. VAN VLEET, Kingston, N. Y., assignor of one-third to Robert C. Riddick, Kingston, N. Y., and one-third to Charlotte A. Maxwell, Saugerties, N. Y. Original application filed Jan. 5, 1920, Serial No. 349,409. Divided and this application filed May 22, 1920. Serial No. 383,382. 1 Claim. (Cl. 124—1.)



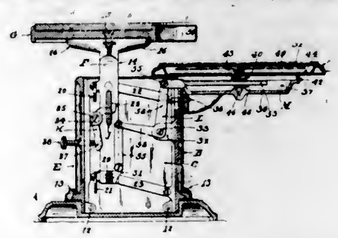
In a projectile throwing device for game apparatus, a base, an upwardly-extending swinging arm pivotally supported at its lower end on said base, a projectile holder on the upper end of the arm, a tail-piece depending angularly from said arm adjacent the pivot of the latter, and a trigger lever fulcrumed on said base at a point in spaced

relation to the pivoted end of the swinging arm, the longer member of said lever extending toward the pivoted end of the arm and terminating in an upstanding angular portion in frictional contact with the lower surface of



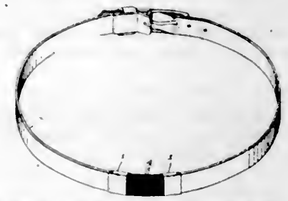
the said tail-piece, and the shorter member of the lever constituting a finger piece by the actuation of which the longer member imparts an upward swinging movement to the tail-piece and the arm.

1,382,697. TRANSMISSION-GEAR. JAMES MILTON WAUGH, Chicago, Ill. Filed Oct. 2, 1919. Serial No. 327,960. 8 Claims. (Cl. 74—29.)



1. A transmission gear comprising a ring gear, a wheel member mounted therein and provided with pockets, resilient plates disposed transversely in the pockets, follower blocks associated therewith and movable with said plates in said pockets, abutments on the ends of said pockets to resist retractive movements of the follower blocks, and abutments on said ring gear contacting said follower blocks to thrust the same toward one another and stress said resilient members when a drive is transmitted by the transmission gear.

1,382,698. RESILIENT TRANSMISSION-GEAR. JAMES MILTON WAUGH, Chicago, Ill. Filed Oct. 10, 1919. Serial No. 329,709. 1 Claim. (Cl. 74—29.)

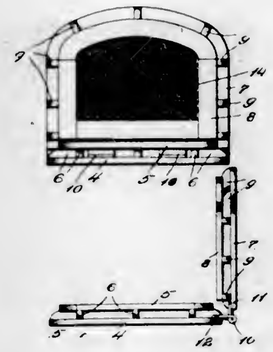


A power transmission element comprising a wheel, a plurality of pockets therein, a rim movably mounted on said wheel, abutments on said wheel and rim adapted to contact one another in extreme positions of adjustment to limit the extent of lost motion between the wheel and rim, a plurality of groups of resilient friction plates mounted within said wheel pockets to resist displacement of said wheel and rim relative to one another, and projections on said rim adapted to project between the groups of friction plates in said pockets to afford a yieldable driving connection between said wheel and rim.

1,382,699. WEIGHING-SCALE. MATHIAS J. WEBER, Chicago, Ill., assignor to Continental Scale Works, Chicago, Ill., a Corporation of Illinois. Filed Dec. 20, 1919. Serial No. 346,291. 6 Claims. (Cl. 265—68.)

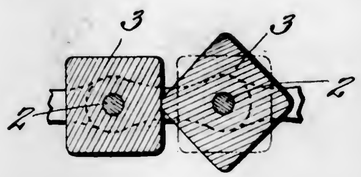
1. In weighing scales of the type set forth, the combination, of a casing, a platform above said casing, spring-actuated means for supporting said platform and permitting vertical movement thereof, a housing extending horizontally from the front of said casing, a vertically disposed pinion shaft rotatably mounted in said housing, a graduated dial plate mounted on said housing, an index hand mounted on said pinion shaft, mechanism for transmitting vertical movement of said platform to said index hand, means for adjusting the tension of the spring-actuated mechanism, means for preventing access to said adjusting mechanism, and means for raising and lowering said platform and associated mechanism for changing the position of the index hand with reference to the graduations on the dial plate.

1,382,700. FLEXIBLE MEMBER FOR BELTS. WILLIAM J. WHALEN, Cleveland, Ohio. Filed July 31, 1919. Serial No. 314,507. 4 Claims. (Cl. 241—8.)



1. In combination with a belt for personal wear, clamping members, means in said clamping members adapted to removably retain said belt in said clamping means, coiled springs interconnecting said clamping members, a wedge-shaped member on said clamping member adapted to engage between the convolutions of said coiled springs, and a clip adapted to retain said coiled springs in engagement with said wedge-shaped member.

1,382,701. RETAINER-BAR FOR TRUNKS. GEORGE HENRY WHEARY, Racine, Wis. Filed June 10, 1919. Serial No. 303,098. 10 Claims. (Cl. 190—36.)



1. A retainer bar, comprising a bar member having a yielding bolt member on one side end which is automatically moved to unlocked position by a swinging movement of the bar member and having a manually operated yielding bolt member on its opposite side end which locks the bar against movement in one direction, said bar being adjustable in one direction without a swinging movement.

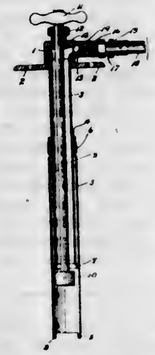
1,382,702. VENTILATED UPHOLSTERED FURNITURE. FRANK ORMOND WHITE, Belleville, Ill. Filed July 12, 1919. Serial No. 310,454. 2 Claims. (Cl. 155—5.)

1. In furniture, a base plate and a seat element, said base plate and seat element secured in spaced relationship by means of rigid supports, said seat element located concentric the base plate and of smaller area than said base plate, a back plate and a back element secured in concentric constant spaced relationship by means of rigid supports, said back element of smaller area than said back plate element, said seat element and back element secured in operative relationship.

1,382,703. LINK CHAIN. ERNEST F. WIEDERHOLDT, St. Louis, Mo. Filed July 15, 1920. Serial No. 396,608. 4 Claims. (Cl. 74—64.)

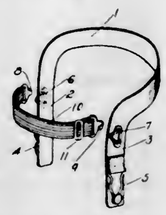
1. A chain composed of links pivotally connected together by pintle bars, and substantially rectangular spacer blocks mounted on said pintle bars and capable of rotatable adjustment thereon, whereby new wearing faces may be presented for action.

1,382,704. DISPLAY-CABINET. FRANK WOLF, New York, N. Y. Filed Apr. 4, 1919. Serial No. 287,411. 4 Claims. (Cl. 211—28.)



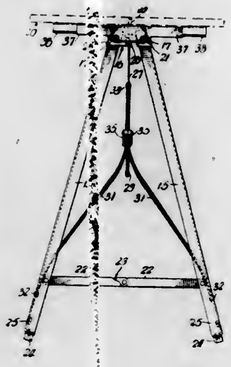
1. In a display cabinet, an upright back, a plurality of stepped shelves disposed forwardly of said back adapted to support cards, retaining means at the forward edge of said shelves adapted to retain the lower corners only of the cards, and hold the cards uprightly and exposed upon said shelves, and means on said shelves adapted to support said cards at spaced points.

4. In a display cabinet, an upright back, side walls, and a central partition extending forwardly and at right angles to said back, a plurality of stepped shelves disposed forwardly of said back at each side of said partition, the lowermost shelf being forwardly of the uppermost shelf, spaced-apart supports arranged upon the shelves and having rearwardly and downwardly inclined upper edges adapted to support cards at a rearward inclination, and retaining means carried by said side walls projecting over the forward edge portion of the shelves to engage and maintain



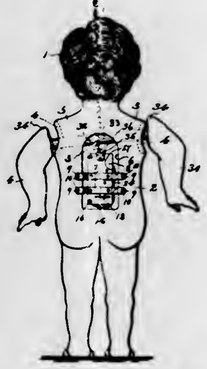
cards on the supports of the shelves and with their outer faces unobstructed.

1,382,705. GREASE-GUN FOR BARRELS AND THE LIKE. A J WOOD, Grand Rapids, Mich., assignor to Bennett Injector Company, Muskegon, Mich., a Corporation of Delaware. Filed Feb. 24, 1920. Serial No. 360,864. 6 Claims. (Cl. 221—83.)



4. In a device of the character described, a head having a passage therethrough, a spring actuated valve in said passage normally closing the same, a tube connected to and depending below the head, a piston rod located lengthwise of the tube, a piston attached to the lower end of the rod, and a handle at the upper end of the rod above the head, said rod passing through the head and being of such length that the piston passes below the lower end of the tube in lowermost position, and a larger tube extending below the lower end of the first tube, substantially as described.

1,382,706. HOSE-SUPPORTER. CLAIR G. WRIGHT, Kansas City, Mo. Filed July 22, 1920. Serial No. 398,209. 3 Claims. (Cl. 241—6.)

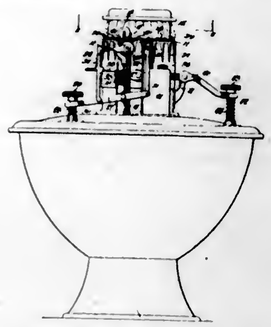


1. A garter comprising a non-elastic major portion having depending sides, the ends of which are adapted for engagement with the hose, and a removable elastic connecting the opposite sides.

1,382,707. FOLDING STAND. WILLIS G. YOUNG, Chicago, Ill. Filed July 2, 1920. Serial No. 393,596. 8 Claims. (Cl. 45—11.)

1. A folding stand comprising, legs arranged in pairs, end brackets, one for each pair of legs, said legs being pivoted to the associated bracket so as to swing in the plane thereof, said brackets having stop shoulders to limit the outward opening movement of said legs, folding brace bars connecting the bottom ends of each pair of legs together, upper extension links pivoted to each other at one end and to said brackets at their other ends, lower brace links arranged in pairs and pivotally connected together at their top ends, there being a pair of such links associated with each pair of legs, the links of each pair of brace links being connected to each of the associated legs and straddling and crossing one of said extension links, and means providing an interlocking connection between said extension links and said brace links.

1,382,708. MECHANICAL DOLL. DAVID ZAIDEN, East Orange, N. J. Filed Dec. 14, 1920. Serial No. 430,676. 6 Claims. (Cl. 46—40.)



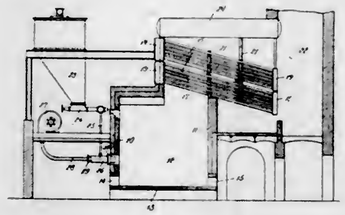
1. In a doll of the kind described, a body having a chambered interior and provided at opposite sides adjacent to the shoulder portions thereof with openings, a transverse bar within said body having its respective ends projecting through said side openings, arm portions carried by the ends of said bar, a pivoted transversely oscillatable lever upon the free end of which said bar is supported, and a spring motor mechanism within said body for actuating the oscillatable movement of said lever and said bar carried by the latter.

1,382,709. HANGER-BRACKET. FELIX P. ZALEVSKI and LAWRENCE P. HAYSHKA, Preston, Ontario, Canada. Filed July 16, 1920. Serial No. 396,866. 1 Claim. (Cl. 68—34.)

In a device of the class described, a vertical member, a horizontal rod extending from the vertical member, a strut secured to said vertical member and supporting said horizontal rod, a trolley having limited travel on said rod, means on the trolley for suspending an article therefrom, a three-cornered body pivotally connected at one of its corners to said strut, a connecting rod pivotally connected to said three-cornered body at another corner thereof, and pivotally connected to said trolley, a lever fulcrumed to said vertical member, a connecting rod pivotally connected to said lever and pivotally connected to the three-cornered body at its other corner.

1,382,710. LAMP-OPERATING MECHANISM. ARNOLD H. BAESEMANN, Rib Falls, Wis. Filed Aug. 1, 1919. Serial No. 314,608. 6 Claims. (Cl. 67—10.1.)

1. The combination with a burner, of a receptacle for volatile fuel including a neck portion, a wick slidable in said neck portion and movable therefrom to a position adapted to transmit flame to the burner, sparking mechanism including a movable sparking member yieldingly urged in direction of sparking movement, means for moving the volatile fuel wick from said receptacle neck, means actuated by said last named means for moving said sparking member in opposition to its yielding member, and means for releasing said sparking member near the end of said wick movement.

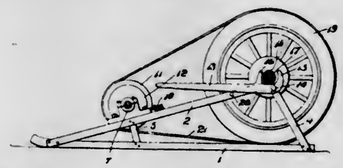


1,382,711. SELF-LEVELING APPARATUS. JOSEPH BAKOVICH, Hermonie, Pa. Filed Nov. 6, 1920. Serial No. 422,201. 2 Claims. (Cl. 114—195.)

1. A leveling mechanism comprising a base, an intermediate frame pivotally connected with the base, a platform pivotally connected with the frame, a gear mechanism carried by the base and having flexible connections with the ends of the frame, a gear mechanism carried by the frame and having flexible connections with the ends

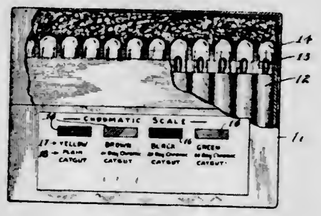
of the platform, said gear mechanisms disposed at right angles to each other, and shiftable carriages carried by the base and frame for operating the gear mechanism to balance the frame and platform.

1,382,712. BURNING PULVERIZED FUEL. HENRY G. BARNHURST, Allentown, Pa., assignor to Fuller Engineering Company, a Corporation of Pennsylvania. Filed June 26, 1918. Serial No. 242,099. 2 Claims. (Cl. 110—28.)



1. The method of utilizing pulverized fuel in a stationary boiler having a furnace lined with refractory material which consists in introducing pulverized fuel and air into the furnace and igniting the mixture thereof within the furnace, maintaining the supply of fuel and air to the furnace substantially continuously to maintain continuous combustion within the furnace, and causing the deflagrating fuel and the gases of combustion to flow through the furnace at low velocity such that at the point in the travel of the gases through the furnace at which the highest temperature is reached the velocity will be substantially seven feet per second, to substantially avoid erosion of the refractory walls of the furnace and insure that combustion of the fuel will be complete within the furnace.

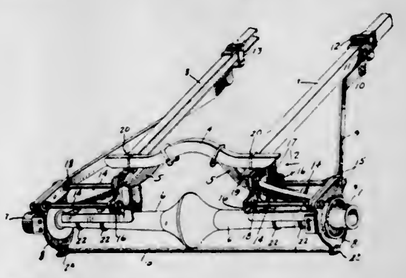
1,382,713. PRINTING-PLATE MATRIX AND METHOD OF MAKING SAME. HARRY M. BLAETZ, Philadelphia, Pa., assignor to The Conley Foil Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 6, 1919. Serial No. 336,095. Renewed Apr. 26, 1921. Serial No. 464,570. 9 Claims. (Cl. 101—401.1.)



1. A matrix for making printing plates comprising a backing composed of a relatively thick sheet of ductile easily moldable metal and a matrix face mechanically united with said backing and comprising an exceedingly thin film of a relatively hard non-oxidizing metal.

1,382,714. MOTOR-VEHICLE-POWER-PLANT ELEVATING APPLIANCE. LEROY H. BUCHANAN, Wisconsin Soldiers Home, Wis. Filed Sept. 17, 1920. Serial No. 410,940. 3 Claims. (Cl. 254—120.)

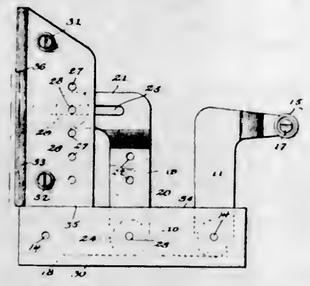
1. A device of the character described, comprising a supporting frame having spaced apart sides including each a horizontal portion, a lever pivotally mounted on each side of the frame at one end and at the upper portion thereof at the front end of said horizontal portion, and a hook and a lug projecting from the same at one end of each lever and in the same direction, said hook and lug being spaced apart and located at opposite sides of the pivot of the lever, substantially as described.



1,382,715. SURGICAL SUTURE. CHARLES T. DAVIS, New York, N. Y. Filed Mar. 17, 1920. Serial No. 366,570. 9 Claims. (Cl. 167—7.)

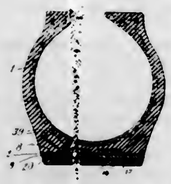
1. The combination of a surgical suture and a coal tar preparation rendering the same antiseptic and dyeing the same a defining color.

5. The combination with a systematically arranged series of sutures differing in characteristics, of means carried by said sutures for identifying a characteristic of each suture, said means including a plurality of dyes having antiseptic qualities and differing in color, each dye being applied to one of the sutures to render the same antiseptic and impart thereto a characteristic color as compared with the other sutures of the series.



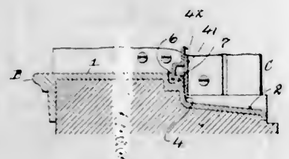
1,382,716. COUPLING FOR RIGIDLY CONNECTING REAR AXLE AND FRAME STRUCTURES OF AUTOMOBILES. HERBERT O. DAY, St. Paul, Minn., assignor, by mesne assignments, to Wood-Craft Company, St. Paul, Minn., a Corporation of Minnesota. Filed Feb. 28, 1919. Serial No. 279,736. 8 Claims. (Cl. 180—16.)

2. The combination with a frame and rear axle casing of a motor propelled vehicle, of couplings rigidly connect-



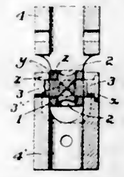
ing the two, sleeve-equipped anchoring plates rigidly connected to said couplings, the said anchoring plates being independently adjustable laterally in respect to the corresponding couplings.

1,382,717. MEASURING DEVICE. JOSEPH DUPLESSIE, Providence, R. I. Filed Nov. 15, 1919. Serial No. 338,162. 5 Claims. (Cl. 33—174.)



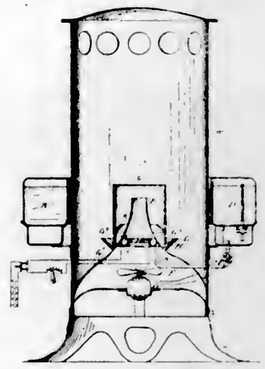
1. In combination with a supporting base member having a groove in the bottom face thereof, a bracket pivoted to said base, a sine bar having sine buttons and a beveled edge pivoted to said bracket, means for holding the bracket in different positions relative to said base and means for holding the sine bar in different positions relative to the bracket.

1,382,718. AUTOMOBILE-TIRE. HENRY C. EGERTON, Ridgewood, N. J. Filed Oct. 8, 1918. Serial No. 257,330. 33 Claims. (Cl. 152—18.)



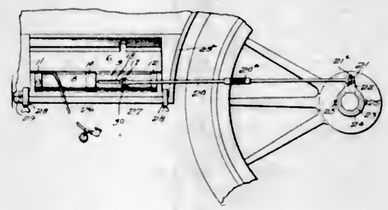
10. The pneumatic automobile tire comprising adjacent the tread portion of the tire layers of vulcanized rubber and interposed incorporated puncture resisting elements, each comprising fibrous material carrying cured phenolic condensation cementing and stiffening material.

1,382,719. SILL FOR METAL WINDOW-FRAMES. IRVING H. ELLIOTT, New York, N. Y., assignor to Harry E. Campbell, Mount Vernon, N. Y. Original application filed July 1, 1919, Serial No. 307,945. Divided and this application filed Feb. 12, 1920. Serial No. 358,112. 1 Claim. (Cl. 189—72.)



A metal window sill, comprising integrally an inner flat portion having a longitudinal groove near its outer edge, a vertical portion outside of said groove, and an inclined portion outside of said vertical portion, the upper edge of said vertical portion being below the plane of said flat portion, in combination with a sash having its lower rail formed of an inner plate adapted to enter said groove and an outer plate united to said inner plate, bearing against the outer face of said vertical portion of said sill and extending below said groove when said sash is in closed position.

1,382,720. FLEXIBLE SHAFT-COUPLING. WILLIAM R. FOX and AUSTIN A. RIDDELL, Jackson, Mich.; said Riddell assignor to said Fox. Filed Dec. 10, 1919. Serial No. 343,771. 18 Claims. (Cl. 64—102.)

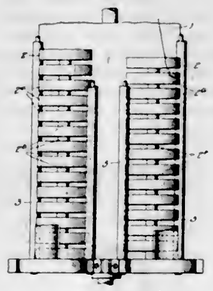


18. The herein-described process consisting in placing the forks in relation to the connecting block, then inserting the pivot pins through the fork into the block and affixing in place by brazing or welding and then hardening the contacting wearing surfaces of the parts, substantially as described.

1,382,721. METHOD AND MEANS FOR HEATING BY CARBON AND HYDROCARBON OILS. FREDERICK E. GERSTENBERGER, South Euclid, Ohio. Filed Jan. 12, 1918. Serial No. 211,541. 5 Claims. (Cl. 158—28.)

4. In a domestic oil heater, a hollow casing, provided with air openings at the top and bottom, a fuel admission pipe having a funnel-shaped base and having a vertical central opening and marginal openings at the wider end for air entrance to the casing, an expanding chamber into the upper end of which fuel oil is discharged, an annular drip-trough in said chamber, in which unvaporized oil is deposited, said chamber provided with perforations adjacent to its lower end, through which heavier gases escape, and a deflector for flames issuing from said openings, said chamber also provided with perforations at a higher level for the escape of lighter gases, a container for fuel oil, a supply pipe for oil leading from said container, a motor-driven fan, a valve for controlling the supply of oil through said oil supply pipe, and an electric circuit for said motor, said circuit opened and closed by the action of said valve.

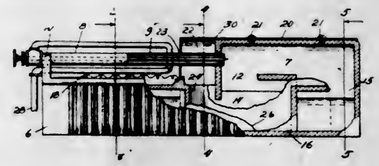
1,382,722. POWER-DRIVEN TIRE-PUMP. JOHN G. GRAHAM, Tomah, Wis. Filed June 23, 1920. Serial No. 391,108. 3 Claims. (Cl. 230—27.)



1. A device of the character described comprising a box like casing having an open top and open front side, a cover of L shape in cross section adapted to close said top and hinged along the rear edge of said box, a pump disposed longitudinally within the casing adjacent the open front side thereof and comprising an element projecting laterally beyond said casing, a crank adapted to be secured to the driving wheel of an automobile and a connecting rod extending between said crank and the laterally extending element of the pump, said casing having a flat bottom adapted to rest upon the running board of an automobile and means for clamping said casing to the running board of an automobile.

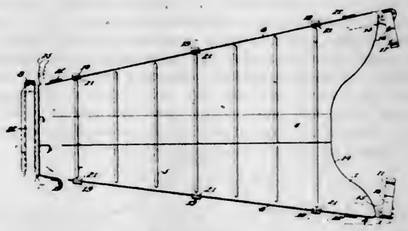
1,382,723. WIRE ROPE. RICHARD DUANE GREEN, Trenton, N. J., assignor to John A. Roeblings Sons Company, a Corporation of New Jersey. Filed Aug. 26, 1919. Serial No. 319,923. 3 Claims. (Cl. 28—5.)

1. A wire rope having a core comprising a plurality of disks, substantially as described.



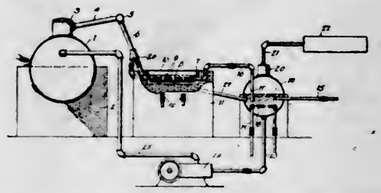
1,382,724. IRONING-MACHINE. WILLIAM SHIPLEY GREY, San Francisco, Calif., assignor to Troy Laundry Machinery Co. Ltd., Chicago, Ill., a Corporation of New York. Filed May 14, 1920. Serial No. 381,280. 8 Claims. (Cl. 68—9.)

1. In an ironing machine, an ironing cylinder, and a roller coacting therewith and subdivided into cylindrical sections, each of which is adapted to independently develop ironing pressure toward the cylinder and to yield independently of the others from the cylinder.



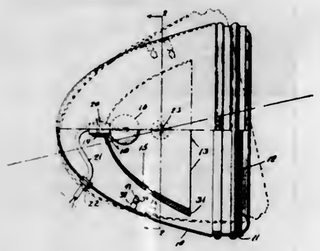
1,382,725. OIL-BURNER. JOHN F. HARMAN, Kansas City, Kans. Filed Mar. 2, 1920. Serial No. 362,812. 2 Claims. (Cl. 158—65.)

1. An oil burner comprising a casing providing a fuel receiving chamber and having flame orifices arranged to provide a flame zone surrounding said chamber, a vapor generating tube passing through said flame zone and feeding into said chamber, and a second casing interposed



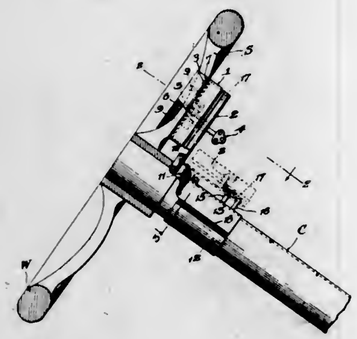
between said orifices and said chamber and surrounding a portion of the generating tube adjacent to said chamber for providing an air chamber adapted to prevent overheating of the vapor being fed into said fuel receiving chamber.

1,382,726. GARMENT-PRESSER. EDWARD AUSTIN HEBB, Philadelphia, Pa. Filed Oct. 29, 1920. Serial No. 420,341. 8 Claims. (Cl. 100—57.)



6. A garment presser comprising presser members, and a heating and moistening member arranged between the presser members, said heating and pressing member consisting of an electrical resistance coil, sheets of asbestos housing said coil, and a moisture-retaining wrapper around said sheets.

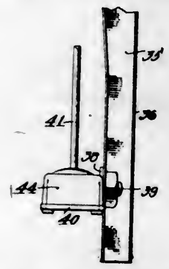
1,382,727. METHOD OF AND APPARATUS FOR TREATING PETROLEUM. DANIEL W. HOGE, Chicago, Ill., assignor, by mesne assignments, to Bash Oil and Refining Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 25, 1916. Serial No. 116,901. 4 Claims. (Cl. 196—25.)



1. A method of treating petroleum which comprises, first, subjecting petroleum from which free gasolene has been removed to heat in a still to vaporize the petroleum; second, conducting the vapor to a cracking apparatus and there subjecting the vapor to a temperature sufficient to break down the high boiling point compounds into compounds having relatively low boiling points; third, conducting the highly heated cracked vapor from the cracking apparatus to a separate receptacle containing a bath of petroleum containing free gasolene and passing said vapor through said bath to heat the same and release the free gasolene therein; fourth, withdrawing the vapor and free gasolene from said receptacle and condensing the same; and fifth, conducting the residuum of said bath to said still.

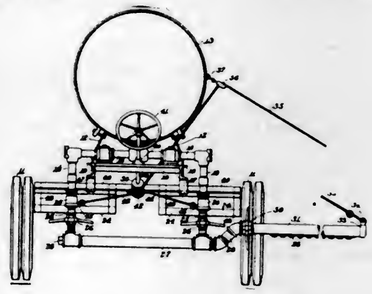
1,382,728. SEARCHLIGHT. RALPH H. HOLMAN, Stoneham, and JOHN MACGREGOR, Roslindale, Mass. Filed July 5, 1917. Serial No. 178,537. 2 Claims. (Cl. 240—41.)

1. In combination, in an automobile headlight, an outer shell fixed to the automobile, a reflector inclosed thereby, and a light emitting front plate in the outer shell, all arranged to direct rays of light downwardly onto the roadbed, means pivotally connecting the reflector with the shell admitting of its unrestricted movement within limits and adjustable means to limit the free relative movement between said shell and reflector, and means to automatically maintain the rays of light downwardly directed onto the roadbed as the automobile passes thereover.



1,382,729. AUTOMOBILE-LOCK. CHARLES HOSKING and LOUIS L. HAHN, Philadelphia, Pa. Filed June 10, 1920. Serial No. 387,971. 5 Claims. (Cl. 70—129.)

1. In a lock for steering wheels, a member secured to a spoke of the wheel and having a socket on its under side extending downwardly in a plane at approximately right angles to the plane of the wheel, a head member receivable in the socket and disposed to lie therein in a plane parallel to the plane of the wheel, a lock borne by the head member and also receivable in the socket, and means to mount the inner end of the head member on the steering column.



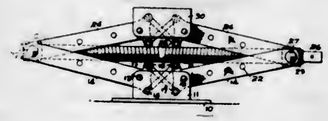
1,382,730. YARN-TENSION MACHINE. LEWIS T. HOUGHTON, Worcester, Mass. Filed May 22, 1919. Serial No. 298,908. 12 Claims. (Cl. 242—153.)

11. A yarn tension device, comprising a stand, a plurality of fixed and movable tension members mounted thereon, a depending bobbin support, said stand having a depending portion fitting between the sides of said support to preserve the lateral alinement thereof, and a single

fastening device adapted to secure said bobbin support to said stand and to clamp said stand to a supporting bar.

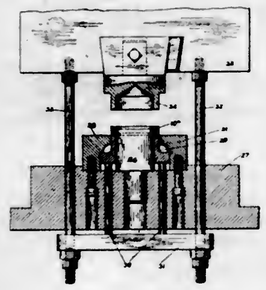
1,382,731. ROAD-OILER. JUSTUS R. KINNEY, Boston, Mass., assignor to The Kinney Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 14, 1920. Serial No. 358,637. 1 Claim. (Cl. 299—34.)

In a machine of the class described, a tank; a delivery pipe therefrom; a transverse pipe communicating therewith; a wheel-supported frame on which said tank is mounted; a spray pipe extending beyond the wheels and connected to an end of said transverse pipe; means including a revoluble shaft and cables connected thereto for reciprocating said transverse pipe and spray pipe; and means for retaining said spray pipe horizontal during said reciprocatory movement including a cable extending from the end of said spray pipe to said revoluble shaft and connected to both.



1,382,732. SHOE-HEEL. RAYMOND R. KIRSCH, St. Louis, Mo. Filed Sept. 7, 1920. Serial No. 408,518. 3 Claims. (Cl. 36—40.)

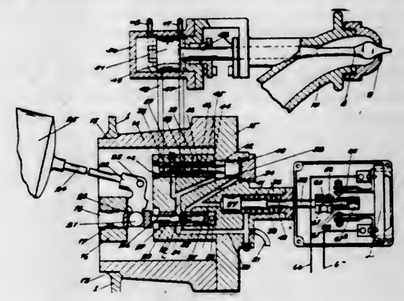
1. A shoe heel, comprising a metallic body portion having a horizontal tread at the base thereof, said tread being provided with cavities in its outer surface and a central threaded opening, a retaining plate having perforations therein, said perforations being over the cavities in the tread of the heel and having a central opening



therein, a retaining screw extending through the central opening in the retaining plate and threading into the threaded opening in the tread, and a top lift extending over the retaining plate and connected therewith by nails passing through the top lift and through the perforations in the retaining plate, and being clenched against the retaining plate by contacting with the walls of the cavities in the tread of the body portion.

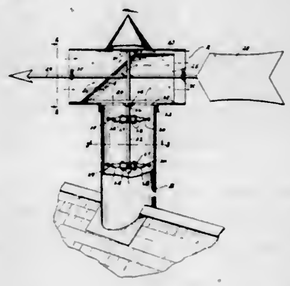
1,382,733. JACK. AMOS F. LANIER, Worcester, Mass., assignor, by mesne assignments, to Hi-Lo-Jack Company, a Corporation of Massachusetts. Filed June 4, 1920. Serial No. 386,520. 4 Claims. (Cl. 254—122.)

1. In a load lifting jack, the combination of a set of arms arranged in the form of a lazy tongs, parallel axes, and crossing links each extending from a point below said axes to a point above them and pivoted to both arms.



1,382,734. METHOD OF SIZING METAL BANDS. ALEXANDER W. LIMONT, Bridgeport, Conn., assignor to Bridgeport Brass Company, Bridgeport, Conn., a Corporation of Connecticut. Original application filed Feb. 20, 1917, Serial No. 149,875. Divided and this application filed June 28, 1918. Serial No. 242,401. 9 Claims. (Cl. 29—156.)

1. The method of sizing a projectile band or the like of soft ductile metal, which comprises interposing the same in the space between a concentric die and mandrel, supporting the band from beneath in a movable manner so that it may be raised out of the die, exerting downward pressure on the band while in the die to cause it to fill the space between the mandrel and the die and bring it accurately to the required size, then removing the pressure on the band, and finally ejecting it from the die.



1,382,735. FLUID-LEVEL REGULATOR. CHESTER B. MCAULAY, San Francisco, and ELY C. HUTCHINSON, Oakland, Calif., assignors to Pelton Water Wheel Company, San Francisco, Calif., a Corporation of California. Filed June 12, 1918. Serial No. 239,561. 10 Claims. (Cl. 103—86.)

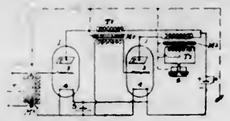
10. The combination with a receptacle for receiving a supply of fluid, and means for delivering fluid thereto, comprising a plurality of independent liquid feeding pumps in communication with the receptacle, a separate motor for each pump, said motors veing operable by energies of different characters whereby one may be operated entirely independent of the other, independently operable controlling devices for each motor, and means re-

sponsive to the fluid level in the container for actuating said controlling devices for placing said motors in operation.

1,382,736. VENTILATOR. WILLIAM MITCHELL, Milwaukee, Wis., assignor to Mitchell Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 29, 1919. Serial No. 348,159. 2 Claims. (Cl. 98—3.)

2. A ventilator comprising a substantially vertical air shaft, a supporting rod centrally carried by said shaft with its end extended thereabove, a substantially horizontal hood member rotatably supported above the shaft by said rod and having a bottom opening in register with said shaft, a substantially inverted U-shaped section positioned within the hood and having its ends secured therein with its outer end terminating near one end of the hood, a wall closing the inner end of said section and inclined from a point at the top of said section adjacent the engagement of said rod with the hood to a point outwardly of the hood bottom opening, the side and top walls of said section being spaced from the side and top walls of said hood whereby air entering the end of the hood adjacent the closed end of said section will be formed into a tubular column to create a suction within the open end of said section, the extreme upper end of said rod passing through an opening in the top of said section whereby the major portion will be shielded from the elements, and means whereby the end of said hood adjacent the closed end of the section will be held into the wind.

1,382,737. BUCKLE FOR PERSONAL WEAR. LAWRENCE F. OTTEN, Newport, Ky. Filed Jan. 24, 1920. Serial No. 353,832. 3 Claims. (Cl. 24—191.)



1. In a belt buckle for personal wear, a concavo-convex plate having rearwardly extending flanges, a pin mounted in said flanges, a sleeve on said pin, a belt loop pivotally mounted on said pin between said sleeve and said extensions respectively and a cam having pointed ridges, and pivotally mounted in the other end of said ex-

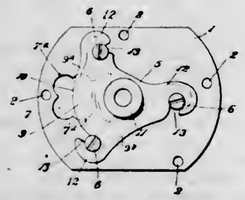
tensions respectively and adapted to receive the other end of said belt between said cam and said plate whereby

said plate is adapted to be held upon the user in any desired position, substantially as set forth and for the purposes specified.

1,382,738. AMPLIFYING APPARATUS. MARIUS C. A. LATOUR, Paris, France. Filed June 8, 1918. Serial No. 239,019. 8 Claims. (Cl. 179—171.)

1. In an amplifying apparatus for wireless signals and the like, a thermionic valve, a source of current in circuit therewith, a telephone, a transformer having a winding in circuit with said thermionic valve and source of current and a winding in circuit with said telephone, and a connection between the frame or casing of said telephone, the transformer winding in circuit with said telephone and one pole of said source of current.

1,382,739. CELLULOID BUTTON. MARTIN PATREMIO, Lodi, N. J. Filed Feb. 8, 1921. Serial No. 443,369. 2 Claims. (Cl. 24—90.)

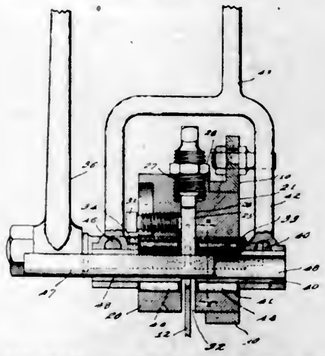


2. The combination with a button having a recess in its face with a surrounding wall extending substantially at right angles to its base, of a panel having a flange at its edge inwardly turned at right angles thereto and fitted in said recess, the outer face of said flange engaging the inner face of said wall for the purpose specified, there being corrugations in the face of the button around the recess for the purpose specified.

1,382,740. CONDUIT. RAY P. PERRY, Upper Montclair, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Filed Aug. 26, 1918. Serial No. 251,536. 14 Claims. (Cl. 92—66.)

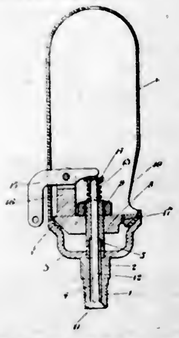
1. As a new article of manufacture, a hollow cylinder containing mixed fibrous and waterproofing materials which have been sufficiently densified by heat and pressure to produce a substantially homogeneous and rigid product.

1,382,741. OUTLET-PLATE. WILLIAM H. PIERSON, Philadelphia, Pa. Filed July 19, 1919. Serial No. 312,037. 15 Claims. (Cl. 240—85.)



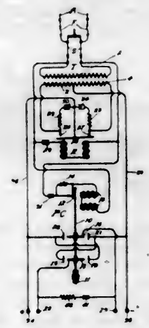
1. An outlet plate comprising a base having an enlarged loom opening, and a hickey for clamping a loom against the edge of said opening and closing the rest of the opening.

1,382,742. CAMISOLE AND METHOD OF MAKING SAME. LEO PLATT, New York, N. Y. Original application filed Dec. 28, 1918, Serial No. 268,587. Divided and this application filed May 22, 1920. Serial No. 383,432. 3 Claims. (Cl. 2—73.)



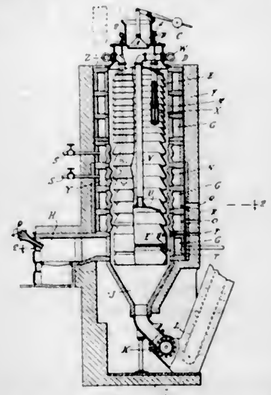
2. A method of making camisoles comprising weaving a strip with tubular edges of suitable length for camisoles and mounting shoulder straps thereon.

1,382,743. SAW-SWAGE. JOHN F. PRIBNOW, Indianapolis, Ind., assignor to E. C. Atkins & Company, Indianapolis, Ind., a Corporation of Indiana. Filed May 17, 1920. Serial No. 381,998. 7 Claims. (Cl. 76—54.)



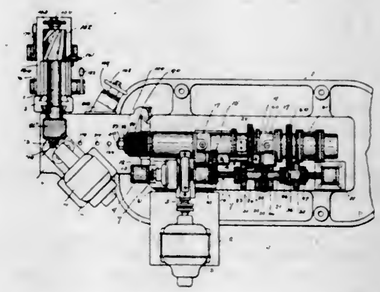
1. A saw swage, comprising a swage block, alined bushings mounted in holes in said swage block, roller bearings between said bushings and the walls of said holes, a swaging die mounted in said alined bushings, and means for turning a bushing and through it turning the swaging die.

1,382,744. WHISTLE. EDWARD J. SCHNEIDER, St. Louis, Mo. Filed Mar. 18, 1921. Serial No. 453,431. 3 Claims. (Cl. 116—138.)



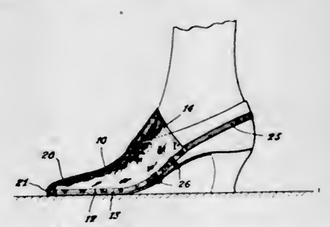
1. A whistle of the character described comprising, a supporting stem, an abutment on said stem, a chamber on said stem bearing against said abutment, a dome having its edge within said chamber, a wall member clamping the edge of said dome against the wall of the chamber, a valve supported in said stem, a spring for holding the valve closed and a lever for opening the valve in opposition to said spring.

1,382,745. ELECTRICAL RECTIFIER AND POLE-CHANGER. FRED SCHOENWOLF, Chicago, Ill., assignor to Kellogg Switchboard & Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 16, 1917. Serial No. 149,010. 6 Claims. (Cl. 172—281.)



1. A device of the character described including a source of alternating current, a transformer having its primary winding bridged across said source of current, a rectifier provided with a pair of magnets connected across said source of current, a pair of secondary windings for said transformer connected to contacts of said rectifier, a condenser in circuit with the magnets of said rectifier to neutralize their impedance to permit the armature of said rectifier to vibrate in synchronism with the alternating current, a supply circuit, a pole changer having movable switching means connected to said supply circuit, relatively stationary switching means for said pole changer connected to said secondary windings and to the armature of said rectifier, and a resistance winding and a condenser connected from said armature to each of said rectifier contacts.

1,382,746. DISTILLATION-OVEN. LLOYD F. SCHRADER, WILLIAM E. ROBERTS, and VLADIMIR BREDLIK, New York, N. Y., assignors, by mesne assignments, to Foundation Oven Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 24, 1919. Serial No. 278,762. 2 Claims. (Cl. 202—9.)

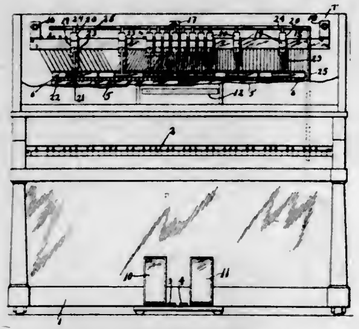


1. An oven for distillation of carbonaceous materials comprising an outer shell formed with heating flues having an inlet at the lower end and an outlet at the upper end and an inner shell formed with openings for carrying off gases, a diaphragm near the lower end of the inner shell forming a chamber for receiving the gases from the lower portion of the material, and means for introducing steam into the lower portion of the material to form ammonia and cause it to pass into said chamber.

1,382,747. GRINDING-MACHINE. ARTHUR SCRIVENOR, Richmond, Va. Filed May 9, 1917. Serial No. 167,578. 17 Claims. (Cl. 51—91.

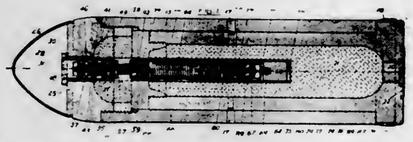
1. In combination, a sleeve rotatably mounted in bearings and having an internally threaded portion, a work holder mounted slidably in and concentrically with the sleeve and provided with an externally threaded portion adapted to engage the internal thread of the sleeve, means for rotating the sleeve, means for rotating the work holder, and differential means for changing the ratio between the rates of rotation of the sleeve and of the work holder.

1,382,748. FOOTWEAR-PROTECTOR. KATE SLASOR, Seattle, Wash. Filed June 12, 1920. Serial No. 388,665. 1 Claim. (Cl. 36—72.)



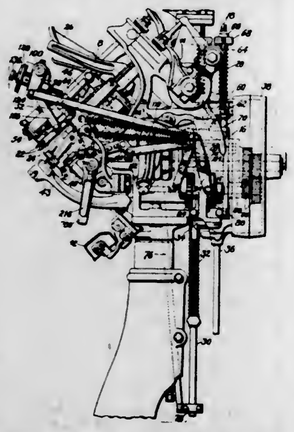
A footwear protector formed of a flexible sheet of material folded to inclose the upper forward portion of the footwear, elastic retaining straps for the lower edges of the folded sheet underlying the footwear, an elastic heel strap projecting rearwardly from the side edges of the folded sheet, the forward edge of the sheet being gathered, and an elastic cord within the gathered edge to permit expansion and contraction of the protector for intimate engagement with the tip of the footwear.

1,382,749. ACCOMPANIMENT CONTROL FOR PLAYER-PIANOS. RAY S. SMITH, Oakland, Calif. Filed Apr. 16, 1919. Serial No. 290,366. 2 Claims. (Cl. 84—35.)



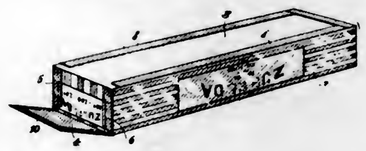
1. An attachment for player pianos having the usual strings and hammer system consisting of a bar extending along the strings in front of them at their upper ends, brackets for securing said bar in position, a plurality of pneumatics supported by said bar, an operating arm carried by each pneumatic and extending to a position adjacent the several hammers, an arm near the center of the scale covering a few hammers while the arms at the upper ends of the scale cover a larger number of

hammers, a tracker board and means operated by the tracker board and pneumatics to vary the position of the



pneumatic arms to diminish the striking blow of certain sets of hammers.

1,382,750. PROJECTILE. FRANK DESMOND SPRAGUE and PHILIP WHALLEY ALLISON, New York, N. Y. Filed July 24, 1917. Serial No. 182,537. 9 Claims. (Cl. 102—29.)

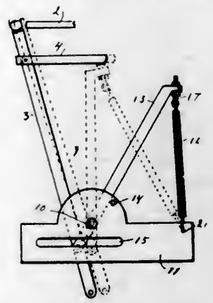


1. In a projectile, the combination of an outer casing, an inner casing, a separating charge in the outer casing in front of the inner casing, a destructive charge contained in the inner casing, an impact fuse for exploding the separating charge, a mechanism in the inner casing for detonating the destructive charge, and a flexible member normally located in the inner casing and connecting the outer casing and the inner casing for initiating the operation of said mechanism, substantially as described.

1,382,751. PULLING-OVER MACHINE. WILLIAM C. STEWART, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 31, 1919. Serial No. 300,852. 68 Claims. (Cl. 12—4.)

1. A machine of the class described having, in combination, grippers for engaging an upper at opposite sides of a last, power means for effecting relative movement of said grippers and the last to pull the upper across the forepart of the last, means for causing said grippers to close on the upper before the machine is started, and means automatically operative after the starting of the machine to effect a relative movement of said grippers and the last in a direction to pull the upper lengthwise from the heel end forwardly.

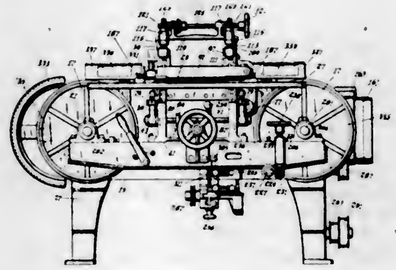
1,382,752. SEALED-WRAPPED PACKAGE. JOHN STOCDELL STOKES, Moorestown, N. J., assignor to Stokes & Smith Company, Summerdale, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 29, 1917. Serial No. 193,930. 3 Claims. (Cl. 229—40.)



1. A sealed wrapped package comprising a box-like container and a wrapper therefor, said wrapper comprising a top portion, end portions integrally connected thereto, and integral side portions having extensions adhesively attached to the adjacent parts of the end portions, said top, side and end portions being entirely free from the underlying package and having extensions at their outer edges overlying and attached to the marginal portion only of the bottom of the package.

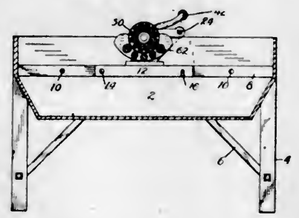
1,382,753. ELECTRIC CONNECTOR. FREDERICK A. TEFFT, Toledo, Ohio. Filed Jan. 24, 1920. Serial No 353,776. 4 Claims. (Cl. 287—75.)

2. In an electric connector, a plug having channels and openings extending from the ends of the plug to the channels, a cylinder having openings, said openings and channels adapted to receive the ends of the wire to be connected and the channels for receiving the turns of wire when the plug is rotated relative to the cylinder.



1,382,754. PICKER-STICK PROTECTOR FOR LOOMS. ANDREW E. WILLSON, Grand Rapids, Mich. Filed Jan. 21, 1921. Serial No. 438,871. 4 Claims. (Cl. 139—48.)

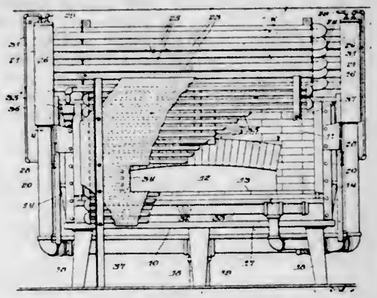
1. In combination with a loom, a loom picker stick, the supporting arm for the picker stick, the actuating mechanism connected with the stick, and the shuttle guides; an auxiliary supporting element secured to the supporting



arm, a lever fulcrumed to the auxiliary supporting element and having a long end and a short end, the picker stick pivotally mounted upon the short end of the lever, a spring connected with the long end of the lever and anchored to the supporting element in such a manner that sudden strain upon the picker stick with its upper end held rigid will throw the short end of the lever and release the strain upon the picker stick.

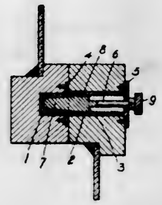
1,382,755. BELT-KNIFE SPLITTING-MACHINE. WILLIAM C. BAXTER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 27, 1919. Serial No. 307,093. 34 Claims. (Cl. 69—10.)

1. A machine of the class described, having in combination, a belt knife, mechanism comprising upper and lower members adapted to engage both sides of the work for feeding the work to the knife, and a single adjusting member movement of which adjusts both members of the feed mechanism in a path substantially parallel to the plane of the cut of the knife.



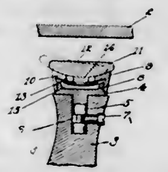
1,382,756. WASHING-MACHINE. ROSS CLARK BEEKMAN, Kansas City, Kans. Filed Feb. 9, 1920. Serial No. 357,205. 1 Claim. (Cl. 68—23.)

In a washing machine, a main roller consisting of two circular end plates, triangular projections on said end plates near the periphery thereof, slats which are substantially rhomboidal in cross section having their ends adapted to fit between the triangular projections on the end plates to form a roller, a shaft upon which said roller is journaled, means for rotating or oscillating said shaft and its roller, and a roller bed coöperating with said main roller, substantially as described.



1,382,757. PREHEATER FOR FURNACES. CARLYLE D. BIDWELL, Milwaukee, Wis., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed Sept. 13, 1918. Serial No. 253,973. 12 Claims. (Cl. 263—20.)

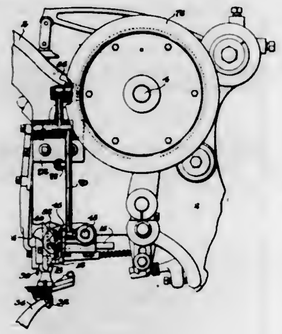
1. In a furnace having a nozzle at the end and a charging door at the side, the combination of a water-cooled shield in front of said door, a passage between said shield and said furnace, means for causing the waste



gases to pass up between the shield and the furnace, and means for extracting heat from the waste gases in said passageway and for returning the heat to the nozzle.

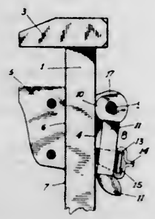
1,382,758. SASH-FASTENER. MARTHA A. BROWN, Pittsburgh, Pa. Filed Oct. 16, 1919. Serial No. 331,228. 2 Claims. (Cl. 292—251.)

1. A sash-fastener comprising a locking-pin constructed to extend through one of the sash-frames and provided with an elongated locking-head and exterior screw-threads and adapted to lie across and extend a considerable distance on each side of the joint between two sash-frames when in locking position, and a metallic inclosing member for said pin located in each of the sash-frames, both of said inclosing-members closely contacting with said locking-head at the joint-line between the sashes when in its locking position, one of said inclosing-members extending entirely through its respective sash-frame and screw-threaded interiorly substantialy its whole length to engage the screw-threads on the locking-pin whether in its locked or unlocked position.



1,382,759. WORK-SUPPORT. LOUIS A. CASGRAIN, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 11, 1917. Serial No. 185,695. 1 Claim. (Cl. 1—41.)

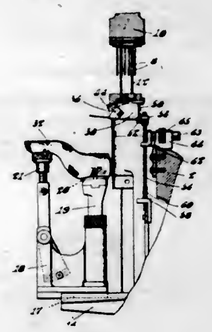
A work support for fastener inserting machines, comprising a horn, a disk engaging and detachably connected to the end portion of said horn and provided with an up-



standing circular flange, a drum having a depending flange engaging the upstanding flange of said disk and also provided with an upper, concavo-convex, spherical wall with a central aperture, and a work engaging tip having a flat upper surface and a spherical lower surface for supporting contact with the upper surface of the concavo-convex spherical surface of said drum and being provided with a shank extending through the aperture in the drum and carrying means to engage the concavo-convex wall of the drum to prevent separation of the parts.

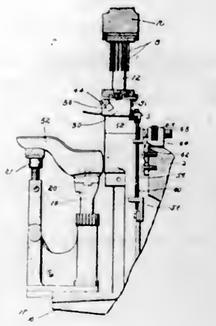
1,382,760. MACHINE FOR FORMING FASTENINGS. LOUIS A. CASGRAIN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 3, 1918. Serial No. 243,152. 44 Claims. (Cl. 10—43.)

1. The method of forming fastenings which comprises alternately swaging the end of the fastening stock to reduce a transverse dimension of the stock at its end, and then severing a fastening from the stock, the point of each fastening being constituted by the swaged end of the stock.



1,382,761. WRENCH. JAMES M. CAVANAUGH, Big Oak Flat, Calif. Filed Aug. 9, 1920. Serial No. 402,100. 5 Claims. (Cl. 81—141.)

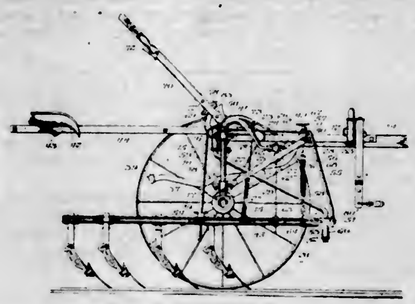
1. A wrench comprising a shank, a fixed jaw, a movable jaw slidable on the shank, a cam member mounted with the movable jaw on the side thereof opposite from the shank, and a friction member coöperating with the cam member arranged to engage the shank with varying intensity and at the same time to cause the cam member to similarly engage the shank.



1,382,762. ASSEMBLING-MACHINE. CHARLES E. CONNER, Auburn, Me., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 10, 1918. Serial No. 253,411. 28 Claims. (Cl. 1—19.)

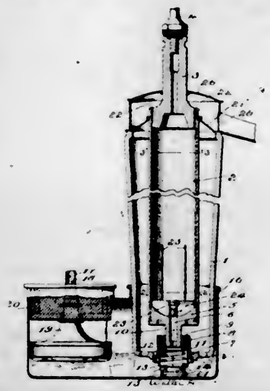
1. In a machine of the class described, the combination of means for supporting shoe parts, inluding a shoe upper, means for supporting a counter, and mechanism for effecting a relative movement of the said, two means to

present the counter in predetermined assembled relation to the shoe upper.



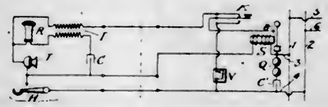
1,382,763. METHOD OF MAKING SHOES. CHARLES E. CONNER, Auburn, Me., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Sept. 10, 1918, Serial No. 253,411. Divided and this application filed Dec. 8, 1919. Serial No. 343,365. 5 Claims. (Cl. 12—142.)

1. The method of manufacturing turned shoes, which comprises rigidly supporting a molded counter, pressing against the bottom of the counter thus supported, a sole to which an upper has been attached, fastening the counter to the sole and thereafter completing the manufacture of the shoe.



1,382,764. CULTIVATOR. SAMUEL K. DENNIS, Chicago, Ill., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed March 20, 1916. Serial No. 85,355. 7 Claims. (Cl. 97—35.)

1. In a cultivator, the combination of a frame, swiveled wheels thereon, a steering bar connecting the wheels, forwardly and downwardly extending push rods pivoted to the frame on vertical axes, implement beams pivoted on the lower ends of said rods, latch members slidably mounted on said steering bar and provided with depending arms loosely engaged with the beams, and latch locking means

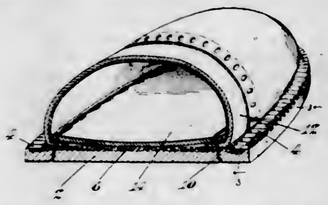


on said connecting bar positioned for engagement by said latch members.

1,382,765. EMULSIFIER. WALTER GRANT DIXON, West Chester, Pa., assignor to The Sharples Separator Co., West Chester, Pa., a Corporation of Pennsylvania. Original application filed Jan. 3, 1920, Serial No. 349,301. Divided and this application filed Aug. 4, 1920. Serial No. 401,261. 13 Claims. (Cl. 259—96.)

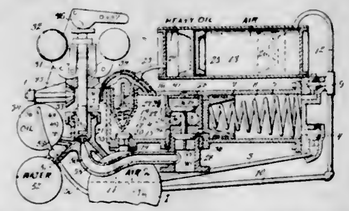
1. An emulsifier including in combination a rotating closed bowl having an inlet opening located at a distance from the inner wall of the bowl, and discharge openings disposed relative to the bowl and proportioned relative to the inlet opening so as to cause the material to enter the inlet opening by suction and to be thrown against the inner wall of the bowl for emulsifying the same.

1,382,766. PARTY-LINE LOCKOUT FOR TELEPHONE SYSTEMS. JOHN W. DORSEY, Winnipeg, Manitoba, Canada. Filed June 20, 1917. Serial No. 175,798. 10 Claims. (Cl. 179—33.)



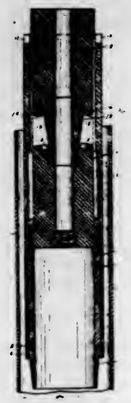
2. A party line lockout system comprising, at each substation, a potential relay normally holding the talking circuit open and responsive to the closing of the switch-hook contacts to close the talking circuit and produce current fluctuations therein for an appreciable time.

1,382,767. VEHICLE-SIGNAL. JOHN L. DU FRANE, Oakland, Calif. Filed Sept. 18, 1919. Serial No. 324,726. 3 Claims. (Cl. 116—54.)



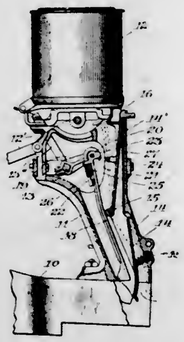
1. An automobile signal including a support, a hinge, one member of said hinge being fixed on said support, a rod journaled in the other member of said hinge, an indicator on said rod, and a link connected at one end to the fixed member of said hinge, a ball and socket connection connecting the other end of said link to said rod for turning the indicator into indicating position when the rod is swung into signaling position and for turning said indicator out of indicating position when the rod is swung into non-signaling position.

1,382,768. RUBBER SOLE FOR BOOTS AND SHOES. GEORGE FERGUSON, Wollaston, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 25, 1917. Serial No. 188,175. 1 Claim. (Cl. 36—32.)



As an article of manufacture, a rubber sole for shoes comprising a sole-shaped rubber body having a fabric stitch-receiving lamina embedded in the upper surface of the rubber body to provide a substantially flat surface from edge to edge on the upper surface of the rubber body, the said rubber body and fabric lamina being vulcanized together, and a series of transversely disposed ribs formed on the upper marginal surface of the sole, and corrugating the outer margin of the said fabric lamina into the rubber body to strengthen its vulcanized attachment to the said rubber body.

1,382,769. FLUID-PRESSURE GENERATOR WITH AUTOMATIC AIR-COMPRESSOR. GEORGE JONES FERGUSON, St. Louis, Mo. Filed May 3, 1916, Serial No. 95,249. Renewed May 7, 1921. Serial No. 467,736. 17 Claims. (Cl. 60—46.)



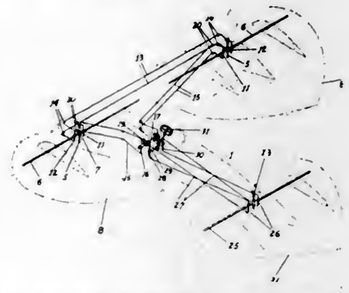
1. In a fluid pressure generator, a combined fuel air and fuel oil reservoir, a sliding piston therein, an explosion chamber, inlets connecting the fuel reservoir and the explosion chamber, an oil valve, an air valve controlling said inlets, and said oil valve resting substantially on said air valve to effect a proportional opening of the valves.

1,382,770. PACKER FOR WELLS. WALTER WILLIAM FONDREN, Houston, Tex. Filed Jan. 10, 1921. Serial No. 436,293. 3 Claims. (Cl. 166—10.)

1. A device of the character described, including a pipe section, a packer surrounding the same, a sleeve threaded onto said section and adapted to abut against said packer to expand the same, a rotatable member fitted within the sleeve and capable of being connected with and disconnected from said pipe section, radially movable dogs carried by said member, yieldable members operating against said dogs, and tending to force them outwardly, the upper end of the sleeve being provided with notches into which said dogs project when brought into alinement therewith, thus forming a connection between the rotatable member and the sleeve through which the sleeve may be rotated against said packer to expand the same.

1,382,771. VALVE AND TRIP-LOCK FOR PLANTERS. RALPH L. FORD, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Nov. 29, 1920. Serial No. 426,926. 7 Claims. (Cl. 111—51.)

1. In corn planter valve mechanism comprising an independently movable member and plunger, the combination with said valve elements of locking means engageable with the valve member and plunger to lock them against relative movement.



2. In corn planter valve mechanism comprising an independently movable valve member and plunger, the combination with said member and plunger of means carried by one of said elements and engaging with the other to lock both against relative movement.

3. In corn planter valve mechanism comprising an independently movable valve member and plunger, the combination with said member and plunger of a lock comprising a latch carried by one of said elements and a complemental part on the other element engaging with said latch when the two elements are brought together.

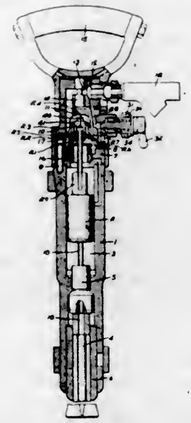
4. In corn planter valve mechanism comprising an independently movable valve member and plunger, the combination with said member and plunger of a lock comprising a spring pressed latch mounted on one end of the plunger and a latching eye on one end of the valve member engaging with said latch when the valve member is moved toward the plunger.

5. In corn planter valve mechanism including an oscillating arm and a plunger pivoted to said arm, the combination with the plunger of a latch adapted to engage an adjacent part of the mechanism to lock the plunger and arm against movement.

1,382,772. AEROPLANE. HENRY M. FRANZEN, Los Angeles, Calif. Filed Aug. 7, 1920. Serial No. 401,922. 14 Claims. (Cl. 244—29.)

1. An aeroplane including a fuselage, horizontal supporting surfaces and vertical fins integral therewith, the supporting surfaces being independently mounted for universal movement relative to the fuselage, and means actuated by the aviator for moving the supporting surfaces.

1,382,773. MULTICOLOR-PRINTING PRESS. CHARLES N. GALLAND and WILLIAM A. KELSEY, Minneapolis, Minn., assignors to Multicolor Printing and Machinery Company, Minneapolis, Minn., a Corporation of South Dakota. Filed Sept. 22, 1917. Serial No. 192,780. 1 Claim. (Cl. 101—175.)

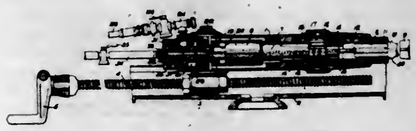


The combination with a printing press having printing devices including a paper delivery cylinder, of an auxiliary printing drum having type thereon for printing in different colors on the paper delivered by said cylinder, an automatic multicolor ink device coöperating with said auxiliary drum and comprising a distributing drum made up of a multiplicity of groups of thin axially shiftable drum sections assembled with gaps between the groups, and an ink font having partitions adapted to be alined with the gaps between the said assembled groups of drum sections, the said drum sections being frictionally held in their assembled positions and capable of sliding movements.

1,382,774. RUBBER ARTICLE AND METHOD OF MAKING THE SAME. WILLIAM C. GEER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Feb. 28, 1920. Serial No. 362,131. 7 Claims. (Cl. 18—53.)

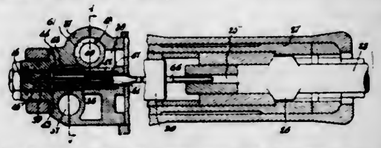
1. The method of making rubber articles which comprises mixing rubber with a vulcanizing ingredient by a suitable masticating operation and giving it an extended form, then without further mastication dividing the rubber body into relatively-small lumps, pressing said lumps together into a mass having a form approximating that of the finished article, and vulcanizing said article.

1,382,775. STONE-DRILLING ENGINE. GEORGE H. GILMAN, Claremont, N. H., assignor, by mesne assignments, to Sullivan Machinery Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 20, 1912. Serial No. 684,970. 30 Claims. (Cl. 121—10.)



3. In a rock drill, the combination with a cylinder, a piston therein, a head block having a fluid supply chamber, and a feed tube supported in said head block for supplying pressure fluid to the drilled hole, said head block having a passage leading from said fluid supply chamber to said cylinder and a passage leading from said supply chamber to said feed tube, of separate valves independently controlling the passages in said head block, respectively.

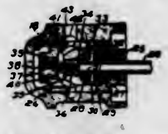
17. In a drilling machine, the combination with a cylinder member, of a head block secured to the rear end thereof, a closure interposed between the head block and cylinder member and held in place thereby, said closure having a central socket, a reciprocatory piston operating in the cylinder member, a tappet engaged by the piston, a tube having a flanged end in the socket of the closure and having its other end in the tappet, means for securing the said end in the socket, and means for introducing motive fluid into the tube.



23. In drilling apparatus, the combination with a motor comprising a cylinder member and a piston operating therein, of means for delivering motive fluid to the piston to actuate it including a rear passage opening into the cylinder member, a valve controlling such passage and coaxially disposed with respect thereto, a hollow tool to be operated on by the piston, and means extending through the valve for delivering cleansing fluid to the tool.

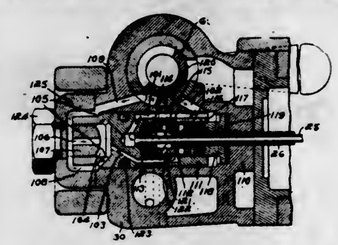
1,382,776. STONE DRILLING ENGINE. GEORGE H. GILMAN, Claremont, N. H., assignor, by mesne assignments, to Sullivan Machinery Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 20, 1912, Serial No. 684,968. Renewed July 9, 1919. Serial No. 309,765. 26 Claims. (Cl. 121—4.)

1. In a rock drill, the combination with a cylinder, of a piston hammer therein, a longitudinally movable drill bit adapted to be supported in said cylinder, and a fluid supply tube connected to the cylinder for supplying fluid to the drill bit, said tube being movable relatively both to the cylinder and the piston to follow the movement of said bit.



1,382,777. CUTTING-TOOL. GEORGE H. GILMAN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Original application filed Apr. 3, 1913, Serial No. 758,563. Renewed Dec. 7, 1914, Serial No. 876,004. Divided and this application filed July 24, 1919. Serial No. 313,120. 30 Claims. (Cl. 121—10.)

1. In a rock drill, a rear head, a hollow drill steel, and means for supplying a cleansing fluid to said drill steel comprising a chamber in said head, a gland insertible in said chamber, retaining means between a wall of said chamber and a wall of said gland, and a plurality of detachable fluid conducting means one of which is secured in said head by said gland and retaining means.



25. In a rock drill, the combination with a cylinder, a piston therein and a hollow drill steel, of means for supplying cleansing medium to a drill steel comprising a rear head for said cylinder provided with a chamber therein, a conducting tube projecting into said chamber and extending longitudinally through said cylinder, a packing surrounding said tube and disposed in said head, a gland surrounding said tube and operative to compress said packing to hold said tube in fixed relation to said head, said gland being provided with means for supplying cleansing fluid to said tube, and a second tube mounted in said head to the rear of said first mentioned tube and projecting into the latter.

1,382,778. ROCK-DRILL. GEORGE H. GILMAN, Boston, Mass., assignor to Sullivan Machinery Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 2, 1914. Serial No. 821,885. Renewed Nov. 19, 1920. Serial No. 425,167. 31 Claims. (Cl. 121—10.)

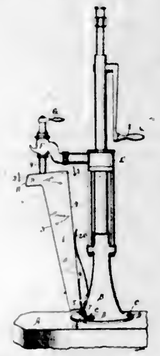
22. In a rock drill, a cylinder including a rear head having a fluid passage therein, a piston movable in said cylinder, a coaxially disposed removable plug attached to said rear head, a fluid supply tube extending axially through said piston communicating with said passage, and means for removably attaching said tube to said removable plug.

1,382,779. ROCK-DRILL. GEORGE H. GILMAN, Claremont, N. H., assignor to Sullivan Machinery Company, Claremont, N. H., a Corporation of Massachusetts. Filed Aug. 27, 1915, Serial No. 47,570. Renewed June 16, 1919. Serial No. 304,726. 43 Claims. (Cl. 121—4.)

1. A rock drill comprising, in combination, a hollow drill bit; drill bit percussion means; tubular means for conducting air and water to said drill bit; a manually operable controlling means for controlling admission of air and water to said tubular means; an air passage connecting said controlling means with said tubular means; and a water passage connecting said controlling means with said tubular means, said air passage being located in the rear of said water passage and so disposed as to prevent leakage therefrom.

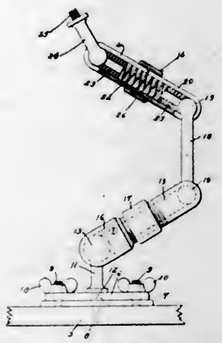
28. In a rock drill, the combination with a cylinder, of percussive means therein, a hollow drill steel, a rear head for said cylinder, separate coaxially disposed gaseous fluid and liquid conducting tubes in said cylinder communicating with said steel, and means for securing said tubes in rigid relation to said head comprising a removable member disposed in said head between the ends of said conducting tubes and operative positively to prevent movement of said ends toward each other.

1,382,780. FILE-WRAPPER. ANNA C. GURSKE, Omaha, Nebr. Filed Feb. 5, 1921. Serial No. 442,681. 5 Claims. (Cl. 129—37.)



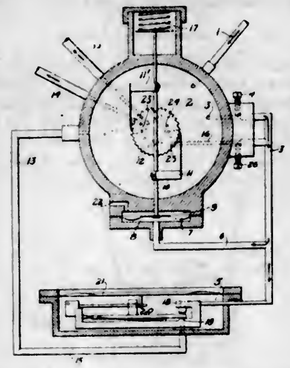
1. A file wrapper, consisting of a flexible sheet having a bent portion providing a back and a cover and having a second bent portion providing a flap above the back, resilient, metallic strands for pressing the flap toward the back, each strand being bent midway between its ends to approximately V-shape to provide divergent parts adapted to lie upon the flap and providing curved parts adapted to be disposed adjacent to the second bent portion of the flexible sheet, and providing loops for engaging said back, a base-strip on the back disposed on said loops, and a housing strip engaging the back and base-strip, the flap of said flexible sheet being bent upwardly to provide a lifting-member.

1,382,781. ATTACHMENT FOR ELECTRIC IRONS. ADAM HAUSAM, Richmond Heights, Mo. Filed Aug. 11, 1920. Serial No. 402,821. 6 Claims. (Cl. 219—25.)



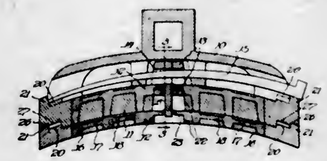
1. The combination with an electric iron having terminal posts, of an attachment including a case, separate from the iron, sockets in the case designed for slip engagement with the posts, electrical leads, a circuit closer between one of the leads and one of the sockets, means for normally holding said circuit closed, and thermal means for automatically releasing said circuit closer whereby said circuit is opened at a predetermined heat.

1,382,782. AUTOMATIC OIL-DRIP CATCHER. MICAJAH C. HENLEY, Richmond, Ind. Filed Apr. 26, 1920. Serial No. 376,572. 6 Claims. (Cl. 221—69.)



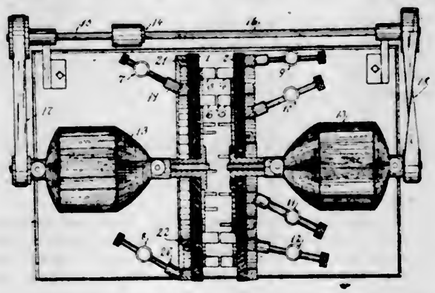
1. In combination with an oil dispenser having a discharge nozzle, an oil container, a head integral with the upper portion of the container, there being a slot in the upper portion of the head in which the lower portion of the nozzle is located, the bottom of the overhanging portion of the head being open, a lip formed integral with the upper end of the container and adjoining said opening in the head, and a cut-off lip located above and projecting outward beyond the first mentioned lip to catch the drip from the nozzle and conduct it to the base of the first lip by which it is conducted into the container, substantially as set forth.

1,382,783. SUPPORT. ALBERT L. HOWARD, Montello, Mass. Filed Dec. 6, 1920. Serial No. 428,730. 2 Claims. (Cl. 248—7.)



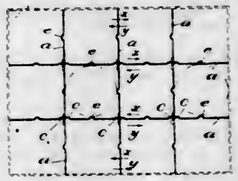
1. In a device of the character described, a supporting member including a base, a pair of sectional link members, a shank having a ball at one end thereof, said ball being disposed within one of the sectional link members, a solid link having a ball formed integral with its respective ends, said balls being positioned within the sectional link members, tubes disposed within the sectional link members and engaging the balls, and spring members within the sectional link members for contacting with the tubular members to force the tubular members into contact with the balls of the solid link members.

1,382,784. FLASHLIGHT SIGNAL APPARATUS. GEORG KARL VILHELM JOHANSSON, Stockholm, Sweden, assignor to American Gasaccumulator Company, Elizabeth, N. J. Filed Mar. 28, 1919. Serial No. 285,868. 16 Claims. (Cl. 67—111.)



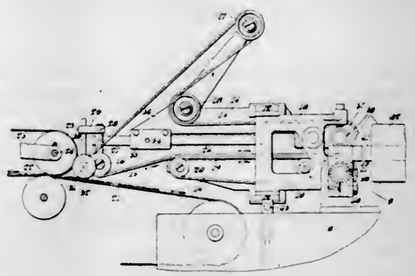
1. In combination with a flash light apparatus, a burner conduit, and means located intermediate the outlet of the flash light apparatus and the burner conduit for controlling communication between the said outlet and the said burner conduit, said means operated by the gas preasure in the supply conduit to the flash light apparatus.

1,382,785. INTERLOCKING BRAKE-SHOE. ROBERT L. JORDAN, Chicago, Ill. Filed May 5, 1920. Serial No. 379,169. 8 Claims. (Cl. 188—239.)



1. An interlocking brake shoe, comprising a new shoe having a central apertured attachment lug on its back for attachment to a brake head, and a central socket in its face shaped to receive a like central attachment lug of a worn shoe, a partially worn shoe fitted to the face of said new shoe, and a one-piece locking key passed through both attachment lugs and secured by the brake head fastening key.

1,382,786. ROTARY SPARK-GAP. AUGUST J. KLONECK, New York, N. Y. Filed June 3, 1916. Serial No. 101,560. 21 Claims. (Cl. 250—38.)

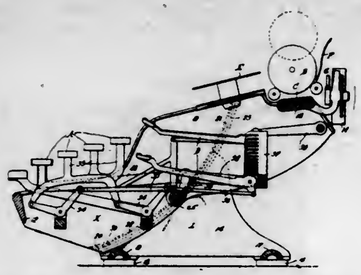


1. A rotary spark gap, comprising two motors having their shafts in axial alinement with one another, electrode holders attached on each shaft carrying metallic electrodes thereon, the electrodes of one motor coöperating with the electrodes of the other motor, said electrodes being divided into sections having a plurality of projecting points, the total number of electrode points being different for each holder.

1,382,787. PARTITIONING FOR BOXES. LEON E. LA BOMBARD, Chelsea, Mass., assignor to Specialty Automatic Machine Company, Chelsea, Mass., a Corporation of Massachusetts. Filed Feb. 20, 1918. Serial No. 218,320. 5 Claims. (Cl. 217—34.)

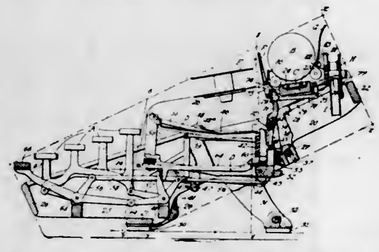
1. Box partitioning comprising strips having interengaging transverse crevices the edges of which are treated to render them elastic, the portions immediately adjacent to the said elastic edges being flat and relatively inelastic, the construction being such as to retain the strips in interengaged relationship by frictional grip of the elastic edges of the crevices upon flat portions of the companion strips.

1,382,788. STACKER. LEON E. LA BOMBARD, Chelsea, Mass., assignor to Specialty Automatic Machine Company, Chelsea, Mass., a Corporation of Massachusetts. Filed Feb. 6, 1920. Serial No. 356,701. 16 Claims. (Cl. 93—49.)



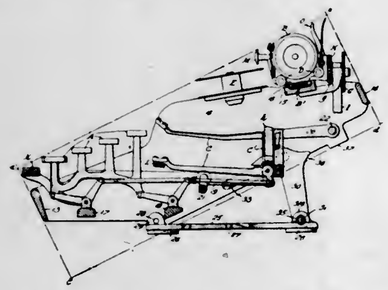
1. Mechanism of the character described having, in combination, a receiving conveyer, a delivering conveyer for depositing articles on said receiving conveyer, an elongated presser for holding the articles on the receiving conveyer, and means for yieldingly bearing on the articles after they are deposited on the receiving conveyer and are approaching the elongated presser.

1,382,789. TYPEWRITING-MACHINE. EMMIT G. LATTA, Syracuse, N. Y. Filed May 1, 1918. Serial No. 231,800. 19 Claims. (Cl. 197—186.)



1. In a typewriting machine, the combination of a platen carriage, type-bars, a keyboard comprising actuat-

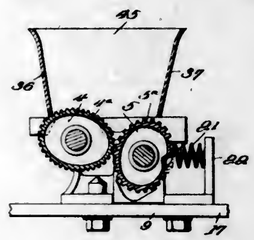
ing keys for said type-bars, a frame carrying all of said parts, and a stationary support on which said frame is



movably mounted to shift in substantially upright position for collapsing the machine to reduce its dimensions.

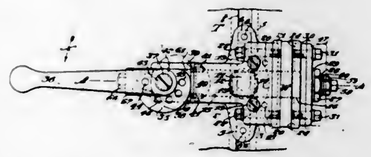
1,382,790. TYPEWRITING-MACHINE. EMMIT G. LATTA, Syracuse, N. Y. Filed July 18, 1918. Serial No. 245,468. 31 Claims. (Cl. 197—186.)

1. In a typewriting machine, a frame having fixed front supports and adapted to have its rear end lowered by tipping on said supports, a pair of pivoted rear supports for said frame arranged to swing in planes parallel with the sides of the frame, and means for limiting the movement of the rear supports on their pivots.



1,382,791. TYPEWRITING-MACHINE. EMMIT G. LATTA, Syracuse, N. Y. Filed Oct. 30, 1918. Serial No. 260,347. 17 Claims. (Cl. 197—186.)

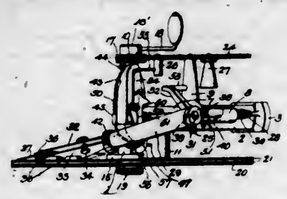
6. In a typewriting machine, the combination with a two-part frame, comprising a main frame having a platen carriage, a key-board and front strike type-bars mounted in operative relation thereon, and a frame base having its front pivotally connected to the main frame, of a rock shaft mounted on one of said frame parts, said rock shaft having rigid legs extending therefrom, and movable connections between the free ends of said rigid legs and the other frame part.



7. In a typewriting machine, the combination of a main frame having a platen carriage, a keyboard, and front strike type-bars mounted in operative relation thereon, a frame base having its front pivotally connected to the lower part of the main frame, a rock shaft mounted on the base and having rigid legs with sliding bearings on the main frame, and stops for said legs.

1,382,792. CORN-HUSKING MACHINE. WILLIAM HAMMOND LEISTER, Westminster, Md., assignor to The United Machinery Company, Westminster, Md., a Corporation of Maryland. Filed Sept. 20, 1917. Serial No. 192,366. 25 Claims. (Cl. 130—5.)

5. A husking machine including in combination, a plurality of substantially parallel longitudinally extending rotary tumblers along which the ears are conveyed, each of said tumblers being of substantially uniform peripheral cross section throughout its length and having sections of its peripheral surface disposed at different distances from its axis of rotation whereby the ears are positively tumbled about transversely a plurality of times during their movement longitudinally of the tumblers, said tumblers being in substantially continuous gripping relation to each other throughout the entire rotation of the tumblers.

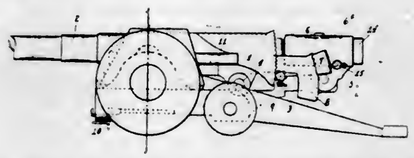


1,382,793. MACHINE-TOOL FIXTURE. EVERETT C. LEWIS, Providence, R. I. Filed Dec. 22, 1919. Serial No. 346,530. 18 Claims. (Cl. 90—61.)

1. In a fixture for machine-tools, the combination with a base, of a fixed jaw on said base, a movable jaw, a support for the movable jaw slidable on the base, automatically-operated means for sliding the support to open the jaws, a cam for sliding the support to close the jaws, and a variable connection between the cam and support for adjusting the operative relation between the movable jaw and fixed jaw.

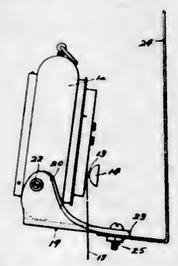
1,382,794. MACHINE FOR SHARPENING SAFETY-RAZOR BLADES. MELCHIOR L. LUEBBEN, St. Louis, Mo. Filed Oct. 14, 1919. Serial No. 330,607. 10 Claims. (Cl. 51—124.)

1. In a machine for the purpose set forth, the combination of an abrading member, a blade-holder, means acting constantly to hold a blade in the blade-holder against the abrading member, means for periodically moving the blade-holder from the abrading member and reversing the same and then permitting return of the blade-holder to the abrading member, a movable element, means for projecting said element normally toward the blade holder, means for retracting said element, and a series of stops on said element to be successively engaged by the blade-holder



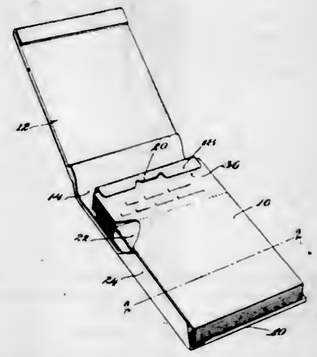
during its return movement as the element is retracted whereby to retard said return movement of the blade holder.

1,382,795. LIGHTNING-ARRESTER. RALPH MCNEILL, Newark, N. J. Filed May 4, 1920. Serial No. 378,844. 15 Claims. (Cl. 175—30.)



1. An electric protective device having normally separated electrodes movable relatively toward each other in response to the passage of a prolonged, arc-creating current, with provision for automatically separating said electrodes on the cessation of the current.

1,382,796. BREECH-BLOCK MECHANISM. CHARLES MIRMILLO, Oakland, Calif., by Sarah E. Hayes, guardian, Oakland, Calif. Filed Aug. 16, 1920. Serial No. 404,018. 1 Claim. (Cl. 89—25.)



A breech mechanism for cannon comprising an arm pivoted to the barrel carriage, a bracket pivoted to the arm and carrying a breech block structure, and coöperating guides on the bracket and carriage for maintaining the alinement of the breech mechanism and holding the same in position when the arm is moved relative to the carriage.

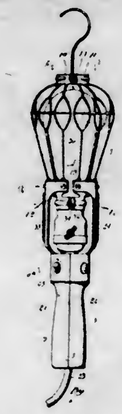
1,382,797. DRAFT-DOOR-OPENING DEVICE. ROBERT BARCLAY MOON, Philadelphia, Pa. Filed Oct. 23, 1920. Serial No. 419,081. 5 Claims. (Cl. 161—8.)

3. A saddle for a time-set prime-mover comprising an integral member formed upon an arc of a circle and provided with an apertured ear upon each side thereof and with a downwardly inclined lug at the rear thereof disposed intermediate said ears and an angular bracket for supporting said saddle the lower arm of which is in a plane paralleling the plane of the seat of said saddle.

1,382,798. MANIFOLD-BOOK. CHARLES W. POTTER, Waltham, Mass. Filed Aug. 25, 1919. Serial No. 319,612. 4 Claims. (Cl. 282—8.)

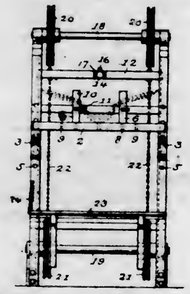
1. A cover for a manifold book provided with means for holding a pad of leaves and with a pair of flexible strips secured together and to said cover at one end thereof and adapted to hold one edge of a carbon sheet between them, one of said strips having a recess adjacent its free end and the other of said strips having a struck up tongue adjacent its free end adapted to engage said recess for locking the two strips together.

1,382,799. BELT-FASTENER. GEORGE E. PURPLE, La Grange, Ill., assignor to Flexible Steel Lacing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 1, 1919. Serial No. 279,965. 8 Claims. (Cl. 24—37.)



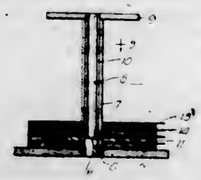
8. A device for connecting the abutting ends of a belt, or the like, comprising two opposed plates lying on opposite sides of said belt and each extending across the abutment of the belt portions, said plates being beveled on their outer and inner sides at the ends thereof whereby no substantial change in the plane faces of the belt is apparent, adjustable means provided with enlarged head portions for securing said plates together, said plates also being provided with registering openings which are surrounded with inwardly extending inclined counter-sunk portions to engage said belt and to seat the enlarged portions of said securing means.

1,382,800. COMBINED LAMP-GUARD AND HANDLE. GEORGE E. PURPLE, La Grange, Ill., assignor to Flexible Steel Lacing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 3, 1919. Serial No. 280,217. 8 Claims. (Cl. 240—54.)



2. A combined lamp guard and handle comprising a lamp guard having two portions pivotally connected to-

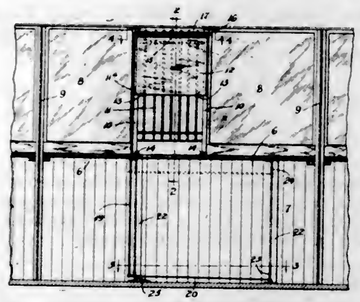
gether which between them embrace the lamp bulb, a handle comprising two portions which between them embrace the conductor leading to the lamp and means for



connecting one of said handle portions to one of said lamp guard portions, and the other handle portion to the other lamp guard portion.

1,382,801. AUTOMOBILE-SPRING COMPRESSOR. EDWARD M. REEVES, Chicago, Ill. Filed Apr. 21, 1920. Serial No. 375,506. 6 Claims. (Cl. 29—87.1.)

1. In a spring compression machine, a main frame, a work table on said frame, a movable compression head guided in the main frame, a horizontal compressor jaw attached to said head in superimposed relation to the work table, a foot lever, and operative connections between said lever and said compressor head.



1,382,802. WATCHMAN'S-CLOCK-DIAL HOLDER. THOMAS A. RENDLE, Chicago, Ill., assignor to Hardinge Brothers, Inc., Chicago, Ill., a Corporation of Illinois. Filed Oct. 22, 1919. Serial No. 332,422. 5 Claims. (Cl. 129—3.)

1. A record holder comprising a base, an upright post secured thereto, a second post telescoping with the first post, a plate secured to the outer end of the second post, a plurality of indices, each provided with an opening, said posts extending through said openings and means preventing relative rotative movement between the posts and indices.

5. In a record dial holder, the combination of a base plate, a hollow post thereon, a second hollow post greater in cross section than the inner cross-section of said first post and arranged when inserted in said first post to contract and to provide frictional engagement therewith, said posts together providing means for receiving and holding a plurality of indices.

1,382,803. PROTECTING DEVICE FOR BANK-WINDOWS. THOMAS H. ROBBINS, Ladysmith, Wis., and EUGENE P. ROBBINS, Minneapolis, Minn. Filed Aug. 25, 1919. Serial No. 319,633. 2 Claims. (Cl. 268—2.)

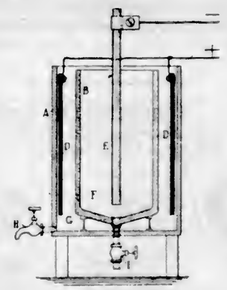
1. The combination with the framework of a bank window having a window opening therein and a stationary counter at the bottom of said opening, of a normally elevated protecting plate extending upwardly from the top of the window opening and hinged to the window frame adjacent the top of the said opening, means above said window opening for holding said plate in its normal position, said plate being adapted to swing downwardly to close the window opening, means tending to swing said plate to its closed position when the same is released, a tripping means for releasing said plate to permit it to swing to closed position, and locking means on said counter to hold the plate in closed position.

1,382,804. INCENDIARY MIXTURE. WALTER T. SCHEELE, Hackensack, N. J., assignor to the Government of the United States, represented by the Secretary of the Navy. Filed Dec. 9, 1919. Serial No. 343,569. 7 Claims. (Cl. 52—23.)

1. A warfare composition containing hexamethylenetetramin and sodium peroxid.

1,382,805. INCENDIARY MIXTURE. WALTER T. SCHEELE, Hackensack, N. J., assignor to the Government of the United States, represented by the Secretary of the Navy. Filed Dec. 9, 1919. Serial No. 343,570. 11 Claims. (Cl. 52—23.)

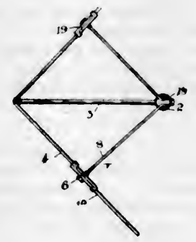
1. An incendiary mixture containing hexamethylenetetramin, sodium peroxid and paraffin.



1,382,806. INCENDIARY MIXTURE. WALTER T. SCHEELE, Hackensack, N. J., assignor to the Government of the United States, represented by the Secretary of the Navy. Filed Dec. 9, 1919. Serial No. 343,571. 10 Claims. (Cl. 52—23.)

1. An incendiary mixture containing hexamethylenetetramin, sodium peroxid, and an oil.

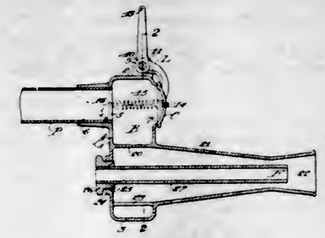
1,382,807. INCENDIARY MIXTURE. WALTER T. SCHEELE, Hackensack, N. J., assignor to the Government of the United States, represented by the Secretary of the Navy. Filed Dec. 9, 1919. Serial No. 343,572. 3 Claims. (Cl. 52—23.)



1. An explosive mixture containing hexamethylenetetramin and sodium peroxid in substantially the proportions of 22.5% and 77.5%.

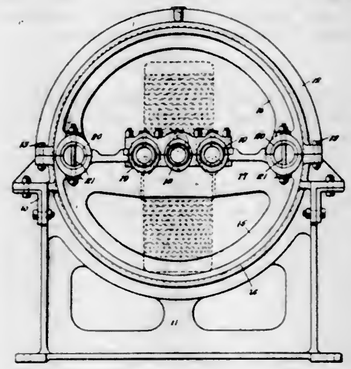
1,382,808. PROCESS OF PRECIPITATING ALUMINIUM COMPOUND. MATHIAS OVROM SEM, Christiania, Norway, assignor to Det Norske Aktieselskab for Elektrokemisk Industri, Christiania, Norway. Filed Apr. 23, 1918. Serial No. 230,250. 11 Claims. (Cl. 204—9.)

1. In the recovery of aluminium compounds, the process which comprises effecting precipitation thereby subjecting a solution containing an aluminium mineral acid salt to electrolysis and thereby effecting precipitation of an aluminium compound at the cathode.



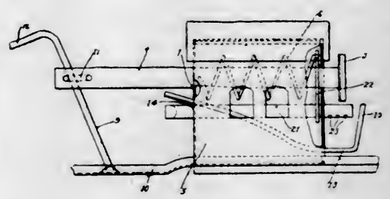
1,382,809. RUDDER ATTACHMENT FOR BOATS. ARCHIBALD DUNLOP STEWART, Toronto, Ontario, Canada. Filed Mar. 25, 1921. Serial No. 455,448. 8 Claims. (Cl. 114—145.)

1. In a rudder attachment for boats, the combination of a rudder post rotatably mounted at the stern of a boat; a rearwardly directed frame mounted on said post; a pair of plates hinged on the rear of said frame; and means for swinging said plates to and from a position alongside and approximately parallel to the frame.



1,382,810. GAS-ENGINE MUFFLER. WILLIAM STORRIE, Providence, R. I., assignor to Apco Manufacturing Company, Providence, R. I., a Corporation of Rhode Island. Filed May 27, 1919. Serial No. 300,136. 6 Claims. (Cl. 137—160.)

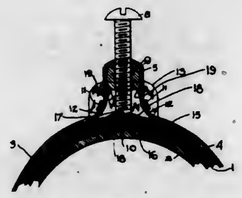
2. In a muffler for gas-engines, the combination of a one-piece casing comprising a vertically arranged box-like expansion-chamber having a flanged inlet on its forward side adapted to receive the end of the exhaust-pipe of the engine and a cut-out port on its rearward side arranged opposite and directly in line with said inlet, a hinged cover for closing the cut-out port, and a discharge pipe formed integral with the expansion-chamber and extending



through the rear wall thereof below the inlet to provide an interior compartment with inlet ports in its walls communicating with the interior of the expansion-chamber.

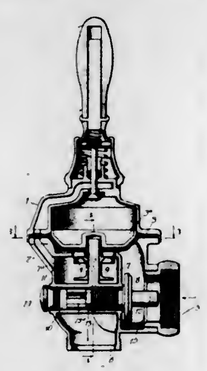
1,382,811. ENGINE-FRAME. PATRICK J. MONAHAN SULLIVAN, Woodcliffe-on-Hudson, N. J., assignor to Monahan Rotary Engine Corporation, New York, N. Y., a Corporation of New York. Filed May 2, 1919. Serial No. 294,264. 9 Claims. (Cl. 121—194.)

1. A supporting frame for engines, including a frame member having a crank shaft bearing and connections to the engine cylinder, and means for supporting said frame member to permit of its free and complete rotation about the axis of the crank shaft.



1,382,812. TOY. JOHN C. TURNER, Dayton, Ohio. Filed Mar. 12, 1920. Serial No. 365,134. 11 Claims. (Cl. 46—37.)

1. In a toy, the combination with a spring actuated plunger to impart movement to a car, and means to retain



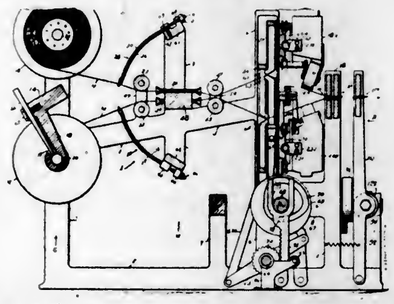
said plunger in a retracted position, of a tripping device mounted adjacent to said plunger and having a part extending slightly beyond the end thereof and arranged to be actuated by the car as the latter approaches said plunger to cause said plunger to be released from said retaining device.

1,382,813. CLAMP. CHARLES VITEK, Omaha, Nebr. Filed Dec. 8, 1919. Serial No. 343,211. 7 Claims. (Cl. 24—19.)

4. In a clamp for connecting two telescoping tubular members, a pair of flexible legs embracing the outer member and provided with an integral connection at one end and with means for adjustably connecting the free ends of the legs, a saddle between the integral connection and the outer telescoping tubular member, means coöperating with said saddle for exerting a tensional strain upon said legs to force them with the said saddle into circumferential engagement with the outer tubular member, and elements on said saddle for retaining the leg portions close to the saddle and to prevent spreading thereof.

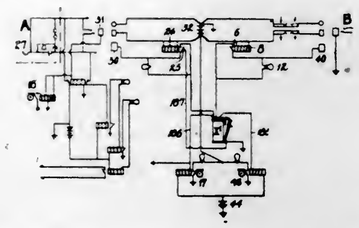
1,382,814. FLUSHING-VALVE. EARL G. WATROUS, Chicago, Ill. Filed Sept. 13, 1917. Serial No. 191,227. 2 Claims. (Cl. 137—93.)

1. In a flushing valve, the combination of a casing having a laterally opening inlet, a downwardly opening outlet, and internal walls dividing the casing interior into inlet and outlet chambers communicating through a valved orifice, an axially movable valve for the inlet opening within the inlet chamber and having a stem extending through a wall of said inlet chamber and wholly within the confines of the casing, said casing having an opening for giving access to said stem, and a closure for said opening.



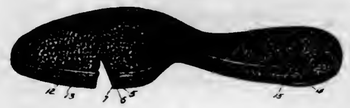
1,382,815. TRACTOR-WHEEL. GEORGE L. BANKS, Huntington Park, Calif. Filed Nov. 22, 1919. Serial No. 339,976. 5 Claims. (Cl. 301—40.)

5. A detachable tread for a wheel rim, comprising a chain composed of links having a central portion and divergent portions extending therefrom, forming substantially Y-shaped arcuate members, said members being substantially L-shaped in cross section to form horizontal bearing treads and vertical traction treads, the outer extremities of the divergent portions being bent parallel with the central portion, co-axial perforations in the parallel portions of the traction treads, a perforation in the trac-



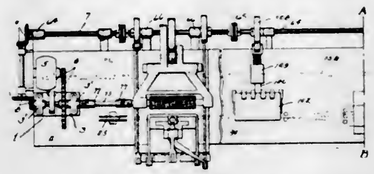
tion tread of the central portion, detachable means for connecting the links, comprising cross bolts passing through the perforations of the divergent portions and the central portion of contiguous links and having spacers on each side of said central portion, and ears extending inwardly from the bearing treads adjacent their parallel portions.

1,382,816. WOOD-WEAVING LOOM. OSMOND T. BELCHER, Los Angeles, Calif. Filed Nov. 7, 1919. Serial No. 336,395. 10 Claims. (Cl. 139—32.)



1. In a wood weaving loom, in combination, means for feeding a warp composed of strips of wood, means for alternately crossing alternate strips of warp, a shuttle adapted to grip throughout their length and carry thin strips of woods comprising a weft in between the crossed strips of warp, means for putting the shuttle to place the strip of weft in position in the weave, means for releasing the weft strip from the shuttle and means for operating the shuttle in and out of the loom.

1,382,817. MEANS FOR AUTOMATICALLY RECORDING CALLS IN TELEPHONE SYSTEMS. WILLIAM JOHN BLAIR, Melbourne, Victoria, Australia, assignor to Alexander Eaton Woods, Melbourne, Australia. Filed Apr. 28, 1917. Serial No. 165,163. 9 Claims. (Cl. 179—9.)

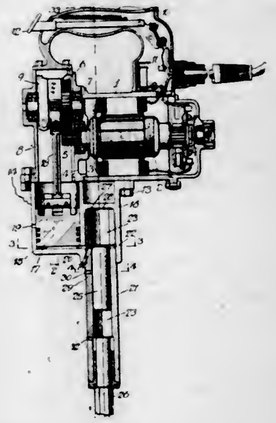


1. In telephone systems, an effectual call meter, an ineffectual call meter, a circuit for each meter, a relay in each circuit, a control relay having two armatures respectively controlling the circuits of the said two relays, said armatures being so arranged that one requires a greater strength of current to operate it than the other, and means on the control relay controlled by the armatures for completing one or the other of said relay circuits according as to whether the call is effectual or ineffectual.

1,382,818. INSOLE AND METHOD OF MAKING. DARIUS W. BUNKER, Brookline, and CHARLES M. BRADFORD, Dorchester, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 31, 1918. Serial No. 247,619. 14 Claims. (Cl. 36—22.)

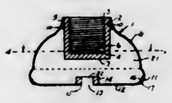
1. An insole for welted boots and shoes comprising a blank of sheet insole material shaped and molded to fit the exact area of the last bottom formed by the curves which define the heel-seat, the arch and the fore-part spring, and provided with a marginal groove forming a sewing-rib to which the upper and welt are stitched, standing from one face of the blank at a uniform angle to all curves produced by the molding thereof.

1,382,819. SAW-MAKING MACHINE. AXEL CARLSON, Berkeley, Calif. Filed Feb. 9, 1920. Serial No. 357,351. 11 Claims. (Cl. 76—112.)



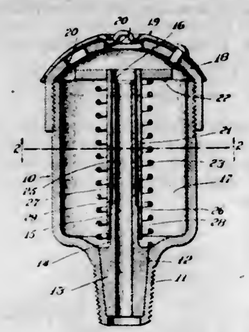
1. A machine for cutting saw blades from continuous strips of metal comprising a frame, a transversely movable cutter head carried thereby, a clamping mechanism comprising a movable jaw for clamping a plurality of saw strips, a member movable at right angles thereto for aligning the edges of said saw strips and means for feeding said strips.

1,382,820. MILK-BOTTLE-CAP REMOVER AND RETAINER. OLE CARLSON, Los Angeles, Calif. Filed Jan. 26, 1920. Serial No. 354,124. 1 Claim. (Cl. 215—53.)



A milk bottle removing and retaining device comprising a knob, an L-shaped member having its vertical leg threaded and seated in the lower portion of said knob, the horizontal leg of said L-shaped member being disposed a short distance below the lower end of the knob and the end of said horizontal leg being pointed, a concavo-convex disk loosely arranged on the vertical leg of the L-shaped member and disposed below the lower end of the knob, and a bur formed on the vertical leg of said L-shaped member below said disk.

1,382,821. POWER-HAMMER. CHARLES B. COATES, Chicago, Ill., assignor to Chicago, Pneumatic Tool Company, Chicago, Ill., a Corporation of New Jersey. Filed Feb. 6, 1920. Serial No. 356,601. 13 Claims. (Cl. 125—34.)



1. In a power hammer, the combination of a cylinder having a piston chamber, a hammer piston reciprocable in such chamber, a compression chamber communicating with the piston chamber, means for intermittently compressing the air in such compression chamber to a high or working pressure, said two chambers having communicating ports, one being always open to supply compressed air to initiate the movement of the piston on its power stroke and the other being intermittently open so as to cause a discharge of high pressure air against the hammer piston after it has started on its power stroke.

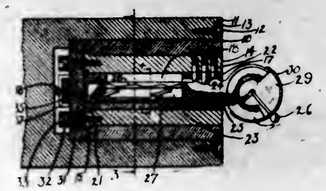
1,382,822. SPRAY-NOZZLE. CLYDE R. COLLINS, Los Angeles, Calif., assignor of one-half to Central Specialty Company, Los Angeles, Calif., a Corporation of California. Filed June 9, 1919. Serial No. 302,982. 2 Claims. (Cl. 299—114.)

1. A spray nozzle comprising an internally screw threaded cap having diametrically arranged tangential openings that are disposed in a plane at right angles to the axis of the cap, a casing having a neck fitting the cap and the body of the casing flaring outwardly from the cap, a rim formed around the large end of the casing, a face plate fitting in the rim and having a central opening, and a ring secured against the inner face of the face plate around the central opening.

1,382,823. AUTOMATIC OIL-CUP. CLAUDE E. COX, Detroit, Mich. Filed Jan. 29, 1921. Serial No. 441,026. 6 Claims. (Cl. 184—69.)

6. In an oil cup of the character described, a relatively stationary post member and a relatively vibratable sleeve member, these shaped as to their confronting surfaces to present an oil space therebetween that is variable in area as the sleeve is vibrated relatively to the post.

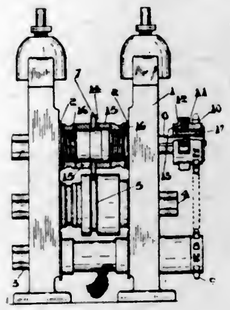
1,382,824. PLASTIC-BLOCK STRUCTURE. WILLIS L. CUTLER, Legrand, Iowa. Filed Oct. 28, 1919. Serial No. 334,055. 1 Claim. (Cl. 72—40.)



In a device of the class described, a block structure for corners, comprising a block, having a groove, and a block arranged at right angles to said first block having a tongue received in said groove, said blocks having inward projections formed with adjacent fitting beveled faces for making a relatively thick corner, and reinforcing members mounted in said projection arranged to overlap each other within the corner spaced from the block, where they may be fastened together.

1,382,825. SEPARATION OF BORAX FROM POTASSIUM SALTS. CLINTON E. DOLBEAR, San Francisco, Calif., assignor to Industrial Research Co., San Francisco, Calif., a Business Association. Filed Oct. 26, 1920. Serial No. 419,751. 10 Claims. (Cl. 23—22.)

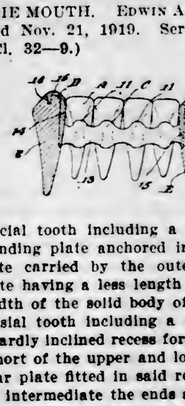
1. The process of separating borax from mixtures of potassium salts and borax, which consists in heating the mixture in moist condition; and separating the resultant liquor with its dissolved content, from the undissolved salts.



1,382,826. LOCK AND KEY. BASCOM A. DOVE, Dallas, Tex. Filed Jan. 8, 1920. Serial No. 350,160. 7 Claims. (Cl. 70—47.)

3. In a device of the character described, a rotatable barrel having a set of tumbler openings formed therein, a cylinder rotatable within the barrel and having a set of tumbler openings to coact with the first named set and also having a second set of tumbler openings, tumblers mounted within the set of openings in the barrel and the first named set of openings in the cylinder, a core rotatable within the cylinder and having a longitudinal slot adapted to receive the inner ends of said tumblers, said core having a set of tumbler openings for coacting with the second named set of the cylinder, said core having a longitudinal key receiving opening, tumblers adapted for operation within the set of openings in the core and the second set of openings in the cylinder, a key

for insertion within the longitudinal opening of the core and having a set of bits for coaction with the tumblers in the openings of the core and also having a longitudinal recess, a rod extending longitudinally within the recess and having a set of bits to coact with the first named tumblers, means to move the rod tranaversely with relation to the key, and a bolt moved by the cylinder.

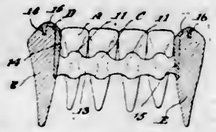


1,382,827. ROLLING-MILL. GEORGE EDWARD FOSTER, Belleville, Ontario, Canada. Filed Jan. 17, 1920. Serial No. 352,174. 2 Claims. (Cl. 80—54.)

2. In a rolling mill, the combination of a frame; a bed roll having an arbor journaled in the frame; a creaser roll having an arbor journaled in the frame; a shaft journaled in the frame parallel to the roll arbors; gearing between the shaft and the bed roll arbor; a sprocket wheel on the projecting end of the shaft; a sprocket wheel on the projecting end of the creaser roll shaft; a sprocket chain connecting said sprocket wheels; and means permitting the part to which one of the sprocket wheels is connected to run ahead of the sprocket wheel, the other sprocket wheel being rigidly secured in position.

1,382,828. SELF-ADJUSTING WIRE FLANGE FOR PIANO-ACTIONS. FRANK L. GEORGE, Los Angeles, Calif., assignor of one-fourth to Burton J. Neill, San Francisco, Calif. Filed July 22, 1920. Serial No. 398,235. 8 Claims. (Cl. 84—251.)

1. In a piano action the combination with a supporting rail, of a movable element, a flange, means for positioning said flange on said supporting rail, and transversely expanding the same, said flange having bearing ends engag-



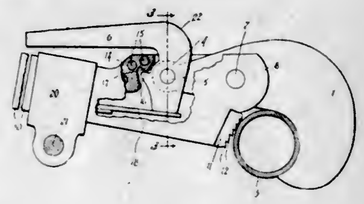
ing said movable element to form a pivotal connection, said bearing ends being yieldably urged toward said movable element.

1,382,829. METAL PULLEY. HENRY J. GILBERT, Saginaw, Mich. Filed July 28, 1919. Serial No. 313,796. 12 Claims. (Cl. 64—18.)

1. A split metal pulley, each half of which comprises a rim and a center formed hollow with opposite side walls, a central hub portion, and web portions between the hub portion and the rim, and means located between said side walls and engaging the rim of one-half and a web portion of the other half, for securing the two pulley halves together.

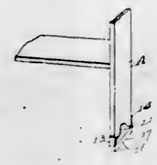
1,382,830. FORM OF ARTIFICIAL TOOTH AND MEANS OR METHOD OF ANCHORING SAME INTO POSITION IN THE MOUTH. EDWIN A. HAGAMAN, Madelia, Minn. Filed Nov. 21, 1919. Serial No. 339,612. 6 Claims. (Cl. 32—9.)

1. An artificial tooth including a solid body, a longitudinally extending plate anchored in said body, and an attaching plate carried by the outer end of the first mentioned plate having a less length and width than the length and width of the solid body of the tooth.



4. An artifisial tooth including a solid porcelain body having an inwardly inclined recess formed in its inner face terminating short of the upper and lower edges thereof, a flat rectangular plate fitted in said recess, said recess being positioned intermediate the ends and side faces of the body, and an attaching plate carried by the outer end of the plate.

1,382,831. PNEUMATIC CUSHION. FRANK C. HILKER, Fort Wayne, Ind. Filed Apr. 11, 1921. Serial No. 460,567. 2 Claims. (Cl. 5—1.)

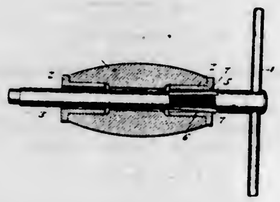


1. A pneumatic sack for a pillow or cushion formed of two sheets of rubber the edges of which are united, and each sheet being composed of laminæ of different degrees of stiffness, the lamina of greater stiffness being of less area than that of the other lamina.

1,382,832. PIPE-TONGS. RICHARD D. HILL, Fort Worth, Tex., assignor to P. G. Krohn, Electra, Tex. Filed Jan. 29, 1921. Serial No. 440,913. 2 Claims. (Cl. 81—78.)

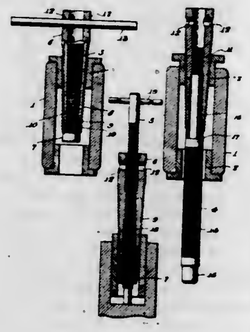
1. Pipe tongs comprising a relatively movable jaw provided with a recess to conformably receive a drill stem coupling or pipe, a smaller stationary jaw provided with teeth, cheek pieces on each side of the jaws, and a lever pivoted to the inner end of the larger jaw and to the cheek pieces, said movable jaw also pivoted approximately midway of its ends to the cheek pieces, means adjacent the lever, whereby when the lever is moved away from or toward the tongs the movable jaw will be moved away from or toward the smaller jaw, and means for locking the lever in operative position when the lever is released.

1,382,833. NON-SLIPPING FOOT FOR LADDER-LEGS. ZENUS L. HURD, Nashville, Tenn. Filed Sept. 4, 1920. Serial No. 408,185. 1 Claim. (Cl. 228—62.)



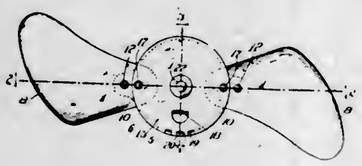
A foot for step ladder legs comprising a base plate turned up at its ends to form parallel end walls, the side edges of the plate being formed with upwardly extending side walls, said side walls extending inwardly, then outwardly and being resilient, the side and end walls at their junction with the base plate being substantially conterminous with the side and end edges of the base plate and said side and end walls forming a socket to receive said leg, and a pad of rubber disposed against the under face of the base plate and riveted thereto, said end walls extending at an angle to the vertical and being parallel to each other.

1,382,834. BUSHING-TOOL. ARTHUR K. JOHNSON, Holly, Colo. Filed Dec. 29, 1917. Serial No. 209,599. 3 Claims. (Cl. 29—88.2.)



1. A tool for removing bushings comprising a shank of a length adapting it to extend through a bushing, pro-

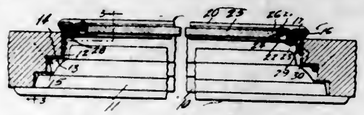
vided at one end with a transverse impact surface and also having means whereby it may be turned, and a ta-



pered thread forming member carried by the shank between its ends.

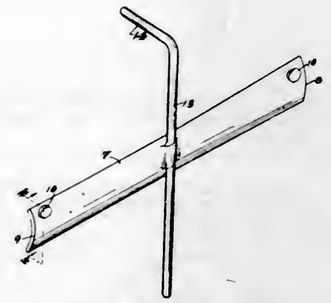
1,382,835. BUSHING-TOOL. ARTHUR K. JOHNSON, [illegible], Colo. Filed Oct. 25, 1918. Serial No. 259,664. 4 Claims. (Cl. 29—88.2.)

1. A bushing extractor comprising a member having a tapered thread-forming outer surface and a longitudinal bore and provided with means whereby it may be rotated, and an extracting member engageable with said bore for imparting a longitudinal impulse to the thread-forming member.



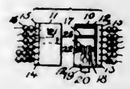
1,382,836. ADJUSTABLE PROPELLER-BLADE. EDWIN JUELSON, Chicago, Ill., assignor to American Aero Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 11, 1918. Serial No. 261,966. 6 Claims. (Cl. 170—162.)

6. In a propeller a hub, two or more wings pivoted to said hub on axes substantially parallel to the axis of the latter, and means angularly adjustable about the axis of said hub and engaging said wings to secure them in adjusted position.



1,382,837. REFRIGERATOR-DOOR. MARTIN JUREK, Dallas, Tex. Filed Feb. 15, 1921. Serial No. 445,086. 4 Claims. (Cl. 45—71.)

1. The combination with a refrigerator having a main door opening, and a maid door to close said opening, of an attachment frame arranged within the main door opening and formed separate therefrom, means for securing

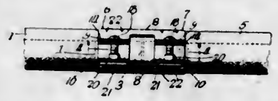


the attachment frame to the wall of the main door opening, and a plurality of individual doors pivotally mounted upon the attachment frame.

1,382,838. SLEEVE-PULLER. NICHOLAS E. KOCH, Los Angeles, Calif. Filed Apr. 29, 1920. Serial No. 377,585. 5 Claims. (Cl. 29—88.2.)

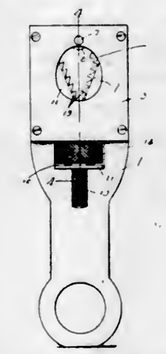
1. A sleeve puller having means for engaging an opening formed in the sleeve, said puller having transversely spaced openings and a handle extending across said puller for withdrawing the puller and received through said openings and the sleeve engaged thereby.

1,382,839. CATCH FOR JEWELRY AND THE LIKE. JOHN C. LAPP, Newark, and JOHN A. HALEY, Irvington, N. J. Filed Feb. 26, 1921. Serial No. 447,982. 3 Claims. (Cl. 24—211.)



2. A catch comprising two members, one member having a well and having marginal walls, a slide extending through one end wall and one wall of the well, the end of the slide being split and having shoulders on its outer edge to engage with the wall of the well to limit its outward movement, the outside edges of the split portion being convex so as to yieldingly hold it, by the edges of the opening in the wall of the well, in its inner and outer positions, the second member having a loop to enter the well and to substantially fit therein and adapted to receive the slide to lock the members together.

1,382,840. HOSE-MENDER. AXEL LEVEDAHL, Aurora, Ill., assignor to Independent Pneumatic Tool Company, Chicago, Ill., a Corporation of Delaware. Filed July 30, 1919. Serial No. 314,375. 6 Claims. (Cl. 285—78.)



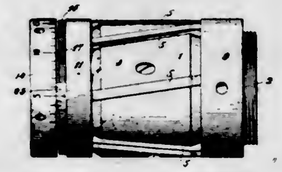
1. The combination with two hose sections having meeting ends, of a mender, comprising an inside core removably inserted into said hose sections at their meeting ends and having a rib for gaging the depth that the core penetrates the hose sections, the portions of the core between its ends and the rib being straight and smooth

and free from projections, clamping means consisting of tubular clamps split longitudinally and applied about the hose sections on opposite sides of their meeting ends, each clamp having its ends at the line of severance bent outward to provide flanges, and means for tightening

each clamp about its hose section, comprising a nut applied against one of the flanges of each clamp and having an internally threaded portion extending inwardly therethrough toward the opposite flange, and a clamp screw inserted through the last named flange and engaging the threaded portion of said nut.

1,382,841. THREADING-TOOL. LEON T. LYNN, Berkeley, Calif. Filed Nov. 25, 1919. Serial No. 340,675. 12 Claims. (Cl. 10—111.)

1. A tool for recutting screw threads comprising a head, supporting rollers revolubly mounted therein, die members slidably mounted therein and in opposition to said rollers, said die members being self-adjusting in a lateral direction within said frame.



1,382,842. DEVICE FOR ALINING AND FINISHING SHAFT-BEARINGS AND THE LIKE. ALBERT A. MARTELL, Mansfield, Mass., assignor to The Taft-Peirce Manufacturing Company, Woonsocket, R. I., a Corporation of Rhode Island. Filed Sept. 28, 1915. Serial No. 53,119. 12 Claims. (Cl. 77—55.)

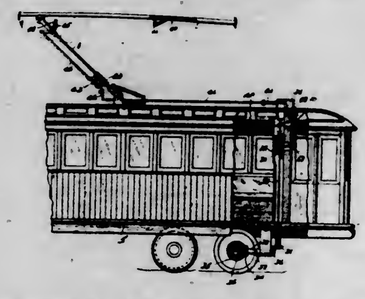
1. A temporary bearing comprising a member having a plurality of threaded holes; a set screw for each hole and threaded to engage the thread of said hole; a plunger operative in each of said holes; a second member rotatably mounted in the first member and held in position by said plungers and a third member rotatably mounted in the second member and having a bore eccentrically disposed with relation to the exterior of said third member.

12. A device of the class described, a reamer shaft, a reamer on said shaft, a temporary bearing slidable longitudinally on said reamer shaft in combination with a conical faced member to support said reamer shaft within a permanent bearing, positively engaging means between said conical member and said permanent bearing, and hand holds whereby said conical faced member may be rotated to cause said positively engaging means to rigidly secure said conical member within said permanent bearing.

1,382,843. MOVABLE ZERO-SCALE FOR REAMERS AND THE LIKE. ALBERT A. MARTELL, Woonsocket, R. I., assignor to The Taft-Peirce Manufacturing Company, Woonsocket, R. I., a Corporation of Rhode Island. Filed Feb. 1, 1918. Serial No. 214,855. 10 Claims. (Cl. 77—75.5.)

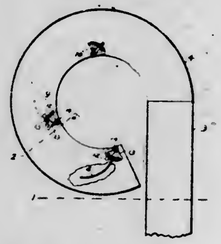
1. In a reamer or the like, in combination, a reamer body, adjustable blades carried by said reamer body, a non-rotatable ring slidable on the body of said reamer, an undercut portion on said non-rotatable ring, a departure scale member having a part adapted to fit the undercut portion, means to lock said departure scale member in predetermined adjusted positions relatively to said non-rotatable ring, and a rotative member provided with a micrometer scale adapted to read from the zero on said departure scale whereby the adjustment of said departure scale changes the point of departure relative to which said micrometer scale is adapted to read.

1,382,844. RELINER. ARCHIBALD O. MASON, Highland Park, Ill. Filed Mar. 2, 1920. Serial No. 362,651. 2 Claims. (Cl. 152—18.)



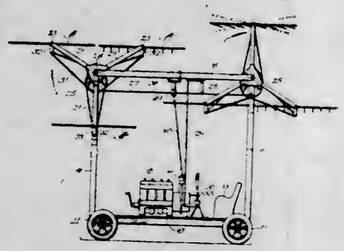
1. A reliner for pneumatic tire casings, comprising an unbroken strip of material formed separate from the casing adapted to fit within the casing and being of a length which will extend around the entire inner circumference of said casing, a coating of cement on the outer face of said length of material, and a protecting covering arranged over said cement.

1,382,845. STREET-INDICATOR FOR RAILWAY-CARS. DE ELLA B. MAYBERRY, Chicago, Ill., assignor of one-fourth to John W. Harrison, Chicago, Ill. Filed Dec. 18, 1918. Serial No. 267,323. 1 Claim. (Cl. 40—46.)



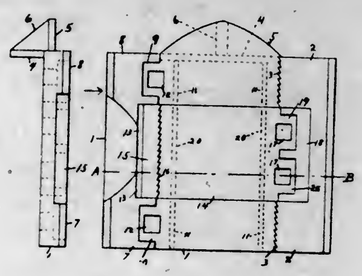
The combination with a car, having a rotary axle, of a street indicator comprising a traveling apron; means for intermittently connecting said axle and said apron, comprising a continuously rotating movable clutch member having connection with said axle; a stationary clutch member having connection with said apron; a shifting collar rotatably mounted on said movable clutch member; means for intermittently tripping said movable clutch member into operative position; arms on said collar; a plate carried by said stationary clutch member with which said arms slidably engage; a projection on said collar; and a table against which said projection is adapted to engage to hold said movable clutch member in

operative position after being tripped into said position, said table having a slot to receive said projection, where-



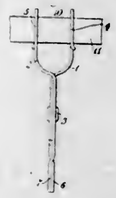
by said clutch will automatically move to inoperative position after rotation of the apron a predetermined distance, substantially as described.

1,382,846. SEPARATOR. CARLE J. MERRILL, Portland, Me. Filed July 24, 1919. Serial No. 313,013. 5 Claims. (Cl. 183—79.)



1. A separator for heavier-than-air material consisting of a spout open along the entire length of one side to permit the free escape of air and curved or bent from end to end toward the open side with a substantially uniform radius of curvature so that the escaping air through the open side at any given point will be unopposed by the escaping air from any other portion of the spout and having a delivery end for delivering the separated material longitudinally of the spout.

1,382,847. AEROPLANE. CARL F. NAYER, Chicago, Ill. Filed Jan. 17, 1919. Serial No. 271,573. 14 Claims. (Cl. 244—11.)

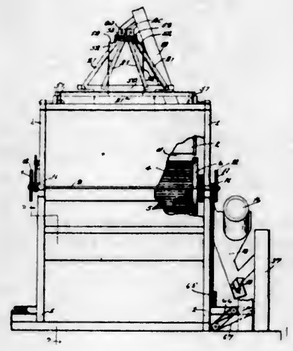


1. An aeroplane including two sets of rotatable lifting planes with control means for maintaining the planes in different parallel positions throughout their rotation, and means whereby said planes are effective throughout part only of their rotation, the planes of the two sets being staggered so that the planes of one set overlap the plane of the other set during rotation of the planes.

1,382,848. TIE-PLATE AND RAIL-ANTICREEPER. ANDERSON OOLEY, Colorado Springs, Colo. Filed Oct. 29, 1920. Serial No. 420,492. 4 Claims. (Cl. 238—304.)

1. A device of the class described comprising a primary plate adapted to be mounted on a railway tie, having suitably located spike holes and a main hole therein, and toothed jaws thereon; and a secondary plate having suitably located spike holes therein and a toothed jaw thereon, slidably disposed within said main hole in said primary plate; the toothed jaws of each edge of a flange of a railway rail, for the purposes set forth.

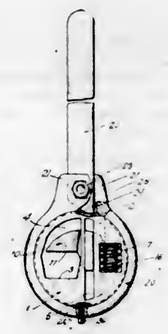
1,382,849. FASTENING DEVICE. ALBERT HENRY FRANKS PERL, Chiswick, England. Filed Jan. 26, 1920. Serial No. 354,229. 6 Claims. (Cl. 24—232.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



6. A fastening device comprising pivotally connected members having coöperating gripping elements formed at one end and movable toward each other and into contact for gripping operations, the opposite end of each member being formed with a hook opening in the direction of movement of the gripping element of such member for gripping action, whereby the hooks are reversed in a line axially of the members when the gripping elements are in gripping coöperation.

1,382,850. APPARATUS FOR BLEACHING ALMONDS. GEORGE W. PIERCE, Davis, Calif., assignor to California Almond Growers Exchange, San Francisco, Calif., a Corporation of California. Filed Aug. 24, 1920. Serial No. 405,703. 17 Claims. (Cl. 99—2.)

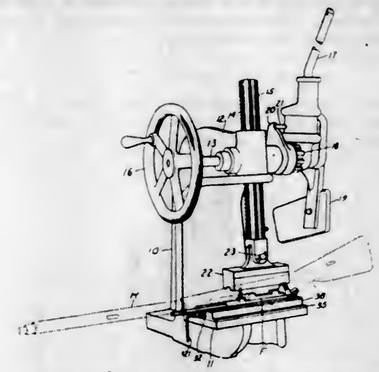
1. The combination with an apparatus provided with a sulfuring chamber, of an open cylindrical agitator rotatably mounted therein, means for imparting continuous rotary movement to said agitator, and means for controlling the feed of almonds within and the discharge therefrom from within the agitator during the rotary movement thereof.



16. In an apparatus for the described purpose provided with a processing chamber, of a main hopper for almonds and a receiving hopper for treated almonds separated therefrom, an open rotary agitator for receiving almonds to be processed interposed between said hoppers and disposed within the processing chamber, a controllable

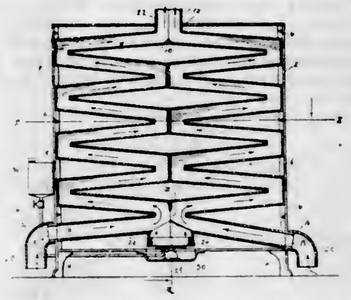
gate for the main hopper, means thrown into action at times during the rotary movement of the agitator for controlling the opening and closing of the gate for the main hopper, devices for separating the delivery of the

treated and the untreated almonds relative to the receiving hopper, and means for removing the untreated almonds from said hopper for returning the same to the main hopper.



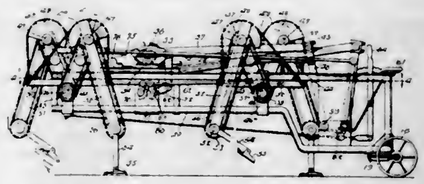
1,382,851. ADJUSTABLE FRICTION-WRENCH. JULIUS A. PITSCH, Los Angeles, Calif. Filed June 2, 1920. Serial No. 385,925. 3 Claims. (Cl. 81—58.)

2. A wrench comprising a circular wrench head having a grooved periphery provided with a channel, a sleeve received about said wrench head, a handle pivoted to said sleeve and extending within said groove, the end of the handle within the groove being arranged to engage and be disengaged from said wrench head when turned in opposite directions, and a set screw projecting from said sleeve into the peripheral groove and channel of said wrench head.



1,382,852. METHOD AND APPARATUS FOR FINISHING GUNSTOCKS. ERNEST W. PITTMAN, Flushing, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 25, 1918. Serial No. 263,985. 8 Claims. (Cl. 144—137.)

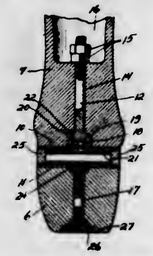
1. In the manufacture of recessed wooden articles, the recesses of which are designed to receive metal parts, the method of forming and fixing the contour of the recess walls that consists in applying a heated die, under pres-



sure, for such period of time, as to insure permanence of contour without charring the material.

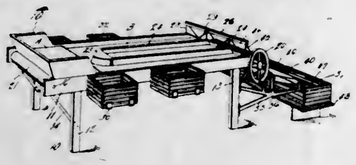
1,382,853. OIL-BURNER RADIATOR. ADOLPH M. PREISS, Kansas City, Mo. Filed Nov. 1, 1916. Serial No. 128,973. 2 Claims. (Cl. 126—91.)

1. A radiator construction comprising a pair of radiator members forming oppositely arranged zigzag sections each having an air inlet opening at its lower end, the lower ends of said sections having portions coöperating to form a burner housing in communication with the passages through said sections, a burner located within said housing for heating said sections and the air as it passes over said burner, and a skeleton supporting frame formed in duplicate sections and provided with means for securing the same together with said radiator sections between them with the corresponding portions of the latter in abutting relation.



1,382,854. PERAMBULATING TRACTOR. PETER A. RASMUSSEN, Chicago, Ill. Filed Nov. 17, 1919. Serial No. 338,451. 16 Claims. (Cl. 180—8.)

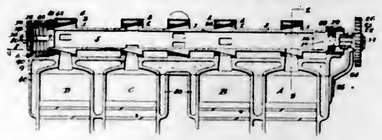
1. In a device of the character described, the combination of a motor, tractor elements having a stepping action



driven by said motor, a driven shaft operable by said motor, a differential gear mechanism driven by said shaft, an oscillatory shaft operably connected with the gear mechanism, said last named shaft forming a means for actuating said tractor elements.

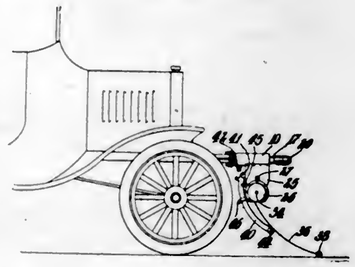
1,382,855. CORDLESS ANKLE-JOINT. MILO E. RICE, Kansas City, Mo. Filed Apr. 30, 1920. Serial No. 377,984. 2 Claims. (Cl. 3—7.)

1. An ankle joint structure for artificial limbs comprising leg and foot members, a sleeve provided with means for fixedly securing the same to one of said members, and a second sleeve journaled within said first sleeve, and a bolt secured to the other of said members and formed with an eye portion encircling said second sleeve, said eye portion of the bolt having an internal key element and said second sleeve being formed with a longitudinal open keyway permitting insertion of said second sleeve within said first sleeve into keyed relation to the eye portion of said bolt.



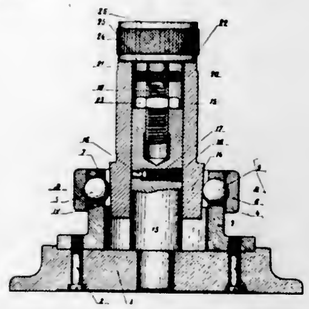
1,382,856. VEGETABLE-GRADING APPARATUS. SAMUEL C. RIGNEY, Dallas, Tex. Filed July 15, 1920. Serial No. 396,493. 8 Claims. (Cl. 130—32.)

1. In a vegetable grader, the combination with a support, of endless belt conveyer means carried by the support, said conveyer means comprising an upper belt section unsupported between its ends, and a lower belt section to receive material from the upper belt section and to permit of the turning of such material when passing thereon from the upper belt section, a supporting member arranged beneath the lower belt section to prevent downward movement thereof, segregating means extending over and longitudinally of the lower belt section to divide the same into a plurality of sections, and means to supply the vegetables to the unsupported portion of the upper belt section.



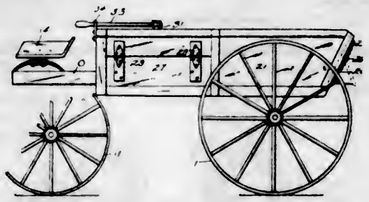
1,382,857. SELF-SEATING ROTARY VALVE. DOMENICO RONCONI, Chicago, Ill. Filed June 26, 1918. Serial No. 242,021. 3 Claims. (Cl. 123—59.)

1. In a rotary valve mechanism of the character stated, the combination with an explosion cylinder including a head, the said head having a valve seat at each of the opposite sides of the explosion chamber, each of such seats having a port in communication with the explosion chamber, a hollow rotary valve in each of the said valve seats, each of said valves having at least one port adapted for intermittently alining with their respective valve seat ports to the explosion chamber, housings that fit over the valves, each of the said housings having opposite bearing members that fit upon and attach to the valve seat portion of the cylinder head, means for



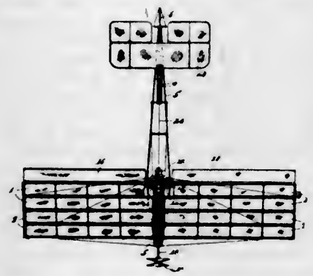
securing the said housings fluid tight onto the cylinder head, and intake and exhaust manifold connections that join with the said housings and through the housings with their respective valves.

1,382,858. VEHICLE SAFETY DEVICE. SIMON ROTHAUSKI, Akron, Ohio. Filed Feb. 3, 1921. Serial No. 442,087. 5 Claims. (Cl. 293—25.)



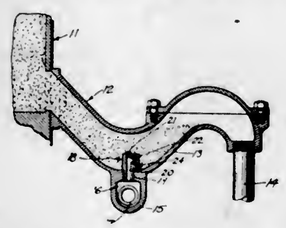
1. A vehicle fender comprising a bumper, a pair of slide-bars on which said bumper is fixed, a shaft, an apron normally wound on said shaft, power means for rotating said shaft to unwind said apron, a part holding said power means against operation, said part being released from its holding position by a sliding movement of the said bars, and a pair of arms normally held in inoperative position and adapted to be released to support said apron when said bars are so moved.

1,382,859. BORE-VERIFYING APPARATUS. LOUIS ROUANET, Ivry-Port, France, assignor to Compagnie D'Applications Mecaniques, Ivry-Port, France. Filed Feb. 16, 1918. Serial No. 217,684. 4 Claims. (Cl. 33—178.)



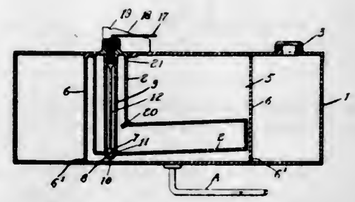
1. An apparatus for the verification of bores containing, in combination, a conical piece movable within the bore to be verified, a guide piece for said conical piece, a base supporting said guide piece, a normally fixed contact member and a checking block adapted to be placed on said conical piece and said contact member, said checking block being adapted to act as a limit gage.

1,382,860. DUMPING-BED. GEORGE E. SARGENT, Hampton, Iowa. Filed July 29, 1920. Serial No. 399,666. 3 Claims. (Cl. 298—24.)



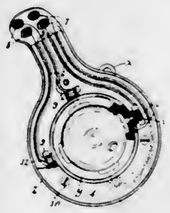
1. In a dumping device, a frame, traction devices thereon, a dumping bed on said frame, having a front wall, inclined side and back walls, bottom members connected at their upper edges and inclined downwardly and outwardly, hinged doors in the side and back walls, a single controlling device operatively connected with all of said doors, a shaft, a disk device thereon, controlling members connecting said disk device with said doors, a lever fixed to said shaft, and means for holding said lever in certain adjusted positions.

1,382,861. AEROPLANE. HENRY SCHRÖDER, Chicago, Ill. Filed May 19, 1919. Serial No. 297,984. 4 Claims. (Cl. 244—15.)



1. An aeroplane comprising a frame; planes thereon adjustable into different positions relatively to the vertical; an angularly adjustable propeller on said frame; an operative connection between said planes and said propeller for adjusting said planes upon adjustment of said propeller; supporting planes pivotally mounted on said frame on an axis arranged transversely with reference to the direction of travel thereof, said supporting planes being arranged to hang normally in substantially vertical positions; and means for limiting the rearward swing of said supporting planes, substantially at horizontal positions, substantially as described.

1,382,862. AIR-NOZZLE FOR LOCOMOTIVE-SANDERS. JOHN W. SIMPSON, Santa Barbara, Calif. Filed Jan. 26, 1921. Serial No. 440,153. 1 Claim. (Cl. 291—11.)

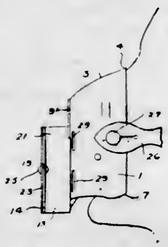


The combination with a locomotive sand discharge pipe having a substantially U-shaped trap, of an air inlet nozzle located in the lower portion of said trap and comprising a plug that is screw seated in the bottom of said trap, said plug being provided with a pair of vertically disposed ducts that are offset with respect to each other and an intermediate inclined duct connecting the inner ends of said offset ducts.

1,382,863. GASOLENE-TANK. SAMUEL SLISHMAN, Chelsea, Mass. Filed Feb. 26, 1920. Serial No. 361,383. 12 Claims. (Cl. 158—46.5.)

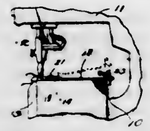
1. In a liquid fuel tank, a main tank, an auxiliary tank having an intake in communication with said main tank whereby filling the main tank fills the auxiliary tank, a tubular valve seat extension fixed within said auxiliary tank and having a valve seat, and an outlet and an inlet port opening into said main and auxiliary tanks, respectively, and a valve stem adjustably mounted in said extension and having a valve coöperative with said seat to simultaneously control said inlet and outlet ports, and means for manipulating said valve stem to move said valve toward and from said seat.

1,382,864. COMMUTATOR DEVICE FOR AUTOMOBILE IGNITION SYSTEMS. HENRY LUND SMITH, Paterson, N. J. Filed Mar. 28, 1919. Serial No. 285,863. 3 Claims. (Cl. 200—19.)



1. In combination, with a concavo-convex housing, a commutator member and a conductor member arranged therein, the commutator member and conductor member respectively including spaced commutator contact and terminal portions held bearing against each other, and one of said members being enterable to and removable from the housing at the concave side thereof independently of the other member.

1,382,865. MOLDED DEVICE. WALTER SODERLING, Reading, Pa., assignor, by mesne assignments, to Willson Goggles, Inc., Reading, Pa., a Corporation of Pennsylvania. Filed Apr. 1, 1918, Serial No. 225,890. Renewed Nov. 27, 1920. Serial No. 426,878. 2 Claims. (Cl. 179—156.)

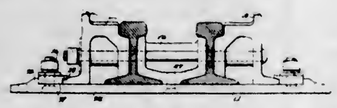


2. A molded article combining a portion adapted to fit the nose and mouth and having a feather or tapered edge

to fit closely to the wearer's face, a portion adapted to hold a telephone transmitter, and absorbent material po-

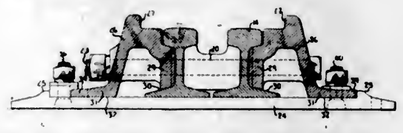
sitioned to absorb moisture of the breath, and to prevent moisture reaching the transmitter.

1,382,866. SHOE-STITCHER ATTACHMENT. CHARLEY J. SPENCER, Osceola, Iowa. Filed Feb. 17, 1920. Serial No. 359,215. 2 Claims. (Cl. 112—45.)



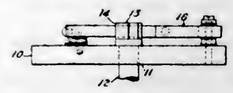
1. A shield attachment for shoe stitching machines comprising an elongated plate having an offset portion having side flanges and a rebent lip at the end thereof spaced from said flanges, said offset portion also having a transverse opening, said plate having an aperture adjacent its opposite end, a clamp having a tapered lug and a shank turnably engaged in the aperture, a washer plate on the shank portion in contact with the plate and a lever on the shank portion.

1,382,867. JEWELER'S EXHIBITION-TWEEZER. ROBERT A. STONE, Barrington, N. J. Filed Aug. 21, 1920. Serial No. 405,143. 5 Claims. (Cl. 63—30.)



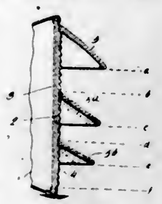
1. A device for exhibiting unmounted gems, which comprises a support having the general contour of a split ring,—gem-clamping members oppositely disposed and slidably carried by said support,—and resilient means adapted to move said clamping members into clamped position upon a gem.

1,382,868. RAILROAD-CROSSOVER. JAMES B. STRONG, Hillburn, N. Y. Filed Aug. 28, 1920. Serial No. 406,605. 9 Claims. (Cl. 246—456.)



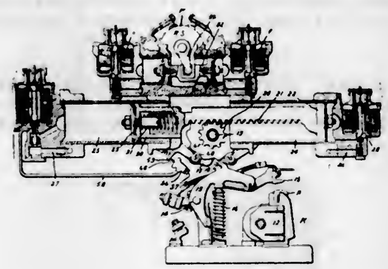
9. In a device of the class described, the combination of two pre-formed members, one member constituting a one-piece railway frog and the other member constituting a one-piece combined flange guard and easer joint, and a wedge clip tie plate for securing the members in operative position.

1,382,869. CROSSOVER. JAMES B. STRONG, Hillburn, N. Y. Filed Aug. 28, 1920. Serial No. 406,606. 11 Claims. (Cl. 246—456.)



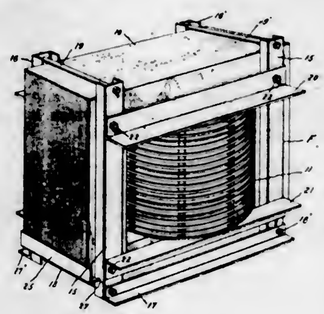
1. In a built-up railroad frog construction, the combination of a pair of service rails extending at an angle to each other, engaging at one end and fashioned to form the point of the frog, a second pair of transversely spaced apart service rails extending at an angle to each other, designed to form continuations of the first named pair across the frog and constituting wing rails extending on opposite sides of and continuous beyond the point, wedging filler blocks disposed between the service rails and between the point and the outside wing rails to hold the point in fixed position relative to the wing rails, a pair of combined flange guards and easer joints, each including an upstanding inner part resting on the lower flange of one of the wing rails, and having a configuration to fit the outer face of said wing rail opposite the point and also including a downwardly and outwardly inclined extension in spaced relation to the inner part and having an outwardly extending supporting flange and through bolts passing through the service rails, through the filler blocks and through the combined flange guards and easer joints to tie the built-up construction together.

1,382,870. IGNITION BREAKER CONTACT. JOHN A. STUMPENHORST, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 5, 1919. Serial No. 308,710. 5 Claims. (Cl. 200—30.)



2. In an ignition mechanism, the combination with a pair of coöperating contact members, of a lever arm for supporting one of said contact members, and means for effecting universal angular adjustment of said arm.

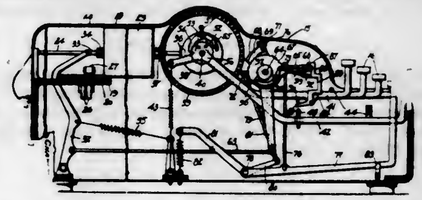
1,382,871. LENS FOR HEADLIGHTS. BERNARD J. TAMARIN, Philadelphia, Pa. Filed Jan. 10, 1920. Serial No. 350,494. 3 Claims. (Cl. 240—48.4.)



1. A lens or lamp front for headlights provided with a plurality of vizors or shields, the topmost vizor being approximately of crescent formation and the succeeding vizors having an approximately parallel arrangement, and said vizors being spaced apart to admit of portions of the lens projecting rays of light forwardly in horizontal lines, the portions of the lens between the vizors being of protuberant or nodular formation to insure a diffusion of the rays of light and thereby prevent the blinding glare.

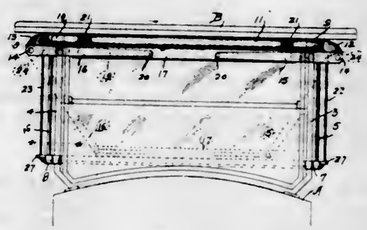
1,382,872. MOTOR CONTROL. JOHN F. TRITLE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 3, 1919. Serial No. 328,286. 11 Claims. (Cl. 200—17.)

1. Electric motor controlling means, comprising a controller for the motor circuit, a fluid motor for operating the controller, valve mechanism for controlling the fluid motor, and means operated responsively to the movement of the controller for operating the said valve mechanism to cause the fluid motor to take a quick start and for effecting a reduction in the speed of the same preparatory to stopping.



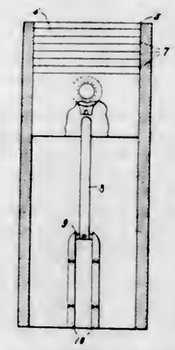
1,382,873. STATIONARY INDUCTION APPARATUS. EDWARD A. WAGNER, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Sept. 23, 1919. Serial No. 325,808. 4 Claims. (Cl. 175—356.)

1. In electrical apparatus, the combination with a core provided with windings, of a clamping frame therefor comprising upright members for gripping the side legs of said core, and a cradle structure suspended between and supported by said upright members in which said core is seated.



1,382,874. CHECK-WRITER. CHARLES WENDELKEN, Robstown, Tex. Filed July 12, 1920. Serial No. 395,708. 22 Claims. (Cl. 197—6.6.)

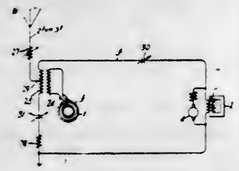
1. A typewriting machine comprising a pair of rotatable and shiftable type cylinders, arranged for the successive passage of a sheet past them, and having peripheral type for making impressions on the sheet and advancing the



sheet, and means for shifting said cylinders to printing position for different characters and for rotating said cylinders.

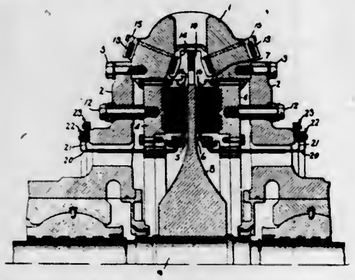
1,382,875. WINDOW-CLEANER. SHINKICHI YUASA, Cupertino, Calif. Filed Jan. 15, 1921. Serial No. 437,488. 1 Claim. (Cl. 15—59.)

In a device of the class described, a cleaning device including a supporting frame adapted to be attached to a windshield frame of an automobile, a spring roller journaled in the top of the supporting frame, a wiper bar mounted free to be moved vertically up and down relatively to the supporting frame and in wiping contact with the windshield, a cord connecting the wiper bar with the spring roller with the cord wound upon the roller under control of the spring thereof, a pull cord for moving the wiper bar downwardly over the windshield against the influence of the spring in the roller, and arms pivoted to the top of the supporting frame and having a pin and slot connection with the wiper bar for holding the wiper bar in contact with the windshield when the same is moved over the surface thereof.



1,382,876. ENGINE-PISTON. FRANK LEMUEL ADRIAN, Mattoon, Ill. Filed Feb. 11, 1921. Serial No. 444,181. 2 Claims. (Cl. 74—108.)

2. In a device of the character described, a cylinder, pairs of bars disposed within the cylinder, a pison operat-



ing in the cylinder, arms having connection with the piston, each of said arms carrying a block, said blocks adapted to move between the bars for guiding the piston, and said bars being secured to the walls of the cylinder.

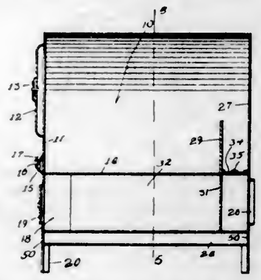
1,382,877. MEANS FOR FREQUENCY TRANSFORMATIONS. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 6, 1916. Serial No. 124,189. 21 Claims. (Cl. 250—17.)

19. Means for producing electromagnetic waves comprising a source of alternating current of a fundamental frequency, an electric circuit associated therewith having means therein for distorting the wave form of the current derived from said source, an antenna circuit associated with said circuit which is resonant to a frequency harmonic to the fundamental, and means for preventing current of the fundamental frequency from flowing in the antenna circuit.

1,382,878. COOLING DYNAMO-ELECTRIC MACHINES. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 26, 1918. Serial No. 264,203. 6 Claims. (Cl. 171—252.)

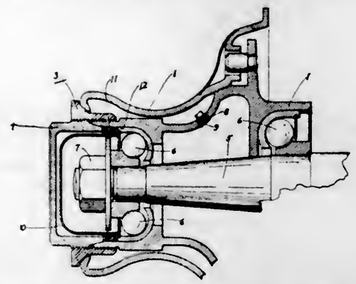
1. The combination in a high frequency alternator of the inductor type, of a pair of circumferentially laminated rings having opposite faces lying in adjacent planes, a winding carried in said faces, a series of circumferential slots in said rings and pipes placed in said slots and adapted to carry a circulating cooling liquid for cooling said rings.

4. The combination in a high frequency alternator of the inductor type of a stator carrying a pair of circumferentially laminated rings having opposite faces lying in adjacent planes, clamping rings inside and outside of each laminated ring, said laminated rings and clamping rings being slotted in their faces, metal terminal blocks secured to said clamping rings and closely adjacent to the ends of said slots, slots in said terminal blocks registering with slots in said rings, windings extending through said slots and having their terminals securely fastened to said terminal blocks.



1,382,879. BUMPER. FINDLEY E. ANDREANI, Los Angeles, Calif. Filed Jan. 18, 1921. Serial No. 438,072. 2 Claims. (Cl. 293—55.)

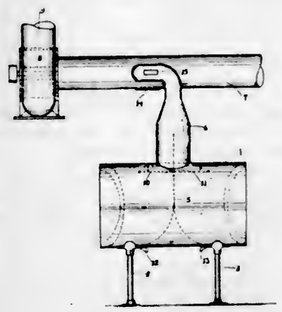
2. A bumper attachment for automobile frames comprising a flat V-shaped spring member having a long end disposed on the upper face of the frame, a bump formed in such end arranged to engage a projection on the frame, a plate extending over such end at one side of said bump, a U-bolt passing around the frame engaging such plate, an



eye having a recess to receive the other end of the spring, means for securing said eye to the spring, a hollow bumper extending through the eye, means for securing said bumper in the eye, and means for closing the ends of the bumper.

1,382,880. FUEL-SAVER AND AIR-CIRCULATOR. HORACE E. ARMSTRONG, Salem, Oreg. Filed Dec. 22, 1919. Serial No. 346,449. 2 Claims. (Cl. 126—60.)

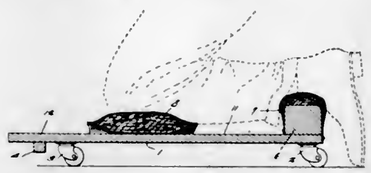
1. A stove comprising a body having a front wall and a rear wall; a platform in the body and defining an upper combustion chamber and a lower compartment, the front wall having an air inlet disposed adjacent to the platform; a baffle extended between the platform and the bottom of the body, the forward end of the baffle being spaced from the front wall of the body, the baffle including a wing extended rearwardly to the rear wall of the body; a transverse partition upstanding from the platform adjacent to the rear wall of the body, the platform having openings located between the partition and the rear wall of the body and disposed on opposite sides of the wing, the rear wall having an outlet communicating, at one side of the wing, with the compartment; and a damper controlling that one of the openings which is located on the same side of the wing as the outlet.



1,382,881. QUICK-DETACHABLE-VEHICLE-WHEEL HUB. CHARLES S. ASH, Hagerstown, Md. Filed Aug. 6, 1919. Serial No. 315,590. 1 Claim. (Cl. 301—9.)

In a quick detachable wheel, in combination, an axle, an inner hub secured thereto, an outer hub telescoping

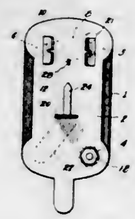
on said inner hub, threaded means screwing on said inner hub and engaging said outer hub to hold the latter, and a cap having a washer slidably fitting within the outer end of said inner hub to retain a lubricant therein, said threaded means and said outer hub being removable independently of said cap and said cap being removably independently of said threaded means and said outer hub.



1,382,882. APPARATUS FOR USE IN CONNECTION WITH APPLYING PAINT. CHARLES S. ASH, Hagerstown, Md. Filed Aug. 6, 1919. Serial No. 315,592. 5 Claims. (Cl. 91—60.)

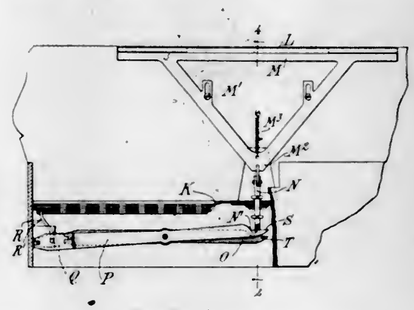
1. In apparatus of the character described, in combination, a tubular member having opposite open ends, an interior wall dividing said member into two separate painting chambers, an exhauster spaced from said member, and flues connecting said exhauster and said painting chambers.

3. In apparatus of the character described, in combination, a tubular member having opposite open ends, an interior wall dividing said member into separate painting chambers, and separate drains from said chambers.



1,382,883. KNEELING-TRUCK. THOMAS G. ASHBRIDGE, Philadelphia, Pa. Filed Jan. 4, 1921. Serial No. 434,999. 3 Claims. (Cl. 155—167.)

1. A kneeling truck embodying a wheel mounted-platform; an ankle rest secured to one end of the platform; a knee pad spaced from the ankle rest and from the other end of the platform; and means for securing the knee pad adjustably to the platform.



1,382,884. ELECTRIC-CIRCUIT-TESTING DEVICE. SAMUEL G. BARNARD, Seattle, Wash., assignor of one-half to Hugo Dotzer, Seattle, Wash. Filed June 8, 1920. Serial No. 387,386. 5 Claims. (Cl. 175—183.)

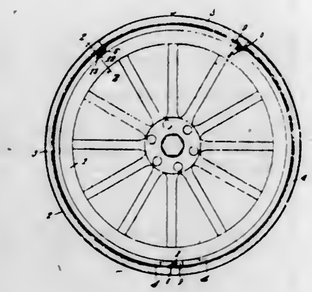
5. A circuit testing device of the character described comprising a pair of pivotally joined switch blocks, one of which has contact members thereon applicable to binding posts or the like of an electric circuit and having a circuit wire binding post thereon, and the other of which has a circuit wire binding post thereon and spaced apart conductive members wherein a spark plug may be held in testing position, and said latter block being movable to one position to effect the closing of a circuit through its

circuit wire binding post and in another position to close a circuit through the said conductive members, for the purpose set forth.

1,382,885. ACCORDION. PASQUALE BARTOLI, Brooklyn, N. Y. Filed May 17, 1920. Serial No. 381,828. 7 Claims. (Cl. 84—376.)

2. In a musical instrument, a key board, keys mounted therein to form a keyboard, an actuating strip extending along said keys, said strip being supported by said key bed, but movable relatively thereto, means, operated by said strip, comprising a pair of elements actuated in alternation, and means oppositely actuated by the respective elements of said pair for controlling the operation of parts of said instrument.

4. In a musical instrument, the combination of a plunger and a pair of levers provided with arms having a spring tension exerted toward each other, said arms having bent portions adapted for mutual engagement whereby each lever, when operated by said plunger, causes an arm of the other to be brought to a position to be subsequently engaged and moved by said plunger.



1,382,886. COTTON-PICKING MACHINE. GEORGE T. BECKNELL, Nevada, Tex. Filed June 7, 1920. Serial No. 387,001. 8 Claims. (Cl. 56—13.)

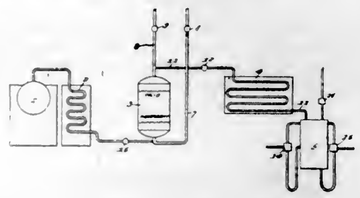
3. In a cotton picking machine, the combination of a wheel supported frame, of a plurality of sets of cotton

picking elements supported at different elevations and spaced longitudinally of the machine so as to operate upon a plurality of different cotton plants at different elevations at the same time and operating upon each plant at one elevation only, each element including a rotating picking member, means for creating a suction mounted on the frame, and a flexible conductor leading from each picking element to the suction means for conveying the picked cotton thereto.

1,382,887. DEMOUNTABLE RIM. ARTHUR B. BEYNON, San Antonio, Tex. Filed Mar. 1, 1917. Serial No. 151,821. 1 Claim. (Cl. 301—31.)

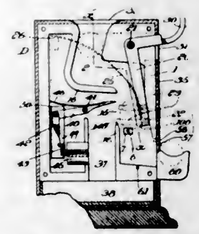
A demountable rim comprising a plurality of segments, fastening means for connecting a pair of segments, said fastening means comprising a recessed block secured to one segment, loops pivotally connected to the coacting segment and adapted to be received in said recessed block, and a removable member extending through said recessed blocks and said loops for connecting the two segments.

1,382,888. DRIVING AND OTHER BELTS. HARRY BRAMMER, Leeds, England. Filed Jan. 31, 1921. Serial No. 441,382. 5 Claims. (Cl. 74—63.)



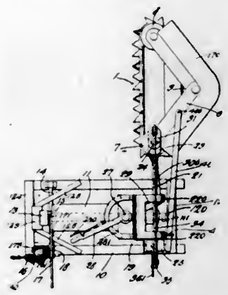
1. A driving belt formed of a plurality of relatively flat links arranged in overlapping relation, each link being chamfered at one end and provided with holes including a relatively enlarged body portion adapted to permit passage of a headed fastener and a reduced portion adapted to receive only the shank of such a fastener, and a plurality of headed fasteners each extending through alined holes in overlapping links and securing said links together.

1,382,889. METHOD OF DISSIPATING HEAT IN PROCESS FOR EXTRACTING VAPORS FROM GASEOUS MIXTURES. GEORGE A. BURRELL, New York, N. Y., and CLYDE L. VORESS and VERNON C. CANTER, Bradford, Pa., assignors to Gasoline Recovery Corporation, a Corporation of Delaware. Filed Jan. 24, 1921. Serial No. 439,676. 7 Claims. (Cl. 252.)



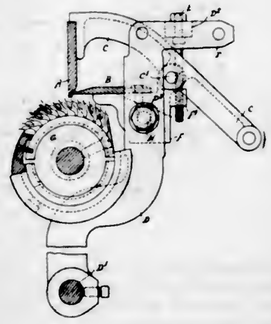
1. A method of dissipating heat in a vapor recovery process consisting in diluting gas mixtures containing larger percentages of recoverable vapors with a gas containing smaller percentages of recoverable vapors.

1,382,890. PROCESS AND APPARATUS FOR RECOVERING AND RECONDENSING GASOLENE, NAPHTHA, AND THE LIKE. GEORGE A. BURRELL, New York, N. Y., and CLYDE L. VORESS and VERNON C. CANTER, Bradford, Pa., assignors to Gasoline Recovery Corporation, a Corporation of Delaware. Filed Jan. 24, 1921. Serial No. 439,679. 11 Claims. (Cl. 252.)



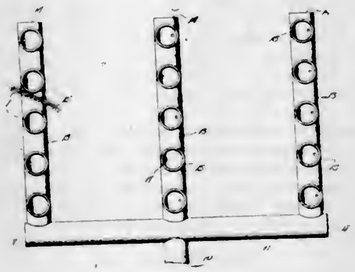
1. It permits the condensation of lighter vapors than could be otherwise condensed at the same temperature without pressure higher than atmospheric.

1,382,891. TELEPHONE SYSTEM. BRYANT D. CAMPBELL, Oakland, Calif. Filed Feb. 6, 1917. Serial No. 146,982. 12 Claims. (Cl. 179—6.3.)



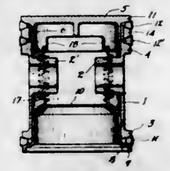
2. In a coin-controlled telephone system, coin-controlled means operatable entirely by the calling party for completing a connection and for collecting the coin when the called party answers, and for returning the coin when the called party fails to answer.

1,382,892. SAWING-MACHINE. DAVID H. CLARK, Waynesville, N. C. Filed May 29, 1917. Serial No. 171,722. 3 Claims. (Cl. 143—32.)



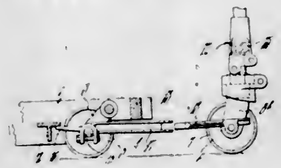
1. A wood sawing machine comprising a main frame; a carrier mounted to tilt transversely on the main frame; an upright shaft; a saw carried by the shaft, means for swinging the saw transversely of the shaft; means for raising and lowering the saw on the shaft; means for connecting the saw operatively with the shaft; and mechanism for supporting the shaft on the carrier, said mechanism comprising means for moving the shaft transversely with respect to the carrier.

1,382,893. COMBING-MACHINE. JAMES WILLIAM CLEGG, Oldham, England. Filed Feb. 12, 1920. Serial No. 358,292. 1 Claim. (Cl. 19—6.)



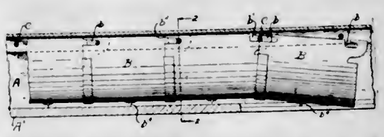
In a machine of the class described, the combination of a comb cylinder and a rocking lever having a nipper knife pivotally mounted thereon above said cylinder, a slide member adjustably carried by said lever and having a cushion plate for coöperating with said nipper knife, said rocking lever having an angularly extending portion at its upper end and a perforated laterally extending lug at one side thereof, said slide member having a rearwardly extending lug provided with a threaded perforation in alinement with the perforation of said laterally extending lug, and a headed adjusting member passing through said perforation in the laterally extending lug and threaded at its lower end to engage the threaded perforation in said rearwardly extending lug thereby to adjust the cushion plate relatively to the cylinder.

1,382,894. GAS-BURNER. ELMER EDGAR CORNWELL and JOSEPH HARRY MCCREADY, Okmulgee, Okla. Filed Oct. 11, 1920. Serial No. 416,054. 3 Claims. (Cl. 158—106.)



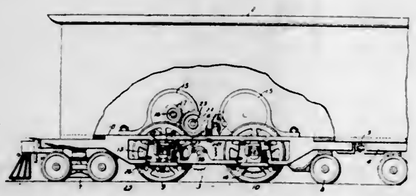
1. A burner of the class described comprising a supply pipe, an imperforate straight header communicating therewith intermediately and having closed ends, a plurality of header pipes extending from said header and having the free ends thereof closed, there being outer pipes and an intermediate pipe disposed in parallel relation with respect thereto, said header pipes being provided with burner orifices in the upper walls thereof located in spaced relation and the burner orifices of the central pipe being disposed in zig-zag relation near the sides thereof, and upwardly extending mixing chambers encompassing said orifices and having the upper ends thereof completely open, said mixing chambers having their lower ends bifurcated to provide spaced side portions secured to the header pipes and producing air inlet openings alined in the direction of the header pipes.

1,382,895. PISTON. HUGO DOTZER and SAMUEL G. BARNARD, Seattle, Wash. Filed Dec. 17, 1919. Serial No. 345,613. 4 Claims. (Cl. 74—108.)



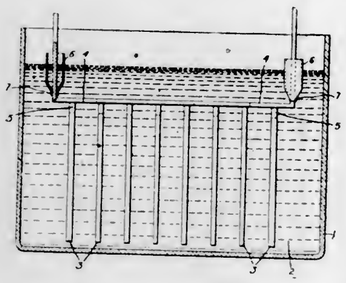
1. A piston comprising a cylindrical body portion whereto a piston rod may be attached, and having an outwardly beveled peripheral shoulder at an end thereof, a head having a cylindrical sleeve extending substantially within and slidably fitting the piston body wall, and having a peripheral shoulder beveled oppositely to and opposing the first named shoulder, an expandible piston ring mounted between and having its opposite faces beveled to fit said shoulders and yieldable means inclosed within the piston body and head for retaining said head within said body and against said piston ring.

1,382,896. COUPLING DEVICE FOR TRUCKS. FRANK L. EIDMANN, Holyoke, Mass., assignor to Edward N. White, J. Lewis Wyckoff, and George F. Jenks, Holyoke, Mass., trustees, doing business as Cowan Truck Company. Filed Oct. 23, 1920. Serial No. 418,875. 3 Claims. (Cl. 213—67.)



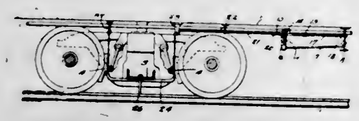
1. The combination with a pair of hand-trucks each comprising a wheel-supported frame having a rear axle and a front axle mounted in a steering-wheel carrier, of a coupling device for said trucks comprising, a pull member detachably connected to the rear axle of one truck and having a forward extension and rear heavier extension whereby the said forward extension will engage beneath a portion of the frame of said truck normally holding said member in a horizontal position, a draw member detachably connected to the front axle of the other truck and having shoulders for engaging opposite sides of said steering-wheel carrier to normally hold the same in substantially horizontal position, said members being detachably and pivotally connected to one another.

1,382,897. LINING FOR GRAIN SPOUTS AND CHUTES. ROBERT ESCHE, Milwaukee, Wis. Filed Aug. 25, 1919. Serial No. 319,774. 5 Claims. (Cl. 193—29.)



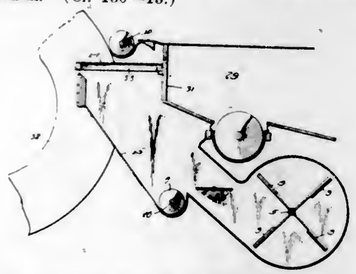
1. A spout for conveying materials, consisting of a series of lining sections, and a support to which the sections are detachably connected, such sections being formed as channels of the desired shape, and provided with open slots in their edges which engage the attaching means on the support.

1,382,898. LOCOMOTIVE. FRANK FIX, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 5, 1917. Serial No. 140,739. 9 Claims. (Cl. 105—113.)



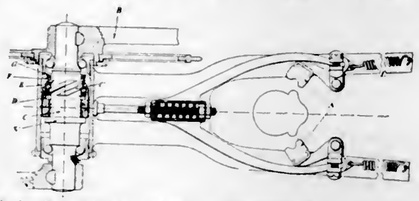
1. In a motor operated vehicle, the combination with a driving axle provided with a gear wheel rigidly mounted adjacent one end thereof, of side frames provided with gear wheels rigidly mounted thereon and in mesh with said first mentioned gear, means for permitting the axle to oscillate in a vertical plane, and means for permitting movement of said axle with respect to said frame about the axis of the gear mounted on said frame as a center.

1,382,899. TERMINAL FOR ELECTROLYTIC CONDENSERS. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 16, 1919. Serial No. 271,462. 12 Claims. (Cl. 175—317.)



7. A terminal for electrolytic condensers. rectifiers, lightning arresters and the like comprising a conductor and a sleeve of conducting material engaging and surrounding, the conductor.

1,382,900. EMERGENCY-AIR-BRAKE ATTACHMENT. JOSEPH B. FOUNTAIN and JOHN B. PARKER, Lakeland, Fla. Filed Jan. 5, 1921. Serial No. 435,220. 5 Claims. (Cl. 246—169.)



1. In a device of the class described, a car frame; a truck; a train line brake pipe; a valve in the pipe; an actuating member extended beneath a part of the truck and operatively connected intermediate its ends with the valve; means for anchoring one end of the actuating member to the frame; and resilient means for connecting the other end of the actuating member to the frame.

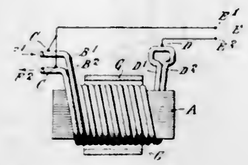
1,382,901. GRAIN-SAVING ATTACHMENT FOR THRESHING-MACHINES. CHARLES L. GEBHARDT, Green, Kans. Filed Sept. 8, 1920. Serial No. 408,994. 1 Claim. (Cl. 130—15.)

The combination with a threshing machine provided with a shoe having a tail-board, of a sieve attached to the rear of such tail-board and extending rearward therefrom and agitated by the movement of such shoe, such sieve being so disposed as to receive the tailings directly from such tail-board, a supplemental fan so disposed as to create an air blast upwardly through such sieve, and means for conveying the grain to a predetermined point.

1,382,902. BACK-PEDALING BRAKE FOR VELOCIPEDES. PIERRE LOUIS ALFRED GIAUQUE, Levallois-Perret, France, assignor to Societe Anonyme des Automobiles et Cycles Peugeot, Paris, France. Filed Dec. 23, 1919. Serial No. 346,938. 1 Claim. (Cl. 192—5.)

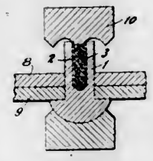
A back pedaling brake for velocipedes comprising in combination an axle adapted to be rotated in either forward or reverse direction, a helical projection on said axle, a nut member in engagement with said helical projection and having a conical coupling surface, a sleeve having a complementary coupling surface adapted to frictionally engage with the conical surface on the nut member, means for rotatively supporting the said sleeve so that it may have a limited angular movement, means for preventing any axial displacement of said sleeve, yielding means adapted to bring the nut member into engagement with the sleeve, braking members, and means for operatively connecting the said sleeve to the said braking members.

1,382,903. LAMP. CHARLES E. GODLEY, Detroit, Mich., assignor to Edmunds & Jones Corporation, Detroit, Mich., a Corporation of New York. Filed Mar. 15, 1920. Serial No. 365,766. 8 Claims. (Cl. 240—41.)



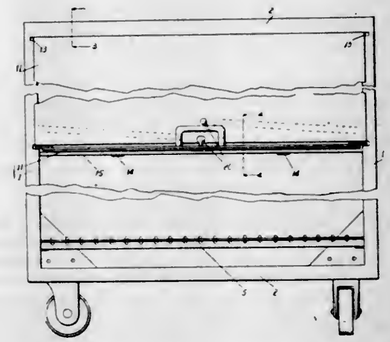
1. In a lamp, the combination of a cup-shaped body having a cylindrical open end, retaining devices extending inwardly from said cylindrical end, a reflector movable into said body and having a radial flange adapted to slide within the cylindrical end of said body, said flange being formed with notches adapted to permit said retainers on the body to pass through, said flange being also formed with two additional notches, and a resiliently mounted outwardly movable tongue extending inwardly from said cylindrical end of the body and adapted to enter said additional notches.

1,382,904. COMBINED DOOR-BELL AND BURGLAR-ALARM. MIKE GORAY, Indiana Harbor, Ind. Filed Jan. 22, 1921. Serial No. 439,211. 2 Claims. (Cl. 116—92.)



1. A combined door bell and burglar alarm comprising a bell adapted to be secured to a door, motor mechanism for operating the bell, a sliding tensioned plate associated with said motor mechanism for arresting movement of the mechanism, a tensioned push button associated with said plate adapted to move said plate to free the motor mechanism, a bifurcated lug carried by the lower end of the plate and a link having its upper end bent in opposite directions and engaging the bifurcated lug for connecting the plate to the door knob spindle for moving said plate upon rotation of the knob spindle.

1,382,905. COOLING MEANS FOR ELECTRIC METAL-WORKING TRANSFORMERS. JAMES H. GRAVELL, Elkins Park, Pa., assignor to Thomson Electric Welding Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 4, 1919. Serial No. 328,544. 3 Claims. (Cl. 175—356.)

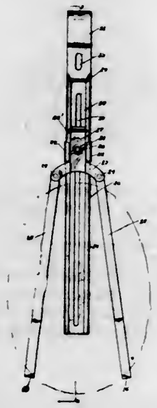


1. An electric coil having two windings of hollow tubing connected to permit the cooling medium to flow through them in series and having electrical connections to cause electric current to flow through them in parallel.

1,382,906. SELF-HEATING RIVET AND METHOD OF RIVETING WITH SAME. JAMES H. GRAVELL, Elkins Park, Pa., assignor to Thomson Electric Welding Company, Boston, Mass., a Corporation of Massachusetts. Filed May 11, 1920. Serial No. 380,581. 8 Claims. (Cl. 85—37.)

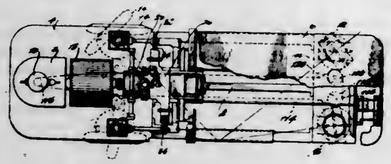
1. A self-heating rivet consisting or a rivet blank having a pocket or cavity and an ignitible heating composition in said cavity.

1,382,907. INCLOSED RACK. CHARLES THATCHER HATCH, Jr., Albion, Mich., assignor to The Union Steel Products Company, Ltd., Albion, Mich., a Corporation. Filed Jan. 3, 1920. Serial No. 349,237. 3 Claims. (Cl. 107—7.)



1. In a structure of the class described, the combination of a housing frame comprising angle iron corner uprights disposed with their angles facing inwardly, walls secured to said frame, the front being open between the front uprights providing a door opening, a door, slides therefor mounted within the corner uprights, the front corner uprights being notched in alinement with said slides to permit the door being swung to a horizontal position and pushed inwardly upon the slides, a door supporting rod disposed below the slides, hooks on said door coacting with said rod to limit the outward movement of the door and pivotally support it when extended, a pair of oppositely disposed locking bolts slidably mounted at the lower end of the door to be projected behind the front corner uprights, and a pivoted hand piece provided with a cross arm to the opposed ends of which said locking bolts are connected so that they are simultaneously retracted and extended by the turning of said hand piece.

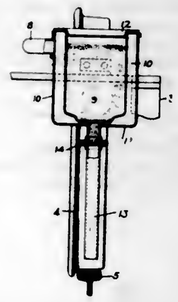
1,382,908. PICTURE-HANGER. MICHAL HELEA, Carthage, N. Y. Filed Oct. 22, 1919. Serial No. 332,414. 1 Claim. (Cl. 40—145.2.)



In a picture hanger of the character described, the combination of a slotted and flanged stationary frame, an inverted Y-shaped member, the vertical portion of said Y-shaped element being slidable within the flanges of the frame member to adjust the height of said Y-shaped member in relation to the stationary member, a sleeve inclosing the vertical part of the Y-shaped member and

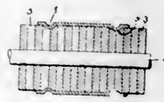
the frame member and adapted to slide on the latter, a threaded bolt passing through the sleeve, the slot in the frame member and the sleeve, a winged nut engaging the bolt to fasten said Y-shaped member in the adjusted position, depending members pivotally attached to the

outer ends of the horizontal part of said Y-shaped member, provided on their lower ends with rests for the support of a picture, the upper end of the stationary frame member forming a hook to engage the molding and with an opening to be engaged by a nail.



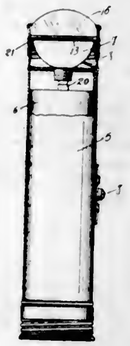
1,382,909. VEHICLE STEERING MECHANISM. DANIEL E. HENNESSY, Holyoke, Mass., and JOHN MCGEORGE, Cleveland, Ohio, assignors to Herbert W. Cowan, J. Lewis Wyckoff, and Edward N. White, Holyoke, Mass., trustees, doing business as Cowan Truck Company. Original application filed Mar. 23, 1917, Serial No. 157,017. Divided and this application filed Oct. 8, 1917, Serial No. 195,240. Renewed Jan. 8, 1921. Serial No. 435,991. 4 Claims. (Cl. 280—91.)

1. In a truck of the class described, the combination with steering wheels, of means for driving said wheels, and means for turning said wheels into tangential relation to concentric circles, comprising eccentric gear segments connected to said wheels and a gear coöperating with each gear segment throughout the steering movement of the wheel, said gear being arranged to turn about a fixed axis.



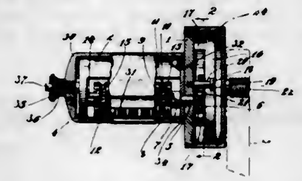
1,382,910. SANDING DEVICE. EDWIN M. HEAR, Edgewood Park, Pa., assignor to Westingbouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 5, 1916. Serial No. 89,144. 1 Claim. (Cl. 291—19.)

In a railway vehicle, the combination with an electric motor adapted to receive fluid for ventilating the same, of a track-sanding device external to said motor, and means comprising a casing surrounding said track-sanding



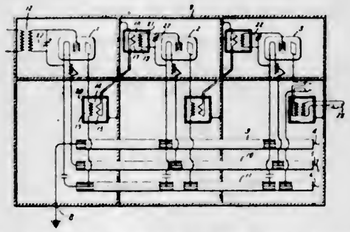
device whereby the heated fluid discharged from said motor is utilized to dry the sand in said sanding device.

1,382,911. VEHICLE-FENDER. ARTHUR J. HERSEY, Minneapolis, Minn. Filed Mar. 5, 1921. Serial No. 449,770. 4 Claims. (Cl. 293—55.)



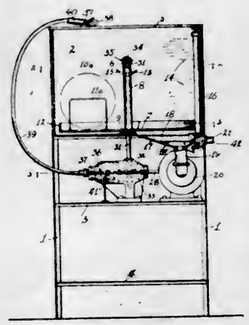
1. A fender of the character described comprising a rigid core, a plurality of washer-like rubber disks mounted upon the core and forming a covering therefor, and means for holding said disks tightly together upon the core.

1,382,912. INSULATOR. HARRY H. HIPWELL, Pittsburgh, Pa. Filed July 22, 1919. Serial No. 312,501. 2 Claims. (Cl. 240—8.5.)



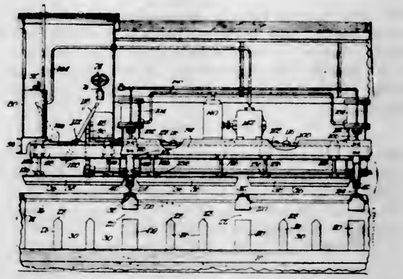
2. A pocket flash-light comprising a concaved bowl-like shell; a similarly shaped reflector fitting within the shell and conforming closely to the shape of the shell; and a sheet of insulating material between the reflector and the shell and conforming to the concavity of the shell, the sheet and the reflector having openings whereby a lamp may be assembled with the shell; the opening of the sheet being stelliform and defining a plurality of pointed tongues which facilitate the conforming of the sheet to the reflector and the shell, about the openings in the reflector and the shell.

1,382,913. REGISTER. HOWARD D. HODGE, New York, N. Y., and JOHN G. DUFF, Waterbury, Conn. Filed Apr. 23, 1919. Serial No. 292,076. 6 Claims. (Cl. 235—91.)



4. In combination with a movable machine part, a casing carried thereby, a vibratory inertia element inclosed therein and having movement relative thereto, an accumulator, means whereby said accumulator is actuated by movement of said inertia element relative to the casing, and means operable exteriorly of the casing for inhibiting movement of the inertia element relative thereto.

1,382,914. AMPLIFYING SYSTEM. CHARLES A. HOXIE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 10, 1920. Serial No. 380,038. 5 Claims. (Cl. 179—171.)



4. The method of operating an amplifying system comprising a plurality of electron discharge amplifiers connected in cascade, each of said amplifiers having input and output circuits which consists in applying the current to be amplified to the input circuit of one of said amplifiers, transforming the resultant energy variations produced in the output circuit of said amplifier to the form of low potential high current energy, retransforming this low potential high current energy to the form of high potential low current energy and applying the same to the input circuit of the second amplifier.

1,382,915. DISH-WASHING MACHINE. THEODORE HUGGINS, Oakland, Calif. Filed Sept. 23, 1920. Serial No. 412,170. 2 Claims. (Cl. 141—9.)

1. A dish-washing machine comprising a tank adapted to contain a supply of cleansing fluid, said tank having a fixed central tube rising from its bottom; a dish-holder having a central tube rotatably mounted upon and extending above the fixed tube of the tank; a nozzle within the tank for directing a jet of cleansing fluid upon the dishes in the holder; a pump for circulating the cleansing fluid through the tank and nozzle; a motor; a vertically disposed shaft extending up through the tank bottom and journaled in the fixed tube of said tank, said shaft extending above said tube and having a slotted top; a cross pin secured in the central tube of the dish-holder and removably seated in the slotted top of said shaft; and power transmitting connections from the motor to drive the pump and the vertically disposed shaft.

1,382,916. COKE-OVEN AND CHARGING MECHANISM. ERNEST JOHNSON and ARTHUR NORDQUIST, Gary, Ind. Filed July 18, 1919. Serial No. 311,824. 6 Claims. (Cl. 214—18.)

1. In mechanism for charging the normally door covered chambers of coke ovens, a traveling car, longitudinally reciprocatable and rotatable members on the car, means for reciprocating and rotating said members, said members being engageable with said door to lift the same by reciprocation and detachably connectible with said door by rotation.

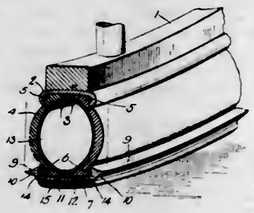
1,382,917. COKE-OVEN. ERNEST JOHNSON and ARTHUR NORDQUIST, Gary, Ind. Original application filed July 18, 1919, Serial No. 311,824. Divided and this application filed May 17, 1920. Serial No. 382,112. 3 Claims. (Cl. 202—9.)

1. In combination with the body of a coal receptacle of a coke oven battery, a passage leading to the receptacle at the top thereof of substantially the dimensions of the body of the receptacle, transverse members across said opening adapted to tie and brace the walls of the coal receptacle and a cover insertible in and removable from said passage.

1,382,918. PNEUMATIC CUSHIONED TIRE. AUGUSTUS HALLAWELL KERR, Fort Worth, Tex., assignor to said Augustus H. Kerr, J. A. Smith, J. M. Atkinson, J. A. Dacus, and W. L. Coley, trustees for an Association. Filed Mar. 5, 1920. Serial No. 363,501. 3 Claims. (Cl. 152—33.)

2. A pneumatic cushioned tire comprising a two-part casing, the sections thereof being formed with inner and outer terminal beads and the sections disposed to have their adjacent meeting edges abut one against the other, a clencher-rim to grip the inner beads of the sections, and a clencher-plate extending across the meeting edges

of the tread portion of the two casing-sections, and formed with edge flange guards extended to lie beyond the maximum projection of the sides of the casing, substantially in line with the outer beads of the casing, the base of the guards next to the casing-beads having a relatively greater thickness than the web portion of the



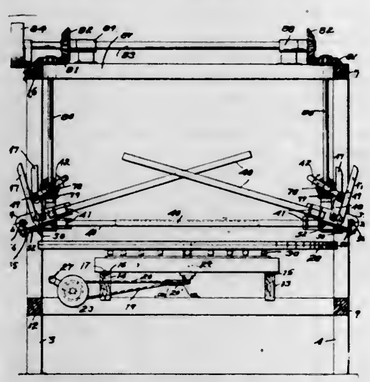


plate and having therein faces concaved to receive the casing beads, and a liner having inwardly extending flanges shaped to conform to the inner concave faces of the guards and disposed to lie between the web and guards of the plate and the outer beads of the casing-sections.

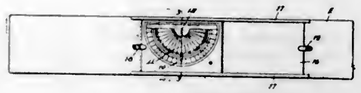
1,382,919. MATTRESS BEATING AND SHAPING MACHINE. WALTER ROBERT KROPF, San Francisco, Calif., assignor of one-half to Adolph Gustave Siebert, San Francisco, Calif. Filed Feb. 15, 1921. Serial No. 445,242. 9 Claims. (Cl. 226—43.)

2. A machine of the class described comprising a frame, a slidable platform in said frame adapted to receive a mattress, means for sliding said frame and power driven means for beating said mattress mounted above said platform.

1,382,920. MANUFACTURE OF SELENIUM OXYCHLORID. VICTOR LENHER, Madison, Wis. Filed May 15, 1920. Serial No. 381,628. 15 Claims. (Cl. 23—10.)

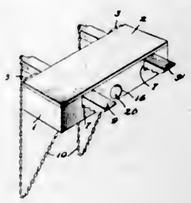
15. The process of producing selenium oxychlorid which comprises chemically combining selenium dioxid, selenium and chlorid gas by a chlorinating process.



1,382,921. MANUFACTURE OF SELENIUM OXYCHLORID. VICTOR LENHER, Madison, Wis. Filed May 15, 1920. Serial No. 381,629. 10 Claims. (Cl. 23—10.)

6. The process of producing selenium oxychlorid which comprises a reaction between water and a compound of selenium in the presence of a solvent for selenium oxychlorid.

1,382,922. MANUFACTURE OF SELENIUM OXYCHLORID. VICTOR LENHER, Madison, Wis. Filed May 15, 1920. Serial No. 381,630. 6 Claims. (Cl. 23—10.)

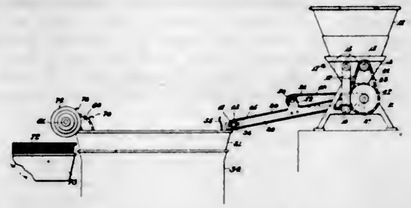


1. The process of producing selenium oxychlorid which comprises causing a reaction between selenium dioxid and hydrochloric acid and separating the water from the resulting compound by means of a dehydrating agent.

1,382,923. PROTRACTOR-LEVEL. HENRY F. LOESCHNER, Fredericktown, Mo. Filed Apr. 12, 1919. Serial No. 289,611. 2 Claims. (Cl. 33—215.)

1. A compound protractor level comprising a main beam having a recess formed therein in one side thereof, a secondary beam seated in the recess of said main beam and adapted to be removed therefrom for use independently of the latter, means for securing said secondary beam in position within the recess of said main beam, and a closure slidably mounted on said main beam and adapted to be moved into registry with the recess of the latter to close the same and to protect the secondary beam from injury when seated in the recess.

1,382,924. LOCK. JAMES M. MCKEE, New Bloomfield, Pa. Filed Oct. 6, 1920. Serial No. 414,978. 6 Claims. (Cl. 70—17.)

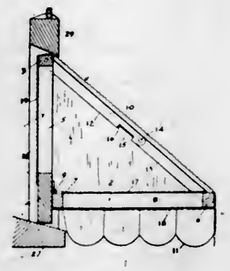


5. A lock comprising a bolt and a U shaped locking pin, one arm of the said pin engaging with the bolt to lock it against movement, the other arm projecting into the keyhole, a key adapted to coöperate with the last named arm to release the first named arm from engagement with the bolt as the key is inserted in the lock, and ratchet teeth on the bolt coöperating with pinion teeth on the key for turning the said bolt.

1,382,925. METHOD OF MAKING ORNAMENTAL PLAQUES. MICHAEL JOSEPH MCLAUGHLIN, St. Louis, Mo. Filed July 25, 1918. Serial No. 246,760. 1 Claim. (Cl. 41—32.)

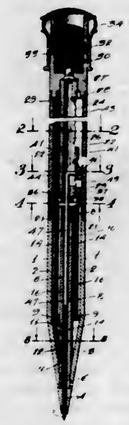
A process of making an ornamental plaque comprising placing the face of the ornamentation upon a fixed polished surface and building the sides of the mold upon said surface around the ornamentation and casting the plaque in said mold in the usual manner, and then removing the cast plaque by first removing the sides of the mold and then the plaque from said surface.

1,382,926. APPARATUS FOR AND PROCESS OF MAKING CRULLERS. LEON MITCHELL, Dorchester, Mass. Filed Feb. 2, 1920. Serial No. 355,791. 6 Claims. (Cl. 107—4.)



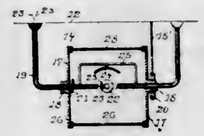
1. The method of making crullers which consists of ejecting onto a traveling apron two strings of dough from a hopper and simultaneously twisting the same, severing said twisted strings of dough while on said apron into sections of substantially equal length, delivering said twisted strings of dough separated from each other from said apron onto a conveyer, submerging the strings of twisted dough in a pan of hot fat and slowly moving them while thus submerged through said fat and frying them.

3. An apparatus for making crullers consisting of a dough-receiving hopper having means in the bottom thereof for twisting two strings of dough as they are ejected from said hopper; a conveyer for the twisted strings of dough; means coacting with said conveyer for severing said twisted strings of dough into sections of substantially equal length; a pan of hot fat into which said sections are deposited by said conveyer; a heating device on which said pan is positioned; and means within said pan for submerging said sections and conveying them while submerged in the fat from one end of said pan to the other and lifting said sections over the edge of said pan and depositing them into a receiver.



4. In an apparatus of the class described, a dough-receiving hopper having a discharge opening in the bottom thereof; parallel feed rollers beneath said discharge opening; a plate beneath said feed rollers having formed thereon scrapers coacting with the periphery of said rollers and having an opening therethrough; a revoluble pocket beneath said plate and alined with said opening and having two parallel discharge openings in the bottom thereof; and means for rotating said pocket.

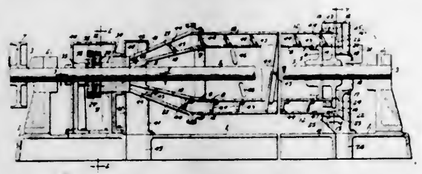
1,382,927. WINDOW-VENTILATOR. MARION MOOERS, San Francisco, Calif. Filed Feb. 18, 1920. Serial No. 359,531. 4 Claims. (Cl. 98—31.)



4. A ventilator comprising a rectangular upright frame, a rectangular frame secured to and extending outwardly from the lower end of said upright frame, screens extending across and secured to said frames, and a canopy extending over the top of said frames and closing the front, top, and ends thereof, a hinge connecting said frames with one another.

1,382,928. LEAD-PENCIL. WADE W. MOORE, Pittsburg, Calif., assignor to Jesse E. Roach, Oakland, Calif. Filed Feb. 17, 1920. Serial No. 359,469. 3 Claims. (Cl. 120—18.)

3. In a lead pencil, the combination with a tip portion having a coaxial bore and an annular magazine surrounding said bore, of a tubular body portion having one end thereof arranged for engagement with the tip portion to close the magazine therein and likewise having a bearing adjacent said end; a threaded rod having a longitudinally disposed radial slot therein having its inner end rotatably mounted within said bearing and having a threaded end extending beyond said bearing, the other end of said rod having a bearing on the opposite end of the tubular body portion to retain said rod coaxial longitudinally with said body and to provide exteriorly located means for the operation of said rod; a threaded follower mounted upon the rod and slidably engaging the tubular body portion and having an annular internal groove therein whereby said follower may be moved longitudinally when the rod is rotated; and a plunger slidably mounted within the radial longitudinal slot of the threaded rod and the coaxial bore of the tip portion and having a lateral extension on one end thereof to slidably engage the annular slot within the follower whereby said plunger may be actuated to project a lead through the tip when the threaded rod is rotated; a nut screwed upon the threaded end of the rod extending beyond the bearing within the body portion to prevent longitudinal movement of and to rotatably secure said body portion; and a clamp arranged for frictional engagement with said lead to normally prevent movement thereof within said bore.

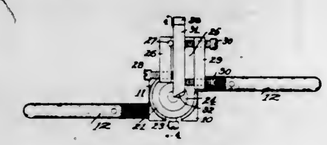


1,382,929. AUTOMOBILE SIGNALING DEVICE. ANDREA GABRIELE MICHELE PANSA, Bristol, R. I. Filed Feb. 11, 1921. Serial No. 444,151. 1 Claim. (Cl. 116—28.)

In an automobile signaling device the combination of the following instrumentalities, a square box shaped signaling indicator having glass sides on which are means for signaling, a tubular U shaped frame on the body of the automobile, at the rear, means for rotatably securing the indicator to the U shaped frame, spring means connecting the indicator with the U shaped frame to rotate the indicator

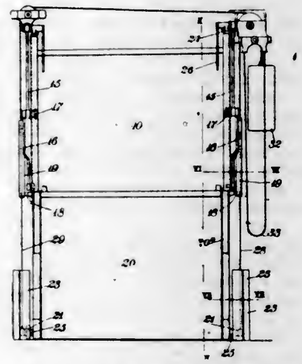
in a reverse direction, a reflector on the U shaped frame, a lamp secured to the U shaped frame in front of the reflector, and means for operating the signaling indicator, all for the purpose as described.

1,382,930. CENTRIFUGAL APPARATUS. JOHN W. PHILLIPS, Meriden, Conn., assignor to Clarence P. Landreth, Philadelphia, Pa. Filed June 17, 1920. Serial No. 389,569. 12 Claims. (Cl. 233—7.)



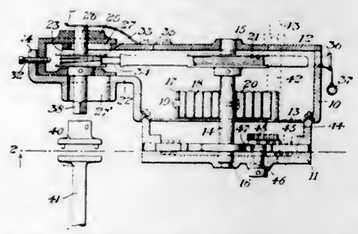
1. Centrifugal apparatus comprising rotatable co-axial drums, means for feeding material between said drums, means for positively advancing material between said drums, and means for separately removing separated materials from between said drums comprising an outlet through the outer drum for one of the separated materials and a passage from between said drums to the interior of the inner drum for another of said materials, and a discharge from the interior of said inner drum for said other of said materials.

1,382,931. CLOTHESPIN AND MANUFACTURE THEREOF. ALFRED L. PREVOST, Mystic, Conn. Filed Mar. 18, 1920. Serial No. 366,933. 3 Claims. (Cl. 24—138.)



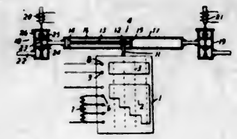
1. The herein described method of making clothespins which consists in forming a slab to the outline in cross section of two clothespins with heads abutting, and severing the same longitudinally midway of its width and also at intervals transversely to produce a series of clothespins with flat sides.

1,382,932. HAND-TOOL. FREDERICK M. RAMSDELL, Worcester, Mass. Filed Apr. 15, 1920. Serial No. 374,082. 8 Claims. (Cl. 82—4.)



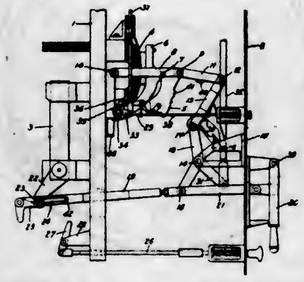
1. As an article of manufacture, a hand tool comprising a pair of complementary clamping members, a pair of handles each having a screw thread, said members each having two parallel openings located on opposite sides of the center, one of each pair being screw-threaded, for receiving the screw threaded portions of said handles so that said members are clamped together thereby, said handles extending in opposite directions from opposite sides of said members, said members having concave jaws at one end adapted to receive and clamp a cylindrical holding surface of a metal working tool, a similar pair of jaws at the other end, and a circular disk adapted to be held in the last named jaws and having a central passage for guiding and centering the work.

1,382,933. DOOR AND THE LIKE. ALBERT RUSH, Columbus, Ohio, assignor, by mesne assignments, to The Kinnear Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Apr. 2, 1919. Serial No. 287,022. 5 Claims. (Cl. 268—1.)



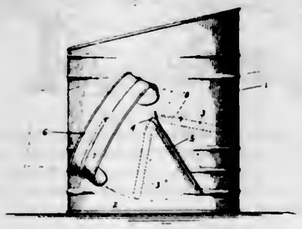
1. A door or shutter including, in combination, an upper section and a lower section, means for supporting the upper section in vertical position, means whereby the lower section may be raised into coincidence with the upper section, and link means engaged and actuated by the lower section to initially and subsequently deflect the coinciding sections and support them in deflected position.

1,382,934. VALVE-GRINDER. GUSTAV SCHADEE, New York, N. Y. Filed Feb. 19, 1920. Serial No. 359,762. 1 Claim. (Cl. 51—29.)



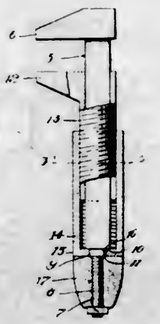
In a valve grinding apparatus, a casing, a tool shaft associated therewith, a pulley mounted on the tool shaft within the casing, a drive shaft journaled in bearings in the said casing, a pulley mounted on the drive shaft within the casing, a chain passed around the pulley on the drive shaft and also around the pulley on the tool shaft and extending at one end to a position exteriorly of the casing, and a spring associated with the said drive shaft whereby when the said chain is pulled exteriorly of the casing the tool shaft is revolved in one direction and a tension applied to the spring and upon releasing the chain the spring is employed to drive the tool shaft in the opposite direction.

1,382,935. SYSTEM OF CONTROL. OTTO S. SCHAIRER, Oakmont, and WILLIAM R. COLEY, Edgewood, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 1, 1917. Serial No. 151,688. 12 Claims. (Cl. 200—17.)



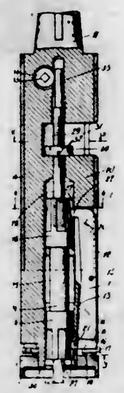
1. The combination with a fluid-actuated mechanism comprising a movable member, a container therefor, and fluid-governing means associated with each end of said container, of means for positively actuating said governing means individually to produce movement of said member in the one or the other direction and collectively to arrest such movement.

1,382,936. CIRCUIT-CONTROL MECHANISM. WALTER W. SCHILLING, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 30, 1920. Serial No. 420,785. 7 Claims. (Cl. 200—50.)



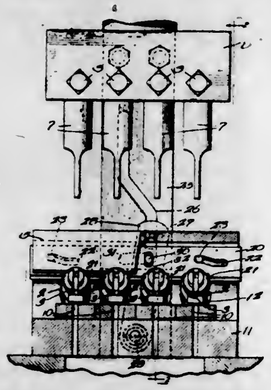
1. In a circuit control mechanism, a switch, a circuit breaker, an operating lever, a linkage interconnecting said switch, circuit breaker and operating lever arranged so that one movement of the operating lever opens the switch and subsequently closes the circuit breaker and the reverse movement closes the switch, and latching means arranged to lock said linkage upon the completion of said reverse movement of the operating lever and adapted to be released by the opening of the circuit breaker.

1,382,937. FLOUR-SIFTER. DANIEL SCHNEIDER, Lodi, Calif. Filed Jan. 17, 1921. Serial No. 437,678. 5 Claims. (Cl. 83—60.)



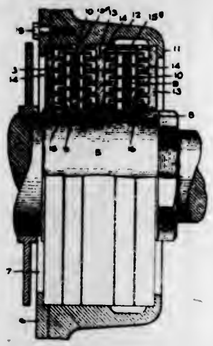
1. In a flour sifter, an agitator, a transverse shaft on which the agitator is mounted, a fixed handle on the receptacle to one side of the shaft, and a handle attached to the shaft outside the receptacle and normally positioned at a downward vertical angle therewith.

1,382,938. WRENCH. WILLIAM O. SINGER and BERNARD J. SINGER, Cresson, Pa. Filed Aug. 28, 1920. Serial No. 406,625. 2 Claims. (Cl. 81—174.)



1. A wrench of the character described comprising a shank, said shank having its end reduced and threaded, a shoulder formed at the base of the reduced portion, a second shoulder formed between the reduced portion and the first mentioned shoulder, a slidable jaw including a threaded extension slidably mounted on the shank, an adjusting sleeve having a partially closed end adapted to receive the extension of the jaw, said partially closed end being also adapted to engage the first mentioned shoulder, and a nut threaded on said extension into engagement with the second mentioned shoulder, said second mentioned shoulder preventing longitudinal movement and permitting unrestricted rotary movement of the sleeve on the shank and extension of the slidable jaw.

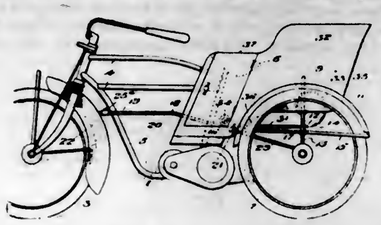
1,382,939. APPARATUS FOR RIFLING GUN-BARRELS. WILLIAM PORTER SPADE, Watervliet, N. Y., assignor to Watervliet Tool Company, Inc., Albany, N. Y., a Corporation of New York. Filed Sept. 9, 1918. Serial No. 253,148. 9 Claims. (Cl. 90—28.1.)



1. In an apparatus for rifling gun barrels, the combination of a body member, a cutter bar pivoted intermediate its ends, carried by the body member, a member for controlling the cutter bar movable longitudinally of the body member and engageable with both ends of the cutter bar, means for moving the member that controls the cutter bar, and a cutter carried on one end of the cutter bar.

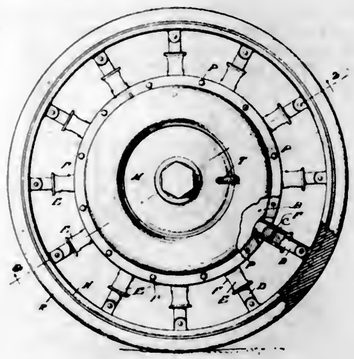
1,382,940. PUNCHING-MACHINE. ARTHUR SPEAR, Chicago, Ill., assignor, by mesne assignments, to Archer Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 15, 1918. Serial No. 217,405. 10 Claims. (Cl. 10—72.)

1. A nut castellating machine including a punch; a swinging nut holder inclined with respect to the punch to enable the punch to enter the bore of a nut that is upon the holder in the initiation of the engagement of the punch with the nut; a die positioned at one limit of travel of the nut holder to be engaged by the nut upon the holder preparatory to a punching operation; a stop that defines the other limit of travel of the nut holder; and a spring for normally maintaining the nut holder at said stop.



1,382,941. SHAFT-PACKING. CHRISTIAN STEENSTRUP, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 7, 1919. Serial No. 336,405. 4 Claims. (Cl. 286—7.)

1. The method of making a packing element which comprises taking a member having spaced projecting concentric rings thereon, fastening a sheet of thin material to the edges of said rings, and machining annular grooves in said sheet at points between said rings.



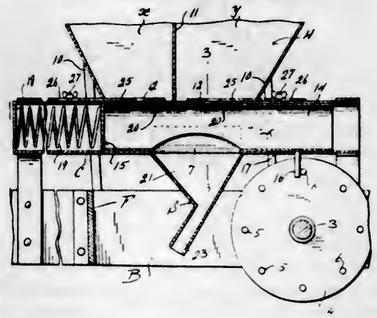
1,382,942. WHEELED MOTORCYCLE ATTACHMENT. LUCY R. VAN HOOSE, Rome, Ga. Filed May 26, 1916, Serial No. 100,017. Renewed Oct. 9, 1920. Serial No. 415,954. 7 Claims. (Cl. 208—45.)

1. A wheeled carrier attachment for motorcycles, comprising a generally horizontal frame having trusses arranged in general vertical disposition, an arch joining said trusses, supporting wheels for the said trussed portions,

adapted to be disposed on opposite sides of the motorcycle, and means for connecting the frame to the motorcycle.

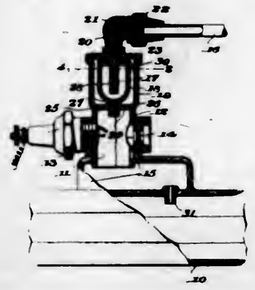
1,382,943. WHEEL FOR MOTOR-VEHICLES AND THE LIKE. RAMÓN OBREGÓN VARGAS, Torrelavega, Spain. Filed Sept. 12, 1919. Serial No. 323,334. 3 Claims. (Cl. 152—46.)

3. A resilient wheel comprising a hub, provided in its periphery with a plurality of circumferentially elongated outwardly flared openings, a rim, telescopic spokes pivoted to the rim and extending through the flared openings in the hub and having flanges on their inner ends to hold same in said hub, and cushion means carried by the hub against which the flanged ends of the telescopic spokes bear.



1,382,944. SACK-CLEANING MACHINE. JAMES A. WAGNER, San Francisco, Calif. Filed Jan. 2, 1920. Serial No. 348,821. 21 Claims. (Cl. 15—8.)

1. A sack cleaning machine comprising means for receiving a sack, means for blowing air through the fabric of the sack for cleaning the same, automatically operating turning means, and means for scouring the inner surfaces of the sack.

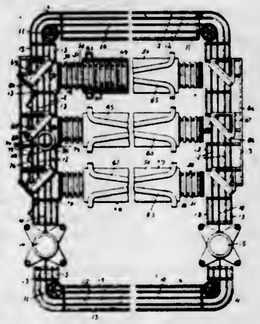


1,382,945. PLANTER. LEWIS F. WHITE, Pond, W. Va. Filed May 15, 1920. Serial No. 381,670. 1 Claim. (Cl. 221—142.)

A planter including a cylinder having an opening in its lower wall, the upper portions of the opening being defined by outstanding flanges, a hopper imposed upon the cylinder, the top wall of the cylinder constituting the bottom of the hopper, said hopper being provided with outstanding flanges overlying the flanges of the cylinder, means for securing said overlying flanges together, the bottom of the hopper being provided with an opening affording communication between the interior of the hopper and the interior of the cylinder, a tubular shuttle movable within the cylinder, means intermittently moving the tubular shuttle in one direction, automatic means

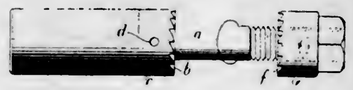
for moving the shuttle in the opposite direction, said shuttle being provided with an opening in its wall to register with the opening in the bottom of the hopper when the hopper is moved in one direction by the first named means, said opening of the shuttle being out of register with the opening in the bottom of the hopper when at the limit of its movement by the automatic means, said shuttle being provided with a second opening registering with the discharge opening in the lower wall of the cylinder.

1,382,946. HYDROCARBON-MOTOR. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 16, 1919. Serial No. 331,042. 5 Claims. (Cl. 158—28.)



2. A combustion heater device comprising a combustion chamber and means for igniting the charge therein, a mixture inlet including a downwardly extending nozzle, a chamber surrounding said nozzle and having a passage in line with said nozzle and communicating with the interior of the combustion chamber, said surrounding chamber also having outlet openings in its upper portion, and another chamber surrounding the first chamber and with which the openings at the upper end of the first surrounding chamber communicate, said second surrounding chamber having a passage leading to the combustion chamber in proximity to the lower outlet opening from the first chamber.

1,382,947. MATERIAL RESEMBLING LEATHER. DAVID BEATTY, Berkeley, Calif., assignor to himself as trustee. Filed Oct. 8, 1917. Serial No. 195,441. 14 Claims. (Cl. 106—40.)

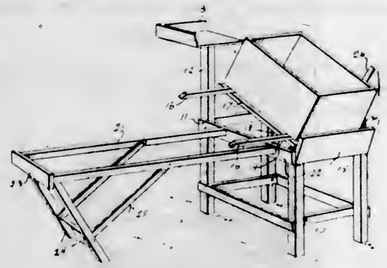


1. A leather substitute comprising coagulated, pliable and moisture-resistant viscose containing fiber therein.

1,382,948. VULCANIZING-OVEN. CHARLES J. BERTHEL, Akron, Ohio. Filed Aug. 3, 1920. Serial No. 400,931. 12 Claims. (Cl. 18—4.)

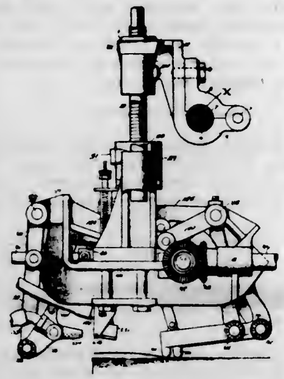
1. An apparatus of the class described comprising an endless carrier including spaced side portions moving in opposite directions, a heating chamber between the sides of the carrier, means for conducting the articles to be treated through said chamber, means for transferring said article from the carrier at one side to the conducting means of the chamber, and means for transferring the article from the conductor means of the chamber to the carrier at the opposite side thereof.

1,382,949. MEANS FOR SECURING ARTICLES ON MANDRELS, SPINDLES, AND THE LIKE. BENABES JESSE BLOOMFIELD, Brighton, England. Filed May 19, 1919. Serial No. 298,279. 5 Claims. (Cl. 82—43.)



1. In combination with a work-supporting mandrel adapted to be revolved in use, of means for securing a work piece in fixed relation on the mandrel, said means including a member adjustably mounted with relation to the mandrel and provided with means to be engaged by the work piece whereby said member is automatically operable through movement of the work piece in one direction to increase its work piece holding effect through such adjustability.

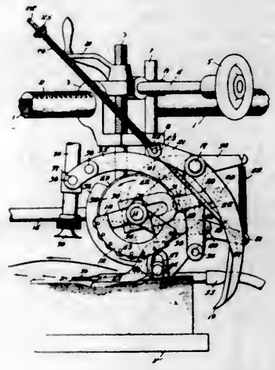
1,382,950. STAND FOR PACKING FRUIT. CHARLES A. BRAND, Roseburg, Oreg. Filed Jan. 28, 1920, Serial No. 354,715. Renewed May 2, 1921. Serial No. 466,214. 11 Claims. (Cl. 100—57.)



6. A packing stand comprising a supporting frame, a box supporting rack and a discharge rack, the latter having a pair of rails extending parallel to the front of the supporting frame, the box supporting rack being mounted above the supporting frame and having rails extending parallel to the rails of the discharge rack, the supporting frame having a member extending diagonally with relation to the front of the frame and with relation to the tracks of the discharge rack, the box supporting rack having a member extending diagonally to the tracks of said box supporting rack and resting upon the first named

diagonal member, one of said diagonal members having its face confronting the other diagonal member disposed at an inclination downward toward the front of the stand

whereby the box supporting rack will be disposed at an inclination to the horizontal in all positions, and a latch detachably holding the box supporting rack at an inclination downward and toward the front of the frame.



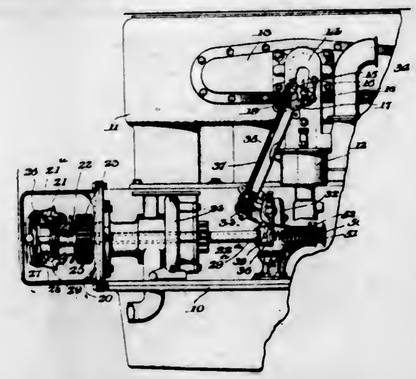
1,382,951. PAPER-FEEDING MACHINE. THOMAS E. BAKEN, Philadelphia, Pa., assignor to Dexter Folder Company, Pearl River, N. Y., a Corporation of New York. Filed Oct. 6, 1919. Serial No. 328,794. 9 Claims. (Cl. 271—20.)

2. In a machine of the character described, a holding foot movable into and out of engagement with a pile of sheets, a sheet engaging instrumentality movable into engagement with said pile and over said pile toward said holding foot, a sheet gripping instrumentality movable into engagement with a displaced portion of said top sheet, means for raising said foot and said instrumentalities for separating the top sheet from the pile, and a second pile holding foot movable into engagement with the pile beneath said top sheet, the last mentioned pile holding foot being provided with air blast channels for introducing a blanket of air beneath said top sheet.

1,382,952. SHEET-FEEDING MACHINE. CARL E. CHRISTOPHEL, Pearl River, N. Y., assignor to Dexter Folder Company, Pearl River, N. Y., a Corporation of New York. Filed Apr. 9, 1919. Serial No. 288,753. 20 Claims. (Cl. 271—22.)

2. In a sheet feeding machine, a sheet gripping instrumentality, means for supporting a pile of sheets and holding one portion of said pile displaced relatively to other portions of said pile, and means operating upon the displaced portion of the top sheet of said pile in a direction

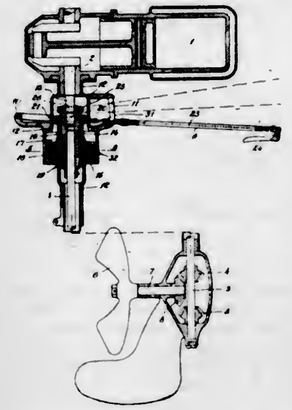
away from said sheet gripping instrumentality and moving said top sheet into position to be engaged by said sheet gripping instrumentality.



1,382,953. HYDROCARBON-MOTOR. HAROLD D. CHURCH, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 14, 1916. Serial No. 120,107. 13 Claims. (Cl. 123—90.)

1. In a hydrocarbon motor, in combination, a cam shaft casing, a cam shaft therein, a rocker arm mounted in and extended through said casing, said rocker arm being operable by said cam shaft, and a packed joint between said casing and a movable part of said arm independent of the arm mounting.

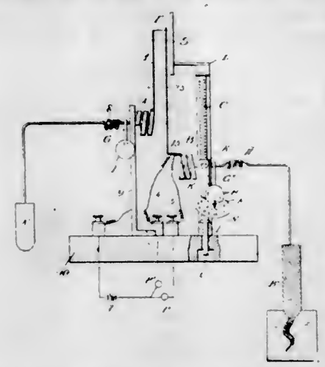
1,382,954. HYDROCARBON-MOTOR. HAROLD D. CHURCH, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 10, 1917. Serial No. 201,294. 12 Claims. (Cl. 264—3.)



1. In a hydrocarbon motor, the combination with a throttle valve therefor, a centrifugal governor of a hollow shaft for driving said governor, a rod extending through said shaft and operated by said governor, a spring adapted to exert pressure against the said rod for yieldingly

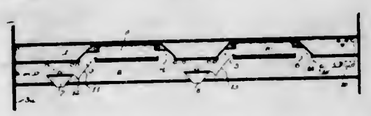
holding the governor inoperative and the throttle open, a member interposed between said rod and said spring capa-

ble of lateral movement with respect to said rod and means pivotally connecting said throttle valve and said member.



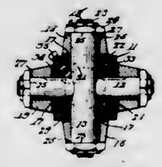
1,382,955. OUTBOARD-MOTOR FOR BOATS. JOHAN FERDINAND JULIUS CLEMENTSON, Malmo, Sweden. Filed Apr. 27, 1920. Serial No. 376,946. 12 Claims. (Cl. 115—18.)

6. An outboard motor for boats, comprising a motor, a propeller, a reversible connection for transmitting and reversing rotary motion from the motor to the popeller, and a disconnectible friction element interposed between the motor and reversible connection for automatically disconnecting the propeller from the motor during the reversing of said reversible connection.



1,382,956. APPARATUS FOR REGULATING HUMIDITY. STUART W. CRAMER and WILLIAM B. HODGE, Charlotte, N. C., assignors to Parks-Cramer Company, Fitchburg, Mass., a Corporation of Massachusetts. Original application filed Dec. 26, 1907, Serial No. 408,049. Divided and this application filed Sept. 14, 1911. Serial No. 649,224. 8 Claims. (Cl. 236—27.)

1. Apparatus for automatically regulating humidity comprising in combination, two thermal elements containing liquid adapted to produce change of internal vapor pressure therein according to temperature change and including flexible walls constituting motor members actuated by such changes, said elements being independently subjected to the wet and dry bulb temperatures of the air, a humidity controlling device moved by said elements



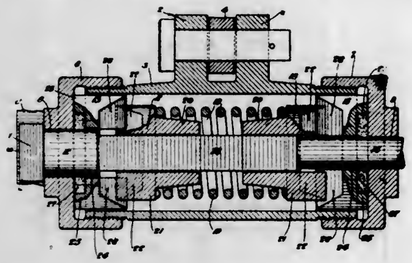
and arranged to be operated only by the difference of the action of said motor members, valve mechanism directly controlling the proportion of moisture in the air and a source of power for operating said mechanism controlled by said device.

1,382,957. CONVEYING APPARATUS FOR OVENS, DRYING-ROOMS, AND THE LIKE. FREDERICK H. CURRY, Detroit, Mich., assignor to Young Brothers Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 21, 1919. Serial No. 339,771. 3 Claims. (Cl. 91—55.)

1. In systems for applying coatings to articles under quantity production conditions, and wherein a succession of articles are subjected to coat-applying and heat treatment operations in automatic succession, a coat-applying station, an oven structure out of vertical alinement with the station, a continuous conveyer adapted to support the articles being treated, and means for supporting the conveyer to provide a flight passing the coat-applying station and a flight extending in the direction of length of the oven, with the plane of the latter flight above that of the first flight, said flights being connected by an intermediate flight inclined forwardly and upwardly in the direction of conveyer advance.

1,382,958. UNIVERSAL JOINT. LEE G. DANIELS, Rockford, Ill. Filed Nov. 30, 1918. Serial No. 264,820. 9 Claims. (Cl. 64—102.)

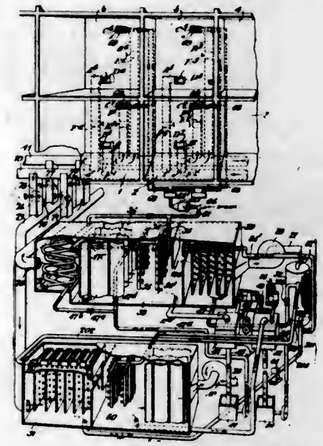
7. In a universal joint, the combination of a pair of yokes having alined trunnion bearings in their terminal arms, a transmission block having trunnions located in



said bearings, the outer ends of the bearings being open, means in coöperative relation to said trunnion bearings for supplying lubricant thereto, a comparatively flat plate seated on the outer face of each terminal arm and covering the opening of its respective trunnion bearing, and cap screws passed through each plate and threadingly engaged in the respective yoke arm for clamping a plate thereto.

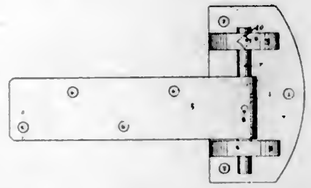
1,382,959. NUT-LOCK. JOHN C. DEUCHLER, Tiffin, Ohio. Filed June 1, 1920. Serial No. 385,554. 2 Claims. (Cl. 151—5.)

1. A bolt, a nut threaded thereon, and a reversely threaded screw tapped through said nut to engage said bolt, substantially as described.



1,382,960. SPRING-SWITCH. ISRAEL K. DIXON, Johnstown, Pa. Filed Jan. 6, 1921. Serial No. 435,360. 5 Claims. (Cl. 246—318.)

1. The combination with a spring switch tongue and spring box therefor, of means for yieldably holding said switch tongue in either of its thrown positions, said means comprising a rocking spring barrel, a stationary shaft on which the barrel is journaled within said spring box, coacting spring pressed wedging members within said barrel adapted to yieldably hold it against rotation, and means connecting said barrel and said switch tongue.

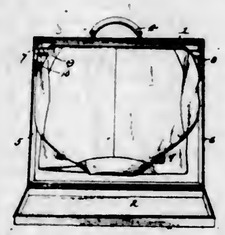


1,382,961. VENTILATION. HENRY L. DOHERTY, New York, N. Y. Continuation of applications Serial Nos. 633,367, 633,368, and 633,369, filed June 15, 1911; also Serial No. 701,873, filed June 5, 1912, and Serial Nos. 855,235 and 855,236, filed Aug. 7, 1914. This application filed Dec. 15, 1916. Serial No. 137,107. 73 Claims. (Cl. 98—33.)

54. The process of conditioning air for ventilation which comprises scrubbing incoming air with a body of water, scrubbing outgoing air, as the first step in its treatment, with a second body of water, and establishing heat-transferring relationship in counter-current flow between the said first and second bodies of water, further cooling said warmer air down to a temperature substantially corresponding to the dew point of the conditioned air, by evaporating water from a body of the same maintained in heat absorbing relationship with said partially cooled warmer air, contacting the cooler air with water after the said air has been partially reheated in said first treatment step, withdrawing said water from contact with said cooler air, compressing the water vapor formed by the evaporation of water from the body of the same in contact with the said warmer air to a pressure corresponding to that of saturated steam at a temperature above the temperature of the said water that has been contacted with the said used air in said second treatment step, contacting the said compressed vapor with said water to condense

said vapor and to heat said water, and returning said heated water to contact with said used air, whereby heat of said condensed vapor is transferred to said outgoing used air.

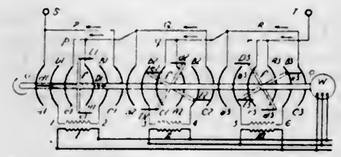
1,382,962. HINGE. ALBERT H. EHRLICH, St. Joseph, Mo. Filed July 14, 1919. Serial No. 310,647. 1 Claim. (Cl. 16—163.)



A hinge which includes a plate and horizontally extending lugs having alined holes therein, a strap of appreciably less width than the distance between the lugs, a pintle extending through said holes in the lugs and rotatable therein, and to which one end of the strap is secured, the pintle having a helical groove or way at one end thereof, one of the lugs having a threaded hole in registry with the groove or way in the pintle, a metallic ball positioned in said hole and extending into the groove or way and a set screw screwed into the threaded hole against the metallic ball.

1,382,963. CEREAL FOOD AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J. Filed May 16, 1919. Serial No. 297,573. 5 Claims. (Cl. 99—10.)

1. The process of making a cereal preparation adapted for use as a human food which comprises soaking an amount of bran in a liquid containing a lesser amount of sugary material and without destroying the structure of the bran, and drying the product at a temperature high enough to produce a curling of the bran flakes.

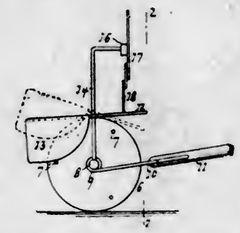


1,382,964. SUITCASE. CHARLES FASEL and WILLIAM W. GARLAND, Butte, Mont. Filed Aug. 13, 1920. Serial No. 403,272. 8 Claims. (Cl. 190—41.)

1. In combination with a suitcase, a hanger rod located in the upper portion thereof over which a coat and vest may be folded; means for detachably securing said rod in place; a form around which the upper portion of said

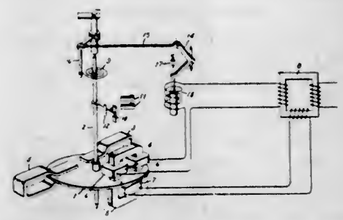
coat and vest may be folded; and a second form around which the lower portion of said coat and vest may be folded.

1,382,965. HIGH-TENSION-RECTIFYING APPARATUS. NICHOLAS V. FEDOTOFF, Brooklyn, N. Y. Filed Mar. 22, 1918. Serial No. 223,975. 8 Claims. (Cl. 175—364.)



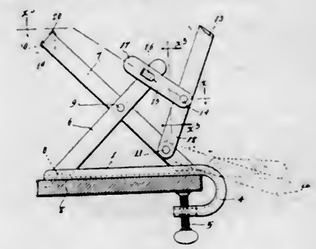
1. A high tension rectifying apparatus comprising polyphase windings each having a plurality of terminals, fixed contact members each adapted to be connected to one of said terminals, a set of fixed contacts of positive and negative sign associated with each of said fixed contact members, the contacts of positive sign in one phase being connected to the contacts of negative sign in an adjacent phase, and means comprising movable bridging members associated with the contacts and contact members of the several phases, for maintaining the windings of all phases in series circuit connection and reversing the connection in circuit of each winding whenever the direction of current changes therein.

1,382,966. PIN-CATCH. JOHN FIELDING, Providence, R. I. Filed Apr. 10, 1919. Serial No. 289,018. 2 Claims. (Cl. 24—157.)



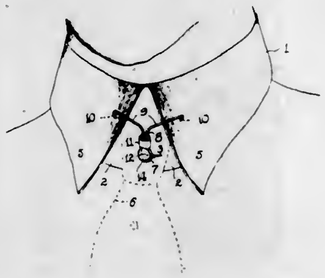
2. In a catch for pins or brooches, the combination with a keeper-member constructed from a flat blank having a central tab forming a hook at the top and provided with wing-like extensions folded together to form opposite parallel sides at the base, the fold of the blank being apertured to provide an integral cross-bar connecting the opposite sides of the base, of a bifurcated guard-member formed of flat stock to adapt it to be inserted between the sides of the keeper and provided with a tail-like extension encircling the cross-bar to pivotally connect the guard with the keeper to adapt it to rock into open relation therewith.

1,382,967. WHEEL TOY. ANDREW B. FOANS, New York, N. Y. Filed Sept. 21, 1920. Serial No. 411,799. 5 Claims. (Cl. 46—45.)



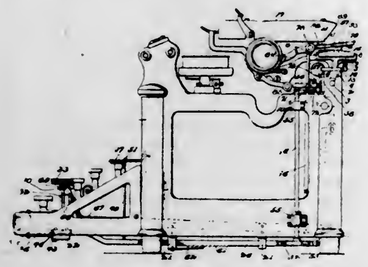
1. A toy comprising a wheel, a frame supported on the wheel, a figure suspended from the frame, and a platform loosely connected to the frame operated by the wheel to actuate the figure.

1,382,968. PROTECTIVE DEVICE. HENRY G. FRENCH, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 24, 1919. Serial No. 333,019. 11 Claims. (Cl. 175—294.)



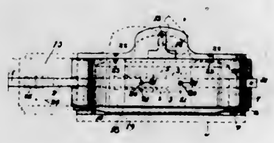
1. In a relay device, the combination with a movable armature member, a torque producing element for moving said armature in one direction, a counter-torque producing means for normally overcoming the effect of said torque producing element, and means operative under predetermined abnormal conditions for reducing the effect of said counter-torque element to enable said torque element to overcome said counter-torque element, said means acting to restore the effect of said counter torque element upon the return of normal conditions whereby said counter-torque element overcomes said torque element.

1,382,969. CANTEEN-HOLDER. SIGMUND FREY, Los Angeles, Calif., assignor to Woolwine Metal Products Company, Los Angeles, Calif., a Corporation of California. Filed Apr. 5, 1920. Serial No. 371,517. 4 Claims. (Cl. 224—29.)



2. In a canteen holder, opposed members adapted to hold a canteen between them, means to attach said members to a support, one of said members being movable and the other stationary, and latch means between the opposed members to hold the movable member against movement away from the stationary member.

1,382,970. HOLDER FOR SOFT COLLARS. NELSON D. FRISBIE, Detroit, Mich., assignor of one-half to William E. Sewell, Detroit, Mich. Filed Jan. 20, 1921. Serial No. 438,611. 4 Claims. (Cl. 24—87.)

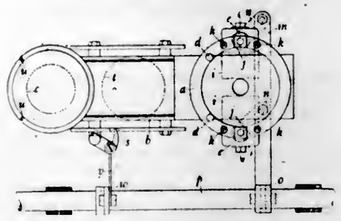


1. A collar holder comprising an eye adapted to fit on a collar button, a shank carried by said eye and terminating in arms adapted to engage collar flaps, and means slidable on said shank adapted to engage behind a collar button head to prevent displacement of the eye relative to the button.

1,382,971. TABULATING ATTACHMENT FOR TYPEWRITERS. MARVIN GARRETT, Pensacola, Fla. Filed Nov. 20, 1919. Serial No. 339,463. 37 Claims. (Cl. 197—177.)

1. A tabulating attachment for typewriters comprising a stop bar provided with a plurality of sockets arranged in longitudinal and transverse rows, stops selectively engaged in said sockets, counterstops upon the typewriter carriage to engage said stops, and means for rocking the stop bar and shifting the same longitudinally to bring a selected stop into operative position.

1,382,972. CALLUS AND CORN REMOVER. GEORGE GIEFERS, Brooklyn, N. Y. Filed Aug. 29, 1919. Serial No. 320,603. 1 Claim. (Cl. 30—23.)



As an improved article of manufacture a safety, adjustable cutter comprising a base bar, a guard and two clamping plates operated by a cam lever and a blade held frictionally between the clamping plates with its cutting edge projecting beyond the longitudinal edges of the clamping plates and guard.

1,382,973. CURTAIN-ROD HOOD. ALMA E. GRADY, Gardena, Calif. Filed Sept. 15, 1920. Serial No. 410,396. 2 Claims. (Cl. 223—38.)

1. A protecting hood for curtain rods, comprising a cylindrical hollow body having an open end and a closed end, and adapted to telescope a curtain rod to shield the sharp edges of the open end of the curtain rod as it passes through the fold of the curtain, the closed end being rounded to facilitate an easy passage of the hood through the fold of the curtain and to prevent catching in the fabric of the curtain, the wall of the cylindrical body having a plurality of longitudinally extending corrugations, permitting of an expansion of the cylindrical wall, when applying the hood to end of the rod, said longitudinal corrugations merging into the rounded closed end of the hood.

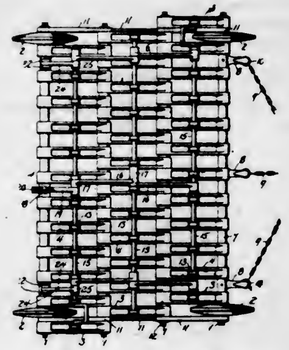
1,382,974. SHEET-METAL-WORKING MACHINE. HARRY ALBERT GRIFFITHS, Edgbaston, Birmingham, and RICHARD HANSON GRIFFITHS, Sutton Coldfield, England. Filed Mar. 23, 1921. Serial No. 454,832. 4 Claims. (Cl. 271—41.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

2. In mechanisms for automatically feeding sheet metal blanks to the tools of cutting, drawing, embossing and like presses, the combination of a movable blank holder in which a stack of blanks is placed, rotatable knife edge separating tools adapted to enter between the bottom blank and those above it, and means for lifting the holder and the separating tools so that the stack of blanks is raised clear of the bottom blank and the latter is thereby released for transfer to the press tools, substantially as described.

1,382,975. METAL SCREEN OR SEPARATOR FOR GASES. EDWARD W. HASLUP, Bronxville, N. Y. Filed Dec. 31, 1919. Serial No. 348,596. 5 Claims. (Cl. 183—32.)

1. In a separator for gases the combination of a drum; a closure plate for the inlet end of said drum provided

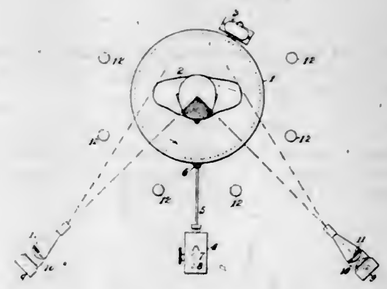
with a plurality of inlet openings; a frame work surrounding each opening and disposed longitudinally of said drum; foraminous filtering screens of heat conducting material and having substantially vertical side walls secured to each of said frame works, said screens spaced from said drum and from each other throughout their extent to provide a space into which the gases may expend; a closure for the exit end of said drum; an exit pipe common to all of said screens to convey away the filtered gases; and an inlet pipe materially smaller in cross section than said drum common to all of said openings and adapted to lead gases to be filtered to said screen, substantially as described.



1,382,976. EMBROIDERING. BENEDIKT HAUSER, Romanshorn, Switzerland. Filed Aug. 1, 1919. Serial No. 314,689. 7 Claims. (Cl. 112—266.)

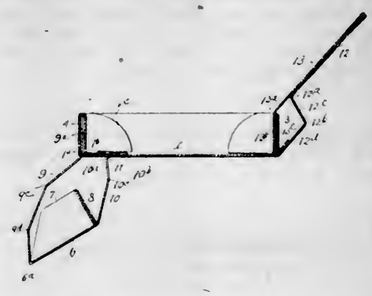
1. The method of making embroidery strips presenting patterns of large repeats, which comprises embroidering designs forming portions of the pattern with needles less in number than the number of single repeats in the width of the pattern, then effecting relative horizontal displacement of fabric and needles to an amount greater than the width of a single repeat, and embroidering design portions between the first embroidered portions with the same needles and needle spacing.

5. An embroidered strip comprising different groups of pattern portions, each group consisting of at least two congruent pattern portions, and said groups alternating side by side.



1,382,977. HARROW. GEORGE W. HOLMES, Vincent, Ala. Filed Sept. 18, 1920. Serial No. 411,230. 3 Claims. (Cl. 55—32.)

1. In a harrow, a plurality of parallel shafts, the two end shafts carrying wheels, a plurality of series of harrow teeth supporting members, loosely connected with said shafts, harrow teeth pivotally supported by said members, parallel rods passing loosely through the upper ends of said harrow teeth, and links for connecting said rods, said rods passing loosely through said links.

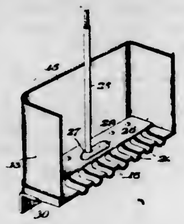


3. In a harrow, a plurality of parallel shafts, the two end shafts carrying wheels, harrow teeth supporting bars loosely connected with said shafts and provided each with a longitudinally extending slot, harrow teeth projecting through said slots, and pivotally connected with said bars, rods passing through the tops of said harrow teeth, links connecting said rods, said rods passing loosely through said links, and means for simultaneously moving said harrow teeth on their pivots.

1,382,978. PHOTOSCULPTURE. MARCUS C. HOPKINS, Falls Church, Va., assignor of one-half to Frank L. Dyer, Montclair, N. J. Filed Oct. 18, 1919. Serial No. 331,584. 15 Claims. (Cl. 41—25.)

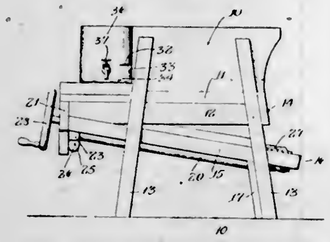
1. The art of making plastic reproductions of three dimensional objects, which consists in casting a shadow circumferentially on the object, in causing the shadow to progress successively over the surface of the object, in making a series of photographs of the shadow thereby obtaining a series of contour lines representing successive sections of the object, and in making pantographically from these photographs the reproduction desired, substantially as set forth.

1,382,979. CARTON. JOHN V. HORR, Cleveland, Ohio, assignor to A. T. Fischer, Cleveland, Ohio. Filed May 8, 1920. Serial No. 379,759. 13 Claims. (Cl. 206—44.)



1. A carton having a body portion, a cover therefor, said cover being hinged upon the said body portion at a place other than that at which the display member is mounted, a display member hingedly mounted upon the body portion of the carton, and resilient means normally urging the display member into upright position.

1,382,980. BATTERY-BOX. ORMOND E. HUNT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 17, 1917. Serial No. 202,503. 1 Claim. (Cl. 220—55.)

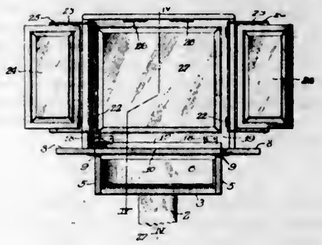


A battery box having a bottom formed with an inward depression and an opening in said depression, a battery securing rod extending through said opening and having

a bent end in said depression and a plate angular in section secured to the bottom and covering said depression

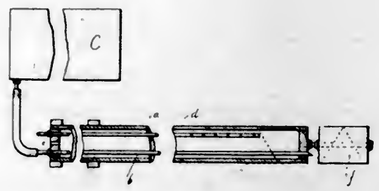
to retain the bent end of the rod therein, said plate also being secured to the battery box supporting bracket to support the box thereon.

1,382,981. GRAIN-TREATING MACHINE. LUDVIG A. IVERSON, Lankin, N. D. Filed July 8, 1919. Serial No. 309,417. 1 Claim. (Cl. 83—28.)



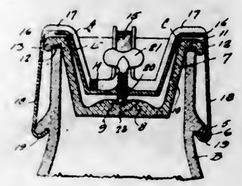
In a grain treating machine, the combination with a hopper having a discharge opening and a grain conveyer and mixer located below the hopper, a spout mounted below the discharge opening, a guide plate in the discharge opening for directing the flow of grain to the center of the spout, a liquid container mounted adjacent the discharge opening and above the spout, and a horizontal plate mounted within the spout and extending transversely of the spout to receive thereon the liquid discharged from the said container, and to deflect the liquid across the path of flow of grain from the hopper.

1,382,982. VAGINAL SYRINGE. EUGENE JEANJAQUET, Swartz Creek, Mich. Filed June 28, 1920. Serial No. 392,278. 1 Claim. (Cl. 128—244.)



In a vaginal syringe, an eduction tube having an induction tube movable axially thereof, a series of dilating fingers, each finger being pivotally mounted at its rear end to the eduction tube, and a series of braces, each being pivotally secured at one end to one of the dilating fingers, and at the opposite end being provided with a terminal member, a collar upon the induction tube having formed therein on its forward face an annular groove and having notches to receive the terminal members of the braces, and a spray head secured detachably upon the front end of the induction tube and arranged so that when in operative position, its rear portion forms a closure for the annular groove in the collar, to hold the terminal members of the braces in pivotal engagement therewith.

1,382,983. TABLE-TOP. JOHN T. KENT, Detroit, Mich. Filed Dec. 31, 1919, Serial No. 348,644. Renewed Mar. 7, 1921. Serial No. 450,416. 1 Claim. (Cl. 45—70.)

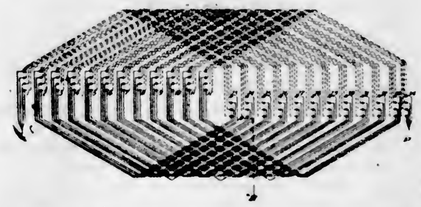


A table top comprising a body having a main table top, side shelves carried by said body and adapted to provide extensions of said main table top, an auxiliary table top supported at the rear edge of said main table top and adapted to be swung to a vertical position and so retained by said side shelves, and mirrors carried by said auxiliary table top.

1,382,984. SPIRAL-TUBE-WINDING MACHINE. ALBERT KING, Ashton-under-Lyne, England; Kathleen Winifred King administratrix of said Albert King, deceased. Filed Jan. 20, 1919. Serial No. 272,126. 11 Claims. (Cl. 91—44.)

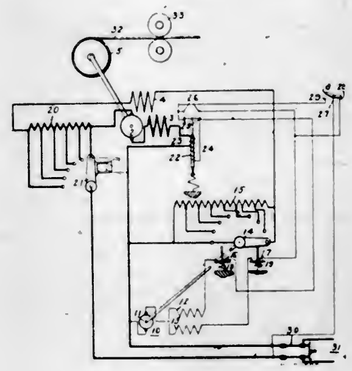
1. The combination with a mandrel of a tube winding machine, of means for automatically supplying a fluid coating material to the interior surface of a tube, formed on the mandrel, beyond the free end of the mandrel.

1,382,985. JAR-CLOSURE. WILLIAM F. KIPP, Fort Lupton, Colo. Filed Dec. 22, 1919. Serial No. 346,592. 5 Claims. (Cl. 215—88.)



1. The combination with a jar including a relatively wide neck, of a closure therefor including a body portion arranged to fit in the jar neck in spaced relation to the inner wall thereof, the upper ends of the body portion having outwardly extending flanges arranged to engage the upper edge of the jar neck, and means for holding the flanges in engagement with the upper edge of the jar neck having the major portion thereof located below the plane of the upper edge of the closure.

1,382,986. WATERPROOFING MATERIAL AND METHOD OF MAKING SAME. LOUIS M. KREGELIUS, Cleveland, Ohio. Filed Nov. 14, 1918. Serial No. 262,582. 9 Claims. (Cl. 106—27.)

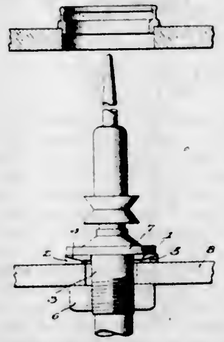


1. A waterproofing material for cement, which consists of a water-repellent wax-like body in finely divided form intimately associated with slaked lime.

1,382,987. ARMATURE-WINDING. JAN ARTHUR KUYSER, Edgewood, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 16, 1913. Serial No. 761,443. 4 Claims. (Cl. 171—206.)

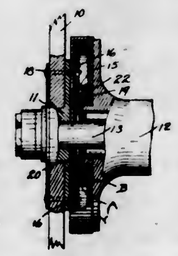
1. In a dynamo-electric machine, the combination with a slotted armature core member having an armature winding embedded in the slots thereof, said winding being provided with two current taps at points of opposite polarity, the portion of said armature winding included between said taps providing a plurality of distinct conducting paths said paths being provided by conductors traversing the same slots in the same order, each of said conductors traversing different slots of said core member at different depths, the resultant reactance of all of said conducting paths being substantially equal.

1,382,988. MOTOR-CONTROL SYSTEM. EDWIN S. LAMMERS, Jr., Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 3, 1917. Serial No. 200,008. 7 Claims. (Cl. 172—239.)



1. In a system of control, the combination with a motor having an armature and a shunt-field winding, and a source of energy for said motor, of a relay having a pair of actuating coils respectively in series with said armature and connected to said source, and means controlled thereby for varying the energization of said shunt-field winding in accordance with the load conditions of the motor, said source-connected coil being energized only when said other coil is energized below a predetermined degree.

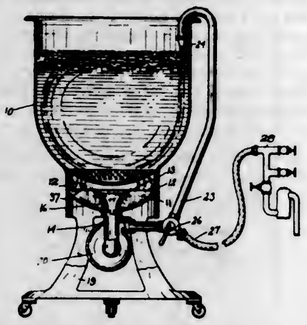
1,382,989. FUSE-BOX. THOMAS AUGUSTINE LEE, Essendon, Melbourne, Victoria, Australia. Filed Feb. 9, 1920 Serial No. 357,318. 3 Claims. (Cl. 200—121.)



1. A fuse box having spaced terminal contacts, a cover having connecting members to engage said contacts, a fuse strip extended between said connecting members, a lever pivotally mounted in a recess formed in the cover, means depending from the lever and encircling the fuse strip intermediate the connections, and a spring for projecting the lever in part above the cover under the influence of the spring on the separation of the fuse strip.

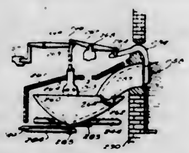
1,382,990. SPINDLE-MOUNTING. PAUL LEVASSEUR, Fall River, Mass. Filed July 10, 1920. Serial No. 395,349. 2 Claims. (Cl. 64—72.)

2. In combination with a rail, and a spindle having a base and a stem depending therefrom, a male and a female member each of ring-like shape and formed independent of the spindle and one another, said members having interengaging inner beveled faces and having their outer faces interposed between the base and the rail, respectively, so that the base rests upon and is supported by the two members, and means to draw the stem downwardly to thereby cause the base to exert holding action on the two members, one of the members closely engaging about the stem so as to partake of all lateral movements thereof and the other member having an opening considerably larger than the diameter of the stem.



1,382,991. GREASE-RETAINER. ARTHUR P. LINVILLE and CLARENCE E. LINVILLE, Berkeley, Calif. Filed Oct. 22, 1919. Serial No. 332,409. 2 Claims. (Cl. 301—123.)

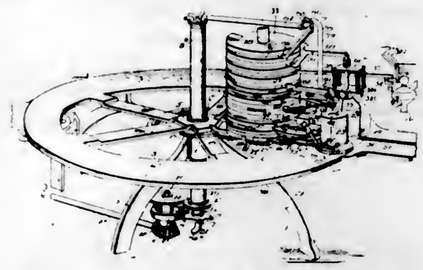
1. In combination with a wheel, an axle housing, an axle, a brake drum, and a cup-shaped ring attached to



the inside of the brake drum and surrounding the axle, and a packing washer arranged in the ring of a second packing washer between the closed end of the ring and the opposing end wall of the axle housing.

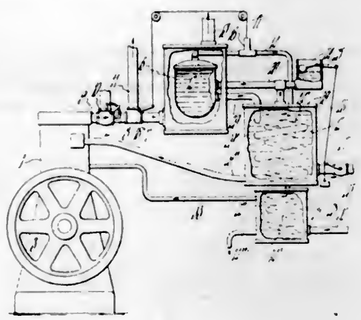
1,382,992. WASHING-MACHINE. NATHANIEL LOMBARD, Worcester, Mass., assignor to Lombard, White Company, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 14, 1920. Serial No. 403,520. 12 Claims. (Cl. 259—98.)

1. In a washing machine, the combination with a tub or receptacle for the water and articles to be washed, having in a wall thereof, adapted to be covered by the water, a perforated surface, of means for introducing water into said receptacle in a direction to produce an endless current around said receptacle and along said perforated surface, give the contents of the receptacle a whirling motion therein, and draw the articles to be washed along said perforated surface and substantially in contact therewith during their whirling course, and means for drawing the overflow out through said perforations during the continuance of the whirling motion to keep the level of water in the receptacle constant.



1,382,993. MEANS AND METHOD FOR PRODUCING CHARGES OF MOLTEN GLASS. CLYDE R. LOTT, Washington, D. C., assignor to The Guardian Trust and Savings Bank of Toledo, trustee, Toledo, Ohio, a Corporation of Ohio. Original application filed Sept. 27, 1909, Serial No. 519,678. Divided and this application filed Jan. 7, 1920. Serial No. 349,922. 15 Claims. (Cl. 49—55.)

5. The method of feeding molten glass, which consists in intermittently delivering from a tank to a container exterior thereof, predetermined quantities of molten glass, causing the same to be intermittently discharged downward from the container through an outlet orifice and subjecting the discharged glass to the action of a mechanical shearing means spaced below the orifice whereby to form mold charges.

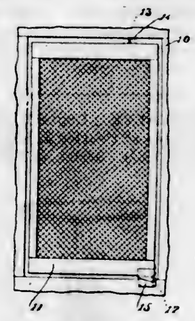


1,382,994. METHOD AND APPARATUS FOR MAKING GLASS ARTICLES. CLYDE R. LOTT, Washington, D. C., assignor to The Guardian Trust and Savings Bank of Toledo, trustee, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 27, 1909, Serial No. 519,678. Renewed Mar. 27, 1920. Serial No. 369,439. 52 Claims. (Cl. 49—1.)

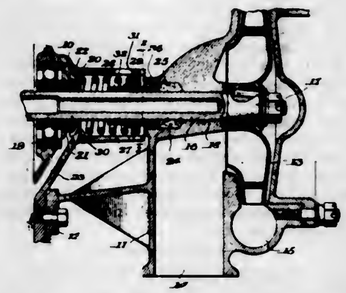
36. The combination of a blank mold and a finishing mold located side by side and each comprising sections hinged to swing horizontally to open the mold, said molds arranged so that each mold is opened at the side facing the other mold, and automatic means to transfer a blank by a horizontal movement from the blank mold into the finishing mold.

49. The combination of a receptacle to contain molten glass, said receptacle having an opening through which a stream or column of glass issues, means to periodically restrict the diameter of the issuing glass adjacent the outlet, a mechanical shear, and means to operate the shear to sever the glass at the point of restriction.

1,382,995. PROCESS AND APPARATUS FOR THE UTILIZATION OF HEAT IN OIL-ENGINES. HERBERT R. LUCKE, Dallas, Tex., assignor to McIntosh & Seymour Corporation, Auburn, N. Y., a Corporation of New York. Filed Feb. 16, 1920. Serial No. 358,856. 19 Claims. (Cl. 123—3.)



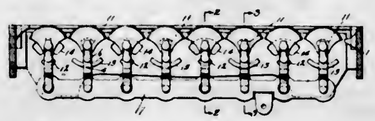
1. In an apparatus for the utilization of heat of internal combustion engines, the combination with said engine of an oil still comprising a retort to contain the oil being distilled, means for heating the retort with the heat given off by said engine when in operation, and means to conduct the undistilled residue from said retort to the fuel inlet of said engine.



1,382,996. HINGE. PETER R. LYDING, Sacramento, Calif. Filed Oct. 19, 1920. Serial No. 418,043. 6 Claims. (Cl. 16—103.)

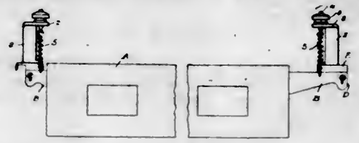
4. A hinge mounting for doors comprising a vertical pin extending upwardly from the top of the door and pivotally seated within the door frame, a vertical pin extending downwardly from the bottom of the door and pivotally seated in the threshold of the door, a horizontally extending convex member mounted upon the threshold and disposed in parallel alinement with the bottom of the door when closed and a cam plate carried by the

bottom of the door and having a concave portion normally seating on the convex member and having outwardly and downwardly extending wedge-shaped flanges by which the door may be restored to its closed position when opened.



1,382,997. PUMP-DRIVING MECHANISM. GEORGE L. MCCAIN, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 30, 1917. Serial No. 204,755. 3 Claims. (Cl. 286—7.)

1. In a pump driving mechanism, the combination with a pump casing, an impeller therein, and a shaft connected to the impeller, of a compressible packing ring around the shaft, a sliding sleeve in contact with the packing ring and keyed to prevent turning with the shaft, and a spring bearing against the sleeve and a non-rotating wall to compress said packing ring.

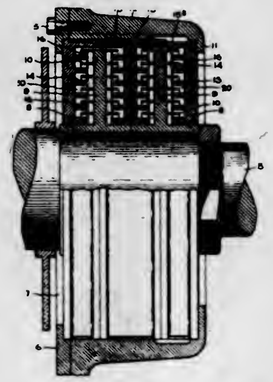


1,382,998. GRATE-BAR AND SUPPORT THEREFOR. EDWARD B. MCCONNELL, Newark, N. J. Filed Mar. 13, 1920. Serial No. 365,476. 4 Claims. (Cl. 126—176.)

1. In a grate, a series of identical grate bars having high and low trunnions, and means for selectively supporting said bars on either their high or low trunnions.

1,382,999. ATTACHMENT FOR ACCOUNTING-MACHINES. SAMUEL H. MCCRACKEN, New Kensington, Pa. Filed Mar. 12, 1920. Serial No. 365,210. 1 Claim. (Cl. 235—59.)

In a combined typewriting and computing machine, the combination with the carriage of the typewriter, a totalizer truck associated therewith, oppositely extending arms on said truck and guides permitting said arms a limited vertical movement, of brackets attached to said carriage



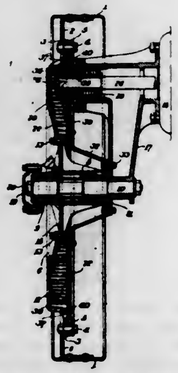
and overhanging said arms, and an adjustable spring connection between each arm and the adjacent bracket.

1,383,000. SPINDLE-RETAINER. CHARLES E. MCGILL, Binghamton, N. Y. Filed Dec. 6, 1920. Serial No. 428,597. 10 Claims. (Cl. 118—65.)

4. The combination with a vertical spindle having an annular flange adjacent to the lower end thereof, a bolster member upon which said spindle is journaled, and a bracket member for supporting said bolster,—of a plate frictionally held between said bolster and said bracket and movable relatively thereto, and an upturned projection carried by said plate, the free end of said projection being adapted to overlap the upper face of said flange.

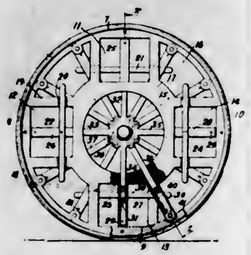
1,383,001. PACKING. THOMAS J. MCGRATH, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 13, 1919. Serial No. 337,804. 3 Claims. (Cl. 286—7.)

1. The method of making a packing element which comprises taking a member having spaced projecting con-



centric rings thereon, machining grooves in the edges of said rings to form projecting parts, and then turning the said parts outwardly in opposite directions and at an angle to said rings.

1,383,002. PISTON-ROD AND PROCESS OF MAKING SAID ROD. EDWIN J. MCILVRIED, Lakewood, Ohio. Filed June 30, 1920. Serial No. 393,011. 5 Claims. (Cl. 29—156.5.)

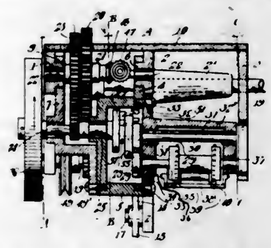


1. A steel piston-rod having a central bore which extends longitudinally of the rod and has a heat-treated surrounding wall.

1,383,003. DUST-GUARD. JOSEPH MADER, Philadelphia, Pa., assignor to S. L. Allen & Co., Inc., a Corporation of Pennsylvania. Filed May 18, 1920. Serial No. 382,233. 7 Claims. (Cl. 74—7.)

1. The combination with a rotatable element and a relatively stationary element, of means for excluding dust from the interior of said rotatable element, said means comprising a member fixed with respect to said stationary element, and a flexible member carried by said rotatable element and normally inclined with respect to the axis of rotation thereof, a portion of said flexible member being adapted by contact with said stationary member to be bent to a position substantially perpendicular to said axis when said elements are in operatively assembled relation.

1,383,004. RESILIENT WHEEL. ANTOLIN NIN Y MARTINEZ, Santurce, Porto Rico. Filed Apr. 11, 1919. Serial No. 289,399. 4 Claims. (Cl. 152—28.)

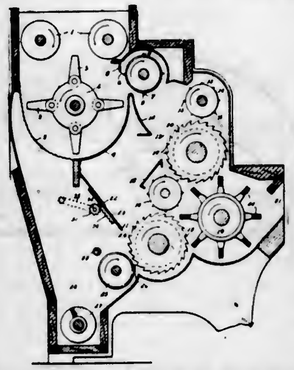


2. A resilient wheel, comprising a rim, side members secured to the rim, a hub, spokes rigid with the hub and having pistons at their ends, tubular members slidably mounted on the said members and in which the said spokes with their pistons work, and sectional spokes between the rigid spokes, the inner sections being pivoted to the hub and having pistons at their ends, the outer sections being tubular and pivoted to the rim and in which the inner sections work.

1,383,005. STEAM-VALVE. LOUIS R. MERTENS, Philadelphia, Pa., assignor to Charles J. Miller, Philadelphia, Pa. Filed Apr. 24, 1920. Serial No. 376,334. 4 Claims. (Cl. 251—167.)

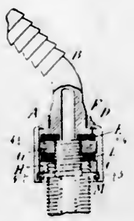
2. A steam valve comprising a valve casing having a bottom opening, an orificed web in the casing, the casing having an inlet port and an outlet port on opposite sides of said web, a hollow valve guide extending through the orifice in the web, a closure for the bottom opening, an orificed neck on the closure adapted to engage said guide and hold it in fixed relation with the web, a hollow perforated valve extending into said guide and adapted to seat thereon, said valve being arranged to be inserted through the bottom opening and the orifice in the web, and a separate stem adapted to be moved in one direction to seat the valve and the opposite direction to allow steam pressure, admitted through said neck into the interior of the valve, to unseat it.

1,383,006. FILM-MOVEMENT MECHANISM OF PICTURE-MACHINES. WILLIAM EDGAR MINUE, Fredericton, New Brunswick, Canada. Filed Mar. 6, 1919. Serial No. 280,893. 5 Claims. (Cl. 74—41.)



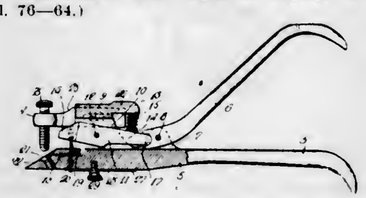
1. In a moving picture machine, a pair of shafts, a disk on one shaft, a cam on the other shaft, a swivel intermediate of the cam and disk having angularly disposed slots, pins on the cam coacting with the slots, and a sprocket shaft designed to be driven from the cam, the swivel being designed to transmit accelerated and retarding motion at predetermined times to the cam shaft.

1,383,007. COTTON EXTRACTING AND CLEANING MACHINE. JOHN E. MITCHELL, St. Louis, Mo. Filed Mar. 10, 1921. Serial No. 451,395. 4 Claims. (Cl. 19—9.)



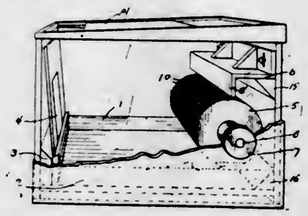
2. In a cotton extracting and cleaning machine, in combination with a saw cylinder and a hull board, the lower

end of which latter defines the size of an opening past the saw cylinder, a roller located below said opening to receive material passing therethrough, and rotating in the same direction as, and in relatively close proximity to



said saw cylinder, and a bar located above and extending over said roller and positioned to obstruct the backward movement of cotton particles while permitting hull particles knocked back by the saw cylinder to hurdle the same.

1,383,008. DOUBLE PUMP-COUPLING. EUGENE V. MYERS, East Orange, N. J., assignor to A. Schroeder's Son, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 13, 1920. Serial No. 373,596. 7 Claims. (Cl. 285—124.)

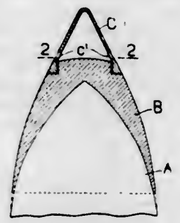


3. A coupling for pneumatic tire valves comprising two nuts, the upper nut adapted to engage a tire valve nipple, and the lower one adapted to engage the body portion of the valve, and a packing interposed between the two.

1,383,009. SAW-SET. ANDREW E. NELSON, De Kalb, Ill. Filed Feb. 19, 1920. Serial No. 359,898. 3 Claims. (Cl. 76—64.)

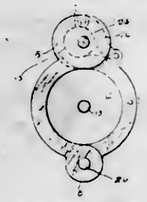
1. A saw set having a major portion providing a handle at one end and having a vertically upstanding part at the other end, the latter end being tapered to receive the flat surface of a saw; a short lever pivoted in the upstanding part and having its front end tapered to engage the teeth of a saw; a handle pivoted to the major portion of the device having a short end engaging the rear end of the short lever and a spring engaging the upstanding part and the rear end of the short lever to yieldingly hold the front end of the short lever normally elevated.

1,383,010. ETCHING-MACHINE. HAROLD OLSEN, New York, N. Y., assignor to Philip Becker and George Becker, New York, N. Y.; said Philip Becker executor of said George Becker, deceased. Filed May 29, 1916. Serial No. 100,574. Renewed Oct. 6, 1920. Serial No. 415,218. 8 Claims. (Cl. 41—9.)



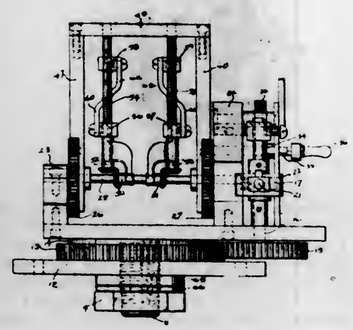
8. In an etching machine the combination with a container for the etching fluid and a holder for the plate to be etched, of a rotary sprayer having generally circular sections of variable diameter at successive points along the axis of rotation, the peripheries of said sections being in contact with the etching fluid and acting to project said fluid against said plate by centrifugal force.

1,383,011. SWITCH AND CONTACT MECHANISM FOR ELECTRIC-CURRENT-REGULATING PLUGS AND SOCKETS. ANTONIO PAPINI, Philadelphia, Pa., assignor to A. Mecky Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 8, 1920. Serial No. 394,725. 4 Claims. (Cl. 219—49.)



1. In a device of the character described, in combination with an inclosing casing,—a case or body,—electric contacts mounted upon the upper surface of said case,—plates contained within said case and encompassing a tubular axial extension integral therewith,—a socket secured to the base of the casing,—and assembled electrical connections for completing the circuit of the device.

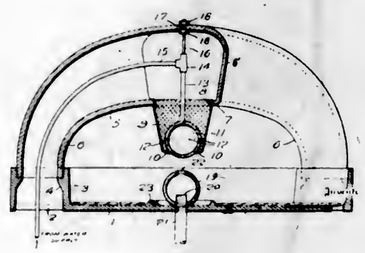
1,383,012. ARMOR-PIERCING SHELL. ALBERT RYS, Essen-on-the-Ruhr, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Dec. 3, 1920. Serial No. 428,078. 2 Claims. (Cl. 102—28.)



1. Armor-piercing shell having a cap and a hollow hood projecting beyond the said cap, said hollow hood being provided with perforations.

1,383,013. FRICTION-BRAKE. PASQUALE PASQUARIELLO, Hamden, Conn. Filed June 24, 1920. Serial No. 391,442. 3 Claims. (Cl. 188—18.)

1. A brake composed of two members, one including a body provided at one end with a knuckle and at the opposite end with a reversely curved hook, a component member provided at one end with a pair of knuckles between which the knuckle of the other member may extend, and with two disk-like heads between which the said hook may be inserted, a cam mounted in the said heads and having a bearing in said hook, whereby the turning of the cam will draw the two members together.

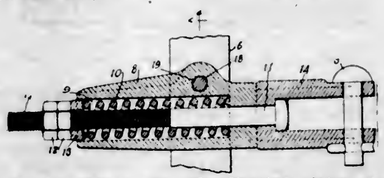


1,383,014. EXTENSION-LADDER. PASQUALE PASQUARIELLO, Hamden, Conn. Filed June 24, 1920. Serial No. 391,443. 3 Claims. (Cl. 227—17.)

1. An extension ladder comprising a table provided on its under face with a post, a support for said post including a fixed externally cut gear, a horizontal shaft mounted on said table, gears fixed to said shaft, posts connected with said gears, said posts connected at their upper ends, beveled gears mounted on said shaft, screws supported by said frame and shaft and provided with bevel gears at their lower ends meshing with the bevel gears on said shaft, a nut and loose collar mounted on each of said screws and a lazy-tongs ladder connected with said nuts and collars and means for turning said shaft.

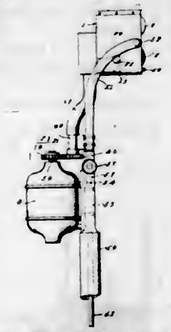
1,383,015. VAPORIZER HYDROCARBON-BURNER. ALBERT WARD PATTISON, Lockport, N. Y. Filed May 25, 1920. Serial No. 384,189. 8 Claims. (Cl. 158—53.)

1. A hydrocarbon burner comprising the combination of a base provided with air-apertures, arched air-tubes communicating with said apertures and converging toward a common central portion provided with an opening in its bottom, a screen depending from said opening in the bottom of said central portion, means for projecting



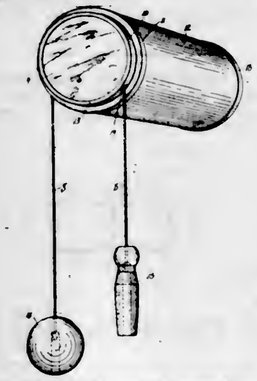
water through said screen, and an oil-supply pipe projecting through said base-plate and disposed beneath said screen.

1,383,016. HAIRPIN. WALTER F. PEET, Philadelphia, Pa., assignor to himself and Edward B. Peet, Philadelphia, Pa., Copartners trading under the name of Peet Brothers. Filed Mar. 15, 1921. Serial No. 452,472. 2 Claims. (Cl. 132—50.)



1. A hair pin comprising a single wire bent upon itself to provide two legs, each leg comprising a series of straight sections and a series of bends, each bend being joined to its most nearly adjacent bend by a straight section and each straight section being joined to its most nearly adjacent straight section by a single bend, the straight sections and bends of one leg being respectively opposite the straight sections and bends of the other leg, all the bends being at an angle to a plane normally approximately coincident with the axes of the straight sections of both legs, each bend extending oppositely to the most nearly adjacent bend of the same leg as well as oppositely to the corresponding bend of the other leg.

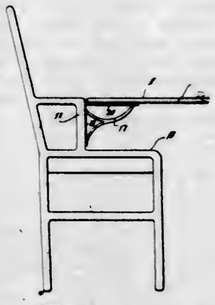
1,383,017. COUPLING. CHARLES H. PELTON, Springfield, Ohio, assignor to The Thomas Manufacturing Company, Springfield, Ohio, a Corporation of Ohio. Filed Apr. 26, 1920. Serial No. 376,642. 7 Claims. (Cl. 213—67.)



2. In a coupling, opposed adjusting plates, a draft head mounted for vertical adjustment therebetween, and means adjustably engaged with the plates for drawing the latter together to rigidly clamp the draft head therebetween in various horizontal positions.

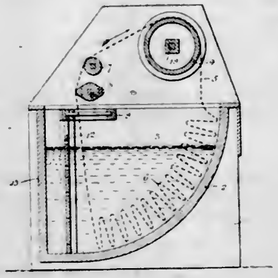
1,383,018. WINDOW-CLEANING DEVICE. JOHN J. PETERSON, Steubenville, Ohio. Filed Oct. 17, 1919, Serial No. 331,350. Renewed Oct. 1, 1920. Serial No. 414,142. 5 Claims. (Cl. 15—59.)

1. In a window cleaning device, a casing, a brush rotatably mounted therein and projecting beyond the casing, a roller rotatably mounted in the casing above and substantially in the plane of the brush, means for rotating said roller and brush, means for supplying a washing solution to the brush, means in contact with said roller for removing moisture therefrom, a second roller mounted in the casing, means for holding said second roller in contact with the first mentioned roller, and means for removing moisture from the second mentioned roller.



1,383,019. KALEIDOSCOPE. JOHN W. PETRIE, New Haven, Conn. Filed Nov. 4, 1920. Serial No. 421,673. 6 Claims. (Cl. 88—15.)

1. A kaleidoscope having a rotatable object-box, a housing within which the same is inclosed, and a cord



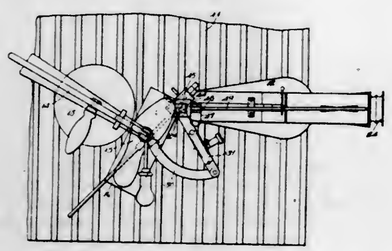
applied directly to the said box for turning the same and having its ends extended outward through the said housing.

1,383,020. TRAY-CHAIR. GEORGE LOUIS PLATTS, Detroit, Mich. Filed Sept. 9, 1920. Serial No. 409,230. 7 Claims. (Cl. 155—128.)

1. The combination with a serving tray and a chair, of means for detachably securing the serving tray to the chair embodying a support secured to the chair provided at its upper end with means adapted to engage a side of the tray to prevent vertical displacement thereof and means extending forwardly from the support for engaging the under surface of the tray to support the same.

1,383,021. APPARATUS FOR BLEACHING, DYEING, &c. MAX POETZSCH, Clifton, N. J. Filed Nov. 6, 1919. Serial No. 336,005. 13 Claims. (Cl. 8—19.)

1. An apparatus for bleaching, dyeing, etc., comprising a liquid containing vat, means for feeding cloth into the vat and removing the cloth from the vat in a continuous movement, and means for longitudinally refolding the cloth each time it passes over said feeding means.



1,383,022. CABINET. GEORGE POLL, New York, N. Y. Filed May 28, 1920. Serial No. 384,968. 3 Claims. (Cl. 211—7.)

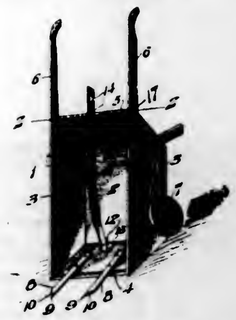
1. A cabinet, including a bed plate, a pair of track members secured one adjacent each of the side edges of said bed plate, rails slidably associated with said track members, a receiving carriage slidably mounted upon said rails, said carriage presenting a pair of uprights, a rail

extending between the lower ends of said uprights, a bar extending between the upper ends thereof, side members having their rear ends secured to said uprights, and an angle iron extending between and secured to the forward ends of said side members.

1,383,023. PATTERN-CUTTING MACHINE. ALBERT F. PRESTON, Boston, Mass.; John Abbott, Winchester, Mass., and Alfred Benson White, Brookline, Mass., administrators of said Albert F. Preston, deceased, assignors to John Abbott, Winchester, Mass., and Alfred B. White, Brookline, Mass. Filed May 18, 1916, Serial No. 98,342. Renewed Oct. 6, 1920. Serial No. 415,217. 8 Claims. (Cl. 164—48.)

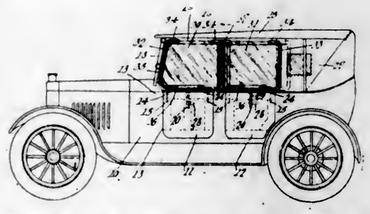
1. A pattern grading and cutting machine comprising the combination with a holder for a model pattern and for a sheet of stock, a guide adapted to coact with such model, elements associated with the guide and projecting at each side of the engaging element thereof for resisting escape of the model therefrom, and a cutting apparatus for outlining a reproduced pattern in such sheet; said holder on the one hand, and said guide and cutting apparatus on the other hand, being mounted for relative movement whereby to effect relative traverse between the model and guide, and corresponding shifting of the point of action of the cutting apparatus on the sheet of stock.

1,383,024. RERUN-STILL. DANIEL PYZEL, Oakland, Calif. Filed Sept. 4, 1919. Serial No. 321,730. 3 Claims. (Cl. 196—13.)



1. A re-run still comprising a cylindrical shell having closed ends, two heads intermediate of said ends forming, with that portion of the shell between said heads, a distilling chamber, a series of tubes tightly secured in said heads and extending through said distilling chamber in the lower part thereof, means for delivering hot residuum to the space outside said distilling chamber and inside one end of said shell so that said residuum can flow through said tubes, means for withdrawing said residuum from the space outside the opposite end of said distilling chamber and inside said shell, means for injecting steam into the bottom of said distilling chamber, means for delivering the fluid to be distilled to the inlet end of said distilling chamber, a series of partitions extending across said distilling chamber above said tubes, means for withdrawing vapors from each of the progressive spaces between said partitions, and means for withdrawing unvaporized liquid from the outlet end of said distilling chamber.

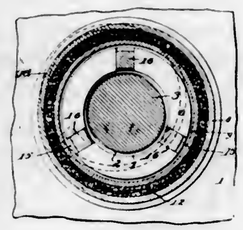
1,383,025. METAL CLOTHES-HANGER. RALPH VAIL REYNOLDS, Chicago, Ill. Filed Aug. 11, 1919. Serial No. 316,521. 1 Claim. (Cl. 45—13.)



A sheet of material for forming hooks divided by broken lines into strips, each strip including two rows of hooks, each strip divided by curved lines into two rows of hooks, the said broken lines forming trapezoidal projections on one strip separated by trapezoidal recesses which constitute like trapezoidal projections on the neighboring strip, the said curved lines forming hook-shaped projections on one row of hooks separated by recesses which constitute like hook-shaped projections on the neighboring row of hooks, each of said hook-shaped projections being enlarged at the end and being constricted between the end and the stem whereby an enlargement of each recess is made which constitutes a like enlargement at the end of each hook of the neighboring row of hooks, said sheet of material being perforated, certain of said perforations being located one in each of said trapezoidal projections and others located one in each of said enlargements, whereby the sheet of material is divided into blanks without waste and the blanks are suitable for the formation of rows of hooks.

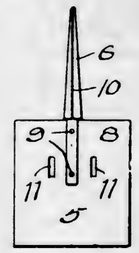
1,383,026. WHEELBARROW. WILBERT RICHMAN, Bridgeton, N. J. Filed Sept. 20, 1920. Serial No. 411,469. 3 Claims. (Cl. 280—51.)

1. In a vehicle of the order stated, a body, a load engaging dog, and means for mounting the latter on the former, said dog consisting of a narrow bar twisted transversely in its length and having its front portion extending angularly downward presenting its broad side to a load.



1,383,027. SIDE WINDOW FOR AUTOMOBILES. CHRISTOPHER S. ROBERTSON, Jacksonville, Fla. Filed Feb. 2, 1920. Serial No. 355,720. 3 Claims. (Cl. 296—45.)

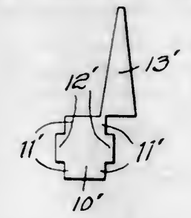
2. In side wind and rain shields for open body type of automobiles, having a top and side curtain parts at the



rear portions thereof together with fenders depending from the sides of the top; of sockets mounted in the doors of the body, open supporting members mounted on the top edges of the doors and having shank portions engaged in the sockets for pivotal adjustment laterally and vertical adjustment, means engaged through the doors and sockets and engaged with the shank portions to hold the supporting members in adjusted relation, and means to close the space between the top and body, and comprising shields mounted in the supporting members.

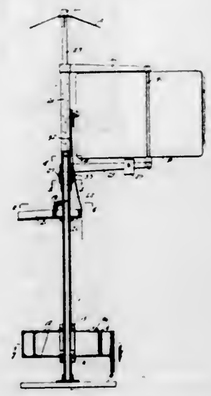
1,383,028. PACKING-RING FOR ROTARY SHAFTS. WALTER G. E. ROLAFF, Belleville, Ill. Filed Dec. 8, 1919. Serial No. 343,208. 4 Claims. (Cl. 286—1.)

1. In combination with an apertured member penetrated by a revolving shaft, a collar fixedly secured on said shaft, a packing ring surrounding said aperture and bearing against the adjacent surface of said member, and movable members interposed between said packing ring and collar and adapted to be thrown outward by centrifugal force, to press the packing ring into engagement with said member.



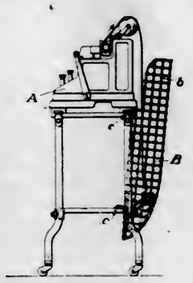
1,383,029. COMBINATION BACKING AND POST FOR ARTIFICIAL ANTERIOR TEETH. HUGO SCHICK, St. Louis, Mo. Filed July 21, 1919. Serial No. 312,122. 3 Claims. (Cl. 32—9.)

2. An artificial tooth, comprising a porcelain front having a plurality of anchor pins extending from the rear face thereof, a backing having an opening to receive each anchor pin to be clenched upon the back face of the backing, a root-post fixed to the back of the backing and extending beyond the upper edge of the backing-plate, and a covering for said root-post.



1,383,030. COMBINATION BACKING AND POST FOR ARTIFICIAL ANTERIOR TEETH. HUGO SCHICK, St. Louis, Mo. Filed July 21, 1919. Serial No. 312,192. 5 Claims. (Cl. 32—9.)

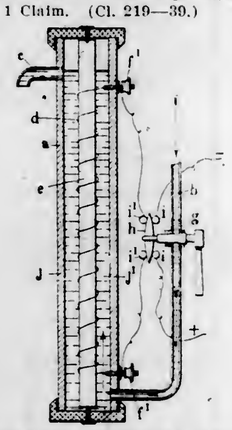
5. An artificial tooth, comprising a porcelain facing having a recessed socket extending from the cervix toward the biting edge thereof, a backing-plate, an inlay fixed to the facing engaging in the recessed socket, and a root-



post integral with the inlay extending upwardly above the upper edge of the backing-plate.

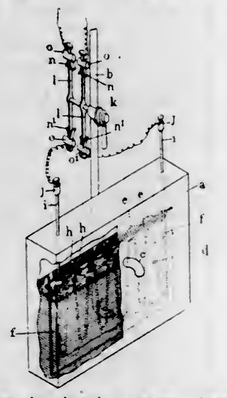
1,383,031. WATER-ELEVATING UNIT. EDWARD E. SCHUMAKER, Hilbert, Wis. Filed Mar. 9, 1920. Serial No. 364,463. 1 Claim. (Cl. 103—73.)

A water elevating unit including a tube, a pump attached to said tube and means for oscillating said pump, said pump including a pair of spaced disks, annular walls extending between said disks and spaced from one another, a partition extending between said annular walls and valves associated with openings formed in said annular walls adjacent said partition.



1,383,032. RECEPTACLE FOR ADDING-MACHINES, TYPEWRITERS, DESKS, AND THE LIKE. WILLIAM F. SCRANTON, Washington, D. C. Filed June 27, 1918. Serial No. 242,268. 1 Claim. (Cl. 220—18.)

A portable open topped basket for waste paper and the like, comprising a body portion having a tapered bottom

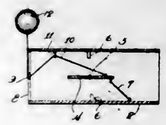


and provided with upstanding walls on three sides thereof, the entire fourth side being of a lesser height than the other sides, said basket being adapted to be placed adjacent a desk or the like with the low side next to said desk or the like.

1,383,033. ELECTRIC WATER-HEATER. LOUIS ELIE SEIMBILLE, Paris, France. Filed Sept. 24, 1918. Serial No. 255,519. 1 Claim. (Cl. 219—39.)

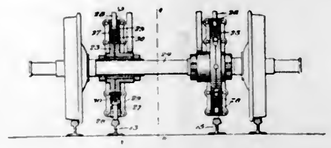
An electric water heater comprising a narrow elongated casing, a water supply pipe opening into the bottom part of said casing, a valve in said pipe, a discharge spout of larger cross-section than said supply pipe connected to the top part of said casing, and means controlled by said valve for heating the water in said casing to a temperature inversely proportional to the rate of flow of the water, said means including a switch and a coiled resistance element in immediate contact with the water in said casing and wholly immersed therein.

1,383,034. ELECTRIC WATER-HEATER. LOUIS ELIE SEIMBILLE, Paris, France. Filed Sept. 24, 1918. Serial No. 255,520. 3 Claims. (Cl. 219—39.)



1. An apparatus for heating water electrically and almost instantaneously, comprising in combination, a casing of small capacity, an inlet tube near the lower part of said casing, a discharge tube near the upper part of the said casing and having a cross-section greater than that of the water inlet tube, a heating element in the said casing comprising an electric resistance and a thin layer of insulating matter forming an envelop surrounding the said resistance, and metallic sheets engaging the sides of the said envelop and allowing circulation of water in contact therewith.

1,383,035. BEARING-SHIM. CHARLES REUBEN SHORT, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 24, 1919. Serial No. 292,324. 9 Claims. (Cl. 64—10.)

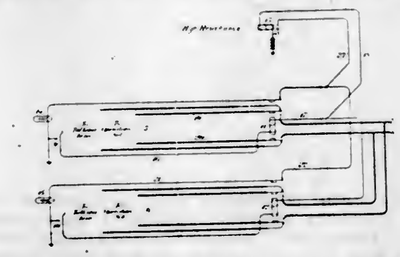


5. A combined shim and bearing comprising a spacing portion made up of a plurality of superposed hard and non-yieldable metallic plates, and a facing portion made from a bearing metal and adapted to form a part of a bearing, said parts being permanently joined together, the unitary member thus formed having a hole to receive a securing bolt.

1,383,036. SWIMMING APPLIANCE. LUTHER P. SIFFORD, Barstow, Calif. Filed Feb. 8, 1921. Serial No. 443,345. 3 Claims. (Cl. 128—140.)

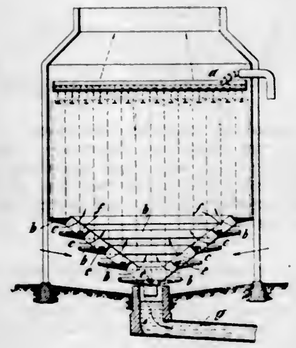
1. A device of the character described comprising parallel tubular members, valves arranged within the members, a float member at the end of each tubular member, means connecting the float member with the valve member within the tube, and an elastic member connected to the valve member and tending to normally hold the valve member in open position.

1,383,037. ELECTRIC CONTACT DEVICE. WILLIAM E. STUDSTILL, Murphy, N. C. Filed July 13, 1920. Serial No. 396,035. 1 Claim. (Cl. 191—45.)



An electric contact device of the character described comprising a wheel of two detachably connected sections, the confronting faces of said sections being recessed, said recesses unitedly defining a circumferential series of pockets opening at the periphery of the wheel, a sliding contact operating within each pocket, and a spring arranged within each pocket to normally hold the contacts projected beyond the periphery of the wheel for the purpose specified.

1,383,038. TELEPHONE CALL-WIRE CIRCUITS. JOHN F. TOOMEY, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 10, 1919. Serial No. 303,054. 1 Claim. (Cl. 179—41.)

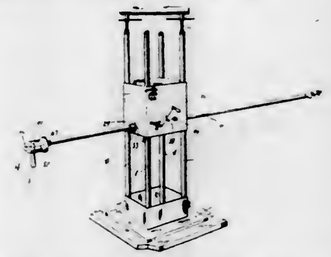


In a telephone system comprising a plurality of switchboard positions, a call order wire associated with said positions, switching means at each of said positions, signaling means at each position, a relay common to all of said positions and in series with said switching means, means controlled by the switching means at each position for completing a circuit for the relay at said position

and said common relay, means controlled by said position relay for connecting said order wire to said position, means controlled by said position relay and said common relay for preventing the simultaneous operation of any

of the other of said relays, and means controlled by said position relay and common relay for operating the signaling means at only the positions which are not connected with said call circuit.

1,383,039. DEVICE FOR RECOOLING THE WATER IN COOLING-TOWERS. FRITZ UHDE, Breslau, Germany. Filed June 15, 1914, Serial No. 845,146. Renewed Aug. 24, 1920. Serial No. 405,755. 9 Claims. (Cl. 261—111.)

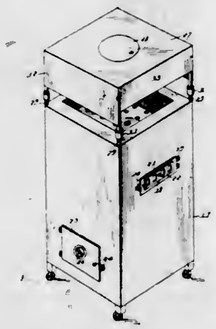


3. A chimney water cooling tower having its lower end closed solely by a plurality of water-catching trays, these trays extending entirely around the bottom and being arranged one above the other and having their inner edges overlapping the tray next below, each tray being provided with a discharge opening arranged below its upper edge, and a discharge channel common to all these discharge openings, for the purposes set forth.

1,383,040. ELECTRICAL CONNECTOR. LEWIS VAN ATTEN, Ossining, N. Y. Filed June 18, 1920. Serial No. 389,911. 3 Claims. (Cl. 287—78.)

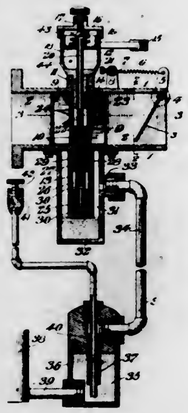
1. An electrical connector, comprising a socket member, an expansible stud member adapted to engage in the socket member, one of said members having external screw threads, and a nut having a rotary mounting on the other of said members and adapted to engage said screw threads whereby said members are coupled together.

1,383,041. MINING-DRILL DEVICE. LOUIS FRANCOIS VERDY, Pleasantville, Ind. Filed May 24, 1920. Serial No. 383,716. 1 Claim. (Cl. 255—47.)



In a power driven drilling machine having a frame, a casing attached to said frame, and a stationary motor in said casing, the combination of a longitudinally disposed square drill rod passing through said casing having a business head and a tail end, a flanged bearing having its flanged end secured inwardly at the vertical center line of the front portion of said casing, a sleeve rotatably mounted in said bearing and terminating at its inner end in a coupling member having an annular flange of larger diameter than the coupling member, a square shaped aperture in said sleeve to receive said drill rod, a counter coupling member provided at the inner face of said first coupling member, means for rotating said counter coupling member, a transversely disposed lever secured to, and having its fulcrum at, one side of said casing, a generally rectangular aperture provided at substantially the center of said lever and having set screws provided at its sides engaging the flange of said first coupling member, a helical tension spring secured at one end to the front of said casing and near the free end to said lever facilitating the said coupling members being normally engaged, a hook adapted to engage the free end of said lever in a position when said coupling members are disengaged, a bearing provided at the rear of said casing, a long sleeve rotatably mounted in said bearing having its open end protruding outwardly from the rear of said casing and its other end secured to said first coupling member, means at the free end of said sleeve adapted to receive auxiliary tools, when desired, a pusher provided at the feeding end of said drill rod, means for rotatably securing said drill rod in said pusher, and means for feeding said pusher.

1,383,042. MAGAZINE FUSE-PLUG. HARRY H. VINCENT and JOHN F. SKINNER, Detroit, Mich. Filed Dec. 6, 1919. Serial No. 343,027. 2 Claims. (Cl. 200—125.)

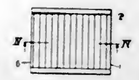


1. A magazine fuse plug, comprising an insulating core, a pair of terminals for the plug mounted upon said core, a plurality of fuses connected to one of said terminals, a circular series of terminal contacts for said fuses mounted upon an end face of said core, an insulating cap rotatively engaging said end fuse of the core and formed with a radially extended recess adjacent said face, and a switch arm disposed within said recess, electrically connected to the other terminal of the plug and rotatively actuable by the plug to selectively engage said terminal contacts, said arm having a struck-out spring tongue stressed by said cap to press the arm against said end face of the core.

1,383,043. COMBINATION FURNACE AND COOK-STOVE. BERTHA H. WEAVER, Texarkana, Tex. Filed Feb. 12, 1920. Serial No. 358,308. 1 Claim. (Cl. 126—4.)

A heating apparatus having a main member provided at its top with an open topped fire box, a supplemental member removably seated upon the main member, said supplemental member being provided with depending legs or supports and the main member being provided with upstanding studs upon which said legs or supports are seated, sleeve couplings detachably engaging said studs and legs or supports to secure the supplemental member in spanning relation with the open top of the fire box, and said supplemental member having a top plate provided with a removable lid, and depending end and side aprons terminating short of the plane of the top of the main member.

1,383,044. CARBURETER FOR INTERNAL-COMBUSTION ENGINES. ALFRED WEILAND, Philadelphia, Pa. Filed June 5, 1917. Serial No. 172,847. 5 Claims. (Cl. 261—44.)



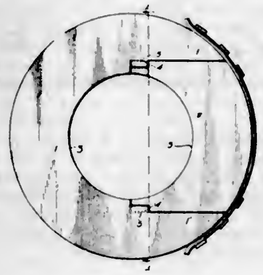
1. In a device of the character stated, a casing forming a carbureting chamber, having communication with the atmosphere and with the intake of a motor of the explosive type, a reservoir for liquid fuel, a movable fuel conducting means forming a communication between said reservoir and said carbureting chamber and means for submerging the inlet of said fuel conducting means in the body of fuel in said reservoir under conditions producing a decreased negative pressure in the motor intake.

1,383,045. METHOD OF MAKING CUTTERS FOR PENCIL-SHARPENERS. ALLEN PARKER WILSON, Waltham, Mass., assignor to Boston Pencil Pointer Company, Waltham, Mass., a Corporation of Massachusetts. Filed Apr. 21, 1919. Serial No. 291,521. 4 Claims. (Cl. 76—101.)

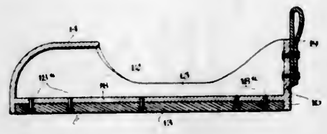
1. The method of producing sheet metal cutters for pencil sharpeners comprising distorting a sheet metal blank to produce one or more pencil sharpening ribs curving the blank into a tube having the rib or ribs arranged exteriorly thereon, and uniting the meeting edges of the blank.

1,383,046. METHOD OF MAKING CUTTERS FOR PENCIL-SHARPENERS. ALLEN PARKER WILSON, Waltham, Mass., assignor to Boston Pencil Pointer Company, Waltham, Mass., a Corporation of Massachusetts. Filed Apr. 21, 1919. Serial No. 291,522. 4 Claims. (Cl. 76—101.)

1. The method of producing sheet metal cutters for pencil sharpeners comprising distorting a sheet metal blank to produce one or more pencil sharpening ribs, curving the blank into a tube having the rib or ribs arranged straight and exteriorly thereon, and uniting the meeting edges of the blank.



1,383,047. METHOD OF MAKING CUTTERS FOR PENCIL-SHARPENERS. ALLEN P. WILSON, Waltham, Mass., assignor to Boston Pencil Pointer Company, Waltham, Mass., a Corporation of Massachusetts. Filed Apr. 21, 1919. Serial No. 291,523. 3 Claims. (Cl. 76—101.)



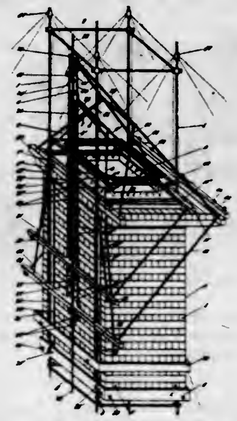
1. The method of producing rotatable sheet metal cutters for pencil sharpeners comprising striking up a sheet metal blank to produce one or more pencil sharpening blades, curving the blank into a tube having the blade or blades arranged exteriorly thereon, uniting the meeting edges of the blank, and providing the cutter with a driving element.

1,383,048. HUB-LINER. JOHN WILLIAM WOLFENDEN, Nashville, Tenn. Filed Nov. 13, 1920. Serial No. 423,923. 2 Claims. (Cl. 64—25.)

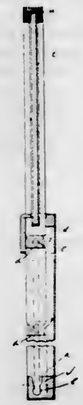
2. A device of the character stated comprising, a pair of interfitting ring sections having opposed semi-circular recesses therein, one of said sections including a pair of arms having their inner faces parallel, the other section fitting between said arms, bendable cleats on the outside edges of the arms, bendable cleats on the periphery of the last mentioned ring section, an arcuate length of wire having its intermediate portion located against the periphery of the last mentioned section, and its ends located against the outside edges of the arms, said wire being clamped in place by all of said cleats.

1,383,049. DIVER'S SANDAL. WILLIAM C. ZESS, Bethesda, Md. Filed Oct. 7, 1920. Serial No. 415,244. 4 Claims. (Cl. 61—70.)

1. A diver's sandal comprising a body or upper having a base and a depending rib or flange around the edge of the base, and a lead sole secured to the base within the rib or flange.



1,383,050. RAIL-JOINT. WILLIAM ZITELLA, Adamston, W. Va. Filed May 3, 1921. Serial No. 466,436. 3 Claims. (Cl. 238—235.)

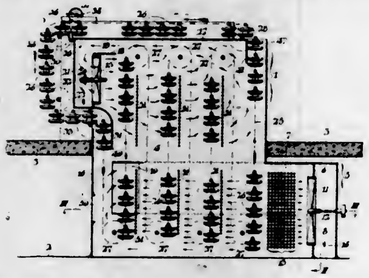


1. In a rail joint the combination with a rail having a longitudinally slotted web, the head of the rail being removed above said slotted web, of a block secured within the slot in the web, resiliently held dogs upon the block, a rail having a web insertible downwardly into said slot, said web being provided with a space for the reception of the block, there being means upon the walls of said space for engagement by the dogs.

1,383,051. APPARATUS FOR LIFTING AND FLOATING SUNKEN VESSELS OR THE LIKE. KANZABURO AKAKI, Higashiku, Osaka, and MASANOBU ITOI, Yodobashicho, Tokyo, Japan. Filed Oct. 1, 1917. Serial No. 194,198. 6 Claims. (Cl. 114—44.)

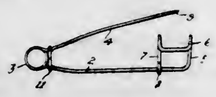
1. Apparatus for lifting sunken vessels and the like comprising piles made of buoyant material, a lifting device mounted on each pile, a deck structure interposed between each lifting device and its pile, connections between the lifting device and the vessel including a lifting rod, and connections between the deck structure and the lifting rod, the latter connections being inoperative while the lifting device is in actuation to raise the vessel and operative to sustain the vessel when the lifting device is not acting to raise the latter.

1,383,052. WINDOW-WELL CONSTRUCTION. JOHN T. ALLMAND, Detroit, Mich., assignor to Fisher Body Corporation, Detroit, Mich., a Corporation of New York. Filed Aug. 27, 1920. Serial No. 406,263. 12 Claims. (Cl. 20—52.1.)



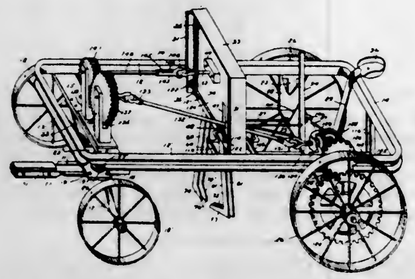
1. In a window construction, a window post, a guide supported by the upper portion of the window post, a pair of rollers supported by the lower portion of the window post, and a buffer block located between the rollers and at the edge of the window that runs in the guide and between the rollers on the lower portion of the post.

1,383,053. DRYING-MACHINE. THOMAS ALLSOP and WALTER W. SIBSON, Philadelphia, Pa., assignors to the Philadelphia Drying Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 30, 1919. Serial No. 293,877. Renewed Oct. 26, 1920. Serial No. 419,734. 12 Claims. (Cl. 34—12.)



3. A drying machine consisting of a drying compartment; a conveyer traveling a circuitous path within the drying compartment; means for circulating the air in a portion of the compartment over a course in one direction;

and a separate means for circulating the air in another portion of the compartment over a course in a direction differing from that of the first mentioned circulatory

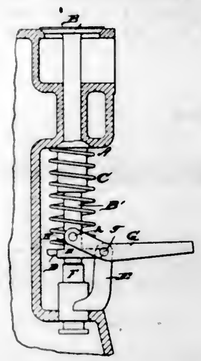


course, whereby the articles carried by the conveyer are subjected to currents of the drying medium from various angles of impingement.

1,383,054. SAFETY-PIN. JOHN H. ANDERSON, Havana, N. D. Filed May 31, 1918. Serial No. 237,594. 1 Claim. (Cl. 24—159.)

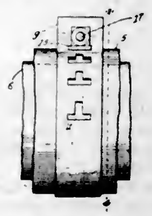
A safety pin comprising a rear bar having a loop formed therein at one end, and a forward bar forming a continuation of said loop and terminating in a pin point, the opposite end of said rear bar having a lateral extension and a loop formed thereon and a cross bar for supporting the pin point when inserted into said loop, and said rear and forward bars having shoulders formed therein and an open link mounted on said bars between said shoulders and said spring loop and said link allowing the free movement of said forward bar while said link is in its normal guiding position, said shoulders holding said link from sliding on the pin when it is closed and said link preventing the garment from entering the adjacent loop in the pin.

1,383,055. COTTON-CHOPPER. ERNST J. ANTONI, Whitewright, Tex. Filed Aug. 28, 1920. Serial No. 406,674. 9 Claims. (Cl. 97—45.)



6. The combination in plant choppers, with suitable suspensory devices, and upright adjusting bars having lateral extensions at their lower end pivotally connected with said suspensory devices, and with vertical bars pivoted to said lateral extensions, and plant choppers connected with said latter bars, of toggle levers connecting the adjusting bars with the bars supporting the plant choppers.

1,383,056. RAILWAY-TIE. HENRY H. ASHLOCK, San Diego, Calif. Filed Sept. 7, 1920. Serial No. 408,680. 3 Claims. (Cl. 238—344.)

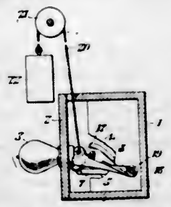


1. A railway tie, including a T member provided with an undercut notch therein adapted to fit the one side of the flange of a T rail and its other side tapering upwardly, and a plate with a similar notch pivotally mounted on said T member and adapted to engage the rail flange when turned to a certain position and to be released therefrom when turned in the opposite direction.

1,383,057. DEVICE FOR REMOVING VALVES FROM INTERNAL-COMBUSTION ENGINES. ERNEST EDWARD ASHMUN, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 8, 1917. Serial No. 147,278. 1 Claim. (Cl. 29—86.3.)

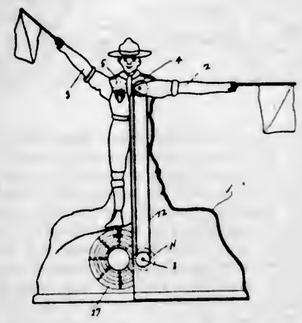
A valve spring compressor comprising a supporting member having separated arms, a rocking member having side pieces pivotally connected between their ends to said arms, said rocking member comprising a handle end and a lever end and the lever end being offset from the longitudinal axis of the handle end, said supporting member being adapted to fold within the handle end of the rocking member, and a valve spring support pivoted to the lever end of the rocking member, the depth of said support from its pivots to its bottom being less than the offset of the lever end of the rocking member.

1,383,058. HOSE-CLAMP. FRANK H. ATKIN, San Francisco, Calif. Filed Oct. 16, 1920. Serial No. 417,283. 2 Claims. (Cl. 24—19.)



1. A hose clamp comprising a clamping band having formed therein T shaped apertures, one of the end portions of said clamping band being bent at its extremity to form an angular recessed extension, the other of the end portions adapted to rest beneath the first mentioned end portion, a looped portion formed in the body of the band and provided with recesses, a bolt provided with a nut adapted to penetrate the looped portion and angular extension, and a clip inserted between said looped portion and extension of the body portion, both the said clip and bolt adapted to be received within the T shaped slot of the clamping band, the lip of the clip being adapted to prevent displacement of the nut.

1,383,059. PROCESS OF PRODUCING FORMALDEHYDE. GEORGE C. BAILEY, Woodcliff-on-Hudson, and AUGUSTUS E. CRAVER, Cliffside, N. J., assignors to The Barrett Company, a Corporation of New Jersey. Filed May 26, 1920. Serial No. 384,265. 12 Claims. (Cl. 23—24.)



1. The process of producing formaldehyde which comprises passing methyl alcohol in the vapor phase and an oxygen containing gas into contact with an oxid of vanadium as a catalyst at a temperature between 225° and 400° C.

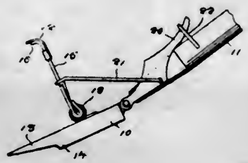
1,383,060. THERMAL CIRCUIT-CONTROLLER. WILLIAM W. BALDWIN, Deskins, Va. Filed Jan. 12, 1918. Serial No. 211,642. 1 Claim. (Cl. 200—142.)

A device of the class described comprising a pivoted U-shaped yoke having one end offset to define a striker arm, a pair of spring contacts disposed in the path of travel of said striker arm, a pivoted lever, a spring engaging said lever and normally urging the same toward said yoke, and a combustible member connected with said lever and holding the same under tension against the resistance of said spring, whereby upon combustion of said combustible member said spring pressed arm will be released to engage and move said yoke whereby the striker arm thereof will move said contacts into engagement.

1,383,061. TOY. THOMAS HENRY BAMFORTH, North Vancouver, British Columbia, Canada. Filed Mar. 11, 1920. Serial No. 365,056. 4 Claims. (Cl. 116—132.)

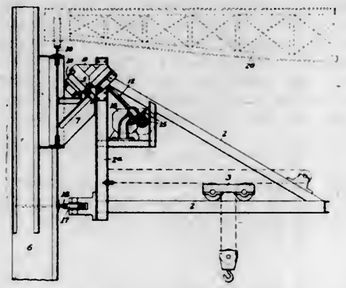
1. A toy comprising a figure in the form of a signaler having arms pivotally mounted, sprockets for each arm secured thereto centrally of the respective pivots, a manually rotatable shaft for each arm, a sprocket secured to each shaft, a flexible connection between each shaft sprocket and each arm sprocket, a stationary locking disk for each arm, provided with as many notches as there are signaling positions of the arm, said notches being spaced to correspond with the arm travel between the signaling positions, and a lock carried by the shaft adapted to coact with said notches to lock the shaft against inadvertent rotation on the completion of a signaling movement, said lock being adapted to unlock by the actuation of the shaft.

1,383,062. WAIST-LINE GARMENT-SUPPORT. CLARENCE BASCOME, Dayton, Ohio. Filed Feb. 7, 1919. Serial No. 275,619. 2 Claims. (Cl. 241—9.)



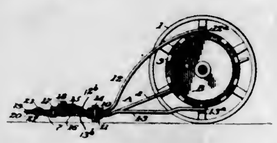
1. A garment support comprising a waist encircling member, bands embracing said member and formed with rectangular eyes therein, and clasps projecting through the eyes and formed with tongues lying between the bands and the outer face of the waist encircling member the tongues embracing the side edges of the bands.

1,383,063. PIN-TICKET. JOSEPH R. BAYER, New York, N. Y. Filed June 25, 1920. Serial No. 391,572. 1 Claim. (Cl. 40—25.)



A pin ticket, comprising a card, a fastener secured to the card and comprising a single piece of wire having both ends of the wire projected through the card and bent in the same direction and located substantially in alinement and against the rear face of the card, one extreme end of the wire bent at a substantial right angle to the card and forming a spur having a sharp outer end, and the other end of said wire bent forming a tongue located normally parallel to the card and extending across the outer end of the spur.

1,383,064. TOOL. JAMES R. BENTON, Oswego, N. Y. Filed May 25, 1920. Serial No. 384,148. 6 Claims. (Cl. 254—132.)



1. A lawn tool comprising a spade, and a spring actuated cutting element pivotally mounted upon one side of the spade and adapted to coöperate with the latter as and for the purpose specified.

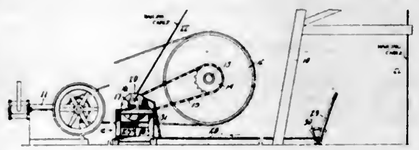
1,383,065. WALL-CRANE. FLORENCE C. BIGGERT, Jr., Pittsburgh, Pa. Filed Apr. 7, 1921. Serial No. 459,260. 9 Claims. (Cl. 104—119.)

1. A wall crane having a movable carriage mounted thereon, and having its load supporting and driving means carried at the upper inner portion of the crane structure, and having driving means including driving wheels arranged to cause the load, and consequently the traction, on said wheels to increase as the crane carriage is moved outwardly from the support, substantially as described.

1,383,066. MOWER. JOHN HENRY BLAIR, San Francisco, Calif. Filed Apr. 18, 1918. Serial No. 229,348. 1 Claim. (Cl. 56—259.)

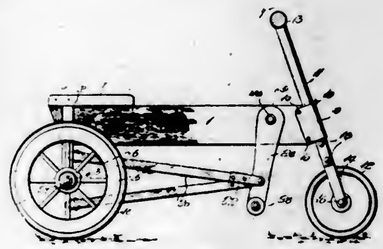
In a mower, the combination with an axle and a pair of supporting wheels, of a drum secured to said axle between the wheels and having a zig-zag guide groove in its periphery, a frame comprising side bars journaled upon the axle, an end bar connecting the forward ends of said side bars and upper and lower cross-bars connecting said side bars adjacent to and at the rear of said end bar, a pair of levers mounted between said cross-bars and pivoted centrally thereof, said levers having relatively long arms engaging said guide groove at the top and bottom of the drum at diametrically opposite points and shorter arms extending forwardly from the pivotal point of the levers, a pair of knife bars superposed one upon the other movable transversely of the frame over said end bar and supported thereby, said knife bars being pivotally connected to the shorter arms of the levers, and serrated blades secured to said knife bars and in sliding contact with one another.

1,383,067. PNEUMATIC HEEL. EMIL BORMAN, Chicago, Ill. Filed Sept. 15, 1920. Serial No. 410,525. 1 Claim. (Cl. 36—35.)



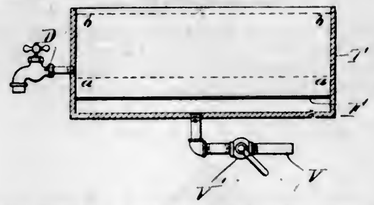
As an article of manufacture, a cushion heel for shoes consisting of a rubber body having a hermetically-sealed cavity for air formed by integral and continuous top and bottom walls and up-standing marginal walls of said body, and provided with a curved protuberance, or boss, on its under side of approximately the same shape and area as said cavity, the bottom wall of said cavity being sufficiently yielding to permit loads and shocks to be resisted mainly by the air confined within said cavity.

1,383,068. WATERPROOFING COMPOSITION. THEODORE BOSSHARD, Brooklyn, N. Y. Filed Nov. 13, 1920. Serial No. 423,874. 1 Claim. (Cl. 134—16.)



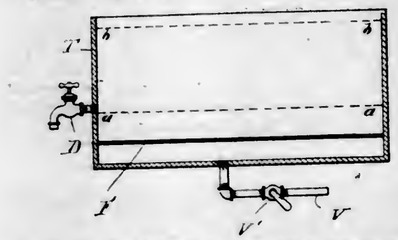
A water proofing composition, including gelatin, water and glycerin in the proportions of one-half pound gelatin, eighteen ounces of water and nine ounces of glycerin.

1,383,069. BAILING APPARATUS. ALLEN B. BOYER and ORA DAVISSON, Trees, La. Filed Apr. 24, 1920. Serial No. 376,363. 1 Claim. (Cl. 254—187.)



The combination with a well rig including a derrick and a prime mover, of a bailing apparatus comprising a shaft constantly driven from the prime mover, a reel loose on the shaft, a clutch for connecting the reel to the shaft, a lever for operating the clutch, a brake to hold the wheel against rotation, a lever for operating the brake, a manually operated lever at the derrick, a rod extending therefrom attached to the brake lever, a bell crank lever having one arm attached to the rod and the other arm attached to the clutch lever, substantially as set forth.

1,383,070. CHILD'S PEDALING-CAR. ROMAN B. BUKOLT, Stevens Point, Wis. Filed May 15, 1919. Serial No. 297,427. 2 Claims. (Cl. 208—30.)

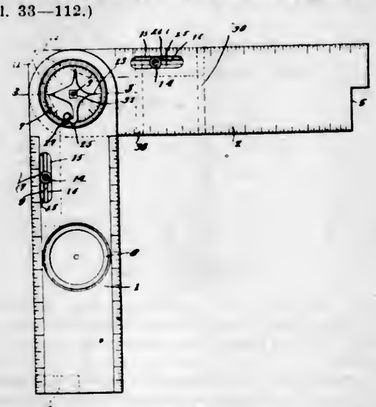


1. A child's car comprising rear wheels and a cranked axle therefor, inverted L-shaped bolster brackets having bearings on their lower ends mounted on said axle between the axle cranks and the wheels, the upper ends of said brackets extending inwardly toward each other above the cranks and terminating in spaced parallel relation, a flat longitudinal beam standing on edge and having its rear end received between said spaced bracket ends, dowels passing through said beam and into said bracket ends, a seat-board secured on said brackets and the rear end of said beam and serving to tie said beam and brackets together, and steering and supporting means for the front end of said beam.

1,383,071. METHOD OF PREPARING SULFUR-BLACK AND THE PRODUCT THEREOF. ALBERT C. BURRAGE, Jr., Hamilton, and GUIDO MEISEL, Burrage, Mass., assignors to Atlantic Dyestuff Company, Burrage, Mass., a Corporation of Massachusetts. Filed Aug. 17, 1920. Serial No. 404,191. 9 Claims. (Cl. 8—6.)

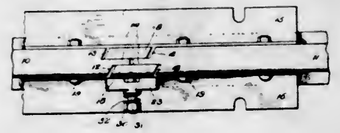
1. The method of preparing sulfur-black, which comprises filtration of water of suspension from the solid color, followed by partial evaporation of the water remaining adherent to the color after filtration, until the color assumes a moist powdery consistency.

1,383,072. SULFUR-BLACK. ALBERT C. BURRAGE, Jr., Hamilton, and GUIDO MEISEL, Burrage, Mass., assignors to Atlantic Dyestuff Company, Burrage, Mass., a Corporation of Massachusetts. Original application filed Aug. 17, 1920, Serial No. 404,191. Divided and this application filed Dec. 4, 1920. Serial No. 428,275. 3 Claims. (Cl. 8—6.)



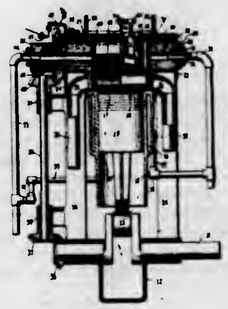
1. Sulfur-black associated with water and a solid soluble comminuted modifier uniformly distributed through it.

2. Sulfur-black containing water distributed through the solid color in quantity consistent with uniform mixture of a solid soluble comminuted modifier with the color.



3. Sulfur-black associated with water and solid comminuted salt uniformly distributed through it.

1,383,073. SQUARE. ALESSANDRO CAPITANO, Pittston, Pa. Filed June 5, 1920. Serial No. 386,880. 6 Claims. (Cl. 33—112.)

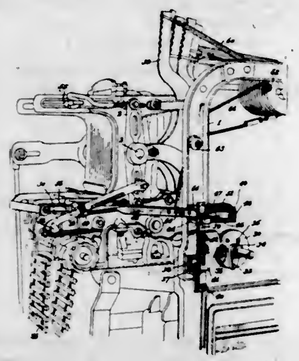


1. A combination square having a shank and a blade, a pair of dials one near the middle of the shank, the other near one end of the same, an indicator, means for releasably securing the same rigidly to the blade, and arranged to coöperate with one of the dials, means for locking the indicator to the shank and thereby securing the shank and blade in their adjusted positions.

1,383,074. RAIL JOINT AND BOND. CHARLES L. CARLSSON, Ivoryton, Conn. Filed Aug. 13, 1919. Serial No. 317,261. 1 Claim. (Cl. 238—222.)

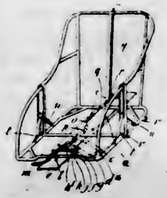
In a rail joint, rails each having a tread portion provided at one side with a notch and at the opposite side with a longer notch, the notches having correspondingly beveled end walls and the long notch of each rail facing the short notch of the other rail to define recesses at opposite sides of the rails, and fish plates connecting the rails and having base flanges engaging therebeneath, the fish plates having vertical flanges confronting the rail webs in spaced relation thereto and being formed medially of the plates with upstanding tread blocks fitting in said recesses providing a continuation of the rail treads and having beveled ends confronting the beveled end walls of the recesses in spaced parallel relation.

1,383,075. INTERNAL-COMBUSTION ENGINE. ROBERT G. CLARK, Brooklyn, N. Y. Filed July 6, 1916. Serial No. 107,756. 12 Claims. (Cl. 123—42.)



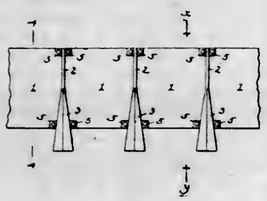
1. In an internal combustion engine, the combination of a crank shaft, a reciprocable piston connected thereto, a piston cylinder, and means to support said cylinder to permit said cylinder to oscillate to assume a position in axial alinement with the piston in all positions of the latter during the reciprocation thereof, to move the cylinder in a direction longitudinally of the piston during the movement of the piston to vary the space between the heads of the piston and cylinder for the purpose specified.

1,383,076. DOBBY-LOOM. F GORDON COBB, Greenville, S. C. Filed Aug. 21, 1919. Serial No. 318,927. 8 Claims. (Cl. 139—28.)



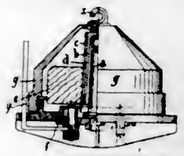
5. In a loom, a rocker arm, a pattern-chain mechanism, an actuator-arm operated by said rocker-arm for actuating said pattern-chain mechanism, a lifting means for displac-

ing the actuator-arm from chain-operating position, a supporting means for said actuator-arm to retain it from



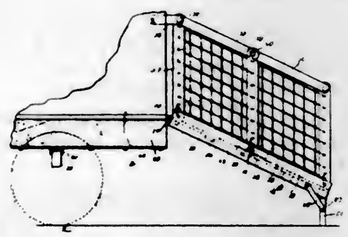
chain-operating position, a releasing means for said supporting means, and a timing mechanism including a worm-gear drive for operating said releasing means.

1,383,077. SLIDING SEAT FOR MOTOR-CARS AND THE LIKE. ALBERT E. COLE, London, England. Filed Nov. 13, 1919. Serial No. 337,818. 2 Claims. (Cl. 155—14.)



1. An adjustable seat for vehicles, comprising a seat body having a front portion pivotally connected thereto, a plate attached to the seat body, a runway fixed to the vehicle body on which said plate is slidably mounted, a locking device including a sectional lever mounted on said plate, one of the sections of said lever extending forward over the front portion of the seat, and means for pivotally connecting said sections of the lever, whereby the front portion of the seat and said extended section may be moved to folded position when the seat is unoccupied.

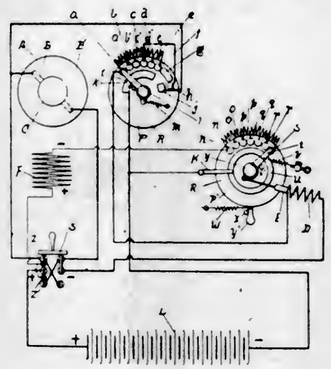
1,383,078. TRACTION-WHEEL. JAMES W. COTTRELL, Hammonton, N. J. Filed Mar. 29, 1921. Serial No. 456,712. 8 Claims. (Cl. 301—43.)



4. A traction wheel, the tread of which is equipped with transverse cleats each comprising a section which is relatively narrow and substantially parallel sided and a section which is relatively wider and wedge-shaped in cross section, said latter section being both progressively blunter and of progressively less projection from its point of junction with said former section to its end.

1,383,079. CONTACT FOR THIEF-ALARMS OR OTHER ELECTRICALLY-OPERATED DEVICES. FREDERICK CRESSALL, Newport, Isle-of-Wight. Filed Oct. 15, 1920. Serial No. 417,263. 8 Claims. (Cl. 200—166.)

1. An apparatus comprising a closed hollow body having a hook at its upper end; an upright standard fixed in the lower part of said body; a conical tubular body movably disposed over said standard and provided with a series of longitudinal grooves in its outer face; an annular weight secured on said tubular body near the lower end thereof; contact wires mounted in said grooves and connected to said hook and projecting at the lower end of said tubular body; an insulated annular contact body mounted in said hollow body, surrounding and normally out of contact with said contact wires; and a conductor electrically connected to said annular contact body.

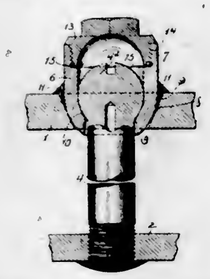


1,383,080. HOG-CHUTE. FRED J. DENO and JOSEPH MARTIN, Fowler, Ind. Filed Apr. 8, 1920. Serial No. 372,160. 10 Claims. (Cl. 214—65.)

1. In a hog chute, the combination of side beams, hooks at the front ends of said side beams for engaging with supporting members of a wagon body, a fixed floor section between the front ends of said beams and a floor section between the inner ends of said beams hinged to the fixed floor section and adapted to be swung against the top thereof.

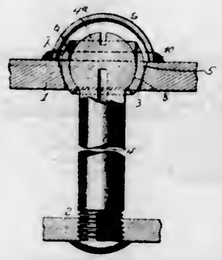
1,383,081. METHOD OF CONTROL FOR ELECTRIC MOTORS. HARRY EUGENE DEY, Jersey City, N. J. Filed Aug. 13, 1919. Serial No. 317,141. 3 Claims. (Cl. 172—179.)

1. A control for electric motors which comprises a source of electrical supply; an electric motor of the shunt type having a comparatively low resistance field winding; a rheostat for the field circuit having movable contact arm and baseplate elements; a spring attached to said contact arm and anchored to a fixed object, to insert resistance; an armature circuit; a solenoid mounted in a fixed po-



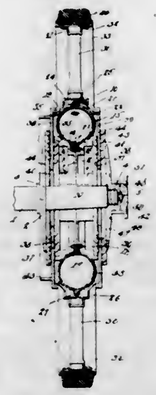
sition, connected in series with the armature circuit, and pulling in opposition to said spring, and means of manual control of the two elements.

1,383,082. MEANS FOR DISPLAYING ILLUMINATED WORDS OR CHARACTERS. ETHAN I. DODDS, Pittsburgh, Pa., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed Oct. 10, 1917. Serial No. 195,818. 4 Claims. (Cl. 40—134.)



1. Means for displaying illuminated words or characters comprising a member provided with a continuous layer of material which will be capable of being rendered luminous by artificial light, and means whereby predetermined portions only of said continuous layer may be activated to form illuminated words or characters.

1,383,083. STAYBOLT STRUCTURE FOR BOILERS. ETHAN I. DODDS and BENJAMIN E. D. STAFFORD, Pittsburgh, Pa., assignors to Flannery Bolt Company, Pittsburgh, Pa. Filed Sept. 10, 1919. Serial No. 322,876. 2 Claims. (Cl. 85—1.5.)

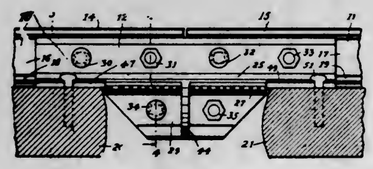


1. In a staybolt structure, the combination with a boiler sheet having a tapering opening with a transversely straight wall, of a bearing sleeve having an external portion rounded in the direction of the length thereof and having on said transversely straight wall of said tapering opening, means for securing said sleeve or bushing to the boiler sheet, and a staybolt having a head mounted in said bearing sleeve.

1,383,084. STAYBOLT STRUCTURE. ETHAN I. DODDS and FREDERICK K. LANDGRAF, Pittsburgh, Pa., assignors to Flannery Bolt Company, Pittsburgh, Pa. Filed Sept. 10, 1919. Serial No. 322,877. 2 Claims. (Cl. 85—1.5.)

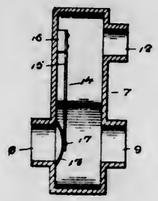
2. In a staybolt structure, the combination with a boiler sheet provided with a tapering opening having a wall which is straight from one face to the other of the sheet, of a sleeve or bushing passing through said tapering opening and provided with an exterior spheroidal face having a free bearing against the straight wall of said tapering opening, a staybolt having a head seated in said sleeve or bushing, a cap inclosing the outer end of the sleeve or bushing and the bolt head, and a weld integrally uniting said sleeve or bushing and the boiler sheet.

1,383,085. AUTOMOBILE-WHEEL. SALVADOR DOMINGUEZ, Mexico, Mexico. Filed June 14, 1917, Serial No. 174,735. Renewed May 2, 1921. Serial No. 466,215. 1 Claim. (Cl. 152—41.)



As an article of manufacture, for use in the making of a cushion wheel, an annular plate provided with an outwardly and laterally projecting hub-forming collar, and having a rib provided with a flange, the rib and the flange projecting outwardly and laterally parallel to the collar, the flange having an external recess one wall of which is disposed in a common plane with the end face of the collar, there being an annular transversely concaved seat in the periphery of the flange, and there being an outwardly and laterally extended groove in the inner surface of the rib, the flange being cut away, between the seat and the groove to form a surface set outwardly and laterally from the inner surface of the plate.

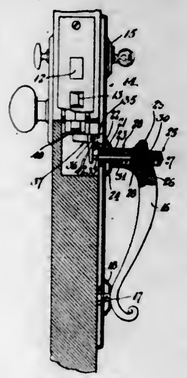
1,383,086. RAIL-JOINT. THOMAS DOUGHERTY, Minneapolis, Minn. Filed Oct. 2, 1920. Serial No. 414,365. 3 Claims. (Cl. 238—191.)



1. A rail joint comprising a pair of longitudinal members each having a portion directly engaging and clamp-

ing the webs of the rails immediately below the rail heads, said portion operating free of the rail heads, a V shaped portion adapted to engage the sides of the rail base oper-

ating free of the rail web, means for drawing said first named portions together and means for drawing said V shaped portions together.

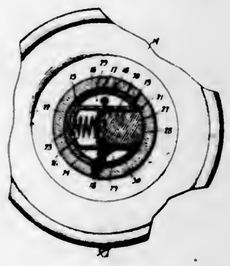


1,383,087. ATTACHMENT FOR ENGINES. FELIX EWING DUNN, Nanton, Alberta, Canada, assignor of one-half to James Alexander Nesbitt, Calgary, Alberta, Canada, and one-half to Stephen Burton Mitchell, Nanton, Alberta, Canada. Filed Jan. 31, 1920. Serial No. 355,381. 1 Claim. (Cl. 251—123.)

In an attachment for engines, as herein described, a substantially rectangular casing having registering openings through the side walls adjacent to the bottom thereof, and outstanding flanges, surrounding the openings, a saucer shaped valve in the casing surrounding and normally closing one of the openings, a flat spring secured to the valve and to the inner wall of the casing above the opening closed by the valve, and said casing having its opposite wall provided with an additional opening disposed directly opposite the secured end of the valve, and an outstanding flange surrounding said last mentioned opening, all as and for the purpose set forth.

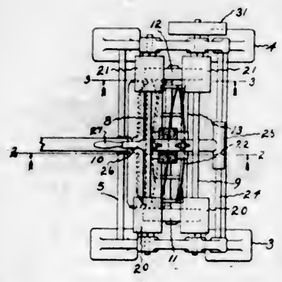
1,383,088. HANDLE AND LATCH OPERATING DEVICE. WILLIAM K. EARLE, Ocean Park, Calif., assignor to Earle Hardware Manufacturing Co., a Corporation of California. Filed Apr. 7, 1920. Serial No. 372,374. 2 Claims. (Cl. 292—166.)

1. In combination with the latch operating arm of a door latch, an escutcheon plate mounted on the door, a hand grip on said plate, a stud formed on the hand grip extending through said plate, means for securing said stud to said plate, a recessed push button slidably mounted in said stud, a rod formed on said button slidably extending through the inner end of said stud, a coiled spring on said rod extending into the recess in said button arranged to elastically force said push button outwardly, a pin in said rod for limiting the outward movement of said button, a lug on said escutcheon plate, a lever having a plurality of perforations thereon and a pin in said lug extending through one of the perforations in said lever, said lever having a downwardly extending arm arranged



to be engaged by the inner end of the rod on said push button and an inwardly extending arm arranged to extend under the latch arm of the lock.

1,383,089. RAIL-FASTENER. GEORGE C. EICHENSEHR and JOHN E. NIESNER, Johnstown, Pa. Filed Apr. 27, 1921. Serial No. 464,861. 3 Claims. (Cl. 238—351.)



1. A rail fastener for ties including a tie having a T shaped slot therein, a fastener for engagement in said slot with a portion thereof arranged above the tie and a portion below the tie, said fastener being engageable in the head of the T slot to prevent lateral displacement of the fastener.

1,383,090. SELF-LUBRICATING AXLE. CHARLES M. FEIST, Sioux City, Iowa. Filed July 29, 1920. Serial No. 399,840. 4 Claims. (Cl. 64—27.)

1. A wheel bearing of the class specified, consisting of a cylindrical tubular body having an opening in the side wall thereof, a casing extending diametrically across and partially occupying the interior space of the body, the inner end of the casing being closed and the outer end open and extending through and coinciding with the opening in the side wall of the body, and an automatically operating lubricating means mounted in the casing.

1,383,091. GRINDER FOR LAWN-MOWERS. GEORGE W. FERNSIDE, Hartford, Conn. Filed Mar. 21, 1919, Serial No. 284,107. Renewed Nov. 23, 1920. Serial No. 426,104. 10 Claims. (Cl. 51—57.)

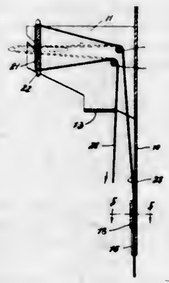
1. A machine for grinding the blades of a lawn-mower, comprising means for supporting the lawn-mower, means for causing the rotation of the blades of the lawn-mower, and movable means provided with a member rigid therewith for grinding the blades during the rotation thereof.

1,383,092. COMPOSITION FOR DYEING ANIMAL FIBER. JOHN H. FIEBIGER, West New York, N. J. Filed July 7, 1920. Serial No. 394,569. 7 Claims. (Cl. 8—6.)

1. A dyeing composition comprising a quantity of an anilin acid coloring material mixed with a quantity (not greater than five times the quantity of the coloring material) of an organic acid; and a quantity of a diluent.

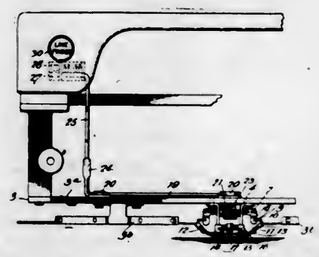
1,383,093. SIGNAL-OPERATOR FOR SPREADING RAILS. CLIFFORD L. FINCH, Minneapolis, Minn. Filed Feb. 3, 1921. Serial No. 442,139. 8 Claims. (Cl. 246—121.)

1. In a railway signal apparatus, the combination with an electrically operated danger signal, of a rail connecting device including a pair of normally spaced contacts electrically connected to opposite rails and means for permitting the engagement of the contacts for electrically connecting the rails to set the signal to danger when the rails become moved laterally a predetermined distance from their normal position.



1,383,094. SHOCK-ABSORBER. LEO FURGISON FITZGERALD, Oilfields, Calif. Filed June 1, 1920. Serial No. 385,861. 2 Claims. (Cl. 267—8.)

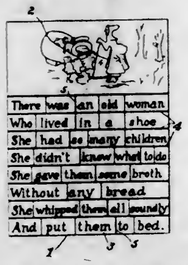
1. A shock absorber comprising a casing inclusive of upper and lower detachably connected hollow sections, a stem arranged within said casing and having an enlarged head, the bore of said lower section being reduced thereby forming an annular shoulder intermediate the ends of the lower section, the head of said stem being reduced thereby forming an annular shoulder contacting with one side of said first named annular shoulder, a washer surrounding said stem and contacting with the other side of the shoulder of said lower section, a piston mounted on one end of said stem, a coiled spring surrounding said stem



and confined between said piston and said washer, and a valve for said casing, said casing and said enlarged head being provided with attaching means.

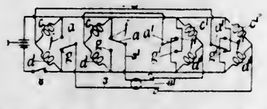
1,383,095. TOY MOVING-PICTURE MACHINE. CHARLES E. FLYNN, De Beque, Colo. Filed Apr. 10, 1920. Serial No. 372,871. 9 Claims. (Cl. 88—17.)

1. A toy cut-out comprising a blank having a base and connected foldable side members, provided with registering bearings, a reel having a flat body and terminal trunnions to engage said bearings and a flexible strip engageable over the reel and having mobile objects depicted thereon in progressively different positions.



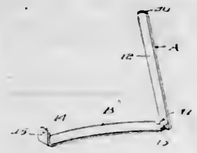
1,383,096. TYPEWRITING-MACHINE. HARRY ARTHUR FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, Harrisburg, Pa., a Corporation of Delaware. Original application filed Dec. 14, 1914, Serial No. 877,216. Divided and this application filed Aug. 17, 1918. Serial No. 250,316. 9 Claims. (Cl. 197—190.)

1. In a typewriter, the combination with a stationary platen, of a line finder normally withdrawn from the line,



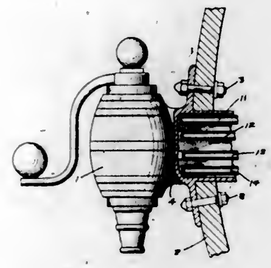
means for moving the line finder toward the line of writing and means effective during such movement to urge the line finder toward the platen.

1,383,097. EDUCATIONAL DEVICE. ADA R. GIBSON, Riverdale, Md. Filed Feb. 7, 1921. Serial No. 443,186. 2 Claims. (Cl. 35—9.)



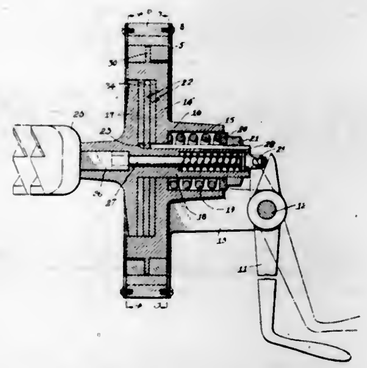
1. An educational device comprising a chart having thereon a picture and a plurality of lines of differing intensities, said lines adapted to guide the pupil in making a simple picture puzzle by severing the chart along the heavy lines and then a difficult one by severing said chart along the lighter lines.

1,383,098. CONSECUTIVE OPERATION OF TWO OR MORE MECHANISMS. JAMES FRANCIS GILL and JOHN NICHOLAS CHAVIARA, Liverpool, England. Filed Feb. 26, 1919. Serial No. 279,371. 4 Claims. (Cl. 172—293.)



1. In electrical means for the consecutive operation of two or more mechanisms, the combination comprising transmitting and receiving instruments, an electro-magnet system and an oscillator movable under the influence of said system in each instrument, a source of electric current, means connecting the said source and the magnet systems of the instruments, and means whereby the oscillator of each instrument in turn can short circuit a portion of the oscillator operating system of the other instrument for producing consecutive movements of the oscillators, substantially as described.

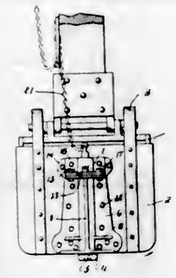
1,383,099. HAIR-CURLER. ROBBIE GORDONE, New York, N. Y. Filed Nov. 24, 1920. Serial No. 426,268. 5 Claims. (Cl. 132—41.)



4. In a hair curler the combination with a rigid concavo-convex arm of a relatively narrow flat flexible arm, said narrow arm being of such width as to cause the hair which is wrapped about the concavo-convex arm to follow the concave face of the rigid arm the hair being retained against the convex face of the rigid arm because of the tension imparted thereto by the clamping action between the flexible arm and the concave face of the rigid arm and means for connecting the free ends of the arms together when they are sprung toward each other.

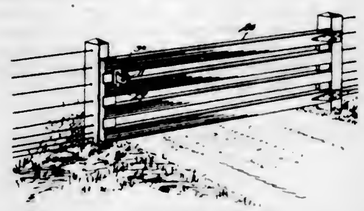
1,383,100. DISPENSING-FAUCET. ARCH B. GREEN, San Francisco, Calif., assignor of one-half to U. G. Walker, San Francisco, Calif. Filed Mar. 7, 1921. Serial No. 450,260. 4 Claims. (Cl. 225—25.)

1. A dispensing faucet comprising a housing having passages (11), (12), (13) and (14) therein and a valve adapted to be rotated in said housing; said valve having four passages, each adapted to establish a connection between the passages (11) and (12), and five outlets adapted to selectively draw on (12) alone, on (13) alone, while (11) and (12) are connected, and on (13) and (14) together, while (11) and (12) are connected.



1,383,101. SAFETY-CRANK. CHESTER GREEN, Cornwall Landing, N. Y. Filed Aug. 25, 1920. Serial No. 406,003. 3 Claims. (Cl. 74—33.)

1. A safety crank including a clutch comprising a hollowed plate, a male plate, a plurality of plates interposed between said first named plates, certain of said latter plates being secured to said hollowed plate, the further plates of said clutch being secured to said male plate, a sleeve forming a part of said hollowed plate, an outwardly extending flange adjacent the base of said sleeve, an extending portion forming a part of said male plate and projecting through said sleeve and beyond the same, a spring interposed between said flange and projecting portion of the male plate, an engaging member secured to said male plates, and means for rotating said hollowed plates.



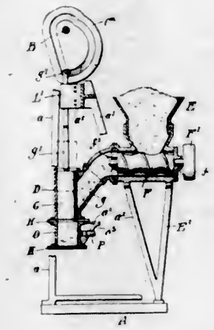
1,383,102. EXCAVATOR-DIPPER DOOR. JOHN J. GREULING, Hibbing, Minn. Filed Feb. 24, 1920. Serial No. 360,637. 3 Claims. (Cl. 37—54.)

1. A door for excavator dippers having a latch or bolt and also having a housing for the said latch or bolt, fixed with respect to the door and disposed at the outer side thereof; the said housing being provided adjacent to its

ends and at inner and outer sides, respectively, of the latch or bolt with pockets, and anti-friction rolls being arranged in series in each of said pockets.

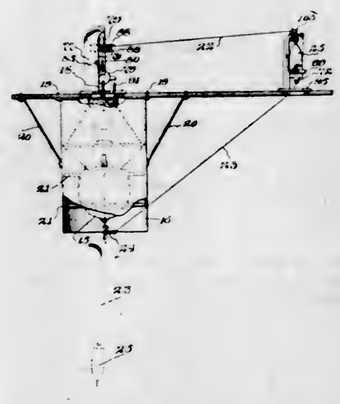
1,383,103. GATE-LATCH. ROY T. GRIMES, Forbes, Mo. Filed July 23, 1920. Serial No. 398,427. 7 Claims. (Cl. 292—198.)

1. In a gate latch, a member adapted to be mounted on the gate or gate post and project forwardly therefrom, a locking element pivoted to the free end of said member and a weight secured to one end of said element for normally maintaining said element in vertical position, said weight being adapted to engage the lower portion of said member for limiting the locking movement of the pivoted element.



1,383,104. FINGER-RING. HARRISON R. GROSSMAN, Philadelphia, Pa. Filed Sept. 29, 1917. Serial No. 193,918. 2 Claims. (Cl. 63—15.)

1. A finger-ring provided with a recess, a screw cover for the top of said recess, an identification-disk, and co-acting structural means carried by said cover and disk for securing said disk to said cover.

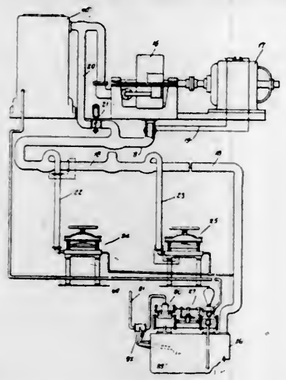


1,383,105. CAN-FILLING MACHINE. WILLIS T. GUILD, Jackson, Miss. Filed Nov. 29, 1920. Serial No. 427,186. 7 Claims. (Cl. 226—101.)

1. A can filling machine comprising a mold filling chamber open at the side, a vertically reciprocating plunger operating in said chamber, a mold mounted to oscillate in an arc below said mold filling chamber, a can carrier, a vertically reciprocating plunger operating in said mold to force material therefrom into a can, means for operating the two plungers, means for swinging the mold from a position under the mold filling chamber to a

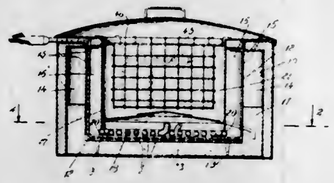
position above a can in the carrier and below the can filling plunger, and means for giving a step-by-step movement to the can carrier.

1,383,106. AERIAL BOMB. JOHN B. HADAWAY, Swampscott, and CHARLES E. CAMPBELL, Lynn, Mass. Filed Dec. 14, 1918. Serial No. 266,763. 15 Claims. (Cl. 102—2.)



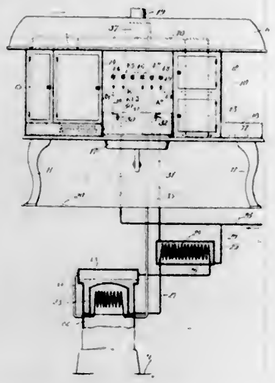
1. The combination with a bomb, of means operated by contact with the target toward which the bomb is moving for exploding the bomb when it reaches a predetermined distance from the target irrespective of the time of flight of the bomb, and a controlling member adjustable in one direction to increase and in another direction to decrease the distance.

1,383,107. GENERATION AND DISTRIBUTION OF HEAT. WILLIAM S. HADAWAY, Jr., New Rochelle, N. Y. Filed Dec. 16, 1915. Serial No. 67,147. 19 Claims. (Cl. 219—20.)



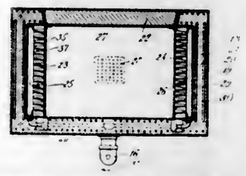
13. A heating system comprising a steam generator, an electrical generator, a heat translating device and a conductor connecting the translating device with said generators, said conductor comprising a pipe, a thermal and

electrical insulator surrounding the pipe and an electrical conductor embedded in the insulator, and means for op-



eratively utilizing the generated electricity to supplement and control the heat of the steam.

1,383,108. ELECTRIC STEAM-COOKER. WILLIAM S. HADAWAY, Jr., New Rochelle, N. Y. Filed July 26, 1917. Serial No. 182,814. 17 Claims. (Cl. 219—44.)

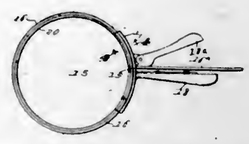


1. A high temperature steam generator comprising a heater, a water space on one side of the heater, means for maintaining water in the space, a steam chamber on the opposite side of the heater, and means for establishing a steam communication between the water space and the steam space.

1,383,109. RANGE. WILLIAM S. HADAWAY, Jr., New Rochelle, N. Y. Filed Aug. 1, 1917. Serial No. 183,861. 17 Claims. (Cl. 219—19.)

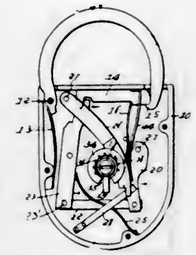
7. The combination with a heated chamber and an electric circuit connector therein, of a baking dish having a connector to coöperate with the connector in the chamber adapted to be inserted therein and having walls of heat insulating material of relatively large heat capacity, and electric heaters for heating the interior of the baking dish.

1,383,110. HEATING APPARATUS. WILLIAM S. HADAWAY, Jr., New Rochelle, N. Y. Original application filed Nov. 15, 1919, Serial No. 338,328. Divided and this application filed Aug. 7, 1920. Serial No. 401,898. 9 Claims. (Cl. 126—20.)



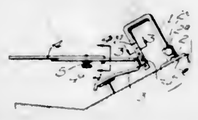
1. A heating system comprising a steam generator, a combination superheater, a working member and electro-responsive means for boosting the temperature of the steam at the working member.

1,383,111. GAS-GUN. GEORGE U. HALL and JAMES B. TRUITT, Winnemucca, Nev., assignors of one-fourth to Andrew P. Weidman and one-fourth to Louise Hall, Winnemucca, Nev. Filed Mar. 18, 1918, Serial No. 223,131. Renewed Sept. 16, 1920. Serial No. 410,744. 15 Claims. (Cl. 89—7.)



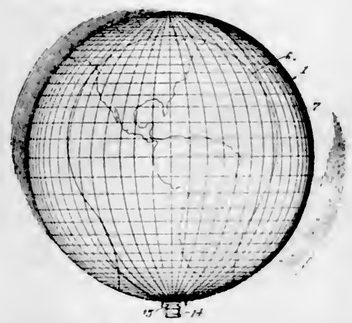
2. In a gas gun, the combination of a barrel, a fixed spark plug spaced in rear of said barrel and alined therewith, a tubular breech block slidably surrounding said spark plug at its rear end and communicating at its front end with said barrel, a compressor for forcing compressed gas into said breech block, a gas supply for said compressor, communicating means between said compressor and the interior of said breech block, means for shifting said block rearwardly from the barrel and then again forwardly and for operating said compressor to compress gas in the breech lock when the latter has reached its forward position, means for placing a bullet at the rear end of the barrel each time said breech block is retracted, and means for completing the circuit of said spark plug after compression of the gas in said breech block.

1,383,112. JAR-HOLDER. MAYNARD N. HANSON, Little Rock, Ark. Filed Dec. 9, 1919. Serial No. 343,453. 2 Claims. (Cl. 81—3.2.)



1. A jar body holding device having a frictionally faced bearing plate interiorly concaved for contact with the surface of a jar body and provided with interior alined grooves forming seats, a handle rigidly connected with said plate, and a flexible frictionally surfaced band engaging said seats in the bearing plate, one of the terminals of the band being secured to the plate and the other being extended through a guide opening to lie adjacent to and in grasping relation with said handle.

1,383,113. LOCK. ALFORD HARDIN, Murray, Ohio. Filed Nov. 25, 1919. Serial No. 340,592. 5 Claims. (Cl. 70—112.)



1. A lock having a bolt and a trip arm operatively connected therewith for communicating unlocking movement thereto, a ward mounted for pivotal movement to engage said trip arm, a retaining arm having a stop lug normally arranged in the path of said ward for preventing engagement thereof with the trip arm, and a movable combination disk provided with means for normally maintaining said retaining arm in position to interfere with the unlockng movement of said ward.

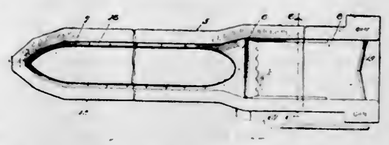
1,383,114. ACCELERATOR EXTENSION-PEDAL FOR AUTOMOBILES. FRED HARRINGTON, San Diego, Calif. Filed Feb. 24, 1920. Serial No. 360,734. 7 Claims. (Cl. 74—81.)

1. An accelerator extension pedal, including a hinged support and an accelerator engaging member pivotally mounted on the free side of said support and extending backwardly.

1,383,115. INFLATABLE GLOBE. ELLEN HENDRY, Fresno, Calif. Filed July 30, 1920. Serial No. 400,198. 6 Claims. (Cl. 35—5.)

1. A spherical envelop for a geographical globe carrying on its surface geographical features, th esaid envelop being divided into two equal parts by a doubly symmetrical spherical curve.

1,383,116. CLOTH-SAVING DEVICE. REUBEN H. HOLDER, Winston-Salem, N. C. Filed Oct. 7, 1919. Serial No. 329,130. 5 Claims. (Cl. 33—11.)

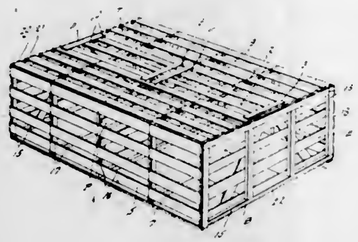


1. A pattern board of the class described having one corner provided with a recess having a curved wall and the adjacent corner having a recess therein having its bottom slightly inclined, said board also having a longitudinally extending slot beginning at its upper edge and extending to a point below the recess, said slot being located midway the side edges of the board.

1,383,117. METHOD OF CASTING THE HULLS OF SHIPS FROM CONCRETE AND FLOATING SAID HULLS INTO A LAUNCHING-BAY. JULIUS H. HOLMGREEN, San Antonio, Tex. Filed Oct. 5, 1918. Serial No. 257,053. 6 Claims. (Cl. 25—130.)

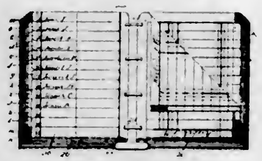
1. The method of constructing the hulls of ships from concrete which consists in covering the bottom of a suitable mold having perforations in its lower part with a lining of paper, casting the hull within the mold and subsequently introducing water through perforations in the mold to disintegrate the lining and float the hull out of the mold.

1,383,118. MOLD FOR CASTING THE HULLS OF CONCRETE SHIPS. JULIUS H. HOLMGREEN, San Antonio, Tex. Filed Oct. 5, 1918. Serial No. 257,054. 14 Claims. (Cl. 25—130.)



1. A mold for casting the hulls of ships from concrete comprising a chamber constituting a mold, a docking chamber adjacent thereto, and a dividing wall common to both chambers, said chambers being in communication with each other over said dividing wall.

1,383,119. WIRE-BOUND COOP. ARTHUR M. HOOD, Indianapolis, Ind., assignor, by mesne assignments, to Wirebounds Patents Company, a Corporation of Maine. Filed Oct. 11, 1915. Serial No. 55,144. 8 Claims. (Cl. 217—47.)



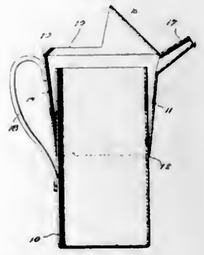
1. A wirebound box or crate blank, comprising a plurality of independent cleated sections foldably associated

by means of binding wires, one of said sections comprising two parallel members lying transversely of the binding wires and held in spaced relation by cleats associated with said members and the binding wires, and two inter-

digitated sliding doors lying between the spaced members and interlocked therewith, said doors being slidable in opposite directions between and parallel with the parallel members.

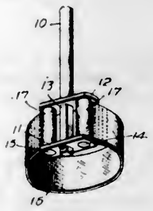
1,383,120. MARGINAL INDEXING. JAN J. HRBEK, Cedar Rapids, Iowa. Filed Oct. 16, 1920. Serial No. 417,346. 7 Claims. (Cl. 283—36.)

1. In an index, a series of progressively stepped leaves, the steps of each leaf being similarly disposed above and below the middle of the leaf margin, whereby the indexing is not affected by inverting the leaf.



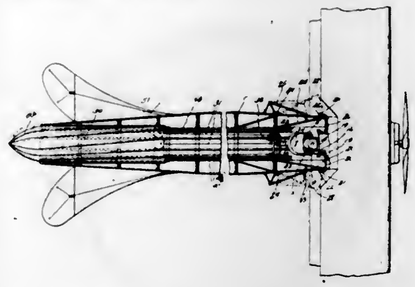
1,383,121. CIGAR AND CIGARETTE HOLDER. THEODORE R. JAMES, Robson, W. Va. Filed July 1, 1919. Serial No. 307,987. 1 Claim. (Cl. 131—10.)

A device of the class described comprising a cigarette holder having an exterior annular groove adjacent its outer end, a cigar holder made of elastic material and having a ring at its inner end for engaging said groove for holding the parts together, said ring being formed of less elastic material than the rest of the cigar holder.



1,383,122. DISPENSING-MEASURE FOR LIQUIDS. MERL W. JONES, New Lyme, Ohio. Filed Feb. 10, 1920. Serial No. 357,542. 1 Claim. (Cl. 221—9.)

A device of the character described comprising an inner receptacle, a surrounding member of inverted frusto-conical shape disposed about said inner receptacle and secured thereto at its lower edge intermediate the ends of the inner receptacle, said surrounding member defining with said inner receptacle an annular reservoir chamber, the upper edge of the surrounding member extending above the top of the inner receptacle and terminating in an inwardly directed flange, a hood extending across a portion of the upper end of the surrounding member,

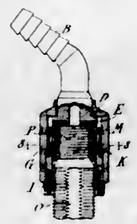


and a discharge spout on said outer surrounding member adjacent the hood and communicating with said annular reservoir chamber.

1,383,123. WRENCH. ROBERT HENRY JONES, Randolph, Nebr. Filed Feb. 28, 1921. Serial No. 448,510. 2 Claims. (Cl. 81—64.)

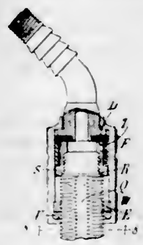
2. A wrench comprising a bar having an angular extremity, spaced members seated upon the angular extremity, pins extending between the spaced members and spaced upon opposite sides of the bar, and a flexible band having its ends folded about and embracing the pins.

1,383,124. LIFE-SAVING MEANS FOR AEROPLANES AND OTHER AIRSHIPS. PERRY L. JORDAN, Washington, Iowa. Filed Jan. 14, 1921. Serial No. 437,249. 12 Claims. (Cl. 244—21.)



1. In an airship, the combination of a tubular casing, means under the control of an aviator to admit air into the forward portion of said casing, an aviator's seat movable in the casing, and a parachute carried and movable in the casing and connected with the aviator's seat and movable with said seat through the rear end of the tubular casing.

1,383,125. GUN-SLING. FRANKLIN K. KENNEDY, Jr., U. S. Army. Filed Sept. 19, 1919. Serial No. 325,013. 6 Claims. (Cl. 224—1.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. A gun sling having a looped buckle part, an adjusting buckle on the buckle part, and a loop member mounted at one end in the loop in the buckle part and securable, at its other end, to the buckle.

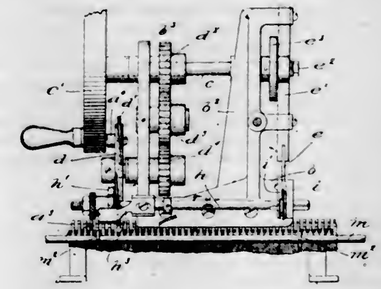
1,383,126. PUMP-COUPLING. HENRY P. KRAFT, Ridgewood, N. J. Filed Mar. 29, 1920. Serial No. 369,588. 9 Claims. (Cl. 285—124.)

8. A pump coupling having a large nut and a small nut non-rotatively and separably connected thereto.

1,383,127. DOUBLE PUMP CONNECTION. HENRY P. KRAFT, Ridgewood, N. J. Filed Mar. 29, 1920. Serial No. 369,589. 8 Claims. (Cl. 285—124.)

1. A coupling having two nuts of different internal diameters, the larger of said nuts being arranged below and the smaller of said nuts being arranged above, the smaller nut being adapted to be pressed against the upper part of the coupling when the larger nut is engaging a valve.

1,383,128. CYLINDER-LOCK. SOFUS ANDREW EMIL LARSEN, Copenhagen, Denmark. Filed June 3, 1920. Serial No. 386,227. 2 Claims. (Cl. 70—46.)



2. A cylinder lock, comprising a casing; a bolt slidable therein and having a rack rigidly connected to it; a ward cylinder having a portion in open communication with the interior of the casing directly opposite said rack; a longitudinal boss on the inner surface of the cylinder; a plurality of ward plates fitted in said cylinder and formed both with alining peripheral notches to conformably receive said boss and thereby be held against rotation, and with alining central holes to rotatably accommodate a key; and a toothed disk fitted in said cylinder directly opposite the open portion thereof and in mesh with said rack, said disk having a peripheral notch wherein said boss is engaged with lateral play in opposite directions, and also having a central hole wherein the key is operatively engageable to rotate the disk when the key is turned.

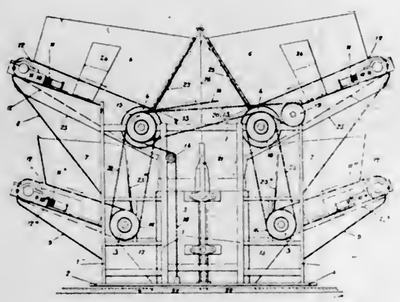
1,383,129. GARMENT-FASTENER. FRANK D. LA VALLE, New York, N. Y. Filed Nov. 11, 1920. Serial No. 423,433. 5 Claims. (Cl. 24—227.)

5. A garment fastener including a pair of identically formed members, each comprising a base adapted to be secured to a garment and an integral hook provided on said base adjacent one end thereof and having its free extremity overlying said base in spaced relation thereto, said hooks adapted to embrace and co-act with the bases of the other member and with one another to secure the members against lateral displacement and longitudinal separation in one direction.

1,383,130. MEANS FOR SPLICING THREAD ENDS. CHARLES LEA, Boston, Mass., assignor to American Warp Drawing Machine Company, Boston, Mass., a Corporation of Maine. Filed Feb. 8, 1915, Serial No. 6,905. Renewed Sept. 15, 1920. Serial No. 410,484. 15 Claims. (Cl. 139—95.)

1. A warp splicing machine embracing the combination of a guide member provided with a series of guides for

receiving the ends of two series of threads in over-lapped position and a clip-setting device for securing upon said over-lapped ends a series of fastening clips to splice each pair of ends together, substantially as described.

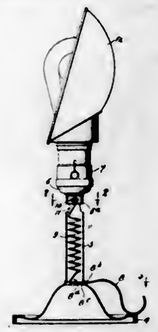


2. The combination of a rack bar whose teeth form guides for retaining two sets of threads with the thread of one set overlapping the ends of the other set and a means coöperating with said rack bar to bind together the over-lapped ends of the two sets of threads, substantially as described.

3. The combination with a rack bar for holding two sets of thread ends in over-lapped position, a clip feeding mechanism for feeding fastening clips successively to the over-lapped threads, and means for clenching the clips around the over-lapped ends of the threads, substantially as described.

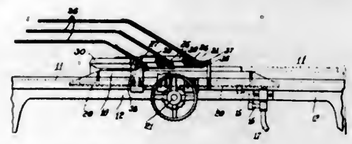
4. A device for splicing warps embracing a guide bar for holding two sets of threads in juxtaposition, a clip feeding mechanism for feeding clips to each pair of thread ends successively, a mechanism for fastening the clips upon corresponding threads of each series, and means for advancing the clip feeding and fastening mechanism along the guide bar, substantially as described.

5. The combination of a guide bar provided with guides for positioning corresponding threads of two series of threads in juxtaposition, a carriage movable along said guide bar, clip setting means mounted on said carriage in position to fasten successive clips on each successive pair of the two adjacent sets of threads, substantially as described.



1,383,131. APPARATUS FOR THE MANUFACTURE OF BRICKS OR BUILDING-BLOCKS. EDMOND LECHAT, Nantes, France. Filed Mar. 30, 1921. Serial No. 457,044. 6 Claims. (Cl. 25—41.)

1. A feeding apparatus for brick or building block presses, comprising in combination upper troughs containing the concrete used to form the main body or core of the brick or block, lower troughs containing the concrete used to form a facing upon one or more sides of the brick or block, endless aprons constituting the movable bottom of the distributing troughs, each trough being provided with adjustable shutters, spouts vertically moved extending through an opening into the mold of the press, a series of feeding chutes leading the first of said qualities of concrete into said spouts and another series of feeding chutes leading the second of said qualities of concrete around said spouts.



1,383,132. ELECTRIC-LAMP STAND. HARRY LERNER, Brooklyn, N. Y. Filed Dec. 10, 1920. Serial No. 429,727. 1 Claim. (Cl. 240—53.)

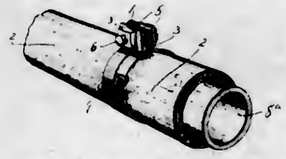
An electric lamp-stand comprising a base-plate and a vertical tube therefor, a socket pivotally secured upon a cross-pin carried at the upper end of said tube, a coiled spring extending from the base plate through said tube and secured to said cross-pin, and a handle extending laterally from said tube pivotally movable and engaged

by the lower end of said coiled spring and coöperating with said base plate to clamp the lamp stand to an article of furniture.

1,383,133. METHOD OF SPLITTING SHEET MATERIAL. CHARLES E. LUCKE, New York, N. Y. Filed June 21, 1915. Serial No. 35,264. 5 Claims. (Cl. 69—9.)

1. The method of splitting sheet material which comprises holding the material against a supporting surface by suction, and cutting a succession of layers therefrom while so held without releasing the sheet.

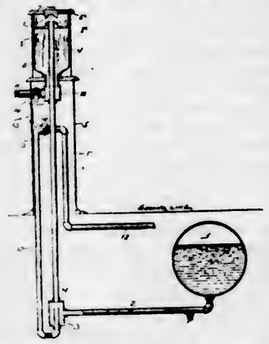
2. The method of splitting a sheet of leather, which comprises holding the sheet by suction with its grain side resting flat against the surface of a permeable support, removing the surface portion from the soft side of the sheet while so held on the support to leave a sheet of uniform thickness, and thereafter and while the sheet is so held on the support cutting a layer therefrom by a knife edge positioned with reference to the supporting surface.



3. The method of splitting a sheet of leather which comprises holding the sheet by fluid pressure with its grain side resting evenly against a supporting surface, and while the sheet is so held cutting therefrom in succession a plurality of layers without releasing the said sheet.

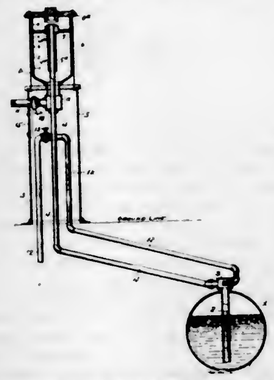
4. The method of splitting sheet material which comprises holding the sheet of material against a supporting surface by suction, and while the sheet is so held cutting therefrom a plurality of layers at a single relative traversing movement between the supporting surface and the cutting device.

5. The method of splitting a sheet of leather into a plurality of layers which comprises cutting surface portions from the soft side of the sheet and thereafter splitting the sheet into a plurality of layers each of substantially uniform thickness throughout, the sheet during the cutting operations being held by suction with its grain side against a surface of reference.



1,383,134. HOSE-CLAMP. CARL J. LUNDGREN, Mount Jewett, Pa., assignor of one-half to Hugo J. Walter, Bradford, Pa. Filed Apr. 12, 1920. Serial No. 373,210. 1 Claim. (Cl. 24—19.)

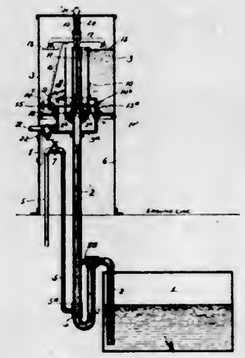
A hose clamp consisting of a sheet metal strip offset approximately at its center so that when wrapped around a hose the two half portions thereof will be parallel and each approximately encircle the hose with the offset portion resting in a plane between the two free ends of the clamp, each free end of the clamp being enlarged laterally in opposite directions so as to overlap, one of said free ends having plain flat surfaces and the other



having the free side edge of its laterally enlarged end bent up to form a lock for a nut, both of said laterally bent ends being without flanges other than the nut locking flange so that they can yield or give to accommodate themselves to variations in the diameter of the hose.

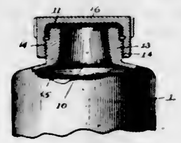
1,383,135. GASOLENE SERVICE-TANK. ABNER JUDSON MCGEHEE, Jackson, Tenn. Filed Aug. 30, 1919. Serial No. 320,763. 8 Claims. (Cl. 221—99.)

1. In a gasolene dispensing apparatus, the combination of a main tank, a dispensing tank, a three way coupling, a continuously open pipe leading from the main tank to the coupling, a continuously open pipe leading from the coupling to the dispensing tank, an air pipe leading from a source of supply to the three way coupling and discharging into the latter, a valve in said air pipe, a discharge pipe from the dispensing tank and a valve in said latter pipe.



1,383,136. GASOLENE SERVICE-TANK. ABNER JUDSON MCGEHEE, Jackson, Tenn. Filed Sept. 26, 1919. Serial No. 326,426. 9 Claims. (Cl. 221—100.)

1. In a gasolene dispensing apparatus, the combination of a main tank, a dispensing tank, a three way coupling

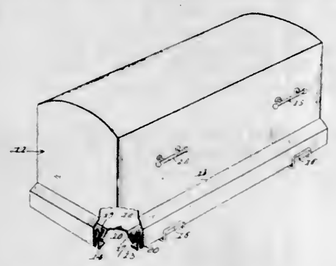


in a plane above the gasolene level in the main tank, a continuously open pipe leading from the main tank near the bottom thereof and connected with the coupling, a continuously open pipe leading from the coupling to the dispensing tank, a pipe leading from a source of compressed air and discharging into the coupling, a discharge pipe from the dispensing tank, a valve in the discharge pipe and a valve in the air pipe.

1,383,137. GASOLENE-DISPENSING APPARATUS. ABNER JUDSON MCGEHEE, Jackson, Tenn. Filed Oct. 31, 1919. Serial No. 334,710. 6 Claims. (Cl. 221—99.)

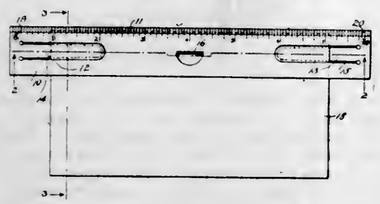
1. In gasolene dispensing apparatus, the combination of a main tank, a dispensing tank, a pipe leading from the main tank near the bottom thereof and terminating in the dispensing tank, the said pipe having a trap intermediate the two tanks, and an air pipe terminating in the discharge pipe within the trap portion of the latter, and discharging the air upwardly therein.

1,383,138. NON-CORROSIVE ATTACHMENT FOR CONTAINERS. ROBERT D. MADDOX, U. S. Army. Filed Nov. 26, 1918. Serial No. 264,227. 1 Claim. (Cl. 215—43.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



The combination with a container characterized by a tubular discharge portion externally reduced at the outlet end, of a lining for the discharge comprising a tubular member having a lateral bearing flange to engage over the reduced portion with the outer face of the bearing flange disposed wholly within the lines of the unreduced portion, a cap bearing over the discharge portion and engaging the unreduced portion of the discharge, and a lining for the cap having a downturned outer portion engaging over the lateral flange of the lining.

1,383,139. STEEL BURIAL-VAULT. ALBERT J. MERKELBACH, Muscatine, Iowa. Filed Sept. 2, 1920. Serial No. 407,726. 3 Claims. (Cl. 27—6.)

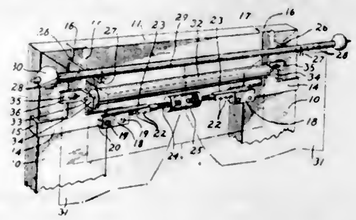


2. A burial vault having base and cap members of which the former is provided with an elevated bench or seat and depending flanges terminating in supporting lips or feet, and of which the latter is provided with side walls overlapping said flanges and extending substantially

to the plane of said lips or feet, the base member being provided between the bench or seat flanges with a de-

pressed sealing channel and the cap member being provided with an inwardly extending leaf forming a rib for engagement with said sealing channel.

1,383,140. COMBINATION RULE AND BLOTTER-HOLDER. HENRY D. NATERMAN, Los Angeles, Calif., assignor of one-half to Frank W. Winship, Riverside, Calif. Filed May 1, 1920. Serial No. 378,039. 3 Claims. (Cl. 120—2.)

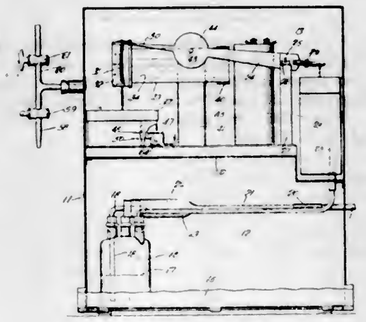


1. An article of manufacture comprising a ruler composed of a strip of spring metal having formed integral therewith a pair of oppositely disposed prongs projecting inwardly from each end of said metal strip.

1,383,141. CLOSING-GUIDE FOR COLLAPSIBLE TUBES. GEORGE H. NEIDLINGER, East Orange, N. J. Filed Jan. 14, 1920. Serial No. 351,295. 3 Claims. (Cl. 113—116.)

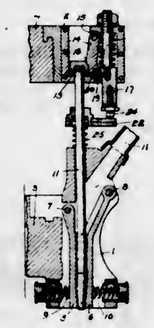
2. As an article of manufacture, a collapsible tube having panels of written matter upon its face, and means also appearing upon the outer face of said tube and adjacent its lower edge, and being substantially in line with one of said panels for indicating the point at which the jaws of a crimping machine should contact for properly closing the open end of said tube subsequent to the same being filled.

1,383,142. CURTAIN-FIXTURE. ANTONI NIEDZIELA, Manchester, N. H. Filed Aug. 2, 1919. Serial No. 314,891. 1 Claim. (Cl. 156—23.)



In a curtain fixture, the combination with a pair of metallic plates having horizontal and vertical elements, bent projections formed at right angles with the outer ends of said vertical elements and said horizontal elements, of plates spacedly supported at the front of said horizontal elements near the inner ends thereof, detents engaged between said plates and said strips, bars having ratchet teeth engageable upon said detents, stems formed with said bars having respectively right and left hand threads, a turn-buckle engageable with said threaded stems whereby said strips may be drawn toward each other, arms integrally formed with said vertical elements extending outwardly, spurs on said arms adapted to engage with a drapery pole, and a pair of opposed hanger brackets adjustably secured upon said vertical elements adapted to support between them a shade roller.

1,383,143. HYDRAULIC RAM. JAMES OLIVER KAFADER, Fort Bidwell, Calif. Filed Aug. 16, 1918. Serial No. 250,260. 3 Claims. (Cl. 103—29.)



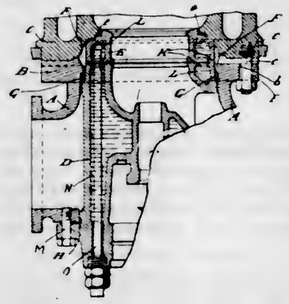
1. A hydraulic ram including a drive pipe having an open upper end and adapted to form a hydrostatic motive column, a valve-controlled air chamber communicating with said drive pipe, an ascension pipe rising from the air chamber, an impetus valve controlling the intermittent discharge of said drive pipe beyond the air chamber and adapted to be closed by the flow of the motive column, said valve opening upwardly, and spring actuated means to positively lift said valve, said lift means being subject to a cessation of flow of the motive column; together with a well casing adapted to be installed between upper and lower subterranean water stratums, said casing having its upper end closed and from which closed end said drive pipe is suspended and through which the ascension pipe extends, said lift means being arranged above the well casing.

1,383,144. APPARATUS FOR INDICATING THE CONDITION OF COAL COMBUSTION. ZACHARIAS OLSSON, Brooklyn, N. Y., assignor to Aug. Rust-Oppenheim, New York, N. Y. Filed Aug. 26, 1920. Serial No. 406,522. 9 Claims. (Cl. 234—10.)

3. An apparatus as characterized comprising a gravity balanced scales, a gas chamber, a counterbalancing member for said scales mounted in said chamber, said counterbalancing member containing a fluid of specific gravity differing from the gas normally admitted to said chamber, and means for sealing said fluid in said counterbalancing member, said means embodying a partition dividing said chamber to form a closed chamber and an open chamber, said chambers communicating by means of a pipe overflowing from the upper to the lower chamber.

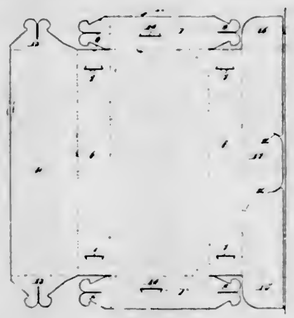
1,383,145. NAILING-MACHINE. JOSEPH F. PENNER, New Castle, and ALDA A. LANSBERRY, Vandergrift, Pa., assignors to Vandergrift Box Company, a Corporation of Michigan. Filed Mar. 25, 1921. Serial No. 455,618. 8 Claims. (Cl. 1—10.)

6. In a nailing machine, the combination of a nail-holding chuck, a plunger holder reciprocable with relation thereto, a plunger borne by said holder and reciprocable in the chuck, a releasable latch for locking the plunger to said holder, a movable member for holding the latch in plunger-locking position, and a trip arranged between said latch-holding member and the face of an article being nailed and adapted when bearing upon such face to move said member from latch-holding position.



1,383,146. GEM-MOUNTING. TOLBERT M. PERRIN, Bozeman, Mont. Filed June 16, 1920. Serial No. 389,331. 5 Claims. (Cl. 63—29.)

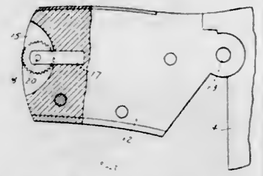
1. In a gem mounting the combination with an article formed with a threaded opening having an annular depression around its upper edge, a threaded sleeve fitting said threaded opening and formed at its upper end with slits providing a series of yielding gem engaging portions,



said portions being provided with a flange to fit the depression around the opening in the article and said flanges also having recesses and a gem fitting in said recesses.

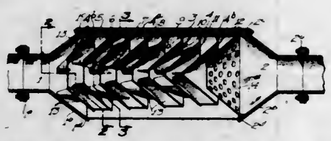
1,383,147. EXHAUST-VALVE BOX OF INTERNAL-COMBUSTION ENGINES. HENRY PILLING, Chorlton-cum-Hardy, England. Filed Dec. 10, 1919. Serial No. 343,832. 3 Claims. (Cl. 123—188.)

1. In an exhaust valve box for an internal combustion engine in which the casing of the valve box and the separate valve seating are connected to the cylinder by flanged joints, spaces provided between the flanges of the casing and the cylinder by which any gas leaking past the valve seating joint escapes directly to the surrounding air, substantially as described.



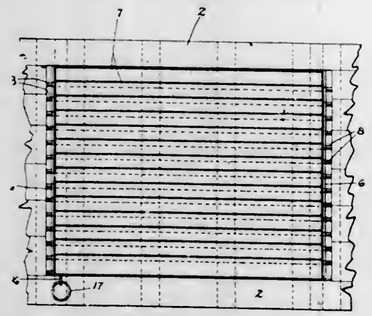
1,383,148. FOLDING BOX. EDWARD E. PINKERTON, Chicago, Ill. Filed Aug. 8, 1917. Serial No. 185,063. 1 Claim. (Cl. 229—36.)

A folding box comprising a bottom; foldable side and end walls therefor; top members at the upper edges of said side walls, each of said top members being of a size to extend slightly over half way across the top of the box and overlap at their free edges, there being slits opening at the free edge of the innermost of said top members, adapted to receive the free edge of the uppermost of said top members; interlocking tongues at the edges of said end walls, there being slits in said side walls adapted to receive said tongues; tongues at the opposite ends of the outermost of said top members, there being slits in the end walls adapted to receive said tongues;



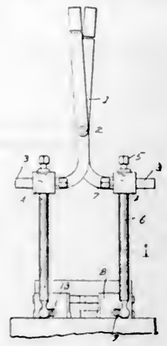
flaps at the ends of the innermost of said top members, adapted and arranged to be inserted within the box and contact with the bottom thereof to support said top members, substantially as described.

1,383,149. LAST. JOHN H. POOLE, Whitman, Mass., assignor of sixteen thirty-seconds to James T. Masterson and John J. Masterson, doing business as Masterson Brothers, eight thirty-seconds to Fred Drew, four thirty-seconds to Frank L. Price, two thirty-seconds to J. G. Wilde, Brockton, Mass., and one thirty-second to J. W. Barlow, Quincy, Mass. Filed Aug. 11, 1920. Serial No. 402,780. 2 Claims. (Cl. 12—141.)



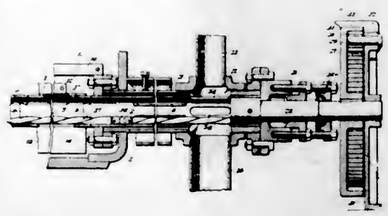
2. A last attachment comprising a dowel, adapted to be secured in a longitudinal socket in the heel end of the last, and a serrated wheel journaled in the outer end portion of said dowel, and of greater diameter than the dowel, so that the wheel may be laterally supported by the sides of a slot formed in the last at opposite sides of said socket.

1,383,150. MUFFLER FOR EXHAUST-GASES. CHARLES E. PAICE, San Diego, Calif., assignor of one-half to G. M. Alexander, San Diego, Calif. Filed Apr. 14, 1920. Serial No. 373,793. 8 Claims. (Cl. 137—160.)



1. A muffler for exhaust gases, including a casing, a plurality of partitions therein provided with gradually decreasing inlet openings centrally in said partitions and with gradually increasing outlet openings at the outer edge of said partitions.

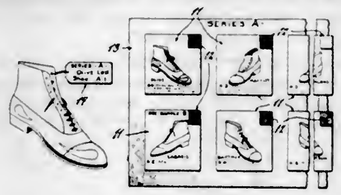
1,383,151. GRATE FOR ELEVATOR-DUMP PITS. RICHARD G. QUEHL, Minneapolis, Minn., assignor to The Strong-Scott Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Aug. 5, 1920. Serial No. 401,437. 4 Claims. (Cl. 214—49.)



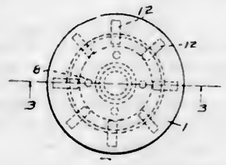
1. The combination, with a dumping platform having a pit opening therein, of a series of plates having bearings at their ends in said platform on each side of said opening and extending across said opening, the edges of said plates being arranged to overlap to close the gap between the plates, and means for tilting said plates on a longitudinal axis to provide spaces between them for the discharge of the grain into the pit beneath.

1,383,152. PISTON-RING-COMPRESSING TOOL. ADOLPH RALOFF, Jr., Thiensville, Wis., assignor, by direct and mesne assignments, of two-fifths to Theadore H. Wegmann and one-fifth to A. G. Raloff, Thiensville, Wis. Filed Feb. 24, 1920. Serial No. 360,927. 8 Claims. (Cl. 29—86.4.)

8. A piston ring tool comprising a plurality of shoes arranged to be placed about and in contact with the piston, each of said shoes comprising a rounded inner concave face and a projecting rib formed at the lower portion of and extending inwardly from said concave face; a pair of operating handles; and intermediate means operatively connecting said operating handles and said shoes, whereby said rib is caused to compress the rings to a diameter smaller than that of the piston.



1,383,153. BOILER FEED-WATER DISTRIBUTER AND CLEANER. CHARLES W. RENEAU, Baton Rouge, La., assignor of one-half to James R. Bankston, Anguilla, Miss. Filed Aug. 10, 1918. Serial No. 249,338. 4 Claims. (Cl. 122—383.)

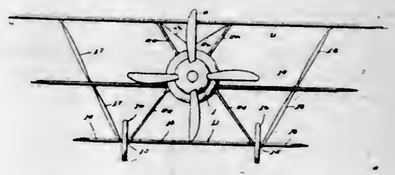


1. In means for the purpose described, the combination of a pipe, means to turn the pipe about its axis, and a knocker bar loosely disposed longitudinally in the pipe and in contact with the wall thereof whereby turning of the pipe will be attended by movement of the knocker-bar in and against the pipe.

1,383,154. SHOE-DISPLAYING DEVICE. JESSE R. RODGERS, Union City, Tenn., assignor of one-half to Wayman C. Joplin, St. Louis, Mo. Filed Oct. 25, 1920. Serial No. 419,291. 5 Claims. (Cl. 35—17.)

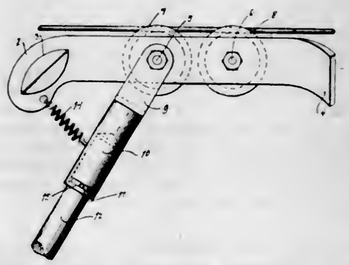
1. In a shoe displaying device, the combination of a sample shoe, a series of pictures representing shoes of the same class as the sample shoe, and samples of leather combined with said pictures to show the quality and color of leather in the shoes represented by the pictures, said sample shoe, pictures and samples of leather being associated with each other to show the shape, color, quality and workmanship of a series of shoes of the same class.

1,383,155. RUBBER HEEL. LEO J. SCHAEFER, Toledo, Ohio. Filed Dec. 26, 1919. Serial No. 347,304. 1 Claim. (Cl. 36—39.)



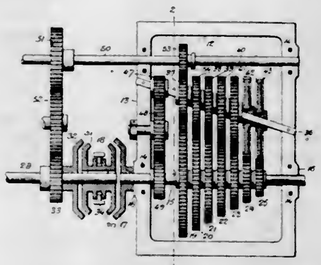
In a rubber heel, a retaining member having a beaded flange around its lower edge, the rubber heel having a recess and an inwardly extending flange, the flange fitting around the outside of the retaining member and above the bead and angular retaining strips secured to the heel and having parts thereof located on the outside of the flange to form a bearing surface against the upper side of the bead.

1,383,156. CRUTCH. CLEVELAND A. SHERMAN, Alamosa, Colo. Filed Apr. 1, 1920. Serial No. 370,520. 1 Claim. (Cl. 135—50.)



In a crutch, side pieces having large perforations, a vertically adjustable and reversible leg between said side pieces and having small perforations, upper and lower bolts engaging selected perforations of said leg and of said side pieces and having threaded ends, nuts engaging the related perforations of the side pieces and the ends of said bolts, said nuts and said bolts being removable and engageable with other selected perforations of said leg and said side pieces in the adjustment of the leg vertically, said side pieces upon removal of the upper bolt having movement outward through inherent resiliency upon the lower bolt as a center and thereby facilitating the reversal of the leg pivotally upon the lower bolt as a center, and the large perforations of the side pieces serving as a guide in the engagement of the bolt with the small perforations of the leg.

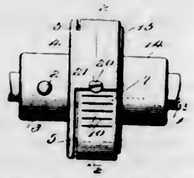
1,383,157. AIRPLANE. HENRY B. SHIELDS, Freeport, N. Y. Filed Oct. 30, 1918. Serial No. 260,343. 10 Claims. (Cl. 244—14.)



1. In an airplane, the combination, of a fuselage, a plurality of substantially V-shaped struts depending from said fuselage, a spar carried by said struts, an aerofoil built upon said spar in three sections and having the end sections spaced from the intermediate section.

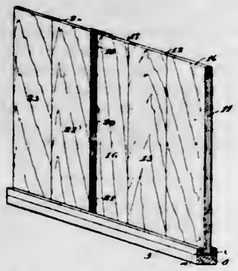
1,383,158. TROLLEY. ADAM SHULTZ, Worcester, Mass. Filed Mar. 18, 1921. Serial No. 453,276. 2 Claims. (Cl. 191—58.)

1. A device of the class described comprising a frame having a pair of parallel side members, the rear ends of said members being curved outward, trolley wheels mounted in said frame, one of said wheels having a relatively wide groove having a substantially cylindrical bottom, a member pivotally attached to the underside of said frame, said member being adapted to be secured upon a trolley pole, and means for urging said frame to rotate to retain one of said wheels against the trolley wire.



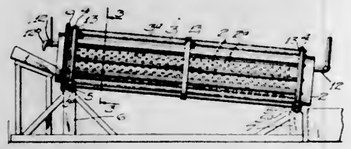
1,383,159. VARIABLE-SPEED-TRANSMISSION MECHANISM. DWIGHT C. SLATER, Essex Junction, Vt. Filed Sept. 9, 1920. Serial No. 409,151. 4 Claims. (Cl. 74—58.)

1. In a variable speed transmission, the combination with a drive and a driven shaft, of a plurality of gears secured upon the driven shaft and of progressively decreasing diameters, an inclined stationary shaft, a plurality of gears carried by said inclined shaft and of progressively increasing diameter and meshing with said first named



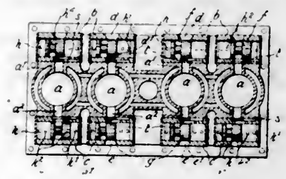
gears, means for mounting said second named gears upon said inclined shaft for free rotation thereon in the same planes as the first named gears, and means operated by said drive shaft for applying power to a selected one of said second named gears.

1,383,160. FLEXIBLE COUPLING FOR MAGNETOS. LEE H. SMITH, Sedan, Kans. Filed Dec. 14, 1920. Serial No. 430,614. 10 Claims. (Cl. 64—96.)



10. In combination, a shaft, an outer shell suitably slotted to provide a resilient inwardly pressing wing provided with a free end formed with a suitable number of inwardly projecting locking lugs, a second shaft, an inner shell nesting within the same and formed with a plurality of outwardly projecting resilient wings provided with a plurality of outwardly facing locking lugs, an independent ring arranged between said shell members and provided with spaced recesses for receiving said projections, and a locking screw attached to said outer shell member and arranged with respect to the free end of said inwardly projecting resilient wing so that the head of the screw will lie across the free end of the wing and prevent its outward displacement, said screw having a cut away portion so that upon the partial turning of the screw, said cut away portion will clear the end of the wing whereby said wing may be forced outwardly.

1,383,161. CONCRETE-FORM BOARD. CLAUDE E. SPALDING, Richmond, Calif. Filed May 28, 1920. Serial No. 384,984. 3 Claims. (Cl. 25—131.)

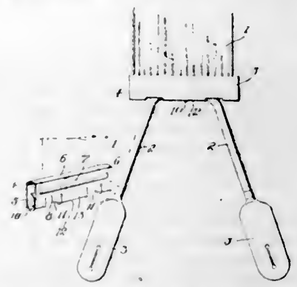


1. In a form, a sill, parallel members attached to said sill, a series of form-boards having beveled edges formed on said boards, and expansion means for keeping the beveled edges of said boards in contact one with the other and for allowing an easy extraction of said form-boards.

1,383,162. FISH SCALING AND WASHING MACHINE. NEWTON C. SPRAGUE, San Diego, Calif. Filed Sept. 30, 1920. Serial No. 413,661. 5 Claims. (Cl. 17—10.)

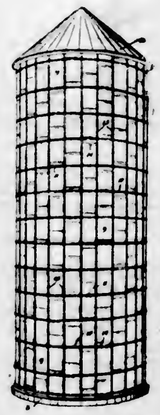
1. A fish scaling and washing machine, including a perforate cylindrical member, means for revolving said perforate cylindrical member, a perforate water pipe extending longitudinally in said perforate cylindrical member and a metallic offset member positioned in one side of said cylindrical member adapted to turn the fish with the revolution of said cylindrical member.

1,383,163. VALVE-GEAR FOR INTERNAL-COMBUSTION ENGINES. ANNIE SCOTT, West Kensington, London, England. Filed July 17, 1920. Serial No. 397,042. 4 Claims. (Cl. 123—59.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



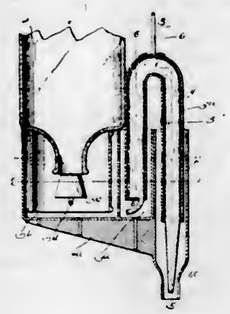
1. In a valve gear for internal combustion engines the combination of four working cylinders or multiples thereof with inlet and exhaust valves of the shuttle type the former operated entirely by compressed air and the latter operated partly by compressed air and exhaust gases from the working cylinder whose pistons act as distributers.

1,383,164. SUSPENDER CONNECTION. MARY STARMER, Newport News, Va. Filed Aug. 5, 1920. Serial No. 401,328. 3 Claims. (Cl. 241—19.)



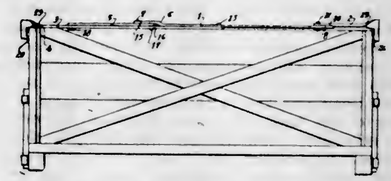
1. In a suspender connection the combination with an inverted U-shape guard having a panel formed with a slot, and forming an attaching bar, of a shoulder strap attached to said bar, a buckle retained within said guard, and hooks on said buckle, and perforated button-hole tabs suspended from said hook within the guard.

1,383,165. GARMENT-SUPPORTER. MARY STARMER, Newport News, Va. Filed Aug. 5, 1920. Serial No. 401,329. 2 Claims. (Cl. 241—19.)



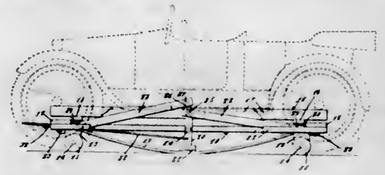
1. The combination with a shoulder strap, of a metallic buckle comprising a front plate and slotted bottom and rear plate forming a bridge bar, and a single piece button-hole tab passed through said slotted portions and suspended on said bridge bar.

1,383,166. MASONRY SILO. HENRY F. STEINKRAUS, Bertha, Minn., assignor of one-third to William P. Chase, Baker, Minn. Filed Feb. 11, 1918. Serial No. 216,474. 2 Claims. (Cl. 72—6.)



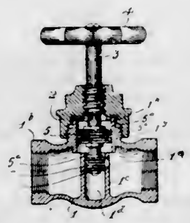
1. The combination with masonry slabs disposed to afford a substantially cylindrical wall structure, said slabs being rabbeted on both their outer and inner vertical adjoining edges and on the horizontal edges, outer and inner wooden joint strips interposed, respectively, in the outer and inner rabbets, contractible external hoops applied around the wall structure, and serving, when contracted, to draw said slabs into closer association and simultaneously to compress said outer and inner joint strips and wooden joint strips interposed in the horizontal rabbets on the outside of the slabs and held in place by the weight of said slabs.

1,383,167. OIL-FEED FOR WICKLESS OIL-BURNERS. CHARLES H. STENBERG, Radcliffe, Iowa. Filed June 23, 1920. Serial No. 391,038. 8 Claims. (Cl. 158—51.)



1. A device of the class described in combination with an oil burner, a feed pipe, an oil reservoir, a wick-siphon designed to draw oil from said reservoir and deposit said oil into said feed pipe, said wick-siphon being adjustably mounted, vertically, with relation to said reservoir, as and for the purpose stated.

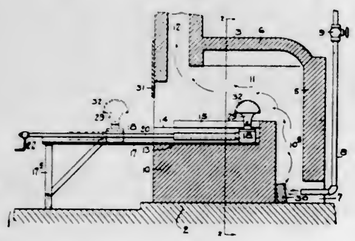
1,383,168. END-GATE ROD. JOHN M. STEVENSON, Mason City, Iowa. Filed June 22, 1920. Serial No. 390,766. 2 Claims. (Cl. 296—52.)



2. End gate rods of the class described comprising flat bars, hook members being carried by said bars, an operating lever, an offset member provided on one of said bars adjacent one end thereof, and having a rivet hole formed near one edge of same and the remaining end of said bar having a roughened surface with a slot formed therein, one of said hook members being provided with a roughened surface which engages the roughened surface provided on said bar and said hook being adjustably secured on one of said bars, a hook engaging part provided on the free end of said lever, said hook engaging the edge of one of said bars when same is in a closed position to prevent movement of parts, a nib being provided on each of said hooks for engaging the thimbles of the wagon, said operating lever having a curved formation to provide the locking means.

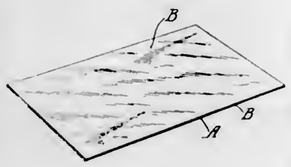
1,383,169. AUTO-LIFTER. JESSE B. STOAMS, Lockport, N. Y. Filed Apr. 5, 1920. Serial No. 371,323. 3 Claims. (Cl. 254—9.)

1. An automobile jack comprising a wheeled frame, a movable frame mounted thereon and provided with means to engage beneath the front axle and rear axle housing of an automobile, a downwardly bowed member having its ends connected to the movable frame, levers pivoted to the wheeled frame and adapted to move with respect thereto, a toggle joint, having connection with the levers and means for operating the toggle joint to move the levers and cause pressure to be exerted on the downwardly bowed member and to cause the toggle joint to raise the levers and movable frame.



1,383,170. VALVE. IRA E. STUMP, Cleveland, Ohio. Filed Apr. 26, 1920. Serial No. 376,532. 10 Claims. (Cl. 251—23.)

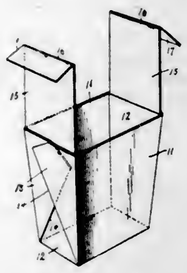
9. A combined service and drain valve, comprising a valve body provided with supply and service branches



separated by a partition having a drain valve chamber intersected by drain ports communicating with the service branch and exterior of the valve body respectively, a main valve chamber arranged above said drain valve chamber and said partition, and a valve stem provided with main and drain valves operating in said main and drain valve chambers, respectively, said main valves being adapted to be seated on said partition and close communication between said supply and service branches, and said drain valve being arranged to open said drain ports to permit fluid to pass from said service branch to the exterior of the valve body when the main valve is fully closed, and to permit fluid to flow therethrough from both branch pipes when the main valve is between its fully closed and fully opened positions.

1,383,171. FIRE-POLISHING APPARATUS. CHARLES A. SUNDER, Jeannette, Pa., assignor to McKee Glass Company, Jeannette, Pa., a Corporation of Pennsylvania. Filed Sept. 18, 1919. Serial No. 324,644. 5 Claims. (Cl. 49—58.)

1. In apparatus for fire polishing glass ware, the combination with a heating chamber, of a refractory support extending within the heating chamber, having a groove formed therein, and a ware-support longitudinally movable in said groove.



1,383,172. COMPOSITE METALLIC SHEET AND METHOD OF MAKING SAME. BERNARD J. SWEENEY, New York, N. Y., assignor to The Conley Foil Company, New York, N. Y., a Corporation of New York. Filed Sept. 25, 1919. Serial No. 326,336. 4 Claims. (Cl. 29—189.)

1. A composite sheet for the making of impression molds for use in the manufacture of printing plates comprising a relatively thick sheet of lead adapted to receive the impression and a facing therefor comprising an exceedingly thin pellicle or film of a non-oxidizing metal united with the lead sheet.

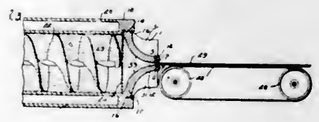
1,383,173. PAPER RECEPTACLE. GERALD W. THROOP and JESS W. DUNDON, Erie, Pa. Filed Aug. 12, 1920. Serial No. 403,012. 1 Claim. (Cl. 229—16.)

A container of the class described formed of a single sheet of material foldable to form a rectangular receptacle open at the upper side, two opposite side walls of the receptacle having extensions foldable upon themselves

at their ends to form lifting ears, said extensions adapted to be overlapped over the open side of the receptacle.

1,383,174. RUST-PROOF PIANO-WIRE. MARVIN J. UDY and FRANK C. NICHOLSON, Kokomo, Ind., assignors to The Udylite Process Company, Kokomo, Ind., a Corporation of Indiana. Filed June 13, 1919. Serial No. 304,020. 12 Claims. (Cl. 204—1.)

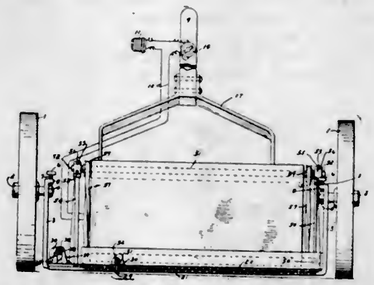
12. The process of treating a piano wire to make it rust-proof, which consists in electroplating the wire with a thin coating of cadmium, then subjecting the wire to heat under conditions which cause the coating to alloy to the wire and to be outwardly oxidized and then polishing the wire.



1,383,175. SPRING. MARVIN J. UDY and FRANK C. NICHOLSON, Kokomo, Ind., assignors to The Udylite Process Company, Kokomo, Ind., a Corporation of Indiana. Filed Oct. 23, 1919. Serial No. 332,795. 6 Claims. (Cl. 204—1.)

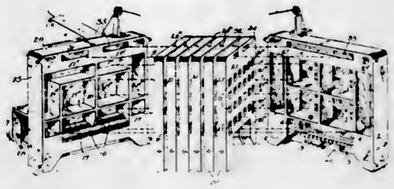
1. The process of protecting steel springs against rusting, which consists in coating the springs with cadmium and then subjecting the springs to heat to alloy the cadmium thereto.

1,383,176. EDGED TOOL. MARVIN J. UDY and FRANK C. NICHOLSON, Kokomo, Ind., assignors to The Udylite Process Company, Kokomo, Ind., a Corporation of Indiana. Filed Oct. 23, 1919. Serial No. 332,796. 7 Claims. (Cl. 204—1.)



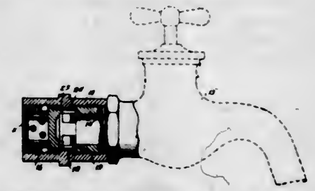
1. The process of protecting an edged steel article against rusting, which consists in coating the article with cadmium and then subjecting the coated article to heat to alloy the cadmium thereto.

1,383,177. DIE AND HEAD THEREFOR. HENRY L. VENN, Oak Park, Ill. Filed Apr. 25, 1921. Serial No. 464,155. 6 Claims. (Cl. 18—12.)



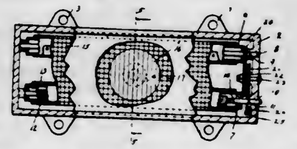
1. In apparatus of the class described, in combination, a head member, means for detachably securing a die member thereto, means for securing the head member to a casing containing a conveyer, and means for equalizing the heat radiation in the head member.

1,383,178. TRACTOR LAWN-CUTTER. WILLIAM E. VOGES, St. Louis, Mo. Filed Feb. 2, 1920. Serial No. 355,716. 6 Claims. (Cl. 56—25.)



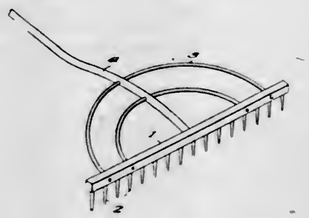
1. A tractor lawn-cutter, comprising a frame, a reciprocating-cutter mounted at the front of said frame, two ground-wheels which support the front end of said frame and hold said cutter at the desired height from the ground, means for adjusting the frame upon the said wheels, to regulate the height of the cutter above the ground, a motor and suitable connections mounted upon said frame, a traction device that supports the rear portion of the machine, means for driving said traction device by the power of said motor, means for driving said cutter by the power of said motor, and a handle connected to said frame and arranged to transfer more or less of the weight of the driver or operator to the said traction device, and whereby the said traction device may be lifted clear of the ground, to stop the machine without stopping said motor.

1,383,179. BOILER. WESTON F. WILLIAMS, Falls Church, Va. Filed July 17, 1919. Serial No. 311,642. 2 Claims. (Cl. 122—225.)



1. In a boiler of the unit section type, a front unit member, a back unit member and a series of intermediate sections having non-intercommunicating side wall faces arranged in abutting juxtaposition and provided in the outermost or lateral outermost edge faces and at the lower portion thereof with water inlet openings and having in the top faces a steam outlet, the said intermediate units being hollow and having series of horizontal rows of smoke passageways in which the gaseous products are caused to flow alternately in reverse directions in successively higher planes, the back unit having a pair of adjacent L-shaped pockets diverting the gas from the upper row of passageways in the intermediate units outwardly toward outer vertical rows of passageways, the gas flowing downwardly through the vertical legs of the L-shaped pockets in the rear unit and passing forwardly through certain of the passageways in the intermediate units into vertical lateral pockets in the front member which divert the gases downward to coördinate return pockets in the intermediate units, the back member having a collecting flue with an upstanding centrally arranged branch, the intermediate sections having in the upper portion alined series of passageways through one series of which the gas is directed from the centrally arranged branch and returned on the opposite side of the units, the front and rear unit members having hollow partition walls forming independent pockets or chambers on opposite sides of a central vertical partition.

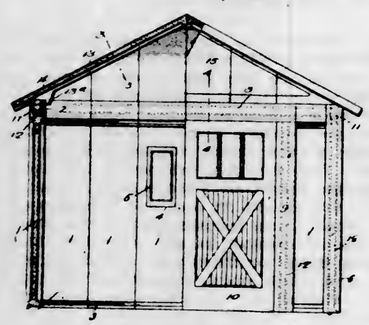
1,383,180. SECONDARY VALVE. WALTER B. WOORE, New York, N. Y. Filed Apr. 26, 1920. Serial No. 376,756. 6 Claims. (Cl. 284—18.)



2. In a device of the class described, the combination of a conduit having two longitudinally spaced apart apertured partitions in the bore thereof, one of said partitions provided with a valve seat, and facing the other partition and facing in a direction opposite to the direction of flow through the conduit, a floating secondary valvular device including a valve element adapted to be moved by the pressure of the flow on to said seat to intercept the flow through the conduit, and extensions for guiding the valve element to and from its seat, said extensions projecting longitudinally from opposite sides of the valve element and slidably mounted in and extending through the apertures in said partitions and a second conduit inserted in the first named conduit and adapted to engage the adjacent extension to hold the valve element in spaced relation to its seat and thus permit a flow past the seat, both of said extensions provided with openings for permitting the flow to pass through the same.

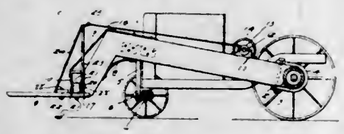
1,383,181. DIRECTION-INDICATOR FOR MOTOR-DRIVEN VEHICLES. OTTO O. ADAMS, Los Angeles, Calif. Filed Oct. 13, 1919. Serial No. 330,423. 2 Claims. (Cl. 116—36.)

1. A direction indicator for automobiles comprising a casing attachable to a suitable part of the vehicle so as to be clearly removable from the rear thereof; a spring roller mounted in the casing, a companion roller also in the casing, a curtain connecting the rollers and normally wound on the spring roller, portions of said curtain being translucent in order to form signaling indicia; and mechanism operable manually to turn the companion roller against the spring roller action, said mechanism including a flexible device attachable selectively to one of a series of stationary supports so as to hold the curtain to display a desired part thereof.



1,383,182. REINFORCED BOW FOR RAKES. GEORGE E. ALEXANDER and RALPH W. ALEXANDER, Newport, N. H. Filed July 31, 1918. Serial No. 247,586. 1 Claim. (Cl. 55—10.)

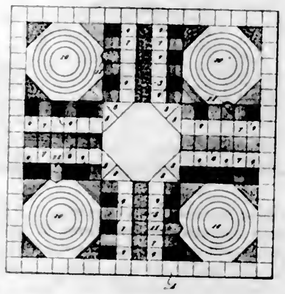
The combination with a rake head having a handle secured thereto; of a bow therefor composed of a sub-



stantially semi-circular, tubiform, metal member having a reinforcing core completely filling said member and extending throughout the entire length thereof, said reinforced bow extending through said handle and having its ends extending through said head, said core avoiding breakage or distortion of the bow throughout its length and at its connection with the handle and the head.

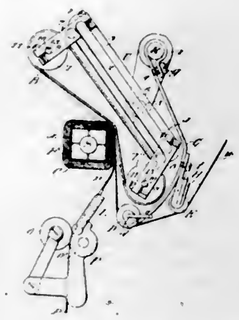
1,383,183. CONCRETE BUILDING STRUCTURE. CHARLES J. ASCHAUER, Decatur, Ill. Filed Aug. 25, 1916. Serial No. 116,838. 2 Claims. (Cl. 72—1.)

1. A building structure composed of concrete slabs, each of said slabs being a solid unit of sufficient thickness and strength to serve as a weight bearing member, and having an integral top channel, said slabs being erected vertically to form the walls of the building, hollow posts located at the corners of the building and having an integral top channel which is in communication with the interior of the posts, the channels of the slabs and of the posts registering and forming a continuous channel extending entirely around the building and down through the corner posts, the top of the slab being increased in thickness to produce a head or enlargement in which the channel is made, and the ends of the slabs having laterally disposed strengthening flanges, the flanged ends of adjacent slabs abutting, and a binder filling said channel and the interior of the corner posts.



1,383,184. TRACTOR PUSH-RAKE. CHARLES M. BORLAND, Echo, Oreg., assignor of one-half to Alfred Haitt, Echo, Oreg. Filed May 14, 1920. Serial No. 381,393. 4 Claims. (Cl. 56—27.)

1. A push rake attachment comprising beams which are approximately L-shape in side elevation, bearings provided at one end of the beams for receiving the axle of the tractor, a yoke connecting the beams together and adapted to be pivotally connected with the forward axle of the tractor, a cradle mounted upon the beams and means mounted upon the beams for swinging the cradle.

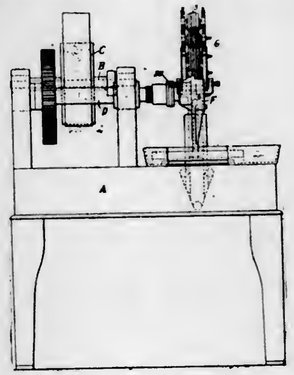


1,383,185. GAME-BOARD. LYMAN BOYD, Canton, Ohio. Filed Mar. 27, 1920. Serial No. 369,303. 1 Claim. (Cl. 46—63.)

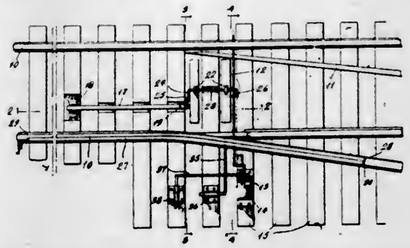
A game board having a rectangular track around its edges, said track being divided into squares upon which different colored pieces of a plurality of players are adapted to be moved, a square area within each corner of said track, for the retention of pieces of one player, waiting to be put into play, a diamond field at the center of the board forming a common goal for the pieces, a home stretch extending from the center of each side of the rectangular track to the adjacent corner of the diamond, each home stretch being of the same color as the pieces of one player, and forming a path from the rectangular track to the goal for the pieces of the same color, a turn out track extending along the two inner

sides of each square retention area and connecting at its outer ends with two adjacent sides of the rectangular track; said turn out being divided into squares similar to the squares in the rectangular track, triangles being in each turn out adjacent to the goal, safety zones beside certain squares in the turn outs and a starting square, connecting each retention area with the adjacent turn out, said starting squares being colored to correspond with the pieces in the adjoining retention area.

1,383,186. WINDING APPARATUS. CARL A. BRINK, Providence, R. I., assignor to Universal Winding Company, Boston, Mass., a Corporation of Massachusetts. Filed July 13, 1918. Serial No. 244,788. 15 Claims. (Cl. 242—10.)



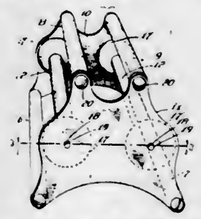
1. In an apparatus for winding electrical coils or the like, the combination with a winding-mandrel, of means to traverse wire or other strands of conductor back and forth on the mandrel to build up a coil, and a flexible band arranged to bear against the surface of the coil wound on the mandrel and to conform to the contour thereof to press the windings into place and flatten the layers against each other.



1,383,187. APPARATUS FOR MAKING TUBES. LOUIS H. BRINKMAN, Glen Ridge, WILLIAM H. FULTON, Irvington, and HERMAN SHELLMER, Newark, N. J., assignors to Titeflex Metal Hose Corporation, a Corporation of New York. Filed Mar. 8, 1917. Serial No. 153,263. 11 Claims. (Cl. 113—35.)

1. In apparatus for forming a tube from a strip, the combination with a stationary die having channels bending the strip transversely for interfolding the edges of adjacent convolutions, the parts of said die being relatively

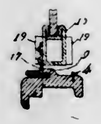
stationary, of a rotating mandrel, about which the strip is coiled, centrally arranged within the die and a preliminary former comprising rolls initiating the bends in the strip section.



1,383,188. RAILWAY-SWITCH. NORMAN W. CHAFFIN, Burnwell, W. Va. Filed Sept. 22, 1920. Serial No. 412,040. 4 Claims. (Cl. 246—315.)

1. A railway switch mechanism having switch rails and means for yieldingly holding the same in their closed position, a rock shaft operatively connected with the switch rails, a vertically movable tread rail disposed in parallelism with the track rails in an upwardly and forwardly inclined position and operatively connected with said rock shaft, said tread rail being yieldingly held in its normal position and being depressible by a car or train carried actuator, a locking means for holding the switch rails in their opened position, and a retaining rail disposed in parallelism with said adjacent portions of the main track and switch rails and depressible by the weight of wheels traversing said rails, said retaining rail being operatively connected with said locking devices.

1,383,189. SHOE-POLISHING DEVICE. HERBERT C. COY, Chicago, Ill., assignor to Vulcan Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 18, 1920. Serial No. 359,548. 1 Claim. (Cl. 15—58.)

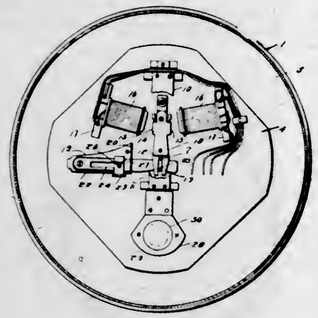


In a shoe-polishing device, a base having a set of lower parallel rods coated with rubber, a set of upper parallel rods coated with rubber, end pieces in fixed relation to both sets of said parallel rods and a plurality of rollers rotatably mounted in said end pieces.

1,383,190. TIRE. DEMETREOS J. DEMAS, Pittsburgh, Pa. Filed May 29, 1920. Serial No. 385,280. 2 Claims. (Cl. 152—18.)

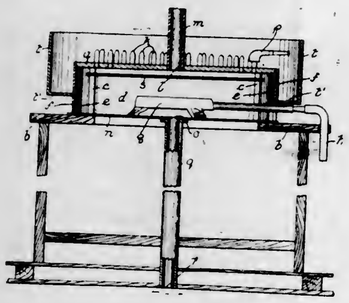
1. In a tire, the combination with a carcass formed of a plurality of layers of fabric and an outer covering of rubber, of an armor arranged between the carcass and the rubber covering, said armor consisting of a plurality of circumferential, spaced cords, a second series of circumferential cords of smaller size arranged alternately therewith, and transverse cords interwoven with said circumferential cords.

1,383,191. WINDSHIELD. FREDERICK A. DILLINGHAM, Troy, Ohio, assignor to The Troy Carriage Sun Shade Company, Troy, Ohio, a Corporation of Ohio. Filed May 15, 1920. Serial No. 381,610. 8 Claims. (Cl. 296—93.)



1. In a windshield, the combination with upper and lower shield sections, of side frame pieces, means interacting between the shield sections and the side frame pieces for forming abutment joints of the sections with the side frame pieces, with the abutment joint for the upper shield section terminating at its lower edge at a point located outwardly from the abutment joint for the lower shield section, whereby the water collected at the joint of the upper shield section will not flow into the joint of the lower shield section.

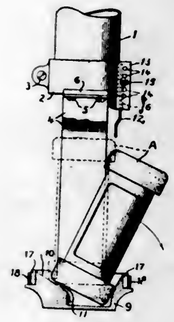
1,383,192. DIRECTION-INDICATOR. WILLIAM F. DORRIDA, Baltimore, Md., assignor of one-half to Charles S. Sutherland, Baltimore, Md. Filed Nov. 12, 1919. Serial No. 337,441. 2 Claims. (Cl. 177—327.)



2. A direction indicator comprising a casing, a supporting element in said casing, a shaft journaled in said supporting element, a crank formed on said shaft, an indicator secured to said shaft, an operating lever pivoted to the supporting element above the shaft and having its lower end bifurcated to receive the crank, electromagnets carried by the supporting element and arranged on

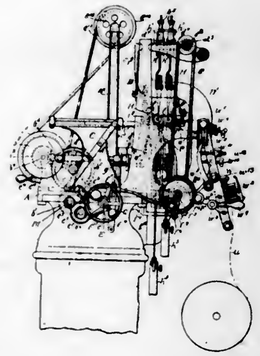
opposite sides of the operating lever and below its pivot, an armature plate secured to the operating lever and

extending to a point adjacent its bifurcation, lateral wings formed on said plate and disposed on each side of the operating lever adjacent the magnets.



1,383,193. APPARATUS FOR SEASONING AND FINISHING TOBACCO-PIPES. ALFRED DUNHILL, London, England. Filed Oct. 23, 1919. Serial No. 332,821. 7 Claims. (Cl. 34—26.)

2. Apparatus for seasoning, finishing or treating tobacco pipes, comprising in combination, an inclosed chamber at least one heating unit located within said chamber, a hot plate constituting the top of said chamber, a series of plugs fixed to and extending upwardly from the top of said hot plate and shaped to receive the bowl of a tobacco pipe, means within said chamber and between said heating unit and said hot plate for causing the heat to be uniformly distributed over the under surface of said plate, and means for admitting air to the bottom of said chamber for the purposes set forth.

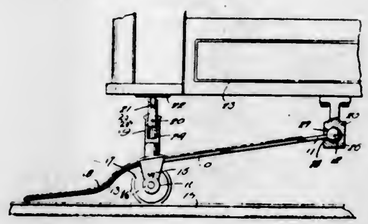


1,383,194. CARRIER-SELECTING DEVICE FOR PNEUMATIC-DESPATCH-TUBE APPARATUS. ALF ENGEBRETSEN, Chicago, Ill., assignor to Joseph Rose, Chicago, Ill. Filed Mar. 20, 1920. Serial No. 367,485. 14 Claims. (Cl. 243—24.)

1. In pneumatic despatch tube apparatus, the combination of a transmission tube for carriers; a receiver to which the carriers are delivered by said tube; means for causing each carrier delivered to said receiver to topple over toward one side of said receiver; and means for caus-

ing certain of the carriers when so toppled, to be engaged and caused to topple back in another direction.

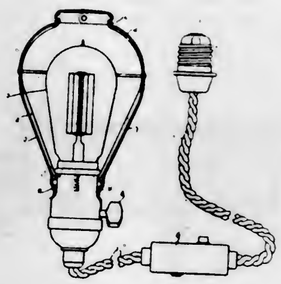
1,383,195. MACHINE FOR OPERATING UPON WARP-THREADS. MILLARD F. FIELD, Winthrop, and CHARLES D. LANNING and EDGAR F. HATHAWAY, Boston, Mass., and FREDERICK C. BLANCHARD, Fort Wayne, Ind., assignors, by mesne assignments, to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed Feb. 6, 1903. Serial No. 142,251. 48 Claims. (Cl. 139—94.)



2. In a warp-drawing machine, embodying a drawing-in device, a traversing carriage supporting the same, means to support loom harnesses to move longitudinally, and mechanism which engages the respective harnesses and automatically and positively moves each independently of the others, parallel with the movement of the traversing carriage and differentially thereto, for the purpose specified.

48. The combination of a warp thread carriage, a carriage having a warp worm and a drawing-in needle, to act sequentially upon the warp threads, a main driving power shaft connected to move both said carriages with a differential, progressive movement, and means to impart compensating, manual movement to the warp thread carriage.

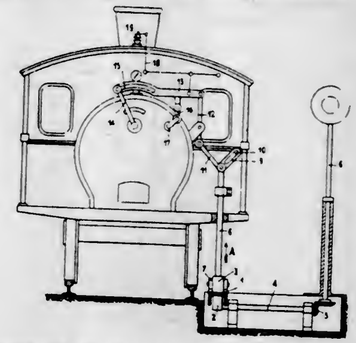
1,383,196. CAR-FENDER. CARL O. FIRST, Meadville, Pa. Filed Sept. 30, 1920. Serial No. 413,701. 2 Claims. (Cl. 293—43.)



1. An apparatus of the class described comprising a frame including spaced side members inclined upwardly

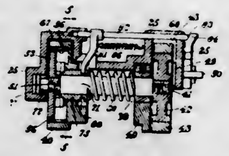
and rearwardly converging to the rear and adapted to be swingingly attached at the converging portion to a car body, track engaging wheels connected to said frame, a plurality of continuous slats connected to said frame and

extending longitudinally thereof, a standard carrying a bearing wheel adapted to engage the under face of the car body, and means for yieldably supporting said standard from the frame.



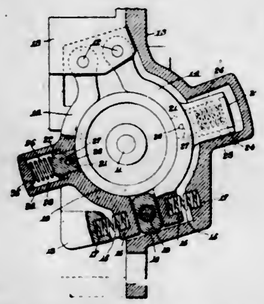
1,383,197. BED-WARMER. JOHN RANDOLPH FLETCHER, Dayton, Ohio. Filed Jan. 16, 1920. Serial No. 351,746. 1 Claim. (Cl. 219—45.)

In an electrical warmer, the combination of a lamp having a thumb switch and provided with a lamp guard of framework sufficiently open not to interfere seriously with the light from the lamp, and a non-metallic, non-heat-absorbing fabric arranged about said guard and lamp but terminating short of the thumb switch to cover parts that become heated from said lamp, a cut out whereby the lamp user may cut off the current at a distance without reaching for the lamp, the lamp guard having indentations at both ends whereby cords may be passed around said fabric and hold it securely to the guard.



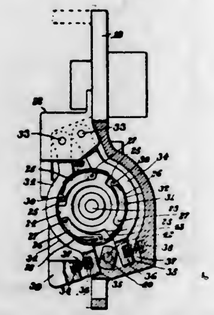
1,383,198. DEVICE FOR AUTOMATICALLY STOPPING TRAINS. ADOLF FRITZ, Magdeburg, Germany. Filed Nov. 23, 1920. Serial No. 426,083. 1 Claim. (Cl. 246—186.)

In a device for automatically stopping a train when running past a signal, an upright rod (8) carried by the locomotive, an arm (11) connected to said rod, a lever (12) influenced by said arm, a slotted bar (13) connected to said lever, said slotted arm simultaneously engaging the lever (14) for turning off the steam and also a lever



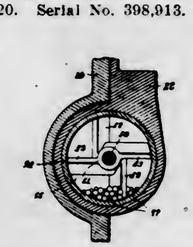
(16) operating the brake-valve (17) for admitting air to the brakes, substantially as set forth.

1,383,199. SPEED-CONTROLLING MECHANISM FOR LOAD-LIFTING DEVICES. FRANK L. GORMLEY, Brookline, Mass. Filed July 6, 1920. Serial No. 394,358. 10 Claims. (Cl. 188—184.)



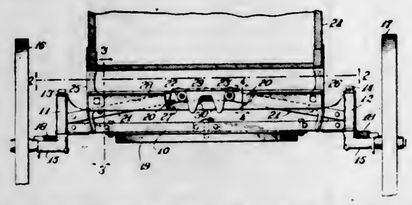
1. In a device of the class described, the combination with a movable load-supporting member having a revoluble shaft; means for rotating said shaft at a high speed only during the lowering of said load-supporting member, a fixed cylinder; a disk therein rotatable with said shaft; a slidable friction shoe on said disk; and a manually controlled movable member for forcing said shoe into contact with said fixed cylinder.

1,383,200. BRAKING MEANS FOR LOAD-LIFTING DEVICES. FRANK L. GORMLEY, Brookline, Mass. Filed July 22, 1920. Serial No. 398,115. 16 Claims. (Cl. 188—75.)



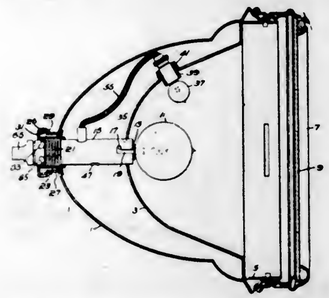
1. A revoluble brake wheel; a brake arm coacting therewith; a device for moving said brake arm from said brake wheel; and means operable by the outward movement of said arm moving device for maintaining a friction on said brake wheel after said brake arm has been removed therefrom.

1,383,201. BRAKE MECHANISM FOR LIFTING-JACKS AND THE LIKE. FRANK L. GORMLEY, Brookline, Mass. Filed July 22, 1920. Serial No. 398,116. 8 Claims. (Cl. 188—82.)



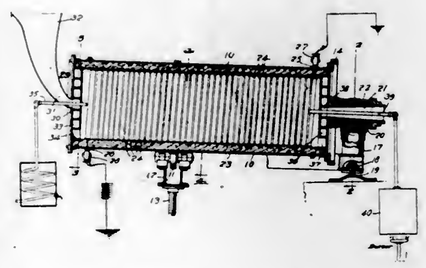
1. The combination of a revoluble brake wheel; brake arms normally coacting therewith; means for separating said arms from said wheel; and speed-retarding members carried by said wheel and movable outwardly into contact with said arms when removed from the wheel.

1,383,202. DEVICE FOR RETARDING THE SPEED OF LOWERING OF SELF-RUN-DOWN LIFTING-JACKS. FRANK L. GORMLEY, Brookline, Mass. Filed July 26, 1920. Serial No. 398,913. 14 Claims. (Cl. 188—101.)



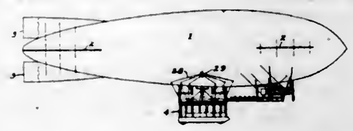
1. In a device of the class described, a revoluble shaft; a member revoluble therewith provided with a plurality of inclined blades; a cylindrical casing for said revoluble member; and movable means in said casing coacting with said blades to retard the speed of said shaft.

1,383,203. BOLSTER FOR VEHICLES. SHERMAN C. HARTSOCK, Moline, Ill., assignor to D. M. Sechler Implement & Carriage Company, Moline, Ill., a Corporation of Illinois. Filed Aug. 30, 1920. Serial No. 406,878. 16 Claims. (Cl. 280—111.)



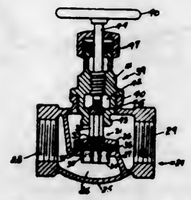
1. In combination, a vehicle, a bolster carried thereby, an axle comprising two members one over the other rigidly connected together at their ends, the upper member being upwardly bowed and unconnected at its central portion with the lower member, said bolster having a laterally-shiftable bearing upon said upper axle member, and rigid means deepnding from the vehicle body near each side thereof and straddling said axle.

1,383,204. LAMP. ELLSWORTH A. HAWTHORNE, Bridgeport, Conn. Filed Aug. 27, 1915. Serial No. 47,573. 7 Claims. (Cl. 240—41.)



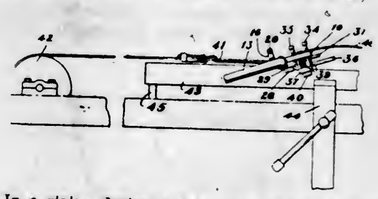
1. In a lamp, a casing, a reflector within the casing, a non-circular aperture in the reflector, a member fitting said aperture and extending between the reflector and the casing, a sleeve mounted in said casing and having screw engagement with said member, a primary light carried by said member, a secondary light within the reflector, electrical connections for the latter light disposed between the reflector and casing and connected with said member, a switch member carried by said member exteriorly of the casing and rotatable about an axis substantially alined with the longitudinal axis of said member selectively to control circuits to said lights.

1,383,205. APPARATUS FOR DISTILLING KEROGEN SHALE. EDWARD E. HEDGES, New York, N. Y. Filed Nov. 10, 1920. Serial No. 423,073. 8 Claims. (Cl. 196—19.)



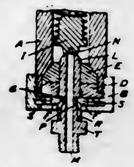
1. A distilling apparatus comprising an inclined rotating retort, means to introduce material into the retort at the axis, and a volute feeding conduit within the retort receiving the material at the axis and discharging it at the periphery.

1,383,206. BALLOON. JOSEPH HENRA, Brooklyn, N. Y. Filed Mar. 11, 1920. Serial No. 364,976. 11 Claims. (Cl. 244—6.)



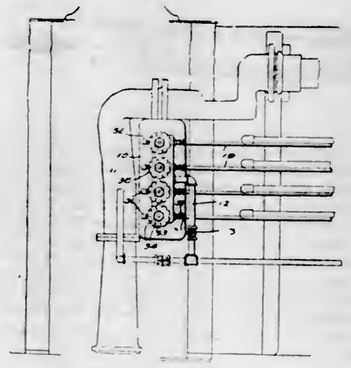
1. A device of the character described comprising a balloon or the like, a car suporting element, a car suspended from said balloon by the supporting element, cables for stabilizing the car against tilting, and means for automatically and positively varying the effective length of said cables between the balloon and car as necessary to maintain the car substantially level.

1,383,207. COMBINATION CHECK AND CUT-OFF VALVE. GEORGE A. HIDDEN, Coronado, Calif. Filed Apr. 21, 1919. Serial No. 291,742. 1 Claim. (Cl. 251—160.)



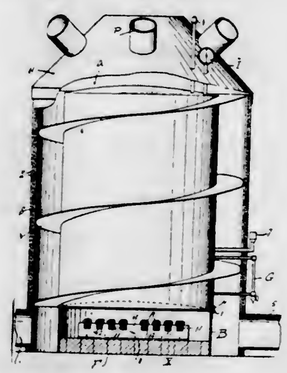
A combination check and cut-off valve including a casing provided with an inlet and an outlet, a partition in said casing between said inlet and said outlet, said partition being provided with an opening, a check valve including a threaded shank, a stem extending from one end of said shank, a head extending from the other end of said shank and slidably mounted in the opening in said partition, a bearing in said casing in which said stem is slidably mounted, said head being fluted to allow the liquid to flow through said opening when the check valve is raised, a gasket on said shank resting on said head and adapted to rest on said partition and close said opening, and a plate screwing on said shank against said gasket, said bearing adapted to engage said plate to limit the opening movement of the valve, and a stem screw seated in said casing for engaging the end of said stem to hold the valve positively closed.

1,383,208. RIVING DEVICE. LYLE H. HOLLAND, Peterboro, N. H., assignor to Eastern States Package Co., Buffalo, N. Y., a Corporation. Filed Aug. 26, 1919. Serial No. 319,973. 2 Claims. (Cl. 144—182.)



1. In a riving device, a base plate having a groove in its under side extending from the forward to the rear edge thereof, a primary cutting blade adjustabzly secured to the under side of the base plate, a secondary cutting blade adjustably secured beneath the base plate in spaced relation to the primary cutting blade and slightly in the rear of the forward cutting edge of the primary blade and a curl preventing shield associated with the base plate.

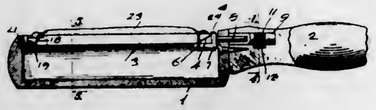
1,383,209. COUPLING. WILLIAM CARL IFTIGER, Watts, Calif. Filed July 30, 1919. Serial No. 314,344. 8 Claims. (Cl. 284—18.)



1. A coupling including a male member and a female member, means for locking the male member partly within the female member against withdrawal from the female member, and means for holding said locking means out of operation upon axially introducing said male member farther into said female member to withdraw axially said male member from said female member.

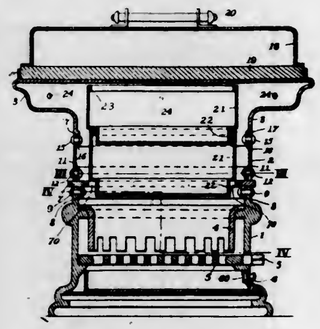
1,383,210. FLUE-BLOWER. ROBERT EDWARD JACKSON and EDWIN MILTON JENKINS, Princeton, W. Va. Filed Sept. 2, 1919. Serial No. 321,125. 2 Claims. (Cl. 122—391.)

1. In a flue blower in combination with a boiler provided with flues, a manifold secured to the outer wall of the boiler and connected with a suitable force of fluid pressure supply, a plurality of chambers formed within said manifold and provided upon their inner ends with flanges, tubular casings secured to said flanges and provided with outlets adapted to project for a short distance into the flues of the boiler, journals formed in the wall of said manifold rotatable shafts mounted in said journals, spiders secured to said shafts, a valve within each of said casings and secured to said spiders and means for controlling the admission of fluid pressure to each of said chambers.



1,383,211. HEAT PRODUCING AND DISTRIBUTING ELEMENT. CHARLES E. JOHNSTON and ANDREW JAVER JORGENSON, Vancouver, British Columbia, Canada. Filed Apr. 28, 1920. Serial No. 377,348. 8 Claims. (Cl. 219—34.)

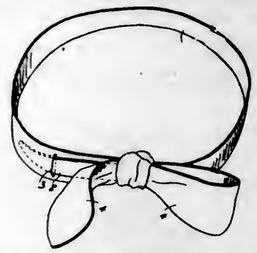
1. A device of the class described comprising, in combination, a hollow base, a boiler mounted thereon, a casing surrounding the base and boiler and spaced therefrom, a



hood mounted upon the casing and overlying the boiler, said hood having distributing means in communication therewith, and an electrical heating medium arranged within the base.

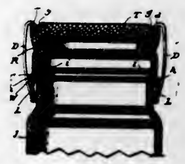
1,383,212. LUBRICATING DEVICE. LOUIS JORDEN, San Francisco, Calif. Filed Mar. 22, 1921. Serial No. 454,503. 10 Claims. (Cl. 184—1.)

9. A lubricating device for saws and the like comprising a housing; a lubricant retainer rotatably mounted within the housing and arranged to detachably engage a lubricant such as a strip of fat; a handle extending from one end of the housing; a pinion rotatably mounted within said handle and arranged to detachably engage said retainer; a rack operatively connected to the pinion and arranged to rotate the same; and an arm pivotally mounted upon the handle and operatively connected to the rack whereby said pinion may be actuated to rotate the retainer and expose the lubricant side of said retainer outside of the housing.



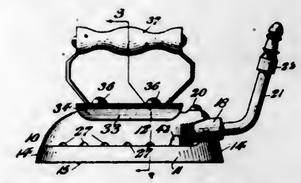
1,383,213. COOKING-STOVE. THEODORE KAUFER, New York, N. Y., assignor to Kaufer Manufacturing Company, Inc., New York, N. Y., a Corporation of New York. Filed June 18, 1919, Serial No. 304,982. Renewed Dec. 4, 1920. Serial No. 428,379. 3 Claims. (Cl. 126—1.)

1. A portable cooking stove comprising an outer casing, a fire pot therein, a griddle on top of the casing, there being restricted outlets for the products of combustion in the side walls of the casing spaced below the top thereof, said walls being otherwise imperforate, whereby a layer of hot air is retained below the griddle and a removable drum-shaped cover for said griddle.



1,383,214. BOW AND NECKTIE. GORDON ALEXANDER ALLAN KING, London, England. Filed May 8, 1920. Serial No. 379,891. 1 Claim. (Cl. 2—82.)

A necktie of the kind described, having one end tapered or narrowed substantially to a point and stiffened, and having a slit at a suitable point in its length so that when the other end of the tie has been manipulated into the form of a bow having one end of double thickness and the other end of a single thickness of material in the known manner, the tapered or narrowed end may be

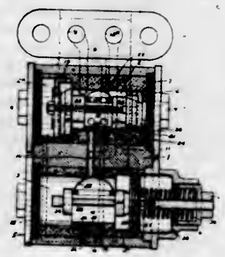


inserted in the slit and pushed between the collar and the portion of the tie passing around same, substantially as and for the purposes described.

1,383,215. JAR-CLOSURE. JOHN L. KIVLAN, Boston, Mass. Filed Mar. 7, 1919. Serial No. 281,307. 6 Claims. (Cl. 215—86.)

2. A jar closure comprising in combination, a cover having a peripheral ridge defined by an interior circular groove, diametrically opposed toggle joint levers having down turned nibs on one member to engage said groove within said ridge and an annular wire pivoting and frictionally securing said toggles to the neck of the jar.

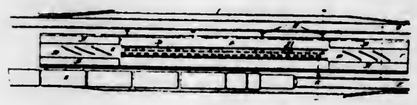
1,383,216. GAS-IRON. HARRY A. KOENIG, Philadelphia, Pa. Filed Apr. 8, 1919. Serial No. 288,486. 7 Claims. (Cl. 158—23.1.)



1. In a gas iron, the combination of a body provided with a series of air inlets in close proximity to the bottom of said body and two series of vents in the top, a burner, and means arranged to form two longitudinally disposed channels across the top of said body in vertical alinement with said series of vents respectively.

1,383,217. COMBINATION-CALIPERS. JOSEPH KONZ, Olympia, Wash. Filed July 29, 1919. Serial No. 314,108. 1 Claim. (Cl. 33—152.)

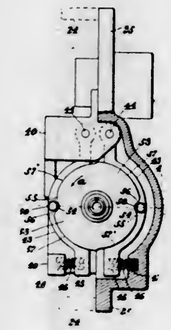
In a tool of the class described, a pair of pivoted legs, each leg having outwardly and oppositely directed feet at its free end, each leg being provided with a longitudinal groove in one face, a pointer slidably mounted in said groove and having a point adapted to be extended past the end of the leg and between the oppositely directed feet thereof, and means for securing the pointer in adjusted position.



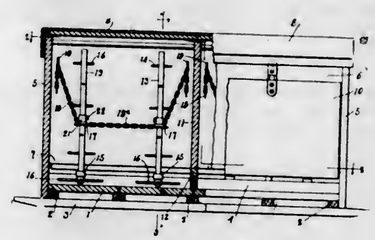
1,383,218. REGULATING-VALVE FOR AIR-BRAKE SYSTEMS. LOUIS J. H. KRUSE, Fort Wayne, Ind. Filed Nov. 4, 1919. Serial No. 335,603. 4 Claims. (Cl. 50—11.)

1. A regulating valve for air brake systems comprising two communicating chambers, a slide valve to control the said communication, means within one of the chambers for actuating the valve, said chamber having two communications with the main reservoir of the system for supplying air under pressure to the chamber for operating said means in opposite directions, a slide valve within the other chamber for controlling one of the communications between the first named chamber and the main reservoir, and means within said other chamber responsive to the pressure of the air in the train line of the system for actuating the latter valve.

1,383,219. [WITHDRAWN.]



1,383,220. PASSENGER AND FREIGHT TRANSFER SYSTEM. WILLIAM P. LAMAR, Atlanta, Ga. Filed Feb. 25, 1918, Serial No. 219,089. Renewed Apr. 12, 1921. Serial No. 460,660. 10 Claims. (Cl. 104—20.)

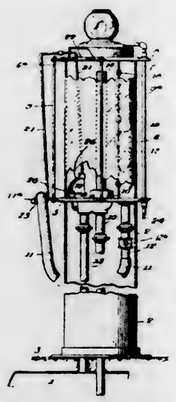


1. In a transfer system of the class described, a trackway, a car adapted to be transferred to a vehicle moving along said trackway, means for accelerating said car, and means for transferring said car to said vehicle, said means including a curved rail member, and a member adapted to engage the same, one of said members being secured to said trackway and the other being secured to said vehicle.

1,383,221. RETARDING MECHANISM FOR LIFTING-JACKS. WALTER E. LOMBARD, Arlington, Mass., assignor to A. O. Norton, Inc., Boston, Mass., a Corporation of Maine. Filed Aug. 3, 1920. Serial No. 401,069. 15 Claims. (Cl. 188—184.)

1. The combination with a lifting jack having a worm shaft adapted to be driven in either direction; a brake wheel loosely mounted on said worm shaft; a member revoluble with said worm shaft; a one-way driving connection between said brake wheel and said member; and a braking member adapted to coact with said wheel.

1,383,222. MECHANICAL STOCK-FEEDER. WILLIAM R. LUKENS and CHARLES F. GALLAGHER, Hillsboro, Ohio, assignors of one-fifth to Allen T. Pence, one-fifth to A. B. Simpson, one-tenth to Joseph Gavey, one-tenth to E. F. Stevens, one-fifth to Wm. R. Lukens, and one-fifth to Robert B. McMullen, Hillsboro, Ohio. Filed Oct. 3, 1919. Serial No. 328,200. 6 Claims. (Cl. 119—54.)

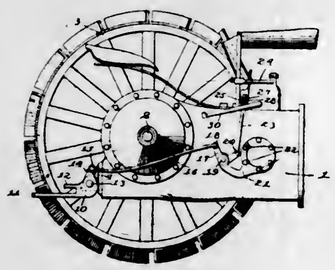


1. In a mechanical feeder for stock, the combination with a hopper and a trough communicating therewith, of an agitator and a movable base therefor suspended to swing freely in the hopper in every direction, said agitator passing through said base and being capable of being reciprocated and rotated with respect thereto.

1,383,223. VISIBLE-MEASURE DISPENSING APPARATUS. ANGUS MCKELLAR, Salt Lake City, Utah. Filed Nov. 18, 1919. Serial No. 338,799. 8 Claims. (Cl. 221—100.)

1. In a liquid dispensing apparatus, a dispensing receptacle, including in its lower portion a base member having formed therein an intake pipe opening extending upwardly from the lower face of said base member and communicating with said receptacle, an independent discharge pipe opening, an upper overflow pipe opening, a lower return pipe opening, an upper drain valve opening in un-

obstructed communication with said return pipe opening, and a constantly open communicating passage way formed

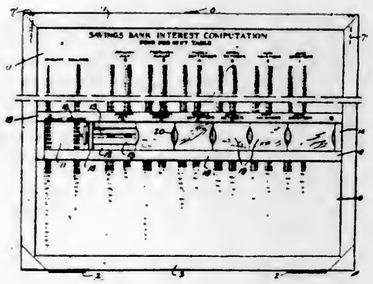


within said base member and providing a conduit between said upper overflow pipe opening and said lower return pipe opening.

1,383,224. PROCESS OF MAKING SODIUM HYPOCHLORITE. JOHN R. MACMILLAN, Niagara Falls, N. Y., assignor to Niagara Alkali Company, Niagara Falls, N. Y., a Corporation of New York. Filed July 29, 1920. Serial No. 399,763. 1 Claim. (Cl. 23—13.)

In the manufacture of sodium hypochlorite solution, the process which comprises leading chlorin into a mixture of lime and sodium carbonate solution, and separating the calcium carbonate produced from the resultant hypochlorite solution.

1,383,225. ATTACHMENT FOR TRACTORS. FRANK E. MEKAN, Dexter, Mo. Filed Sept. 27, 1920. Serial No. 413,018. 3 Claims. (Cl. 180—82.)

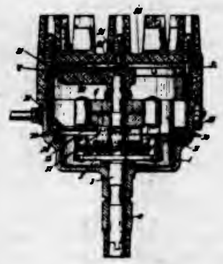


1. In a motor propelled tractor having a frame, power transmitting mechanism between the motor and driving wheels, a clutch in said transmitting mechanism and means for controlling said clutch; a coupling device pivotally mounted on said frame, a rod adjacent to said means having a roller adjustably mounted thereon for engaging said means and actuating said clutch, and connections from said coupling device to said rod for actuating said rod in accordance with the movements of the coupling device relatively to said frame.

1,383,226. TOOL. GEORGE W. MOAD, Soldier, Iowa. Filed Jan. 14, 1919. Serial No. 271,029. 1 Claim. (Cl. 72—136.)

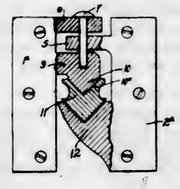
A tool of the class described comprising a flat strip constructed of wood, a cylindrical handle being secured to one face thereof, a block arranged on the opposite end of said flat strip and having its upper face having ends inclined in opposite directions, the edges at the inclined ends having recesses to provide finger holds, a metallic strip being secured to each side edge of said flat strip and the former being of the same width as the thickness of the board, means for securing said strips to the flat strip, the ends of said tool having recesses formed therein at the edges thereof, the ends of said metallic strip being bent at right angles and extending into said recesses, and means for securing said strips in the recesses.

1,383,227. SAVINGS-BANK INTEREST-INDICATOR. HARRY S. MOIR, Chico, Calif. Filed May 25, 1920. Serial No. 384,037. 3 Claims. (Cl. 235—89.)



1. A savings account interest sheet comprising a pair of parallel amount dollars columns of numerals, the numerals of one column being differentiated from the numerals of the other column and the numerals of said columns being in horizontal line, a plurality of parallel differentiated numeral columns parallel with said pair of columns, the numerals of the plural columns being in horizontal plane with each other and with the numermerals of the pair of columns, the plural columns alternating with each other in differentiating numerals, said plural columns having the names of the months of a year assembled at the head thereof, and a vertically movable slotted holder including a plurality of transversely movable gates, one gate adapted to serve as an indicator within the slot of said holder, said gates being adapted to be moved from one of the months columns to another according to the date of deposits and to provide for adjusting the indicator according to the amount.

1,383,228. ROADWAY. STUART B. MOORE, Houston, Tex. Filed Mar. 23, 1920. Serial No. 368,067. 6 Claims. (Cl. 238—5.)

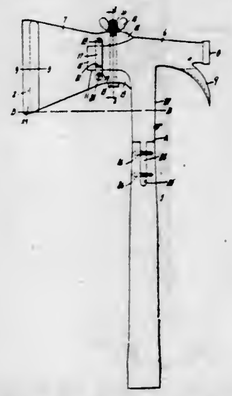


1. In a roadway, a vehicle wheel way comprising rails of hard material such as cement, and asphaltic concrete covering said rails.

1,383,229. IGNITION APPARATUS. WILLIAM B. MOSES, Watertown, Mass., assignor to Gray & Davis Inc., Cambridge, Mass. Filed Apr. 8, 1918. Serial No. 227,184. 16 Claims. (Cl. 200—22.)

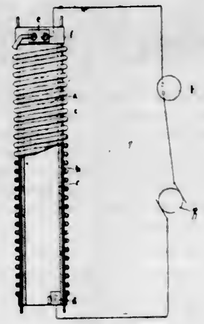
9. In ignition apparatus for internal combustion engines, in combination, a contact set comprising a fixed and a movable contact, a rotatable shaft, movable-contact actuating means carried by said shaft comprising spaced variable length actuator portions, and speed responsive means for varying the length of said actuator portions to decrease or increase the distance between them.

1,383,230. HINGE. CHARLES G. MURPHY, Trafford, Pa. Filed Aug. 28, 1920. Serial No. 406,561. 2 Claims. (Cl. 16—106.)



1. In a hinge, two leaves provided with overlapping lugs having alined apertures, a pin fitting through said lugs, opposed and alined socket members carried by said leaves, and a pivot member positioned between and fitting into said socket members.

1,383,231. FAUCET. CARL A. NELSON, Moline, Ill. Filed May 27, 1919. Serial No. 300,033. 2 Claims. (Cl. 251—106.)



1. In a device of the class described, a casing provided with a plurality of inlet ports and an outlet port, a valve member having a port therein proportioned to communicate with all of the ports at one time and to vary the relative proportion of fluid admitted through the inlet ports, an indicating device having a fixed relation to the valve member and the port thereof, and means coöperating with the indicating device and including yoke elements constructed to fit the casing in a predetermined position with reference to the ports thereof, whereby the relative position of the valve port and the remaining ports is controlled.

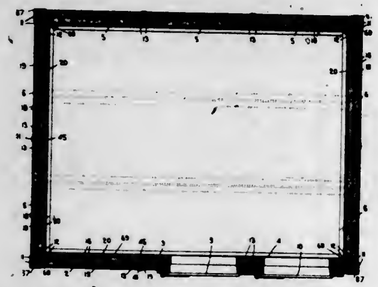
1,383,232. COMBINATION HAMMER AND HATCHET. STUART NOSEWORTHY, Cambridge, Mass. Filed Apr. 28, 1920. Serial No. 377,283. 2 Claims. (Cl. 145—3.)

2. A hammer, a handle therefor, an end on said hammer extending transversely of said handle, a hatchet blade provided with a slot in which said end is adapted to fit, said slot being located between two jaws on said hatchet blade and a bolt extending through said jaws and through said end of said hammer and fastening them together, and a pair of oppositely disposed links, each of said links pivoted at one end thereof to said jaws and provided with a notch adjacent their opposite ends adapted to engage a projection on the other of said jaws.

1,383,233. MEANS FOR DETECTING OR MEASURING MOISTURE. CHARLES ALGERNON PARSONS and ALEXANDER HENRY LAW, Newcastle-upon-Tyne, England; said Law assignor to said Parsons. Filed July 10, 1918. Serial No. 244,264. 1 Claim. (Cl. 175—183.)

A device for indicating the presence of moisture in air or gases comprising a metal cylinder having its curved surface covered with a material the electrical insulation resistance of which varies with the amount of moisture in the surrounding atmosphere, a coil of bare wire wound around the insulating material, and terminals connected respectively to the metal cylinder and to the wire coil, substantially as described.

1,383,234. FLAGPOLE. ERNEST H. RAGUSE, Summit, Ill. Filed Apr. 5, 1919. Serial No. 287,783. 3 Claims. (Cl. 116—173.)

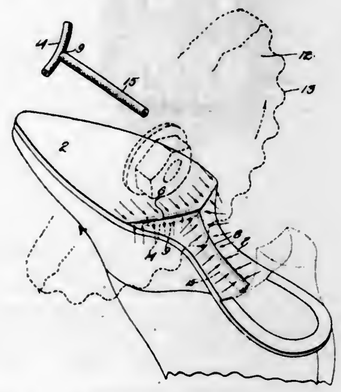


1. In a device of the class described, a flag pole, bearing members thereon, sleeves slidably mounted on the

pole, one of the sleeves being rotatable with reference to the other, means for raising and lowering the sleeves

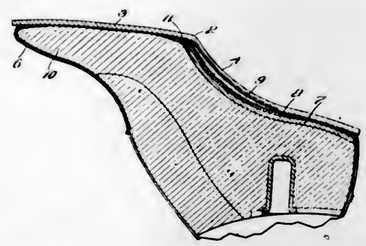
into and out of engagement with the bearing members, and an object displayed by one of the sleeves.

1,383,235. REFRIGERATOR. HARRY H. REED, Winthrop, Mass. Filed Apr. 14, 1921. Serial No. 461,297. 5 Claims. (Cl. 45—71.)



2. In a sectional cement finish refrigerator, the combination with a floor portion, of a wall made in individual sections each comprising a skeleton framework, a filling of insulating material and a coating of plastic material on one or both sides, a roof or ceiling supported by said walls and angle iron finish members inclosing the corner formed by the ceiling and walls and operating to secure the wall sections together.

1,383,236. THIRD-RAIL-BRACKET-CLAMP CAP. HUGH RICE, Yonkers, N. Y. Filed Nov. 10, 1920. Serial No. 423,157. 6 Claims. (Cl. 191—29.)

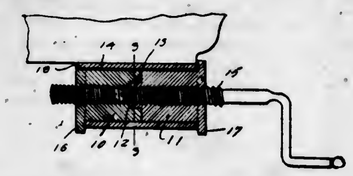


1. The combination with a bracket, a third rail spaced from the bracket, a clamp of insulation embracing the rail, and compression means acting upon the clamp to hold it and the rail to the bracket, of a cap of insulating material extending across the top of the clamp, substantially as set forth.

1,383,237. METHOD OF MAKING BOOTS AND SHOES. FRANK E. ROBERTS, Lynn, Mass., assignor of one-fourth to Albert N. Blake and one-fourth to Frank C. Stetson, Lynn, Mass., and one-fourth to Frederick W. Howe, Swampscott, Mass. Filed July 20, 1920. Serial No. 397,695. 6 Claims. (Cl. 12—142.)

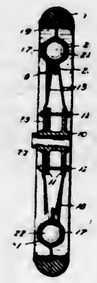
1. The method of making boots and shoes of the class described which consists in first assembling the upper and inner sole upon a last; then placing a bolstering member in position upon the innersole; then securing the outersole in place, and lastly beating down the outersole so as to shape the latter to the last and bolstering member by crowding the material of the outersole toward said bolstering member and the last simultaneously.

1,383,238. METHOD OF MAKING BOOTS AND SHOES. FRANK E. ROBERTS, Lynn, Mass., assignor to Gotham Process Shank, Inc., Lynn, Mass., a Corporation of Massachusetts. Filed Oct. 6, 1920. Serial No. 415,085. 4 Claims. (Cl. 12—142.)



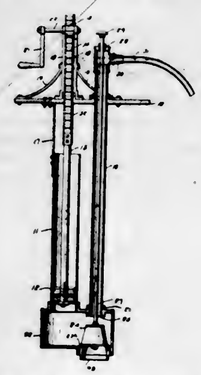
4. The method of making turned boots and shoes of the class described which consists in first securing the upper and outer-sole together, then turning the shoe right side out and inserting therein a shank stiffener with a longitudinally disposed bolstering member between said stiffener and the outer sole, then drawing the shoe onto a last with a transversely disposed bolstering member fastened to the last at the junction of the shank and forepart of the latter so as to occupy a position between the outer-sole and last, and then beating down the outersole so as to utilize said bolstering members to shape the outer-sole.

1,383,239. FEED-NUT. LOUIS I. ROLAND, Kernville, Calif. Filed June 12, 1920. Serial No. 388,596. 2 Claims. (Cl. 74—40.)



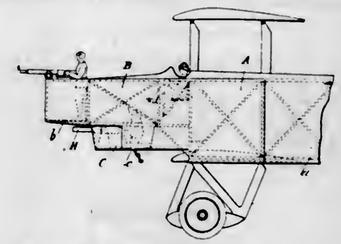
1. A feed nut having a sleeve or housing and axially alined sections or members fitted in said sleeve or housing

in endwise relation to each other and provided at their adjacent ends with interlocking elements, one of said



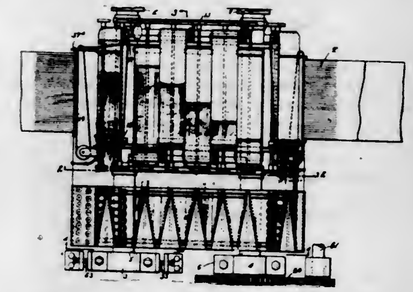
sections or members being held by the sleeve to prevent rotary movement thereof.

1,383,240. VEHICLE-WHEEL. RICHARD R. ROMNEY, Seattle, Wash., assignor to Ellis Resilient Wheel Corporation, Seattle, Wash., a Corporation of Washington. Filed Aug. 13, 1919. Serial No. 317,170. 2 Claims. (Cl. 152—28.)



1. In a wheel, the combination of a hub, two circular plates carried thereby in spaced relations and having scalloped peripheries, said plates being arranged to have the peripheral projections of one be in radial planes medial of the peripheral concavities of the other plate, cup elements provided in the projections of each of said plates, a rim having an internal web provided with cup elements with the cavities thereof opposing the cup elements of each plate and extending into the concavities between the projections of the other plate alternately, resilient balls in the opposing cup elements of said web and plates, and means for connecting said plates to the hub.

1,383,241. GREASE-PUMP. JEREMIAH V. ROSER, Nashville, Tenn., assignor of one-half to Charles A. Brengelman, Nashville, Tenn. Filed Sept. 21, 1920. Serial No. 411,713. 6 Claims. (Cl. 103—75.)



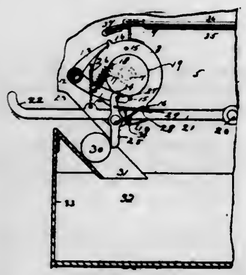
1. A pump for the purpose indicated having a cylinder and piston operating therein, means for actuating the piston, a discharge tube, and a frusto-conical valve for respectively controlling the inlet to the cylinder and the discharge through said tube, said inlet to the cylinder being of a larger diameter than the tube and closed by the large end of the valve.

1,383,242. ARMING OF FIGHTING AND OTHER AEROPLANES. JEAN JULES MARIE ANTOINE EUGÈNE SCHNEIDER, Paris, France. Filed May 10, 1920. Serial No. 380,262. 8 Claims. (Cl. 244—30.)

1. In an aeroplane, the combination of the fore-nose of the fuselage, a gun turret revolubly suspended beneath said fore-nose, and means for revolving said turret.

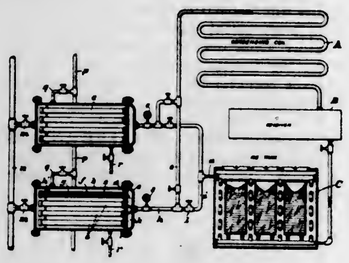
1,383,243. PAPER-REINFORCING MACHINE. AARON SCHWARTZ, Brookline, Mass., assignor to Safepack Mills, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 6, 1918. Serial No. 248,640. 10 Claims. (Cl. 154—1.)

1. Apparatus of the kind described, comprising means for supporting and advancing a paper web in longitudinal continuous movement, and means continuously moving longitudinally for depositing transverse threads thereon during the web movement mounted for a cycle of movement into and away from operative relation with the paper web, and having means coöperative therewith for drawing the threads transversely of the web while out of operative relation with the web.



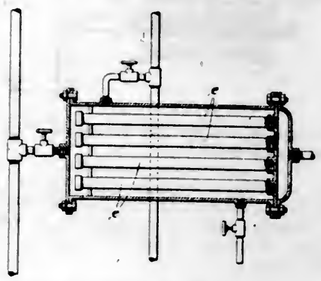
1,383,244. COMBINATION AIR-VALVE AND PRIMING-CUP. FRITZ SCHWARZER, St. Gallen, Switzerland. Filed Apr. 9, 1920. Serial No. 372,700. 3 Claims. (Cl. 123—187.5.)

1. In a valve of the character set forth, in combination, a one-piece body member comprising a polygonal portion,



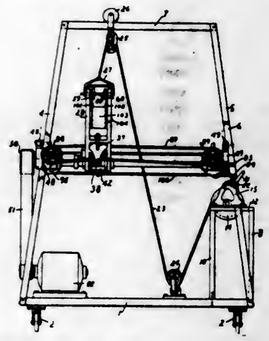
an outwardly threaded neck portion presenting at the lower end a valve seat, a cup portion, and said neck portion and part of said polygonal portion presepting an axially directed central bore in communication with said valve seat, a duct connecting said cup portion and said central bore, a socket extension within said cup portion centrally bored in axial alinement with the first said bore, a spring controlled valve spindle slidably arranged in said alined bores, a valve body at the lower end of said spindle adapted to coact with the said valve seat, and means for locking said valve spindle in the open position.

1,383,245. TOILET-PAPER DISPENSER. JAMES H. SELLERS, Oklahoma, Okla., assignor to The National Sanitary Service Company, Oklahoma, Okla., a Corporation of Oklahoma. Filed July 1, 1918. Serial No. 242,864. 2 Claims. (Cl. 194—22.)



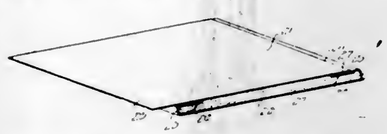
1. A device for dispensing packages comprising a rotary member, means carried by said rotary member for engaging and delivering a package, a two-way member for controlling and releasing the rotary member, a lever adapted to lock said rotary member, and a coin operated trip mounted on said lever adapted to normally hold said two-way member and said lever each in locking engagement with the rotary member.

1,383,246. REFRIGERATING APPARATUS. CURTIS M. SMITH, Washington, D. C., and HERMAN WEIGAND, La Crosse, Kans. Filed Jan. 16, 1919. Serial No. 271,465. 3 Claims. (Cl. 62—118.)



3. In an absorbent ice machine the combination of a chamber, containers located therein, each comprising an outer tube and an inner perforated tube, absorbent material filling the annular space between the outer and inner tubes, means for heating and cooling the chamber, and a conduit for the ammonia gas connecting with the interior of the perforated tube, substantially as described.

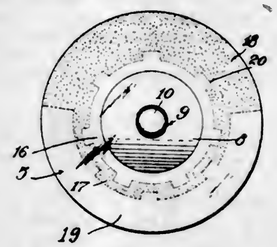
1,383,247. ABSORBENT MATERIAL FOR USE IN ICE-MACHINES. CURTIS M. SMITH, Washington, D. C., and HERMAN WEIGAND, Baxter Springs, Kans. Original application filed Jan. 16, 1919, Serial No. 271,465. Divided and this application filed Mar. 5, 1920. Serial No. 363,422. 2 Claims. (Cl. 252.)



1. An absorbent material for use in ice machines consisting of anhydrous calcium chlorid with charcoal distributed throughout the mass, substantially as described.

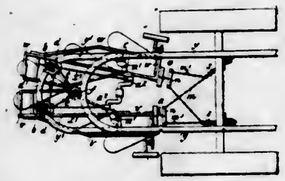
1,383,248. ENDLESS BUCKET ELEVATOR. FLOYD E. TOWNSEND, Berkeley, Calif., assignor of one-half to Eugene G. Palmer, San Francisco, Calif. Filed May 5, 1919. Serial No. 294,713. 5 Claims. (Cl. 193—3.)

1. An endless bucket elevator comprising the combination of a truck, a tower thereon, a horizontal drive shaft on the tower, an arm slidable along said shaft, means to adjust the arm to different positions along the shaft, means to raise or lower the arm, an endless elevator leg supported by the arm, means to swing the elevator leg toward or away from the truck, and means to operate the elevator from the drive shaft.



1,383,249. PLASTER-BOARD. CLARENCE W. UTZMAN, Chicago, Ill., assignor, by mesne assignments, to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 13, 1918. Serial No. 249,630. 6 Claims. (Cl. 154—45.9.)

1. A plaster board of the kind described comprising a body of suitable material provided with covering sheets on

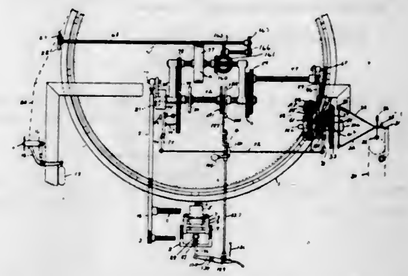


the faces thereof, one of the covering sheets being scored and thence folded to inclose the side edge and overlying the other face of the board.

1,383,250. HEADLIGHT-LENS. HENRY J. WAGNER, Boston, Mass., assignor of one-half to Philip F. McGinn, Boston, Mass. Filed Aug. 28, 1920. Serial No. 406,629. 1 Claim. (Cl. 240—48.4.)

A device of the character described comprising a transparent lens, having opaque screening means disposed centrally of the lens, the upper portion of said lens having translucent screening means, said translucent screening means extending from the edge of the upper portion to the intermediate portion of the lens and terminating in spaced relation to the opaque screening means, whereby a transparent portion of the lens is exposed, said translucent screening means also extending in semi-circular formation over the intermediate portion of the lower portion of said transparent lens in spaced relation to the edge of said lower portion and the opaque screening means.

1,383,251. MECHANICALLY-PROPELLED PLOW. FRANCIS MARK WALLER, Stafford, England. Filed Sept. 27, 1917. Serial No. 193,534. 10 Claims. (Cl. 97—27.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

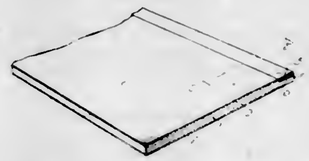


1. In a plowing implement, the combination of two gang plows one right-handed and the other left-handed arranged side by side, draft tackle coupling each of said plows to the frame of the implement, means for suspending said plows from the frame of the implement, mechanism for swinging either plow into the line of draft and mechanism for raising and lowering either plow.

1,383,252. COUPLING MEANS FOR RELEASABLY SUSPENDING A MASS. GORDON AUGUSTUS WEARHAM, London, England. Filed Feb. 10, 1921. Serial No. 443,952. 8 Claims. (Cl. 294—83.)

1. In apparatus for releasably suspending a mass, the combination with a frame or housing, of a hook from which the mass is suspended pivoted to the housing so as to tend to turn to release the mass, a detent engaging the said hook adapted to prevent such turning, an arm pivoted to the frame, on which the detent is pivoted and a trigger adapted to hold the detent in its hook-engaging position.

1,383,253. COLOR-PRINTING MECHANISM. CLINTON ALVORD, Worcester, Mass. Filed Aug. 20, 1919. Serial No. 318,716. 148 Claims. (Cl. 91—21.01.)

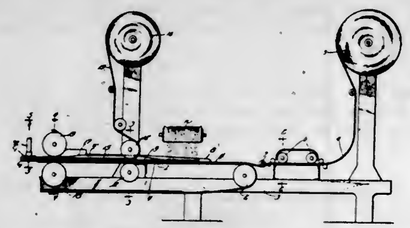


139. In a device of the class described, the combination of means for holding under tension yarn arranged in bights, and automatic means for printing said yarn at variably spaced apart intervals.

143. In combination, automatic means operable to move yarn variable distances and a color mechanism operable to contact the yarn.

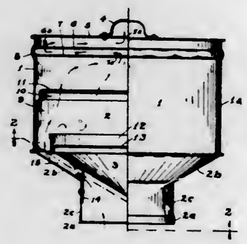
148. In a device of the class described, the combination of a yarn support, a color-striping mechanism for applying stripes to the yarn supported by said support, a color ridge remover, and means associated with said mechanism for automatically actuating said ridge remover.

1,383,254. PLASTER-BOARD. CHARLES R. BIRDSEY, Hinsdale, Ill., assignor, by mesne assignments, to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed July 29, 1918. Serial No. 247,244. 6 Claims. (Cl. 154—45.9.)



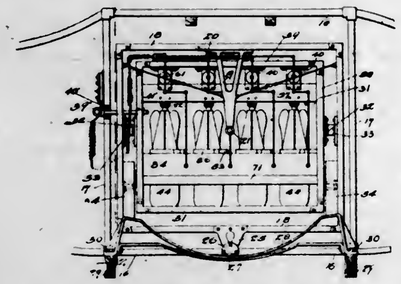
1. A plaster board comprising a body, a relatively stiff covering sheet of fibrous material adhering to one face of the body and extending to adjacent one edge of the body, and a second covering sheet adhering to the other face of the body and having an extension at one side folded over to inclose the edge of the body and overlie a portion of the body and the edge portion of the first covering sheet.

1,383,255. MACHINE FOR AND METHOD OF MAKING PLASTER-BOARD. CHARLES R. BIRDSEY, Hinsdale, Ill, assignor, by mesne assignments, to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 2, 1920. Serial No. 348,939. 9 Claims. (Cl. 154—2.)



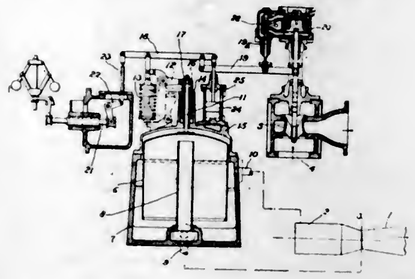
1. In a machine of the kind described and in combination, a conveyer, means for supplying the cover sheet of suitable material thereto, means for folding up the edges of the sheet and maintaining the same turned up, means for depositing a plastic body on the sheet between

said turned up edges, means for applying a second cover sheet on said plastic body, means for folding said edges



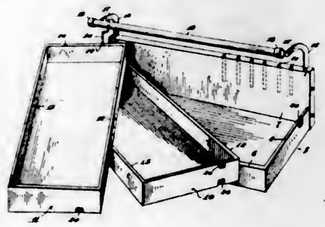
of the first sheet over onto the second cover sheet, and means for pressing the same down on the said second sheet.

1,383,256. BAKING-OVEN. GEORGE E. COOPER, Nashville, Tenn. Filed Nov. 3, 1920. Serial No. 421,487. 5 Claims. (Cl. 126—275.)



1. An oven of the class described, including an outer cylindrical casing provided with a top, baffle plates adjacent said top and provided with suitably spaced apertures, an inner supporting cylindrical casing arranged to fit loosely over the said outer casing, an inverted cone-shaped deflector plate within the inner casing, supporting means secured to said inner casing and said deflector plate adapted to support said deflector plate in spaced relation to the sides of the inner casing, a perforated shelf removably secured to the upper edge of said inner casing, an imperforate shelf positioned on the rim of the deflector plate, and a handle fastened to the top of the outer casing.

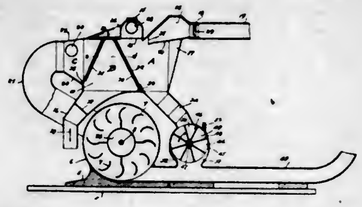
1,383,257. AIRCRAFT BOMBING APPARATUS. HAROLD A. DANNE, New York, N. Y. Filed Apr. 14, 1919. Serial No. 289,811. 7 Claims. (Cl. 244—1.)



1. In apparatus for use upon an air craft, a gimbal joint structure embodying outer and inner frames, a barrel secured to the inner frame and arranged substantially parallel with the vertical axis thereof, an aerial bomb having a tail adapted for insertion within the barrel, means to support the bomb with its tail projected into the barrel and to release the same, and a cartridge adapted for insertion within the barrel, and means for simultaneously releasing said bomb and igniting said charge.

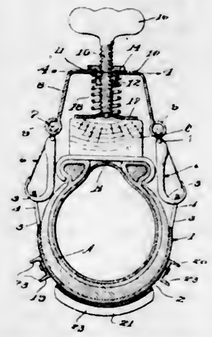
1,383,258. CONSTANT-VOLUME REGULATOR FOR TURBO-COMPRESSORS. PAUL HOFFMAN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 30, 1919. Serial No. 320,911. 10 Claims. (Cl. 103—92.)

1. A constant volume regulator for a motor driven turbo compressor, comprising a Venturi tube forming the intake of the compressor, a float, movement of which is adapted to vary the amount of power to drive the motor of said turbo compressor, said float being forced up or down by fluctuations in pressure differences between the throat and full diametered portions of said Venturi intake tube, whereby a substantially constant quantity of fluid is delivered to the intake of the turbo compressor regardless of the discharge pressure.



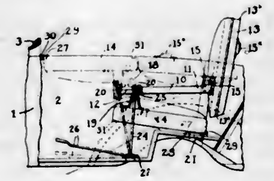
1,383,259. TOOL-BOX. HERMAN H. JORDAN, Los Angeles, Calif. Filed May 26, 1919. Serial No. 299,745. 1 Claim. (Cl. 206—45.)

A tool box comprising a bottom tray, a back wall on said bottom tray extending outwardly therefrom, a series of superimposed trays, a pivot pin connecting said superimposed trays and the bottom tray adjacent to a corner thereof near said back wall; said back wall forming an abutment against which the superimposed trays may be closed, a pair of brackets on said back wall extending forwardly over the uppermost tray, and a bar carried by said brackets extending substantially on the plane of the longitudinal center of said trays.



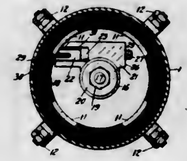
1,383,260. GRAIN-CLEANER. CHARLES ARGYLE TORRENCE, Winnipeg, Manitoba, Canada. Filed Sept. 3, 1919, Serial No. 321,401. Renewed May 11, 1921. Serial No. 468,724. 12 Claims. (Cl. 130—17.)

1. In a grain cleaning machine, a casing, a grain feeding spout connected to the casing, a fan operatively connected to the casing and designed to effect an air blast through the casing and the feed spout, screens within the casing intermediate of the spout and fan, a



discharge spout communicating with the fan, a rotary feeder associated with the discharge spout and an outlet spout for cleaned grain leading from the casing to the feeder.

1,383,261. ANTISKIDDING DEVICE. WATSON E. TUBBS, Milwaukee, Wis. Filed Aug. 27, 1918. Serial No. 251,686. 3 Claims. (Cl. 152—14.)

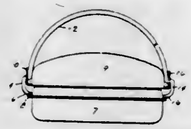


1. In an anti-skid device, the combination with a vehicle tire, and a vehicle wheel, of a device transversely surrounding the tire and wheel felly, a spring interposed between the felly and tire surrounding device for resiliently maintaining said tire surrounding device in gripping engagement with the crown of the tire, and means for adjusting the spring to vary the gripping engagement of the tire surrounding device upon the tire.

1,383,262. CONVERTIBLE-ROADSTER BODY. COON A. DEAS, Rock Hill, S. C., assignor to Rock Hill Buggy Company, Rock Hill, S. C., a Corporation of South Carolina. Filed May 8, 1920. Serial No. 379,895. 6 Claims. (Cl. 296—66.)

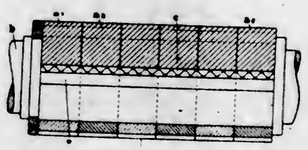
1. The combination of a vehicle body having a compartment, a seat and a back therein of size and form adapted to jointly form a closure for said compartment, a bar secured at each side of the compartment, means for pivoting the back to the rear end of said bar whereby the back may turn about said pivot from the erect position to serve as a back to the horizontal position to serve as a cover, bracket on the seat having pivot studs, slide bearings for said pivot studs so disposed on said bars that when the pivot studs are at the front end of said slide bearings the seat may be turned over to function as a cover and when said pivots are at the rear end of said slide bearings the seat may assume its normal position to receive passengers.

1,383,263. IGNITION-TIMER. EDWARD B. JACOBSON, Pittsfield, Mass., assignor to J and B Manufacturing Company, Pittsfield, Mass., a Corporation of Massachusetts. Filed Feb. 28, 1919. Serial No. 279,743. 1 Claim. (Cl. 200—19.)



In an ignition timer, the combination with a casing, contact-elements mounted in the casing, and a rotor portion mounted to rotate in the casing and having an arm arranged lateral to its axis, of a spring-pressed contactor carried by said arm and arranged to yieldingly engage the contact-elements successively, said contactor being provided at its outer end with a cutting edge formed by the intersection at an acute angle of its bearing face with its front side and adapted to remove deposits adhering to the surfaces of the contact-elements.

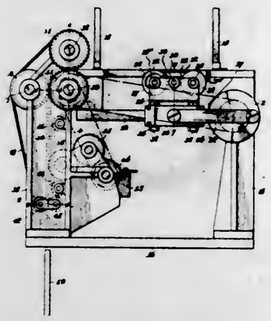
1,383,264. SOLID NON-HYGROSCOPIC IRON SALT AND THE PREPARATION THEREOF. OTTO RÖHM, Darmstadt, Germany. Filed July 16, 1920. Serial No. 396,876. 8 Claims. (Cl. 23—13.)



6. A chemical compound having the formula "$FeSO_4Cl$."

1,383,265. CAN-COVER LIFTER. EDWARD B. BIRKENBEUEL, Portland, Oreg. Filed Nov. 29, 1920. Serial No. 427,068. 4 Claims. (Cl. 220—43.)

1. In a can cover lifter, the combination of a can having a flange below the top of its side wall, a slip cover for said can having a pair of perforated up-turned ears formed integral with said cover, and a bail member whose ends pass through said ears before they are up-turned after which they journal therein, and whose extreme ends engage the sides of said can.

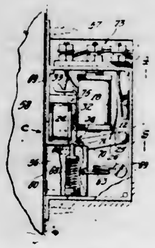


1,383,266. TOOTHED WHEEL. ERIC BROWN, Baden, Switzerland, assignor to Aktiengesellschaft Brown Boverie & Cie., Baden, Switzerland. Filed Mar. 9, 1917. Serial No. 153,757. 8 Claims. (Cl. 74—7.)

8. In combination a shaft, a plurality of toothed wheels disposed about said shaft, a projection on one member

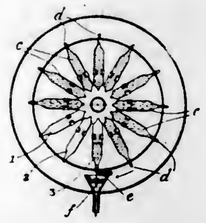
adapted to come in contact with a part substantially integral with the other member and rigid members capable of relative movement connecting said projection and said other member.

1,383,267. PAPER-FEEDING MECHANISM. HILARIO DE ESCOBALES, New York, N. Y., assignor to H. Escobales Co. Inc., New York, N. Y., a Corporation of New York. Filed Mar. 13, 1917. Serial No. 154,447. 12 Claims. (Cl. 271—45.)



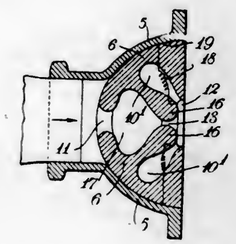
4. In mechanism for delivering blanks individually and successively from a pile of blanks and with each delivered blank having an adhesive-containing face, and wherein each blank is advanced by a continuous movement, feed mechanism in the path of a blank advancing from the pile, said mechanism including gear-connected rolls and bands carried by the rolls, said bands and rolls being positioned to form band-runs coöperating to support and carry the blank throughout a flight of predetermined length, and adhesive-applying mechanism including an applying face operative on the blank intermediate the ends of the flight, said runs being positioned to support the blank against the pressure of adhesive-applying activity and the runs and applying face being mutually arranged and formed to maintain the band formations free from contact with the applying face in the absence of a blank.

1,383,268. NON-DUSTING CEMENT CONCRETE FLOOR OR LIKE ARTICLE. CARLETON ELLIS, Montclair, N. J., assignor to Ellis-Foster Co., a Corporation of New Jersey. Filed Oct. 2, 1917. Serial No. 194,314. 3 Claims. (Cl. 91—68.)



3. A cement concrete floor coated with a cumaron resin having a melting point substantially above 75° C.

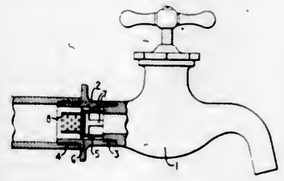
1,383,269. ELECTRIC-LOCK STRIKE. NATHAN FIENBERG, Bondi, near Sydney, and WALTER LESLIE WAKEHAM, Five Dock, near Sydney, New South Wales, Australia. Filed Sept. 21, 1920. Serial No. 411,853. 4 Claims. (Cl. 70—52.)



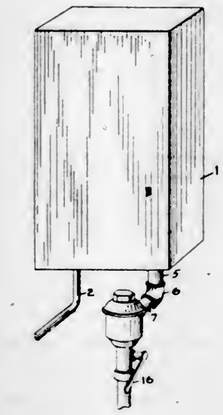
1. Electromagnetic control means for doors, comprising a spring backed hinged staple engageable by a latch bolt and adapted when free to be swung aside to allow said latch end to pass it, a drop pawl adapted to take behind said staple to chock it, an electromagnet adapted for lifting said pawl to free said staple, a counterbalanced pendent armature with toe piece adapted to engage and hold said pawl in its raised position, a resetting electromagnet adapted to pull off said pendent armature to release said pawl, a contacting member on said staple adapted to strike said pendent armature in the relocking movement of said staple, and separate circuit closing contacts with spring resetting means for closing the circuits of said pawl lifting electromagnet and said resetting electromagnet.

1,383,270. MEANS FOR COOLING INTERNAL-COMBUSTION ENGINES AND OTHER MACHINERY. ALBERT HENNING, Leytonstone, England. Filed Oct. 2, 1918. Serial No. 256,633. 4 Claims. (Cl. 221—106.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. An appliance for cooling purposes comprising a movable carrier with means for holding flasks, ampuls or the like containing highly volatile liquid, and means for opening the flasks or ampuls consecutively by moving the carrier.



1,383,271. SOUND REPRODUCING AND RECORDING APPARATUS. WILLIAM MACDONALD SMITH, Bloomsbury, England. Filed May 19, 1920. Serial No. 382,600. 11 Claims. (Cl. 274—27.)

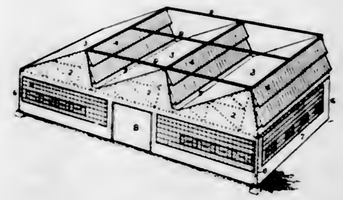


1. A tone purifying device for use on gramophones, phonographs, microphones, telephone transmitters and receivers comprising a mass of non-sonorous material of cup shaped form suitably mounted and retained in position adjacent the diaphragm of such apparatus or instrument, the said non-sonorous mass having a tubular member projecting from the interior thereof toward the diaphragm and having a central opening to admit of the sound waves passing therethrough.

1,383,272. SECONDARY VALVE. WALTER B. WOORE, New York, N. Y. Continuation of application No. 327,766. Renewed Oct. 1, 1919. This application filed Sept. 18, 1920. Serial No. 411,169. 3 Claims. (Cl. 277—27.)

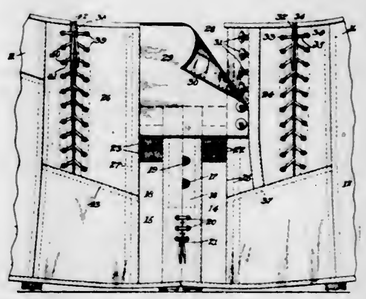
1. The combination with a coupling having an annular valve seat, of a valve to fit said seat, a plurality of spaced arms projecting from the outer face of the valve through the valve seat close to the walls thereof and serving to guide said valve to its seat, a conduit to fit in the outer end of the coupling and engage the arms for moving the valve away from the seat when the conduit is inserted into the coupling, a concentric cage on the inner face of the valve, said cage having perforations in its walls opening on all sides and serving to center the pressure of the water on the valve to insure the proper seating thereof as soon as the conduit is removed from contact with said arms.

1,383,273. FLUSHING APPARATUS. ARTHUR H. KLAHN, San Francisco, Calif. Filed Dec. 26, 1914, Serial No. 879,093. Renewed Feb. 24, 1919. Serial No. 278,934. 6 Claims. (Cl. 4—5.)



1. In a flushing apparatus, the combination of a closed tank, having an outlet larger than its inlet, both inlet and outlet located near the lower end of the tank, a valve casing on the tank outlet, the outlet of said valve casing smaller than its inlet, a float valve covering the outlet of said valve casing, and means to lift the float valve into the upper part of the valve casing to allow the water to be blown out of the tank.

REISSUES.

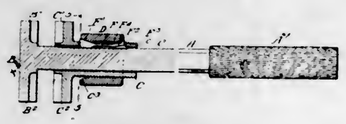


15,133. ROOF STRUCTURE. WALTER F. BALLINGER, Philadelphia, Pa., and CLIFFORD H. SHIVERS, Woodbury, N. J., assignors, by mesne assignments, to said Ballinger. Filed May 5, 1921. Serial No. 467,203. Original No. 1,347,669, dated July 27, 1920, Serial No. 314,526, filed July 31, 1919. 6 Claims. (Cl. 108—1.)

1. An improved roof of saw-tooth construction, comprising a plurality of parallel trussed sections providing saw-tooth framing along the length of the building for supporting oblique roof covering portions and upright sash portions, said saw-tooth framing having a plurality of parallel tension chord members extending throughout the entire length of the roof structure at its base and supported at their ends, and a plurality of longitudinal compression chord members at a higher elevation than the tension chord members and rigidly secured to the upper portions of the framing of the several saw-tooth members and located above the main level of the roof covering and

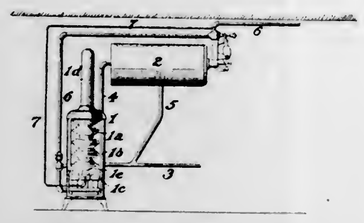
sash portions, combined with transverse trussed girders respectively extending along the high sash portion of each saw-tooth section and each having its upper portion secured to the compression chord members and its lower portion secured to the tension chord members and operating to support the roof transversely over great widths, and supports for the ends of the tension chord members.

15,134. APPAREL-CORSET. DANIEL KOPS, New York, N. Y. Filed Mar. 19, 1921. Serial No. 453,749. Original No. 1,366,811, dated Jan. 25, 1921, Serial No. 404,607, filed Aug. 19, 1920. 7 Claims. (Cl. 2—73.)



1. In an apparel corset, front steel members adapted to extend from the groin section upwardly and to overlie portions of the abdominal section of the body of the wearer, front body members secured to the front steel members and extending appreciably above the same so that the forward edges of the front body members above the front steel portions are materially spaced from one another, and a front strap extending between the said spaced edges of the front body members.

15,135. WRENCH. ROBERT A. ROSANDER, Brooklyn, N. Y., assignor to Romaro Machine and Tool Company, a Corporation of New York. Filed Nov. 4, 1919. Serial No. 335,771. Original No. 1,299,510, dated Apr. 8, 1919, Serial No. 139,518, filed Dec. 29, 1916. 6 Claims. (Cl. 81—130.)



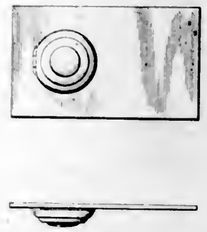
5. In a tool of the character set forth, a bar having a jaw attached thereto, a second jaw slidably mounted on the bar, and means for locking the jaw to the bar in

different positions of adjustment comprising a series of fine corrugations on one face of the bar, a dog having a complementary series of corrugations carried by said movable jaw and adjustable bodily toward and from the

corrugations on the bar, and a threaded ring carried by said sliding jaw adapted to be screwed along the jaw and clamp said dog against said bar with a plurality of its corrugations in engagement with the corrugations of the bar.

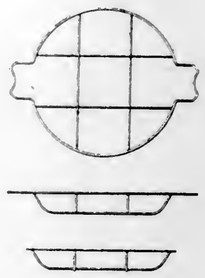
15,136. STORAGE WATER-HEATER. EDWIN RUUD, Pittsburgh, Pa., assignor to Ruud Manufacturing Company, Camden, N. J., a Corporation of New Jersey. Filed May 12, 1921. Serial No. 468,945. Original No. 853,738, dated May 14, 1907. Serial No. 266,909, filed June 26, 1905. 4 Claims. (Cl. 236—33.)

1. In a storage water heater system, the combination of a water-heater, a reservoir, connections between the same, a valve to control the supply of fuel to said heater, a thermostat in said reservoir, a lost-motion connection between said thermostat and valve and means to cause said valve to remain either entirely closed or completely open.



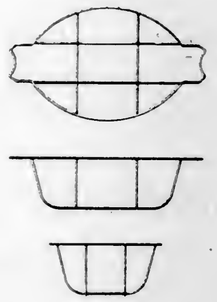
DESIGNS.

58,203. BOTTLE. HENRY C. ANDERSON, Athens, Ga. Filed July 17, 1917. Serial No. 181,180. Term of patent 14 years.



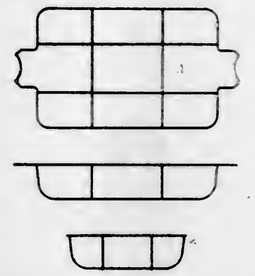
The ornamental design for a bottle, as shown.

58,204. COMBINATION BELT-BUCKLE AND LOCKET. ISABEL ANDERSON, Chicago, Ill. Filed Apr. 5, 1920. Serial No. 371,491. Term of patent 7 years.



The ornamental design for a combination belt buckle and locket, as shown.

58,205. FRAME FOR OVENWARE. CHARLES ANDREWS, Jr., Rockford, Ill., assignor to Andrews Wire & Iron Works, Rockford, Ill., a Corporation of Illinois. Filed Nov. 21, 1919. Serial No. 339,726. Term of patent 7 years.

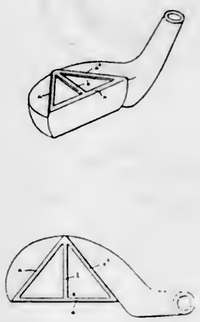


The ornamental design for a frame for ovenware, as shown.

58,206. FRAME FOR OVENWARE. CHARLES ANDREWS, Jr., Rockford, Ill., assignor to Andrews Wire & Iron Works, Rockford, Ill., a Corporation of Illinois. Filed Nov. 21, 1919. Serial No. 339,728. Term of patent 7 years.

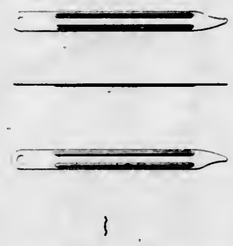
The ornamental design for a frame for ovenware, as shown.

58,207. FRAME FOR OVENWARE. CHARLES ANDREWS, Jr., Rockford, Ill., assignor to Andrews Wire & Iron Works, Rockford, Ill., a Corporation of Illinois. Filed Nov. 21, 1919. Serial No. 339,731. Term of patent 7 years.



The ornamental design for a frame for ovenware, as shown.

58,208. TWEEZER. HENRY W. ARMSTRONG, New Haven, Conn. Filed Mar. 11, 1921. Serial No. 451,592. Term of patent 14 years.



The ornamental design for a tweezer as shown.

58,209. GOLF-PUTTER HEAD. EDWARD F. BACHELLER, Lynn, Mass., assignor of one-half to John Hammond Stewart, Lynnfield, Mass. Filed Feb. 10, 1921. Serial No. 444,043. Term of patent 14 years.

The ornamental design for a golf putter head as shown.

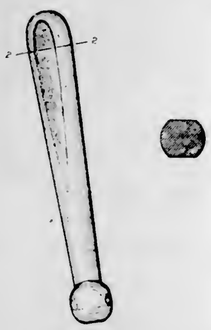
58,210. FINGER-NAIL TOOL. VICTOR BEAUREGARD, Boston, Mass. Filed Nov. 13, 1920. Serial No. 423,993. Term of patent 14 years.

The ornamental design for a finger-nail tool, as shown.

58,211. PLATE OR SIMILAR ARTICLE. ANDRÉ BEYRAND, Limoges, France, assignor to Herman C. Kupper, New York, N. Y. Filed July 10, 1920. Serial No. 395,401. Term of patent 7 years.

The ornamental design for a plate or similar article as shown.

58,212. PLATE OR SIMILAR ARTICLE. ANDRÉ BEYRAND, Limoges, France, assignor to Herman C. Kupper, New York, N. Y. Filed July 10, 1920. Serial No. 395,402. Term of patent 7 years.



The ornamental design for a plate or similar article as shown.

58,213. PLATE OR SIMILAR ARTICLE. ANDRÉ BEYRAND, Limoges, France, assignor to Herman C. Kupper, New York, N. Y. Filed Jul. 10, 1920. Serial No. 395,403. Term of patent 7 years.

The ornamental design for a plate or similar article as shown.

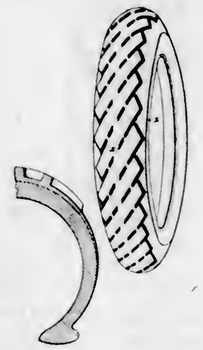
58,214. POLICE-BILLY. FRED BIFFAR, Jr., Chicago, Ill. Filed Sept. 27, 1919. Serial No. 328,076. Term of patent 14 years.

The ornamental design for a police billy as shown.

58,215. SPARK-PLUG. HARRY H. CHINSKY and EMIL HONSTETTER, Brooklyn, N. Y. Filed Apr. 10, 1920. Serial No. 373,015. Term of patent 3½ years.

The ornamental design for a spark plug, as shown.

58,216. CABINET FOR AN X-RAY UNIT. GEORGE B. COLEMAN, San Francisco, Calif., assignor to Coleman X-Ray Company, San Francisco, Calif., a Corporation of California. Filed Aug. 27, 1920. Serial No. 406,493. Term of patent 14 years.



The ornamental design for a cabinet for an X-ray unit substantially as shown.

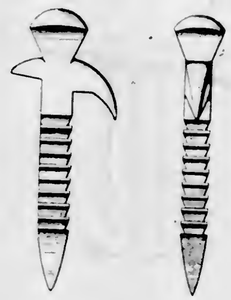
58,217. VEHICLE-WHEEL. JULIAN L. CRACRAFT, Georgetown, Ky. Filed Mar. 22, 1921. Serial No. 454,489. Term of patent 7 years.

The ornamental design for a vehicle wheel, as shown.

58,218. TIRE FOR AUTOMOBILE-WHEELS. GEORGE K. CULP, New York, N. Y., assignor to New England Tire and Rubber Company, Holyoke, Mass., a Corporation of Delaware. Filed June 24, 1920. Serial No. 391,543. Term of patent 14 years

The ornamental design for a tire for automobiles wheels, as shown.

58,219. WINDOW-FASTENER. HARRY DALITZ, Cleveland, Ohio. Filed Jan. 29, 1921. Serial No. 441,052. Term of patent 14 years.

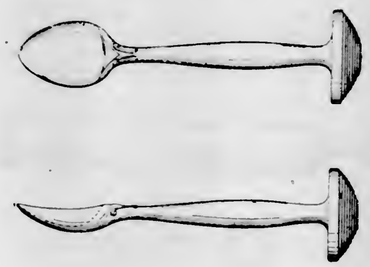


The ornamental design for a window fastener, as shown.

58,220. COLLAR-HOLDING DEVICE. CLARENCE A. DYE, Toledo, Ohio. Filed Jan. 15, 1921. Serial No. 437,639. Term of patent 14 years.

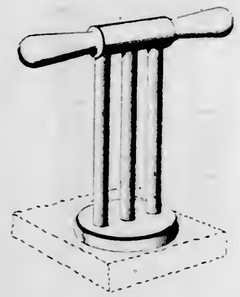
The ornamental design for a collar holding device, as shown.

58,221. RAILROAD-SPIKE. FRED M. EMBANKS, Cleveland, Ohio. Filed Mar. 17, 1921. Serial No. 453,154. Term of patent 14 years.



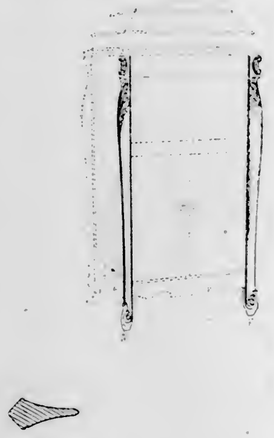
The ornamental design for a railroad spike, as shown.

58,222. MOTOR-CASING. ALEXANDER GLOWICKI, Cincinnati, Ohio. Filed Oct. 13, 1919. Serial No. 330,495. Term of patent 14 years.



The ornamental design for a motor casing, as shown and described.

58,223. COMBINED CULINARY MASHER AND SPOON. MARY GOLDSMITH, St. Louis, Mo. Filed Nov. 11, 1920. Serial No. 423,498. Term of patent 14 years.



The ornamental design for a combined culinary masher and spoon, as shown.

58,224. HANDLE FOR CHILDREN'S VEHICLES. WARREN T. GREEN, St. Louis, Mo., assignor to The Mengel Company, Louisville, Ky., a Corporation of New Jersey. Filed Jan. 31, 1921. Serial No. 441,478. Term of patent 14 years.

The ornamental design for a handle for children's vehicles, as shown.

58,225. CORNER MEMBER AND LEG. CHRISTIAN H. GUDEGAST, Richmond Hill, N. Y. Filed Nov. 13, 1919. Serial No. 337,856. Term of patent 3½ years.

The ornamental design for a corner member and leg as shown and described.

58,226. VALVE-CASING FOR A HORN. EDWARD J. GULICK, Elkhart, Ind., assignor to C. G. Conn, Ltd., Elkhart, Ind., a Corporation of Indiana. Filed Jan. 13, 1921. Serial No. 437,098. Term of patent 14 years.

The ornamental design for a valve casing for a horn, as shown.

58,227. CAR-CHECK HOLDER. HARRY J. GUTMON, Springfield, Ill. Filed July 31, 1920. Serial No. 400,552. Term of patent 3½ years.

The ornamental design for a car-check holder, as shown.

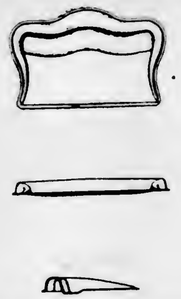
58,228. COMBINED MIRRORSCOPE AND PARKING-LIGHT. WILLIAM P. HAMMOND, Maplewood, N. J. Filed Apr. 1, 1921. Serial No. 457,830. Term of patent 14 years.

The ornamental design for a combined mirrorscope and parking light, as shown and described.

58,229. SALT AND PEPPER BASKET. RUTH E. HARRIS and ROY L. CHANCE, San Francisco, Calif. Filed Jan. 28, 1921. Serial No. 440,814. Term of patent 14 years.

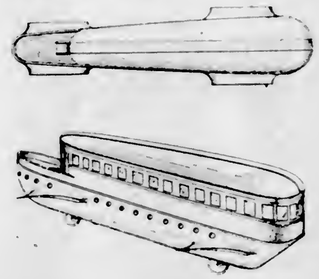
The ornamental design for a salt and pepper basket, substantially as shown.

58,230. ELECTRIC-WELDER CABINET. SIDNEY M. HARVEY, Detroit, Mich., assignor to Electric Welding Machine Company, Detroit, Mich., a Copartnership Firm. Filed Dec. 20, 1920. Serial No. 432,116. Term of patent 14 years.



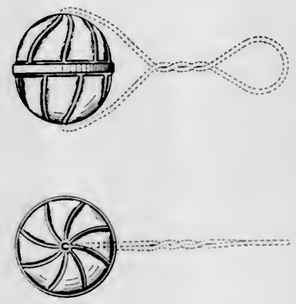
The ornamental design for an electric welder cabinet as shown.

58,231. SPARKING-PLUG ELECTRODE. FREDERICK WILLIAM HILL, Folkestone, England. Filed Nov. 12, 1919. Serial No. 337,615. Term of patent 7 years.



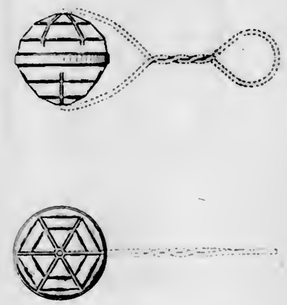
The ornamental design for a sparking plug electrode as shown.

58,232. CRUMBING IMPLEMENT. WILLIAM J. HINES, Hartford, Conn., assignor to The Fuller Brush Company, a Corporation of Connecticut. Filed Oct. 18, 1920. Serial No. 417,852. Term of patent 7 years.



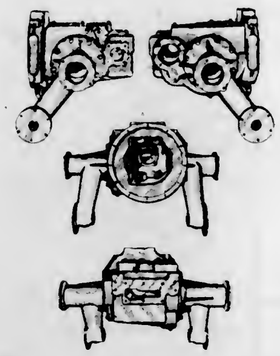
The ornamental design for a crumbing implement, as shown.

58,233. AEROPLANE-BODY. LEO HINZ, Perth Amboy, N. J., assignor of one-half to Friedrick Martin, New York, N. Y. Filed Sept. 22, 1919. Serial No. 325,561. Term of patent 7 years.



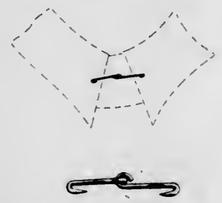
The ornamental design of an aeroplane body as shown.

58,234. RATTLE. FRANK A. HOLLEY, Rochester, N. Y., assignor to Bastian Bros. Co., Rochester, N. Y., a Corporation of New York. Filed Apr. 8, 1920. Serial No. 372,361. Term of patent 3½ years.



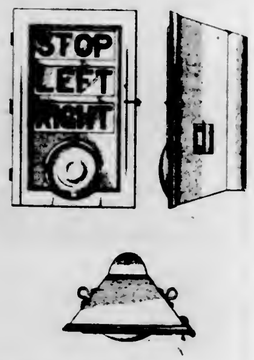
The ornamental design for a rattle, as shown.

58,235. RATTLE. FRANK A. HOLLEY, Rochester, N. Y., assignor to Bastian Bros. Co., Rochester, N. Y., a Corporation of New York. Filed Apr. 8, 1920. Serial No. 372,362. Term of patent 3½ years.



The ornamental design for a rattle, as shown.

58,236. TRACTOR TRANSMISSION-HOUSING. JOHN M. HOWARD, Media, Pa., and CHARLES J. ALLEN, Moorestown, N. J. Filed June 18, 1920. Serial No. 390,041. Term of patent 14 years.

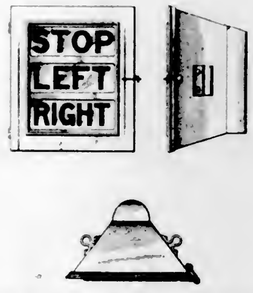


The ornamental design for tractor transmission housing, as shown.

58,237. COLLAR-LINK. ROBERT W. JOHNSON, Chicago, Ill. Filed Dec. 3, 1920. Serial No. 428,137. Term of patent 7 years.

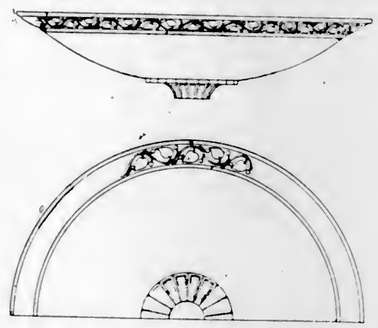
The ornamental design for a collar link, as shown.

58,238. SIGNAL-EXHIBITOR CASING. JAMES E. JOURNEAUX and WILLIAM E. HEBESTREIT, Detroit, Mich. Filed Jan. 17, 1921. Serial No. 438,012. Term of patent 3½ years.



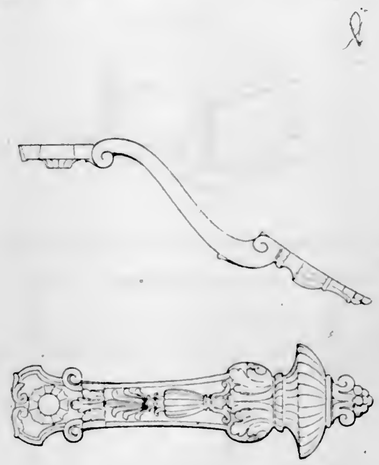
The ornamental design for a signal exhibitor casing, as shown.

58,239. SIGNAL-EXHIBITOR CASING. JAMES E. JOURNEAUX and WILLIAM E. HEBESTREIT, Detroit, Mich. Filed Jan. 17, 1921. Serial No. 438,013. Term of patent 3½ years.



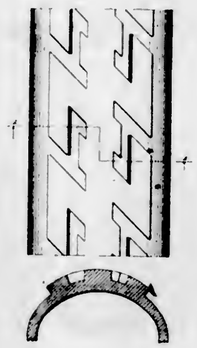
The ornamental design for a signal exhibitor casing, as shown.

58,240. SIGNAL-EXHIBITOR CASING. JAMES E. JOURNEAUX and WILLIAM E. HEBESTREIT, Detroit, Mich. Filed Jan. 17, 1921. Serial No. 438,014. Term of patent 3½ years.



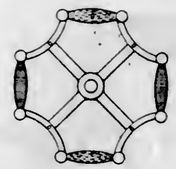
The ornamental design for a signal exhibitor casing, as shown.

58,241. BODY FOR LIGHTING-FIXTURES. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 28, 1920. Serial No. 420,291. Term of patent 3½ years.



The ornamental design for a body for lighting fixtures, as shown.

58,242. ARM FOR LIGHTING-FIXTURES. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 28, 1920. Serial No. 420,295. Term of patent 3½ years.



The ornamental design for an arm for lighting fixtures, as shown.

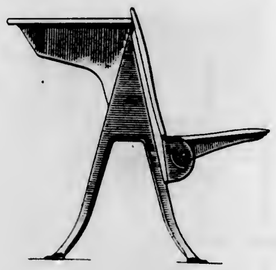
58,243. TIRE-TREAD. GRANT LAMBRIGHT, Fond du Lac, Wis. Filed Dec. 27, 1920. Serial No. 433,509. Term of patent 14 years.

The ornamental design for a tire-tread, as shown.

58,244. MOTOR-VEHICLE STEERING-WHEEL. HOARD LEE, Shreveport, La. Filed Mar. 21, 1921. Serial No. 454,209. Term of patent 14 years.

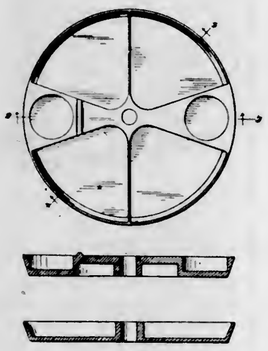
The ornamental design for a motor vehicle steering wheel as shown.

58,245. DIRECTORY-CABINET. SAMUEL L. MARSH, New York, N. Y. Filed Oct. 23, 1920. Serial No. 419,106. Term of patent 14 years.



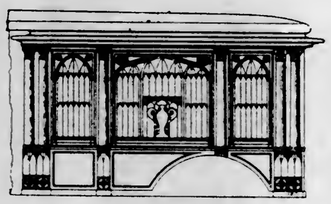
The ornamental design for a directory cabinet as shown.

58,246. MUD-GUARD FOR CYCLES. HERBERT J. MCCAULEY, East Aurora, N. Y. Filed Nov. 20, 1920. Serial No. 425,568. Term of patent 14 years.



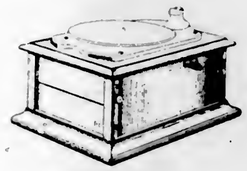
The ornamental design for a mud guard for cycles as shown.

58,247. SCHOOL-DESK. LOUIS H. MCKEE, Trenton, N. J. Filed Dec. 8, 1920. Serial No. 429,288. Term of patent 14 years.



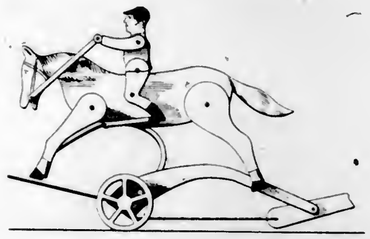
The ornamental design for a school desk, as shown.

58,248. PLATE. ALTHIA A. MEEKER, Eldon, Iowa. Filed Jan. 20, 1921. Serial No. 438,749. Term of patent 7 years.



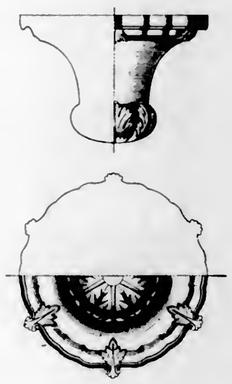
The ornamental design for a plate as shown.

58,249. HEARSE-BODY. CHARLES S. MOONEY, Grand Rapids, Mich. Filed Mar. 11, 1921. Serial No. 451,593. Term of patent 7 years.



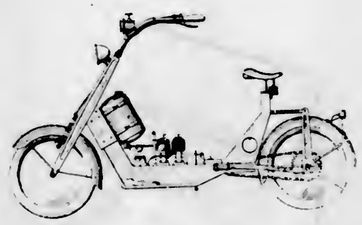
The ornamental design for a hearse body, as shown and described.

58,250. PHONOGRAPH-CABINET. ALBERT T. MOWITZ, New York, N. Y., assignor to Columbia Graphophone Manufacturing Company, Bridgeport, Conn., a Corporation of Delaware. Filed Mar. 2, 1921. Serial No. 449,229. Term of patent 14 years.



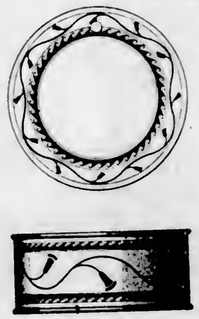
The ornamental design for a phonograph cabinet, as shown.

58,251. TOY HORSE WITH JOCKEY. ROBERT MULRONE, Camperdown, Sydney, New South Wales, Australia. Filed Dec. 28, 1920. Serial No. 433,654. Term of patent 7 years.



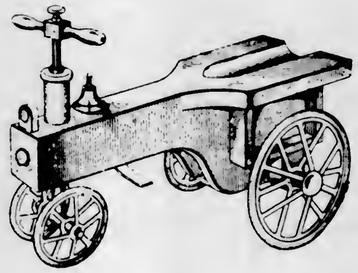
The ornamental design for a toy horse with jockey, as shown.

58,252. LIGHTING-FIXTURE CANOPY. ALBERT J. D. OHM, Astoria, N. Y., assignor to Lion Electric Appliance Co., Inc., New York, N. Y., a Corporation of New York. Filed Sept. 13, 1920. Serial No. 410,018. Term of patent 3½ years.



The ornamental design for a lighting fixture canopy, as shown.

58,253. AUTOMOTIVE VEHICLE. VICTOR W. PAGE, Kew Gardens, N. Y. Filed Mar. 14, 1921. Serial No. 452,316. Term of patent 14 years.

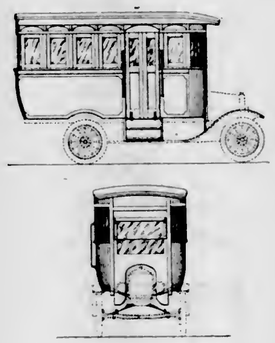


The ornamental design for an automotive vehicle, as shown.

58,254. RECEPTACLE. IRVING R. PARSONS, Chicago, Ill. Filed Nov. 29, 1920. Serial No. 427,243. Term of patent 14 years.

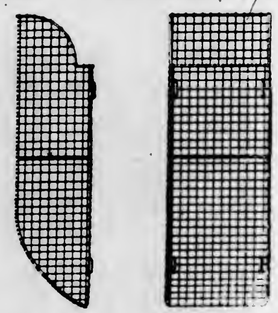
The ornamental design for a receptacle as shown.

58,255. VEHICLE TOY. ROSS M. G. PHILLIPS, New Haven, Conn., assignor to Perlie P. Fallon, New York, N. Y. Filed Apr. 8, 1921. Serial No. 459,805. Term of patent 14 years.



The ornamental design for a vehicle toy as shown.

58,256. ALPHABET OF SIGN-LETTERS. GEORGE R. PYPER, Salt Lake City, Utah, assignor to The Pyper Animated Sign Company, Salt Lake City, Utah, a Corporation of Utah. Filed Mar. 12, 1920. Serial No. 365,327. Term of patent 14 years.



An ornamental design for an alphabet of sign letters, as shown.

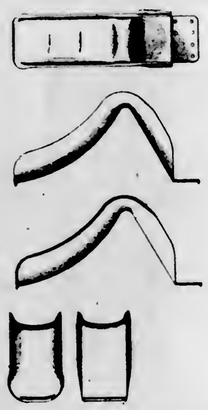
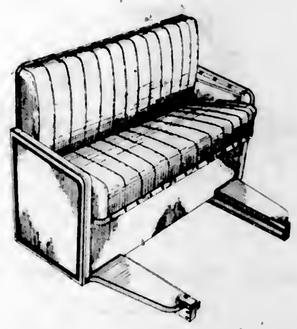
The ornamental design for a vehicle body, as shown.

58,258. WASTE-BASKET. WILLIAM F. SCRANTON, Huntington, W. Va. Filed June 16, 1920. Serial No. 389,496. Term of patent 14 years.



The ornamental design for a waste basket, as shown.

58,259. GAME APPARATUS. EMIL C. STEFFEN, Los Angeles, Calif. Filed Jan. 31, 1921. Serial No. 441,494. Term of patent 7 years.

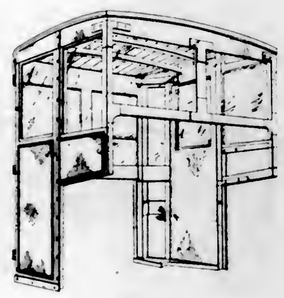


The ornamental design for a game apparatus as shown.

58,260. WHEEL-HOLDER. REUBEN B. STIPES, JOHN D. GOODWIN, and HOWARD C. WELCH, Flint, Mich. Filed Jan. 21, 1921. Serial No. 439,028. Term of patent 14 years.

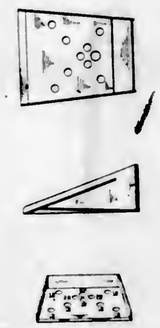
The ornamental design for a wheel holder, as shown.

58,261. AUTOMOBILE-SEAT CONSTRUCTION. HORACE T. THOMAS, Lansing, Mich. Filed Feb. 25, 1921. Serial No. 447,882. Term of patent 7 years.



The ornamental design for an automobile seat construction, as shown.

58,262. AUTOMOBILE-BODY. HORACE T. THOMAS, Lansing, Mich. Filed Feb. 25, 1921. Serial No. 447,883. Term of patent 7 years.



The ornamental design for an automobile body, as shown.

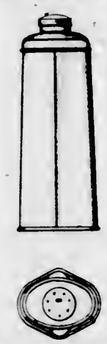
58,263. AUTOMOBILE-TOP. HORACE T. THOMAS, Lansing, Mich. Filed Mar. 2, 1921. Serial No. 449,230. Term of patent 7 years.

The ornamental design for an automobile top, as shown.

58,264. GAME-BOARD. SAMUEL L. TRACEY, Toronto, Ontario, Canada. Filed Feb. 28, 1921. Serial No. 448,612. Term of patent 7 years.

The ornamental design for a game board, as shown.

58,265. RECEPTACLE FOR TOILET POWDER. LOUIS A. WEGENAAR, Brooklyn, N. Y. Filed Apr. 26, 1920. Serial No. 376,886. Term of patent 14 years.



The ornamental design for a receptacle for toilet powder as shown.

58,266. RECEPTACLE FOR TOILET POWDER. LOUIS A. WEGENAAR, Brooklyn, N. Y. Filed Apr. 26, 1920. Serial No. 376,887. Term of patent 14 years.

The ornamental design for a receptacle for toilet powder as shown.

58,267. RECEPTACLE FOR TOILET POWDER. LOUIS A. WEGENAAR, Brooklyn, N. Y. Filed Apr. 26, 1920. Serial No. 376,888. Term of patent 14 years.

The ornamental design for a receptacle for toilet powder as shown.

58,268. RECEPTACLE FOR TOILET POWDER. LOUIS A. WEGENAAR, Brooklyn, N. Y. Filed Apr. 26, 1920. Serial No. 376,889. Term of patent 14 years.

The ornamental design for a receptacle for toilet powder as shown.

58,269. RECEPTACLE FOR TOILET POWDER. LOUIS A. WEGENAAR, Brooklyn, N. Y. Filed Apr. 26, 1920. Serial No. 376,890. Term of patent 14 years.

The ornamental design for a receptacle for toilet powder as shown.

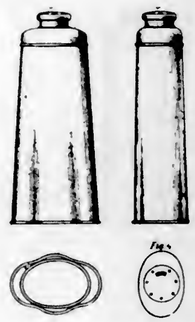
58,270. RECEPTACLE FOR TOILET POWDER. LOUIS A. WEGENAAR, Brooklyn, N. Y. Filed Apr. 26, 1920. Serial No. 376,891. Term of patent 14 years.

The ornamental design for a receptacle for toilet powder as shown.

58,271. RECEPTACLE FOR TOILET POWDER. LOUIS A. WEGENAAR, Brooklyn, N. Y. Filed Apr. 26, 1920. Serial No. 376,892. Term of patent 14 years.

The ornamental design for a receptacle for toilet powder substantially as shown.

58,272. RECEPTACLE FOR TOILET POWDER. LOUIS A. WEGENAAR, Brooklyn, N. Y. Filed Apr. 26, 1920. Serial No. 376,893. Term of patent 14 years.

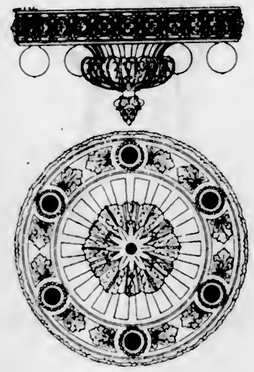


The ornamental design for a receptacle for toilet powder as shown.

58,273. RECEPTACLE FOR TOILET POWDER. LOUIS A. WEGENAAR, Brooklyn, N. Y. Filed May 3, 1920. Serial No. 378,705. Term of patent 14 years.

The ornamental design for a receptacle for toilet powder as shown.

58,274. RECEPTACLE FOR TOILET POWDER. LOUIS A. WEGENAAR, Brooklyn, N. Y. Filed May 3, 1920. Serial No. 378,706. Term of patent 14 years.

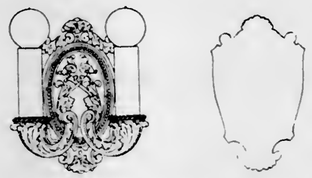


The ornamental design for a receptacle for toilet powder as shown.

58,275. RECEPTACLE FOR TOILET POWDER. LOUIS A. WEGENAAR, Brooklyn, N. Y. Filed May 3, 1920. Serial No. 378,707. Term of patent 14 years.

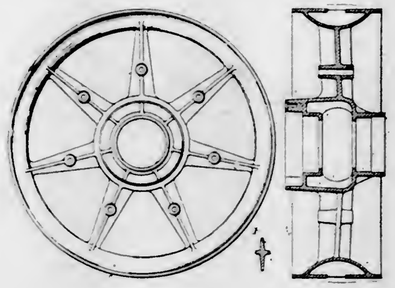
The ornamental design for a receptacle for toilet powder as shown.

58,276. LIGHTING-FIXTURE. WALTER A. WELLER, Milwaukee, Wis., assignor to Charles Polacheck & Brothers Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 11, 1920. Serial No. 423,491. Term of patent 7 years.



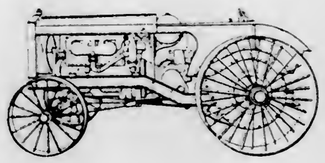
The ornamental design for a lighting fixture, substantially as shown.

58,277. LIGHTING-FIXTURE. WALTER A. WELLER, Milwaukee, Wis., assignor to Charles Polacheck & Brothers Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 11, 1920. Serial No. 423,492. Term of patent 7 years.



The ornamental design for a lighting fixture, substantially as shown.

58,278. LIGHTING-FIXTURE. WALTER A. WELLER, Milwaukee, Wis., assignor to Charles Polacheck & Brothers Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 11, 1920. Serial No. 423,493. Term of patent 7 years.



The ornamental design for a lighting fixture, substantially as shown.

58,279. VEHICLE-WHEEL. RALPH H. WEST, Cleveland, Ohio, assignor to The West Steel Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 9, 1919. Serial No. 329,620. Term of patent 14 years.

The design for a vehicle wheel substantially as shown.

58,280. TRACTOR. JOHN C. WESTMONT, Sauk City, Wis., assignor to The Wisconsin Farm Tractor Company, Sauk City, Wis., a Corporation of Wisconsin. Filed Nov. 17, 1919. Serial No. 338,775. Term of patent 14 years.

The ornamental design for a tractor as shown.

58,281. FUEL-CONTAINER. MILTON C. WHITAKER, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Aug. 6, 1920. Serial No. 401,798. Term of patent 14 years.

The ornamental design for a fuel container as shown.

58,282. INDICATOR, SIGN, OR SIMILAR ARTICLE. CHARLES A. WIDMER, Paterson, N. J. Filed May 8, 1919. Serial No. 295,789. Term of patent 14 years.

The ornamental design for an indicator, sign, or similar article, substantially as shown and described.

58,283. RADIATOR-CAP ORNAMENT. LOUIS KYLE WOODARD, Mount Vernon, N. Y. Filed Apr. 1, 1921. Serial No. 457,825. Term of patent 3½ years.

The ornamental design for a radiator cap ornament as shown.
